IN THE HOUSE OF REPRESENTATIVES
Monday, April 21, 1958

Mr. PORTER. Mr. Speaker, a classmate of mine at college, Joseph Clawson, now an author and an economist of prominence wrote an article in 1947 which I believe to have considerable pertinence to the situation facing us today. He tells us not to laugh at the economist, the psychologist, the sociologist, and other behavioral scientists, for your life may depend on him.

Under a previous consent I include my friend's analysis of how our salvation may lie in the behaviorial scientist and his recommendation that our emphasis had better be in this direction if we wish to survive.

Did you know that mankind's mighty mouse, the social scientist, faces a strange crisis this year—a dilemma which concerns you and your family more vitally than your job, your life insurance, your friends, or the cost of living? He faces this crisis partly because he is more misunderstood, more underrated, more bitterly opposed than the chemist or the nuclear physicist were before the war.

Who is this unusual person? And why mankind's mighty mouse?

This new friend of yours may be a psychologist, an economist, a sociologist, or perhaps an anthropologist. He might be an historian, a political scientist, a statistician, or an education research worker. Like the movie hero, Mighty Mouse, his job is to get civilization out of jams. Like the movie hero, he is usually thought of as a sort of comical cartoon character. In fact, the public smiles upon him as an absent-minded daydreamer puttering around like a happy child, with his white mice, dirty old clay pots, many-colored price charts, his straight-faced studies of nightclub panics and race riots.

In accomplishments, he is mighty. In comparison with the superhuman task ahead of him, he is a mouse. Yet on this same quiet, unassuming person may depend your greatest chances of physical survival. Why is this?

With scarcely an exception, every one of our great national problems today is a problem of human relations. War is exhibit A. There is already blood upon the neutron, and there may be more before we're through. The experts agree there is no military or technical defense against an atom bomb attack. They also agree that 40 to 100 million Americans would be blasted into radioactive dust during the first hour of war. The remainder would die soon after from food and air poisoning, strange new germs, and V–2 rockets.

Next, read the headlines of your newspaper. They shout about strikes, race riots, and divorces, or inflation, housing shortages, poverty, and sex butcheries, or robberies, juvenile delinquency, panics, approaching depression, and unemployment.

What do you make of them? Is it the Frankenstein menace of machinery that

makes these headlines? No, it is the failure in human relations. Dr. Raymond B. Fosdick, farseeing president of the Rockefeller Foundation, puts it this way: "We've been learning how to control physical nature, but we haven't learned how to control ourselves."

After all, the atom bomb is not dangerous. The deadly explosive is man. We are apemen in rocket planes, Alley Oops disguised as Flash Gordons.

But where does the social scientist come into this unpretty picture?

With new tools and rules this specialist is fighting every moment of the day for your life and happiness. If the story of his great social inventions and discoveries is ever told, it will be one of the most fascinating tales of human struggle, of truth against witchcraft, ever related. Heroism and drama underlie every advance of the social scientist. Galileo, Pasteur, Eve Curie, and Einstein had no monopoly on adventure or success. Yet we have been calling the new pioneers "impractical daydreamers" and "crackpots."

Consider their achievements.

The door opens and a gray-haired cripple swings up to you on crutches. "Look at me, mister," he says. "A disabled veteran. Not from this war, or the last war, but the one before that, the Spanish-American War." He smiles ruefully. "I'm living proof, don't you think, that war is an inborn trait of human nature? Like cutthroat competition and selfishness, they're inborn, all of them."

He has reason to be bitter. But for a scientific answer, let's turn to the cultural anthropologists. Ruth Benedict and Margaret Mead have shown in their investigations that the answer is a resounding "No." All three of these traits are learned, like your 1-2-3's and the English language.

Powerful social weapons against war are on the production line right now. But we need to play for time until they are ready. Meanwhile, the handiest tools are the U. N., the UNRRA, the reciprocal trade agreements, the International Trade Organization, the World Bank, the world fund. For personal understanding, there's Donald Watt's delightful Experiment in International Living.[1]

"But," you ask, "are we actually getting down to the fundamentals, the causes of war?"

At this, a tall, energetic young professor of psychology speaks. You take an immediate liking to him. "For one thing," he asserts, "depressions frequently cause wars. Let's put it this way: frustration causes aggression. Over in Germany in the early 1930's, for example, thousands of young Germans, jobless, hungry, defeated, heard a spellbinder blaming all their troubles on the scheming Jews, as he called them. Or on the lack of living room. So, a heartless persecution began, and a merciless army swung into step to conquer the world."

That's Hadley Cantril from Princeton speaking. His discoveries regarding mobs, panics, and social movements have been revelations. A few years ago, his study of the panic that followed Orson Welles' broadcast of an invasion from Mars was a scientific gem.

As a psychologist, he was speaking of depressions causing wars. So we turn to the economists and ask, "What causes depressions, then?"

Among other things, they say, a depression follows from inflation. Maybe we haven't cured any depressions yet, but we have harnessed one inflation. In the United States, Canada, and England the prevention of a big wartime price boom between 1942 and 1945 was a remarkable achievement. It had never happened before. Every major conflict before World War II had ushered in a great price upheaval, and few in 1940 believed it could be controlled this time. But these countries did it with tools supplied by economists like John Maynard Keynes of England and Alvin Hansen of Harvard.

Mary, the neighbor girl, and Bill, her fiance, come forward with a more personal question. "We're engaged and—terribly in love," says Mary, hesitantly. "But with so many marriages breaking up, we'd like to know if there isn't some way of finding out ahead of time whether—well, whether we have any chance of happy marriage."

Yes, Mary, there is a way. Burgess and Cottrell at Chicago and Terman at Stanford have developed tests which will help you. If your joint score—yours and Bill's together—is definitely high or definitely low, these tests can predict with remarkable accuracy whether your marriage will succeed or fail.

"That's wonderful," says Bill. Then he stops and frowns. "But can't we affect the outcome, or are we just stuck with things as they are?"

Yes, Bill, you can, thanks to the pioneering efforts of sociologists like Ernest Groves and Paul Popenoe. They recognized a vital human need and decided to fill it. In 1925, Dr. Groves established at Boston University one of the earliest college courses in marriage problems, a forerunner of hundreds of such courses now being offered in colleges and night schools all over United States. Dr. Popence heads the 17-year-old American Institute of Family Relations in Los Angeles, which has helped build hundreds of successful marriages at a time when hit-or-miss marriages are failing in every direction.

Amazing? These are only appetizers—only a couple fields of practical social science research. Yet each of these victories in human relations is significant, each as sensational as a commando raid on Dieppe. Some of the inventions and discoveries of human science are as familiar as the census, the Tennessee Valley Authority, the Federal Reserve System, the ballot, the Constitution, the public opinion poll. Some have caused worldwide sensations, like Sigmund Freud's psychoanalysis, which is still in use though the emphasis has shifted. Others are almost unknown, but they deserve monuments and medals for their aid to civilization.

Crime is being revealed by the lie detector, diagnosed by Sheldon and Eleanor Glueck of Harvard, and treated by Chicago's "back-of-the-yards project." Racial troubles hold fewer secrets because of Donald Young's and Gunnar Myrdal's work. Tolerance is being spread through mixed communities by Jahn Granrud's Springfield plan.

A business executive clears his throat. "Wait a moment," he interrupts. "Don't forget those investigations made by Roethlisberger and—let's see—Dickson on labor-management techniques. They've been a gold mine for me."

Yes, and businessmen are also keeping out of the red with tested advertising, market analysis, pretested movie plots.

Along with radar, jet propulsion, and relativity, the record of great Twentieth Century inventions must also include intelligence tests, vocational aptitude tests, the wartime rumor clinic of Gordon Allport, and Simon Kuznets' pioneering studies of national income.

These highlights of just a few outstanding social inventions show that the social scientist is truly mighty. Though the human sciences may lag far behind the natural sciences; they can be useful from the very start.

Does this mean that the social scientist is any more intelligent or honest or sincere than our political leaders, our clergymen, generals, authors, teachers? Certainly not. Their success has been due exactly to the measure in which they have applied the methods of science to the problems of modern society. Science has gotten us into this mess, and science must get u out. For nature—human and otherwise—gives true answers to all who ask sensible questions according to scientific method.

You object: "Hold everything. If the social sciences are so terrific, why didn't they solve all our problems long ago?"

That's a good question—and a basic one. The specialist in human relations today is mighty, for his size. But he is Mighty Mouse against Frankenstein. The truth is, the social scientist isn't strong enough yet to save us. But there is worse to be told. Our political leaders are using barely a fraction of what is already known about human science. Like witchdoctors refusing to administer modern penicillin to a dying patient, they have repeatedly refused to employ the medicines and instruments of social science. Indeed, three times since the first atom bomb was dropped on Japan, Congress has refused to include the social sciences in any plan for a Government-aided National Science Foundation. One Senator contemptuously referred to them as "various kinds of ideology."

So the social scientists are fighting lonely, isolated skirmishes in the dark against powerful foes—fighting them almost with bare hands. They are the peacetime commandos against the atom. The number of these doctors of civilization has never exceeded 18,000 in the United States, plus a few thousand abroad.

The most conservative estimates indicate that at least $350 million a year is spent on natural science research. During the war we spent over $2 billion altogether, or say half a billion dollars a year on the Manhattan atom-bomb project. Nearly $175 million a year was spent on other military programs of the Office of Scientific Research and Development. In contrast, it appears that less than $100 million a year is spent on social-science research, even when the professors' regular teaching salaries are included.

The pitifully small funds, the overworked personnel of the social sciences are concentrated in university social-science departments, in the social-science research council, in the Rockefeller, Sage, Milbank, and Sloan Foundations, and timidly in a few obscure Government bureaus. They are doing all they can, but it isn't enough.

The publicity and action organizations which conscientiously use scientific findings in their programs are also amazingly few in number. Among them are the Public Affairs Committee, the National Planning Association, the American Institute of Family Relations, Johnson O'Connor Human Engineering Laboratory, the Society for the Psychological Study of Social Issues, and to some extent the older organizations—Boy Scouts, YMCA, Red Cross, and Community Chest. There's the picture.

Without the full ounce of prevention, society takes many tons of cure. Strikes cost the workers over $200 million in 1945. Federal, State, and city governments regularly spend $3 billion a year for public welfare and relief, $250 million for police protection and penitentiaries, and, worst of all, spent $69 billion a year for World War II.

But it wasn't the dollars that suffered. At least 36 million people, armed and unarmed, all over the world were imprisoned, wounded, lost, or killed during World War II. and 37 million went through the same wringer during World War I. In December 1932, at the bottom of the great depression, 13,600,000 workers were unemployed in America, with additional millions walking the streets in England, France, Germany, and elsewhere.

These weren't statistics. These were people. The money and lives and human costs we waste once these social plagues get started are like water poured down a

[1] Youth Experiments in Latin-American Living, Reader's Digest, January 1942.

rathole. Only scientific methods, applied in advance, can prevent them.

What do the social scientists need to equip them for the superhuman task ahead?

They need four things. First of all, they need funds. A half billion dollars a year would be a cheap investment in peace and prosperity. Second, personnel. America needs a standing army of 50,000 social scientists. Third, organization. A superabundance of these three things—money, men, and organization—were poured into the Manhattan project. And in an incredibly short time, the project produced the atom bomb. But a fourth ingredient is required by social science. It needs active partners in every community. In traditional American fashion, they must advertise these new inventions and put them into use.

Yes, we can have any kind of a world we want, say the social scientists. We can even have a political and social defense against the A-bomb. "That is," says Sylvanus Duvall, "we can if we quit spending billions for bombs and pennies for people."

Comments on the Recession

EXTENSION OF REMARKS

OF

HON. ROBERT W. HEMPHILL

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Monday, April 21, 1958

Mr. HEMPHILL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Fort Mill Times, of April 17, 1958:

Sometimes it is a bit difficult to determine in which direction the Eisenhower administration is heading. Only a few months ago the President called for a tight-money policy to curb spending and retard inflation. Interest rates on loans shot skyward; down-payments on Government-financed homes rocketed; efforts were made to sharply curtail all installment buying.

Last week President Eisenhower told reporters at his news conference that the way to lick the recession was for everybody to buy. "Buy what?" a reporter asked.

"Buy anything," the President replied.

So I suppose the only way we can lick this thing is for everybody to go out and start buying stuff, regardless of whether they need it or not, and even if they don't have money to pay for it.

But the only catch is—right in the middle of your spending spree the Ike administration may invoke the tight-money policy again.

Frankly this is the first recession (depression) I have experienced that was accompanied by inflationary prices. Customarily a business recession is accompanied by sharply declining prices. But this time the recession hit with prices at an all-time high, and the longer the recession lasts, the higher the prices go.

It poses quite a problem: Is it more important to lick recession or inflation? It seems that trying to whip them both at once is similar to traveling in opposite directions at the same time.

Oh, well, we'll let the eggheads figure that one out.

While on the subject of the inconsistencies of the administration, one of the worst phases is the doublecross of the American textile industry. The administration has arranged it so foreign countries (largely Japan) can purchase United States cotton 26 percent under the price paid by American textile mills. The Japs manufacture the cotton into cloth with labor that is paid only one-tenth of what American textile laborers receive. The administration then lets the bars down so that American markets are overrun with this cheap, imported cloth which is priced far below the manufacturers' cost of United States made textiles.

If this policy is continued over the years it could well destroy the American textile industry. Already it has caused numerous mills to cease operations, and daily is jeopardizing the livelihood of more and more textile workers.

The administration has repeatedly made it clear that to them the friendship and well-being of the Japs matters more than the economy of the Southland and of New England, and the employment and welfare of our citizens.

How Hiring the Handicapped Helps You and Me

EXTENSION OF REMARKS

OF

HON. CARL ALBERT

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Monday, April 21, 1958

Mr. ALBERT. Mr. Speaker, under leave to extend my remarks I include a very fine essay written by Miss Floy Jean Scribner of Fillmore, Okla., in my congressional district.

This splendid essay was one of the national winners in the 1958 National Essay Contest sponsored by the President's Committee on Employment of the Physically Handicapped. The expenses of this contest were born by the Disabled American Veterans. Miss Scribner is a student at Milburn High School, Milburn, Okla. Along with other national winners, Miss Scribner will receive her award at the opening session of the President's Committee on Employment of the Physically Handicapped on May 8. The award will be given to her directly by President Eisenhower.

Miss Scribner's essay reads as follows:

HOW HIRING THE HANDICAPPED HELPS YOU AND ME

As the strength of a chain is measured by its weakest link, so a nation's well-being is measured by its nonproductive citizens. It is a basic American belief that every man should have a chance to develop all that is best within him and achieve his fullest measure of perfection.

Oklahoma, alone, has 40,000 so-called handicapped adults. Multiply this by 48 and we have a fair estimate of the potential drag on our economy if these citizens are not given the opportunity to become producers. They are all consumers. They require food, clothing, shelter, and all other needed services to live. If they are compelled to remain in a state of dependency, others must work to support them, thereby lowering the standard of living of both the impaired and the worker. This need not be. Countless examples could be given to show that impaired workers can become efficient, self-supporting, contributing members to a nation's economy.

We have in times past failed to see that the so-called handicapped have many latent abilities that could be trained and put to work. All of us are in some way handicapped. Most of us would be handicapped if called upon to play football, or solve scientific or mathematical problems, but is that any reason for ignoring and failing to train the capabilities that we do have?

If we could leave out all humanitarian and charitable obligations to hire the handicapped, which we cannot, it would still be profitable for our well-being and our Nation's economy to train and hire them. They would pay back in Federal income and State sales taxes many times the cost of their training. Hiring the handicapped would reduce our welfare rolls. Hiring them would lighten the physical and mental burden of the ones who must now work to support them; and it would broaden the horizons of the unhappy, dependent handicapped persons.

It is no longer a question of debate as to the competency of handicapped workers. They have proved that when placed in jobs for which they are trained they become valuable employees. They work hard and conscientiously; they are rarely absent from their jobs or late to work; they ask no special favors. All this inspires the physically fit worker to do his best and makes the employer who hires the handicapped feel that he is lucky to have them on his pay roll.

Placing the handicapped in productive employment helps you and me. Placing them in productive employment is a gain for everyone. The hiring of all available manpower and working skill is vital to our national strength and wealth and to our national standard of living. It is the working people who support their community and their nation, not the people who are living on welfare funds and compensation pensions.

The economic progress and superior standards of living depend on good labor relations. American labor with its system of private enterprise stands to profit by providing every available opportunity for handicapped persons who are qualified to take their places in productive jobs. American labor and industry have proved that thousands of persons who we once thought were handicapped have done their jobs well in war time and peace time. When the handicapped person is trained to meet the requirements of the job, he is no longer handicapped. Human needs of all of us as well as the handicapped are best served when the handicapped are helped to become self-supporting and are made capable and given their chance to make their contribution as self-reliant members of society. Nothing is truer than what the vocational rehabilitation people say: "It is not what a man has lost but what he has left that is important." [1]

Thousands of formerly handicapped workers, but now no longer handicapped because of training, are doing you and me a favor by taking their wheel chairs, leaving the four walls of their homes, even the confines of the home community to join the army of independent producers who pay with their own efforts for what they consume, who become property owners, and who pay taxes to make our country a better place in which to live. No, we are not doing for them any more of a favor than they are doing for us. They have earned their places among our most valued employees.

From a business standpoint, we are fortunate in having them. From a humanitarian standpoint, it is good for our souls. We cannot reduce life to pure materialism, to an attitude of letting the fittest survive. Hiring the handicapped helps you and me combat attitudes of prejudice and intolerance. Only weak, selfish men must be surrounded by absolute perfection, so working side by side with the physically handicapped makes us strong.

If America is to be kept strong, you and I must help all men who will work, to find work, not only the physically sound but also the men whose bodies are impaired but who have talents and skills that can be used to

[1] United States Department of Health, Education, and Welfare, from pamphlet, Help the Disabled, revised April 1953, p. 8.

strengthen a country that holds its high place because of a free economy. Any attitude that black lists any employable worker is lowering the national standard.

Organized labor is neither wholly selfish nor entirely humanitarian in pledging their organizations to see that the handicapped are hired. They are both. They know that State and national economy, to be what it should be, must hire any worker whose talents can be used to make him productive and self-supporting.

Hiring the handicapped helps you and me, not only economically but also morally. We know that no single job requires all faculties of a normal person. We know that the handicapped can do just as many skills—perhaps not all the same—as the nonhandicapped. We know they ask no favors. They meet the same production and safety standards as other workers. They ask for only their just rights, the opportunity to be self-respecting and self-sustaining. Unless they are given gainful employment in keeping with their abilities and interests, they are denied their just rights.

We cannot promote the strength of the whole free world as we contend that we want to do unless we are willing to work shoulder to shoulder with the handicapped. They can add spirit and power to American industry and remove any stigma or accusation that we still practice the tactics of the Dark Ages when the physically or mentally unfit were hidden from the public eye or allowed to starve or freeze in dungeons.

The handicapped do not want our sympathy. They do not need it. They will help you and me when we see that they are trained and hired to work at jobs that will give them human dignity that is their inalienable right.

The Objective Is Fine

EXTENSION OF REMARKS
OF
HON. ROBERT W. HEMPHILL
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 21, 1958

Mr. HEMPHILL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Rock Hill Herald of April 17, 1958:

THE OBJECTIVE IS FINE

President Eisenhower is having a rough go with Congress over his plan to reorganize the Defense Department.

Part of the President's trouble is his own fault. He has not made himself clear. His 7,000-word proposal for streamlining the department left many points in doubt. Vagueness has been one of the President's weak points on more than one occasion.

The overall objective that the President has in mind, however, is certainly worthwhile. He wants greater efficiency in our Defense Department setup.

Ike wants to give the Secretary of Defense and the Joint Chiefs of Staff more authority. Each separate defense branch—the Army, Navy, and Air Force—would lose some authority.

The result might be less interservice squabbling, for one thing. The Joint Chiefs might be more inclined to look at the overall defense picture—and spend the available money more efficiently. The tendency of each individual branch to try to get more than the next might decline.

Maybe Congressmen don't agree with the President on the details. But we'll go along with Ike on the main idea. The Defense Department can stand a whole lot of reorganizing.

Upturn Is On

EXTENSION OF REMARKS
OF
HON. EMMET F. BYRNE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, April 21, 1958

Mr. BYRNE of Illinois. Mr. Speaker, the Chicago Daily News has a spirited and colorful writer, Jack Mabley. I follow his columns religiously and wish to have consent to insert one of his stories appearing on April 15. I wish to commend Jack Mabley for his accurate and timely article on the current economic condition.

UPTURN IS ON
(By Jack Mabley)

The recession is V shaped, it's U shaped, it's saucershaped, it's tapering off, it's getting worse, it'll end in the fall, it will continue through the year, it's a readjustment, it's a depression, it's good for us, it's calamitous.

One thing we know for sure. If the economists in Washington knew what they were talking about they would have foreseen this recession and moved to avoid it.

Most of the predictions of when the recession will end are just so much hot air. Nobody knows when it will end. When the public starts buying instead of saving, business will get better.

Recession is caused by a state of mind. Newspapers are criticized for printing bad news about business. This makes the public cautious and gloomy and worsens the recession.

The critics overlook the fact that if we didn't print bad news along with the good, word of mouth would take over, facts would become monstrously distorted, and a real panic would take place.

Our Democratic Senator came back from Washington last week. He's a humanitarian and anxious to get information to guide him in the Senate.

SHOULD HAVE TALKED TO SAVERS

So to get near the people he hiked out to the State unemployment offices and talked to the unemployed. He got a pretty miserable picture. He is alarmed. We reported his alarm.

I wish the Senator had ogne out to a savings institution on a Saturday morning and talked to people putting their money away. They're employed and well off. They are the ones who could have told the Senator when and why they might start spending.

At any rate, he's gone back to Washington with a frightening picture, based on talking with the 8 percent who are unemployed. The 92 percent who are employed hold the answers.

When the 92 percent start spending, they'll stimulate jobs for the 8 percent not working. Then we'll be out of trouble.

When? Here's a guess. There has been a pitiful absence of direction or leadership from Washington. The panic merchants there are doing more to undermine confidence than any group in the Nation.

So the citizens are taking matters into their own hands. Private business is providing leadership.

SALES DRIVES MAY MARK THE UPTURN

Business is providing salesmanship and good buys. Chicago is in the middle of a huge auto sales campaign. Almost every city in the Nation has done or will do the same.

This may mark the turn upward. This would mean that people smart enough to buy during this sales drive would get the best price of the year or maybe of several years.

Retailers in every field who are giving good buys find the money and the willingness to buy are there.

Over the weekend I shopped in a department store, hardware and garden store, and a drugstore. There were sales going on, and it certainly didn't look like hard times in these places.

Strictly on the basis of trying to figure people, I offer the curbstone opinion that we've hit botton and are on our way up. The initiative and drive of the auto dealers deserves a major share of the credit.

Our People's Factories

EXTENSION OF REMARKS
OF
HON. EDGAR W. HIESTAND
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 10, 1958

Mr. HIESTAND. Mr. Speaker, last fall, the Air Force, in a so-called economy move, arbitrarily took practically all of the maintenance overhaul and alteration business of our fighting aircraft away from the private companies who had developed an efficient and economical defense industry, and transferred it to our Government-owned depots, many of which, conceivably, could have been used in the B–52 dispersal plan.

One of the best editorials I have seen on the subject of getting our Government out of competition with its taxpaying citizens is that of Wayne W. Parrish, in the April 7 issue of American Aviation magazine.

The editorial follows:

OUR PEOPLE'S FACTORIES
(By Wayne W. Parrish)

It is quite apparent that the United States Military Establishment feels that the Soviet Union has evolved a way of life worth emulating. The Air Force and the Navy, especially, have moved rapidly into the Soviet pattern of state socialism with a network of people's factories and a people's airline (called MATS) and almost any day we expect the Order of the Red Star to be given to some stanchly patriotic United States general or admiral for having out-performed Rumania or Czechoslovakia in following the Moscow formula for success.

All this must be so, because the facts are there to prove the belief of United States military in the Soviet way of doing things. It used to be in presocialist days that USAF and Navy let our maintenance and overhaul work to the privately owned aircraft maintenance industry. But today only 3 percent of the $1.5 billion which Congress allocates for maintenance is offered out competitively to private industry.

When Congress ordered a 7 percent cut in the fiscal 1958 budget for aircraft maintenance, the military did just fine. It cut its own people's factories 1 percent and cut private industry 56 percent. And whether or not the military services realize what they are doing, the end result is one big boost to the cause of state socialism as pioneered by the Soviet Union.

Today over 140,000 civilian skilled personnel are employed in 20 people's factories, known as overhaul and repair depots. Not bad empire-building. After all, out of the $40 billion defense appropriation a whopping $7 billion goes for maintaining our weapons once they come into inventory. A commissar's paradise. A carnival for state socialism. Bureaucracy in its finest flowering. And all

done for the glory of the people's democracy, United States branch.

Well, as we often say, the United States of America can take care of its enemies in due style, but Lord save us from those carrying our flag at home but who undermine the very system which made this country great. The military who have pushed their people's factories into big socialistic business following the lines of Lenin and Stalin had better do some soul-searching before it's too late.

What Part Will I Play as a Citizen?

EXTENSION OF REMARKS
OF
HON. JOHN M. VORYS
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, April 21, 1958

Mr. VORYS. Mr. Speaker, by unanimous consent, I am placing in the RECORD the prize essay of Ellen Gira Zisking, 50 South Ardmore Road, Columbus, Ohio, which is in my congressional district, entitled "What Part Will I Play as a Citizen?"

Each year the American Legion of Ohio conducts an essay contest based on a patriotic subject. The study and effort devoted to this contest by thousands of high-school students is a great stimulus to understanding of the duties of citizenship. The subject this year is especially challenging. This winning essay contains thoughts that could well be weighed and taken to heart by every good citizen.

WHAT PART WILL I PLAY AS A CITIZEN?

What part will I play as a citizen? In order to come to terms intelligently with this question, it becomes necessary to define the word "citizen." Webster defines citizen as follows: a member of a State; a person, native or naturalized, who owes allegiance to a government. It is clear that the significant word in this definition is "allegiance." Allegiance is a matter which may vary with the individual. For myself, however, allegiance to my country implies a recognition that the privilege of living in a democracy where an individual is guaranteed certain basic liberties, carries with it definite duties and responsibilities. The manner in which I accept and discharge these responsibilities, will determine the kind of citizen I shall be.

What do I consider the responsibilities and duties of citizenship? First, it is important that I stand ever ready to defend my country against its enemies. A country is only able to survive if its citizens stand committed to fight for it. Thus, as a citizen, I am prepared to do so.

Second, it is my duty to obey the laws of my country, State, and city. Only through obedience to law is it possible to live in harmony with others. Failure to obey laws brings chaos and disorder.

For the good of my country, and because this makes it a better and more decent place in which to live, I propose to heed legal authority.

Third, it is my responsibility to participate in the educational, cultural, and religious goals which will insure my country's growth, progress, and development. Excellent schools, opportunity to express ourselves creatively, and strong moral teaching make for a better government. Thus, I resolve to lend my efforts diligently to these causes, because both my country and I will benefit immeasurably through such labors.

Fourth, I know that living in my country involves living with others. There will be people who are less fortunate than myself, who, through sickness and disease or other circumstances, will need help. Since it is my understanding that my country is only as strong as its willingness to lend aid to its unfortunate, my citizenship will direct me to make myself a part of a program on behalf of the disabled and underprivileged, wherever such conditions exist. Moreover, as a citizen, I shall never consider this work completed until the causes for these conditions are eliminated.

In conclusion, I consider it a part of my citizenship to work for the achievement of peace. I am mindful that my country offers me many opportunities and stands ready to protect me always. This, my country, can only continue to do, if I, as an individual, through my Government, strive for a world in which all men are brothers under the kingship of God. Thus, my citizenship shall be a challenged, wherever possible, to pursue the cause of peace between nations, and all men, always.

How Hiring the Handicapped Helps You and Me

EXTENSION OF REMARKS
OF
HON. OTTO KRUEGER
OF NORTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 21, 1958

Mr. KRUEGER. Mr. Speaker, much has been said about the waste of manpower which has resulted from not fully making use of the talents and ability of persons who are physically handicapped.

I think this has been very ably summarized in an essay by Miss Sally Ann Walter of Mandan, N. Dak. Her essay is so good, in fact, it has been adjudged one of the prize winners in this year's essay contest sponsored by the President's Committee on Employment of the Physically Handicapped, and the Disabled American Veterans.

Because of her fresh and vigorous approach to this problem, I believe every Member will be interested in what she says:

HOW HIRING THE HANDICAPPED HELPS YOU AND ME

(By Sally Ann Walter, Mandan Senior High School, 1100 Sixth Avenue NW., Mandan, N. Dak.)

You and I, collectively and individually, constitute the American public. We share in the government, the freedom, the luxury of a great Nation, but we also have a part in its problems and indebtedness.

If the magical genie of Aladdin's lamp would appear suddenly to us, the American public, and show us a sure-fire way to cut down on taxes, increase the number of producing citizens, boost the integrity of the United States abroad, and gain a great deal more blessings both materially and spiritually for this country, wouldn't we weigh Mr. Genie's plan carefully? In fact, wouldn't we jump at the chance to gain just those blessings for ourselves and our country?

Yes, I think so. For you see, Mr. Citizen, we are the pioneers and people of the greatest democratic nation on the face of this earth today. Americans have always faced up to their national problems, accepted criticism, and looked for ways to bettering their Nation and people. The genie of Aladdin's lamp has an answer and a plan for solving many of the troubles of today. It is to hire the handicapped.

At first thought this may seem strange to you. You may even argue that such a plan has nothing whatever to do with the great, pressing needs and problems our country is facing today; that it would profit you nothing to hire a handicapped individual. But take a second look; consider the proposition a little longer.

Today we are engaged in a cold war with Russia, and other communistic countries, that is basically a contest between two ways of life. Hiring the handicapped is a vote for democracy and an answer to communism's challenge because democracy is based on the policy that all men are created equal. This does not mean that a person without a leg, arm, or eye can physically equal a totally well and whole person. But he can equal and even surpass a normal person in a specific vocation.

A man who possesses a pair of skillful, sensitive hands can repair precision watches even if he has no legs; a deaf man could do better work in a noisy factory than his normal fellow workers who would be distracted by the din.

All facts considered and weighed, you still have the truth that all men are equal. Take the handicapped person, look beyond his physical defect, and you will find another American citizen. Look at what the person has left, not what he has lost, and you will see him as your fellow human being, your equal. Going one step further and treating the handicapped as your equal, Mr. Citizen, is a direct hit at the terror of communism, for you are expressly demonstrating that all men are basically the same, equal. You are upholding democracy and safeguarding your way of life.

What has democracy provided for these people? What have you as a citizen contributed to their welfare? Your Federal Government operates and finances the vast vocational rehabilitation program which stretches into 48 of the 48 States. You have passed the Federal Rehabilitation Act, which provided financing and expert medical and guiding help for those people with physical defects, to help them become more useful citizens. In 1943 you amended this law, widened it to include those with emotional or mental handicaps. Your President has organized a President's Committee, and your Congress has voted financial aid for these programs. Your country has been an example to foreign nations and to the ever-threatening danger of communism in this very significant way.

But the strange and wonderful fact about the whole matter is that we not only gain integrity and esteem of other countries, we not only prove that democracy is best, but materially we benefit by hiring the handicapped.

Over $400 million are consumed by these handicapped persons through governmental assistance payments in 1 year alone. This money goes to 260,000 blind persons; 2 million with diabetes; 200,000 amputees; 750,000 epileptics; 500,000 with tuberculosis; 10,500 cases of cerebral palsy a year. There are over a million other people with minor difficulties.

This means that our institutions and hospitals are filled with persons who rely on Government aid through tax-supported institutions. Rehabilitating these people would free the Government plus you and me, the citizens, from higher taxes.

But let's get down to cases. A few years ago a cross section of 8,000 handicapped individuals were receiving between them $5 million of assistance payments, your tax money. They were rehabilitated, put back in the active stream of life. In the first year alone after their return to activity, they earned $14 million. They no longer relied

on your tax money; instead they paid $1 million in income taxes. The tax consumer can become a taxpayer, no longer a burden on your pocketbook but an asset to the Nation and the Nation's business.

The Chamber of Commerce of the United States, in cooperation with the National Association of Manufacturers, has made a spot survey of 800 member companies to determine the comparative performance of the handicapped and nonhandicapped workers. Their findings show that the handicapped are adaptable, that they adjust quickly and satisfactorily to the conditions of the job.

Handicapped people are equal and sometimes superior to nonhandicapped persons in their job performance. They make safety records equal or superior to other workers. They tend to have job attendance records as good as fellow workers on the same job. They are not job hoppers but reliable, trustworthy employees. They have proved to be assets to their communities, families, and employers.

Webster defines "handicap" as: "any disadvantage which makes progress or success more than ordinarily difficult." Note that he doesn't say impossible, just difficult.

In other words, this handicap is a challenge to the individual. He must work many times harder than a normal person to be a success. He must overcome the pain of his defect, must crush out his shame and embarassment, develop patience and courage. This, then, is no person to be ignored. He has struggled and fought through a great war with himself. He has died a thousand deaths.

Abe Lincoln said of the dead at Gettysburg: "They shall not have died in vain," and I say of our handicapped people: "They shall not have fought in vain." Just as our soldiers fought on the battlefields of the world for democracy, so also does the handicapped person fight for democracy. He, as an individual, is a unit of democracy and we as individuals profit from his fight because we, too, are a part of this democracy. This is exactly how hiring the handicapped helps you and me.

Is Work Going Out of Style?

EXTENSION OF REMARKS
OF
HON. ROBERT W. HEMPHILL
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 21, 1958

Mr. HEMPHILL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Rock Hill Herald, of April 16, 1958:

IS WORK GOING OUT OF STYLE?

If you're like the rest of us there have been times when you have sat back and dreamed about how nice it would be to have plenty of money and to loaf the rest of your life.

The dream is perfectly normal, but it reminds us of a growing attitude in America that work is distasteful.

Dr. William Kvaraceus, of Boston University, said the other day that this country is developing a culture that is seeking to get rid of work. The magic words today, he says, are labor-saving device.

The Boston educator says work is discipline. He says the attitude that work is something to be avoided will cause juvenile delinquency to rise.

Another man, Dr. D. Ewen Cameron, says we have an "asinine belief that not to work is to enter into bliss."

The point is that doing nothing can get mighty dull and uninteresting. Soft living develops weak humans.

Work gives you a chance to show what you can do. It gives dignity to your life. It offers you a chance to express yourself and to make some contribution to the world in which you live.

If you become a parasite, taking and never giving, you'll lose your zest for living. And doing nothing won't be any fun. Work is what makes you able to appreciate rest.

It doesn't matter what kind of work you do. The important thing is to have pride in doing the job well. The satisfaction you'll get will give meaning to your life.

Stop Federal Controls

EXTENSION OF REMARKS
OF
HON. J. HARRY McGREGOR
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, April 21, 1958

Mr. McGREGOR. Mr. Speaker, under leave to extend my remarks I would like to include an editorial appearing in a newspaper of wide publication. I am doing this because I, too, am worried because the legislation referred to is seemingly another step of federalization of our entire Government procedure. If we do not call a halt to Government controls in my opinion it will be but a short time before many other businesses will come under Federal jurisdiction.

BILLBOARDS AND HIGHWAYS

By the close vote of 47 to 41, the United States Senate last week approved a bill going all around the proverbial Robin Hood's barn to effect a partial Federal control of billboard advertising on the Nation's highways. The measure now goes to the House for consideration.

The bill originally provided that States which conform to Federal regulation of size and placement of billboards—in practical terms, their virtual elimination—on their segments of the 41,000-mile National Highway System will receive a bonus in the form of a larger allotment of Federal money.

An amendment to the bill exempted some 10,000 miles of federalized highways by stipulating that the law would not apply to any roads being built over the routes of already existing highways. So the law, if enacted, will affect only the remaining 31,000 miles.

We do not object to the motive behind the legislation. We prefer highways which are not defaced with unsightly advertising signs, along which motorists may enjoy the unspoiled natural beauty of the countryside without incongruous distractions.

We do see several dangers, however, in the equivocal manner in which Congress has approached the problem.

For one thing, it represents one more instance of indirect Federal dictation to the States. Of course, the proposed law is not compulsory. Any State which does not wish to ban billboards on national highways is free to refrain—but how many States will refuse what amounts to a polite bribe to bow to the Federal Government's will, when it means more money from Washington?

Another thing is that it would provide reason for those who would like to establish the principle of some degree of government control over advertising to point to a precedent favoring their objective.

For once the premise that the Federal Government may properly control advertising is established, what is there to prevent its application to other mediums?

Finally, the move looks very much like another subtle invasion of States rights.

The problem of whether or not to permit billboards on principal highways varies greatly in different localities and is affected by many factors.

If individual States wish to ban, or not to ban, depending on how their citizens feel about it—and do it frankly, without resort to a devious system of rewards or penalties, as embodied in the Federal bill—it seems to us less chance exists of setting a dangerous precedent.

Sales in You-Auto-Buy Drive Roll in High Gear

EXTENSION OF REMARKS
OF
HON. EMMET F. BYRNE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, April 21, 1958

Mr. BYRNE of Illinois. Mr. Speaker, I would like consent to insert a story about Chicago's you auto buy which went into gear April 16. This campaign is to last for 9 days and, according to the Chicago Daily Tribune story of April 17, the results are making the dealers sing.

For some time I have been saying that American private enterprise will take steps to give our economy a boost. The automobile dealers over the entire country have embarked on a drive which merits praise. They are not going to succumb to the onerous lamentations from some quarters that America is in a situation from which we cannot emerge. I commend Raymond Ellis of the Chicago Tribune for his fine account of Chicagoland's participation in this program.

SALES IN YOU-AUTO-BUY DRIVE ROLL IN HIGH GEAR

(By Raymond Ellis)

Chicago's you auto buy now campaign was locked into high gear yesterday as sales continued at about the same high rate established in the first 3 days of the 9-day drive which opened Saturday.

Tuesday's sales of new cars were estimated at 925 units, raising the 4-day total to more than 2,600 units from 1,303 in the corresponding period a week earlier.

SALES WILL TOP 4,711

If this rate continues, sales during the campaign will run well over the 4,711 new cars sold in the 12 days preceding the opening of the campaign.

The you auto buy now campaign in Chicago is sponsored by the Automobile Trade Association, composed of new car and truck dealers, and the Greater Chicago Used Car Dealers Association.

In the first 3 days, used car sales were estimated at 3,300 units, with a total value of $3,300,000. Total value of new cars sold was placed at between $8 million and $9 million.

COUNTRYWIDE SALES EFFORT

The you auto buy now drive is part of a countrywide campaign promoted in cooperation with the automobile industry to give a boost to the economy.

One out of seven workers owes his livelihood to the automobile industry.

On an individual basis, it was reported yesterday that dealers were profiting in proportion to the amount of effort each put into the campaign. One dealer reported a fivefold sales increase in the first 4 days—an average of 10 cars a day compared with a yearly average of 2 cars a day.

Resolutions of Breeders Association

EXTENSION OF REMARKS
OF
HON. ALBERT H. QUIE
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 21, 1958

Mr. QUIE. Mr. Speaker, I should like to call the attention of my colleagues to a series of five resolutions, pointing the way to a stronger agriculture, which were adopted on March 29 by the Minnesota Holstein-Friesian Breeders Association.

The association, a great farm organization in Minnesota, is composed of about 975 members who are all prominent dairy farmers of the State. In a meeting at Northfield, Minn., the group passed the following resolutions which I believe should be studied and thoughtfully considered by all members of Congress as we are confronted with legislation for the benefit of our farm people:

RESOLUTIONS ADOPTED BY THE MINNESOTA HOLSTEIN-FRIESIAN BREEDERS ASSOCIATION, IN MEETING AT NORTHFIELD, MINN., MARCH 29, 1958

TAXATION OF FARMERS COOPERATIVES AND THEIR PATRONS

Under the law, farmer cooperatives are taxed in the same manner as business enterprises conducted by individuals or partnerships. The savings made by farmers in marketing their products through their cooperatives, belong to the farmers.

Patronage refunds are income to farmers and are therefore taxable to the cooperative patron. The extension of withholding taxes to such allocations of income before distribution to farmers would discriminate unfairly. We oppose any legislation whereby farmers' earnings allocated directly to individual farmers by their cooperatives would be subject to withholding taxes.

MARKETING AGREEMENT ACT

We recommend review of the regulation imposed under the Agricultural Marketing Agreement Act of 1937 to the end that exclusions from the market are no longer necessary or in the best interests of farmers and consumers, shall be removed.

Improvement in transportation equipment and the possibilities of reducing transportation costs by use of new developments in the science of manufacturing may make it unreasonable to exclude from these markets, producers living at considerable distance, but now because of advancement in the techniques of manufacturing and transportation should and can now supply milk and products of milk to the advancement of both producers and consumers.

NATIONAL UNIFORM SANITARY STANDARDS FOR MILK

The development and administration of standards for use in the marketing of perishable commodities interstate is a well-defined function of Government.

Such standards have been developed but never made mandatory with reference to fluid milk. The United States Department of Health, Education, and Welfare has prepared a milk ordinance and code as a service to local communities. This ordinance and code is widely used for administering the public function related to the local milk supply. If health officers fail to apply the standards uniformly, the shipment of milk interstate for use in the various markets becomes uncertain and confused.

We recommend to the Congress of the United States that:

(a) The provisions of the United States milk ordinance and code should be made mandatory with reference to all milk moving in interstate commerce in all markets of the United States, and that (b) to prevent build-up of duplicating and conflicting agencies, the personnel of local public health offices be qualified by the Department of Health, Education, and Welfare, insofar as feasible, to administer the inspection and certification divisions of the code.

LABOR AND MANAGEMENT

Labor, costs, or wages cannot be advanced more rapidly than the productivity of labor if our present disastrous inflationary trend is to be curbed and a stabilized dollar realized. We appeal to the leaders of the labor movement to use discretion and sound business judgment in making demands for wage increases, and do so only when increased productivity would justify such increases.

We also appeal to the management of industry to refrain from price increases that extend beyond the cost of production plus a reasonable return or profits on investment. The vicious wage-price spiral of today constitutes one of the great dangers jeopardizing the future welfare of our free American economy, and constitutes the principal cause of the present price-cost squeeze on agriculture.

FOOT-AND-MOUTH DISEASE

The Minnesota Holstein-Friesian Breeders Association in convention assembled joins with other interested livestock organizations in recommending and strongly urging that the joint commission for the prevention of foot-and-mouth disease, now located in Mexico, be continued. In addition, we wish to commend both the Governments of Mexico and the United States in maintaining a nucleus of personnel and equipment under the joint commission for the protection of both countries against the reoccurrence of the dreaded foot-and-mouth disease on our continent.

Free Enterprise

EXTENSION OF REMARKS
OF
HON. E. Y. BERRY
OF SOUTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 21, 1958

Mr. BERRY. Mr. Speaker, at this time, with the air filled with an ever-increasing number of socialistic schemes under the guise of antirecession legislation, it is especially gratifying to be reassured that the youth of our country realize that through the free enterprise system, this Nation became great, and only by perpetuating it, can we continue to prosper.

It is with genuine pleasure that I direct the attention of my colleagues to the following essay written by Miss Nancy Nickerson, of Rapid City, S. Dak. Miss Nickerson is a high school senior, and her essay was awarded first place in the South Dakota State Medical Association's annual contest.

The United States of America is the richest Nation in the world, for here we enjoy a higher living standard than any people in any other land. No other nation has achieved the progress and success that America has achieved.

Throughout the world people look to America for assistance in the bare necessities of life. These people need the food produced on America's Midwestern farms, the cotton produced in the South, and the machinery built from steel in American factories. The people of the world look to America as an example: an example of freedom and prosperity.

Yes, truly America has the highest living standard in the world. But, you ask, why is this so? Why do we have more than others? There are many reasons why we are so fortunate. But the American free enterprise system has been the greatest force in raising our standard of living. The American ecenomic system grew out of a longing for personal freedom and has always emphasized the idea on individualism. Our American free enterprise system is based on the belief that individuals should rely on their own efforts for most of the things they want. This economic system is characterized by the institutions of private property, freedom of enterprise, and freedom of contract.

Freedom to own property gives one the exclusive right to own something of value. Private ownership of wealth is one advantage of our economics system. The hope of increasing earnings stimulates initiative and causes man to work harder. The accumulation of wealth gives an incentive to save. The result is an increase in capital for both the individual and the Nation. If more people have more money with which to buy goods, more goods will be produced and production costs will decrease. Thus, the American standard of living will rise.

The second institution of our economic system is freedom of enterprise. Freedom of enterprise gives on the right to go into business for oneself. Freedom of enterprise leads to competition. It has been said that competition is the life of trade. Competition causes producers to maintain and to strive to improve the quality of their merchandise. New methods must continually be discovered if one competitor is to remain on an equal basis with another. The producer must produce the goods needed and wanted by the majority of the consumers. The producer and the merchant must be alert in order to keep up with his competitor. Competition causes the sale of more goods; therefore competition results in lower cost. In American's free competitive market, business is operated for the purpose of making a profit. The hope of making a profit stimulates initiative to work. Clifford F. Hood, president of the United States Steel Corp., believes that the desire to make a profit is the spark plug in our industrial mechanism. Because Americans are allowed to go into business for themselves the American standard of living rises.

The third institution in our free enterprise system is freedom of contract, which gives an American the right to make an agreement which can be enforced in a court. This institution is a protection of an individual's freedom.

Yes, Americans are very fortunate. The American free enterprise system gives one the right to succeed or to fail. It gives one

the right to work as hard as he wishes. It gives one the right to have a little or to accumulate a lot. As long as Americans continue to possess this freedom, our standard of living will continue to be the highest in the world. Mr. Hood said about our economic system, "I strongly believe that the American enterprise system is making its contribution to more than just material welfare of the American people, and of other peoples whose lives it touches. I feel too, that along with religion, the industrial enterprise system stands in apposition to godless, grossly materialistic Russian communism."

Years ago Karl Marx wrote that by adopting his form of communism, a country's living standards would rise to great heights. He also believed that communism would eventually become the form of government for the entire world. How surprised Marx would be if he knew that the free-enterprise system of the United States had accomplished all that he thought his communism would accomplish. What would he think if he could now compare the living standards of the United States with that of the people of Russia?

The Communists often say that "while socialism might not work in the United States where the people are for the most part well off to begin with, it was a good thing for China and other less advanced nations." It must not have occurred to them that this country was not pretty well off to begin with, but got that way precisely because it followed the principles of free enterprise.

The leaders of the communistic and some socialistic countries take from each of their people according to their ability, and give to each according to their need or their work. In America we are free to work and to earn more or less than our fellow worker. We often fail to understand that democracy with individual freedom is impossible except on the basis of the free-enterprise system. We must preserve our economic system, for as long as we practice the American free-enterprise system, we will continue to have the best housed, most healthfully fed, most soundly educated nation in the world.

Daniel E. Lambert

EXTENSION OF REMARKS
OF
HON. CLIFFORD G. McINTIRE
OF MAINE
IN THE HOUSE OF REPRESENTATIVES
Monday, April 21, 1958

Mr. McINTIRE. Mr. Speaker, it has been said that the giving of oneself in the service and interests of others is the principal characteristic of a first-class citizen.

I submit this release from the fifth Legion district news service to substantiate that Mr. Daniel E. Lambert is eminently qualified to assume this title:

It was announced today that Daniel E. Lambert, South Brewer, Maine, Penobscot County commander, Department of Maine, the American Legion, has set a new record by presenting over 100 talks to non-Legion groups on the programs of the American Legion and Auxiliary since his election last June.

Commander Lambert, a four-time wounded member of the famed Darby's Rangers of World War II, has covered all phases of the Legion activity in a move to acquaint non-Legionnaires with the outstanding features of the organization. As a result from these active and informative sessions, many groups are desirous of obtaining his services, presentations of his subjects are booked ahead for 1 year by PTA, civic, church, and fraternal groups, as well as TV appearances, to further the Legion's program. This public-relations program has the full support of the fifth Maine Legion district.

The record number of addresses by this disabled Ranger shows that he has not lost his fighting spirit. Considered one of the best speakers in the Pine Tree State, Lambert's presentations are now crossing State lines in New England area. His most recent invitation will be in Canada this coming June.

Lambert has devoted much time to the VA program of community acceptance of disabled veterans and has called for the need of every citizen to be interested in the Veterans' Administration. It was also announced that Commander Lambert will undertake a special series of talks on rehabilitation, child welfare, and service work during the next 2 months.

Off the Record

EXTENSION OF REMARKS
OF
HON. ROBERT W. HEMPHILL
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 21, 1958

Mr. HEMPHILL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Chester Reporter of April 9, 1958:

OFF THE RECORD

People as individuals rarely learn from the experience of others. In the case of nations, history recalls only a few instances when one nation has profited from the experience of another. Here in the United States we are playing footsy with the idea of the welfare state while ignoring evidences of its failure in other lands. We dislike the Communist system, of course, because it depends on a police state for its survival.

But what of the welfare state in a free country? According to a recent Gallup poll, 56 percent of Great Britain's young people between 21 and 34 years of age would like to leave their native islands and settle somewhere else. The elsewhere includes Australia, Canada, New Zealand, and the United States in that order of preference.

Other surveys in recent years have shown similar desires. Student organizations have probed deeply into why so many of England's young people should wish to leave their homeland forever. Reasons are many and varied. But one of the principal ones is found in the restrictions of the British welfare program.

Government controls are rigorous and carry with them a crushing burden of taxation. Opportunity for most young people is limited in the extreme. The heavy hand of an intrenched, rule-bound bureaucracy is felt everywhere. Main basic industries are nationalized and most large privately owned enterprises are circumscribed and dominated by Government.

Security without opportunity can be as oppressive as a police state. That is why England's people want to get away to a land of more freedom, more chance to make the most of their energies and abilities in an atmosphere that encourages private enterprise.

There are lessons to be learned from England's experiments with the welfare state but the trend in the United States has been more to duplicate the mistakes than to learn from them.

We have become too sophisticated, too wrapped up in new ideologies, to interpret correctly the significance of the simple success story. The State told recently of the career of one of its former newsboys. He is John E. Swearingen, native Columbian, who is now, at the age of 39 years, president of the Standard Oil Company of Indiana.

This was no poor boy, rags-to-riches story, but the account of a hard-working youngster who took advantage of the ordinary opportunities to be found on every hand in the United States.

England gave us the story of Dick Whittington but we doubt that he could become Lord Mayor of London in the welfare state. Our present danger in the United States is not a depression but the loss of a fraction more of freedom and independence as the Government moves in with more controls and guaranties of security.

It used to be that when we wanted to cite something as completely ridiculous we would compare it with a man attempting to lift himself by his own bootstraps. We no longer have boots as everyday wear and few people know the purpose of a bootstrap. A man trying to lift himself by his shoestrings would be more apt if Secretary Dulles had not recently supplied a better illustration.

In his appearance before the Senate Foreign Relations Committee, Mr. Dulles argued that the $3.9 billion foreign-aid program was needed down to its last dollar to cut unemployment in the United States. It was his contention that three-fourths of what we give away to foreign countries was spent in the United States and that the remainder—after aiding the economy of our allies—eventually comes back to the United States to buy additional products.

In other words, the more we give away, the better off we become economically. This is the giveaway philosophy that has affected the State Department for a number of years. It defies all known economic law and would have already bankrupted this country except for the tremendous resources of our economic system. But the day of reckoning is approaching.

Report on Hill-Burton Funds in Iowa

EXTENSION OF REMARKS
OF
HON. FRED SCHWENGEL
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 21, 1958

Mr. SCHWENGEL. Mr. Speaker, since it has been my pleasure to be a Member of Congress, I have had an opportunity on several occasions to help a number of hospitals qualify for and receive Hill-Burton funds to build and improve hospitals in the various parts of my district. This experience suggested that it might be of interest to do a study of this program as it relates to the State of Iowa. I am happy to take this opportunity to report to the Members of this body the results of my study of 10 years of grants-in-aid or better known as Hill-Burton program for hospital construction in Iowa. First, it may be well to recall the apparent intent of the Congress in the passage of Public Law 725 and its subsequent amendments.

First. To study the comparative need of all communities for hospital facilities in terms of national standards consistent with the best thinking available.

Second. To provide funds to assist communities with greatest unmet need for hospital facilities who demonstrated sufficient incentive by providing two-thirds of the funds required for the subject.

Third. To utilize commercial practices of design and construction which would result in the maximum hospital facilties for the fewest Federal dollars with the shortest period of time.

Fourth. Administration of the program would be by State agencies with only technical assistance from the Federal agency.

Fifth. Planning.

When the program was inaugurated in Iowa, the public reacted rather skeptically. Most sponsoring groups inquired with reservations because of their experiences with previous Federal WPA and other public works programs where control and regulations were entirely in Federal hands and where excessive regulation and control had been continuously demonstrated. The architectural profession of this State was equally reluctant to participate in the program because of these same unreasonable regulations and control.

During the first 5 years, most of the public reluctance was overcome. The Federal agency offered assistance in expediting projects to completion with a minimum interference through regulations. Their interpretations of the intent of Congress seemed acceptable. While Public Law 725 authorized an annual appropriation of $150 million, it should be pointed out that in all but 1 year the appropriation was below the authorization and ranged down to as low as $60 million.

Accordingly, the Iowa agency has never been able to assign Federal funds to every eligible applicant responding to the annual invitation in spite of the dire need of many communities. As a result, many communities whose needs could not be denied utilized their maximum local resources, reduced the scope of their planning, and proceeded without Federal assistance.

During the past few years, certain groups within the State have expressed themselves in regard to the effect of the program. A criticism occasionally heard is that the program is stimulating construction beyond the needs of communities. This seems to be an inaccurate statement and not based on facts. The basic program permits participation only in areas with existing unmet need for hospital beds, needs based on accepted national standards. Demand for participation has always been beyond the funds available to the State, thereby precluding allotment of moneys to the projects with least unmet need. Such comment seems to stem from the larger hospitals that are apparently jealous of the service rendered the smaller communities by the smaller hospitals built with help of the program. There is no question that the program has benefited, either directly or indirectly, the citizens of every community in Iowa. Thousands of people now have access to adequate hospital facilities and treatment who would otherwise be denied this opportunity.

INDIRECT RESULTS

Mr. Speaker, it is also very gratifying to note the indirect results of this construction program. It was stated earlier that many hospitals could not participate in the grants program and proceeded to build a smaller facility than was needed but without grants-in-aid. It is conservatively estimated that during the past 10 years, there has been $120 million worth of needed hospital construction in the State, exclusive of construction in State owned hospitals. Of this total, approximately $64 million worth of hospital construction was with grants-in-aid which totaled less than $19 million. Directly or indirectly, 1 Federal dollar stimulated $6.32 worth of hospital construction.

At this point, it might be well to pursue further the possibility of overbuilding. The hospital experience of the past 10 years in Iowa has been reviewed from several angles by highly qualified people. None give indication of excessive building. All facilities are being used to the maximum. It is safe to say that the rate of construction in the past has done little more than eliminate some of the obsolete facilities which existed at the beginning of the program.

The initial study criteria for hospital beds classed them as acceptable and nonacceptable. No initial provision was made for determining the degree of obsolescence or the future life expectancy for the acceptable beds. On the basis of this simple criteria, it was determined that in 1948, 35.56 percent of the total statewide bed need was met. After constructing $120 million worth of hospitals, with $19 million aid, Iowa can provide only 51.98 percent of the total bed need. If the acceptable beds were studied further, however, we would find that a portion of these have only limited future expectancy in terms of obsolescence based upon present day standards.

FUTURE NEEDS

The Iowa State Department of Health has made preliminary studies toward projecting a 20-year program designed to fulfill all unmet needs, replace obsolete hospital structures which cannot reasonably be licensed, and meet needs for population increase. Several basic assumptions were necessary, such as—

First. That population trends would be reasonably constant.

Second. That the average life expectancy of buildings is 50 years from the date of construction.

Third. That bed need per unit of population is not inconsistent from the conservative criteria utilized in the current grants program.

Projecting the above assumptions and correlating the past construction of beds to fulfill unmet need, a conservative estimate indicates that a construction rate of at least 1,236 new beds per year is necessary until 1978. During the past 10 years when hospital construction has been most active, we have built at an average rate of 582 new beds per year. In other words, Iowa would have to triple its present rate of construction to approach fulfillment of such a goal. Interpolated to dollars, and assuming that construction costs were comparable with the past 10-year average, Iowa needs to construct hospitals at a rate of from $35 million to $40 million per year until 1978.

OTHER NEEDS

The earlier comments were in terms of hospitals as defined in Public Law 725. The amending Public Law 482 which incorporated related health facilities into the program introduces an additional need for nursing-home bed. In this category Iowa, as many other States, presently finds itself in a deplorable condition. The problem of adequate and pleasant homes for our fathers, mothers, and other people in their age group is becoming more acute every year. This may be the next great social problem that we will have to face as a Nation. Many communities and States have already recognized this problem and have pointed the way toward meeting the challenge with and without Government encouragement and help.

Examples of the fine contributions that have already been made are found in Friendship Haven, Inc., a home for the retired people of Ft. Dodge, Iowa, sponsored by the North Iowa Conference of the Methodist Church. And another community that has seen fit to meet the challenge is Washington, Iowa, where the Presbyterian Church has maintained a home and where now other citizens of the city see the need for meeting the challenge and have already improved and bettered the facilities for more people in their community. Robert Blue, former Governor of Iowa and now a member of the governing board of Friendship Haven and who through the years has given much thought and study and furnished fine leadership in this whole area of the problem of retired people, has this to say in reference to the problem in Iowa. "There is a very large need for modern nursing homes. There are practically as many people in nursing homes in the State of Iowa as there are in all of the board of control institutions, which include the penitentiary, reformatory, boys and girls reformatories, mental hospitals, and hospitals for the feebleminded and epileptic."

He further observes, "most of the present nursing homes in this State are secondhand buildings that were originally constructed for a home, a hotel, a hospital, or a factory."

In the discussion of this subject, he points out further that "one of the facts that is too little understood is that an aged person or a chronically ill person can be adequately cared for in a modern nursing home at approximately half the cost of care in an ordinary hospital."

Here, then, is testimony of dire need by a competent and able public official who has dedicated his life to a study and consideration of this problem and then set about trying to do something about it.

He further states that it is his considered opinion that "a substantial amount of the overcrowding at State

mental institutions and in the ordinary hospitals could be relieved if we had a nationwide program for building modern nursing homes. This care, whether it be for the chronically ill, the senile, or the person with ordinary medical ailments, can be furnished in modern nursing homes at a saving of approximately 50 percent, either to the individual who pays his own way or to the public body that must care for such a case."

Finally he makes a statement saying that Congress should recognize the situation that has been created and seek to rectify it and endorse a nationwide program for building modern nursing homes with the Federal Government furnishing part of the money and the balance furnished by State, county, or the municipality, and says that if Congress wants a building program of real worth, constructive in its nature, and looking toward the future to help ease the present unemployment situation, a nationwide program for nursing homes would be one of the most commendable programs that it could adopt.

Organizations that were most prominent in the success of this program in Iowa are the Iowa Hospital Association, State Medical Society, Iowa Osteopathic Physician and Surgeons Society, and the Iowa Nursing Home Association.

There are many people who have been very helpful in many ways and they include Harold K. Wright, Sioux City; Sister Mary Edmunda, R. N., Fort Dodge; Miss Esther Squire, R. N., Washington; David H. Grau, D. O., Muscatine; Con R. Harken, M. D., Osceola; E. E. Munger, Jr., M. D. Spencer; Miss Anna A. Carlson, R. N., Ida Grove; Mrs. A. D. Wiese, Manning; Mrs. Ralph D. Jacobson, Boone; Thomas W. Purcell, Hampton; and Roy Hawkins, Leon.

The people who have been appointed by the governor and given the responsibility for the administration of this program in the State of Iowa are: Dr. Edmund G. Zimmerer, Polk County, commissioner of public health for the State of Iowa; Mr. James Anderson, Fort Dodge, member of State Hospital Licensing Board; Dr. G. H. Ashline, medical doctor, Keokuk; Mr. Louis B. Blair, Cedar Rapids; B. D. Fickness, registered nurse, Nevada; Dr. Charles H. Flynn, medical doctor, Clarinda; Dr. Gerhard Hartman, doctor of philosophy, Iowa City; Mr. G. Edward Harvey, Missouri Valley; Mrs. James Henderson, Waterloo; Merrill E. Hunt, Des Moines, Iowa; Dr. C. N. Hyatt, medical doctor, Corydon; Mrs. Phyllis Kocur, Des Moines; Dr. R. N. Larimer, medical doctor, Sioux City; Mrs. Alice Nuzum, Des Moines; Marjorie Perrine, registered nurse, Council Bluffs; Dr. Floyd Pillars, dental surgeon, Des Moines; Mrs. Jay S. Tone, Jr., Des Moines; and Dr. H. B. Willard, D. O., Manchester.

The people hired by this council and who are eminently qualified and have had the responsibility for successfully carrying out the policies outlined by the council are: Felix W. Pickorth, Des Moines, director of Division of Hospital Services for the State of Iowa; and H. W. Stricker, Des Moines, Chief Engineer of Division of Hospital Services for the State of Iowa.

Maine Potato Industry Plans Ahead

EXTENSION OF REMARKS
OF
HON. CLIFFORD G. McINTIRE
OF MAINE
IN THE HOUSE OF REPRESENTATIVES
Monday, April 21, 1958

Mr. McINTIRE. Mr. Speaker, marketing plans, more and more, are coming to the fore as excellent vehicles for successfully disseminating agricultural commodities through commercial channels, particularly those of a perishable nature.

Such programs—through quality control and wise marketing practices—serve to help not only the particular area where they are instituted, but all other producing areas as well.

The potato industry in Maine has been recognized as a leader in this field of planned marketing, and as it has done in the recent past, so is it planning to do in the immediate future. The following article from the editorial page of the April 19 issue of the Packer, a vegetable trade paper, graphically portrays the Maine potato industry's forward look:

MAINE POTATO INDUSTRY PLANS AHEAD

For the 1956 and 1957 crop years the Maine Potato Council prepared and executed a marketing plan, and subsequent actions of growers and shippers in carrying out the objectives of these plans undoubtedly contributed to a considerable degree to the success with which the crops were marketed, particularly the 1957–58 crop.

While the marketing plans have been of inestimable help in marketing the crops, the programs did have one shortcoming, the council points out; namely, they were adopted and executed after the crops had been produced. To remedy this situation, a move has been made in Maine to tailor the crop to be produced to fit the pattern of what it is believed can be marketed profitably. To this end, the productive practices committee of the Maine Potato Council has drawn up a marketing plan for the 1958 Maine potato crop before the prospective crop has been planted.

The packer gave wide publicity to the Maine marketing plan which was set up last year before the crop started to market. It is our belief that the planning which spelled out Maine's program for marketing the 1957–58 crop aided other late producing States greatly in making their own marketing plans, and because we believe a program which spells out a marketing plan, which includes plantings, will help other producing areas even more, we are pleased to present below the highlights of Maine's plan for 1958 at this time. Objectives: Accent on quality, and tailoring the crop to fit its probable market. Here are the plan's highlights:

1. The plan was developed through the Maine Potato Council, the potato growers' own organization.

2. Its objective is to tailor supplies available for market from the 1958 crop to what can be sold. The goal for a successful marketing season is 52,000 cars.

3. Based on the acreage that growers now intend to plant, the 1958 crop can easily total 400 million bushels.

4. In the past 6 years potato growers have planted more potatoes than their March 1 intentions in every year except 1957. Potato plantings usually increase following years of good prices and decline following years of low prices.

5. Potato growers have a greater opportunity to adjust production to meet market needs before the crop is planted than after it is harvested.

6. In making the decision, the individual grower needs to evaluate the overall supply and demand situation and what he logically can produce and sell from his farm.

7. Maine can successfully sell more potatoes from the 1958 crop than they did in any year except 1957 and possibly 1929.

8. Maine growers have reported intentions to produce more potatoes in 1958 than in 1957.

9. Quality is a must if markets are to be maintained and expanded. Following recommended production practices will assist in giving desirable quality.

10. The crop should be tailored to meet specific market needs and prospects. Caution needs to be expressed in increasing production of Russet Burbanks and potatoes for chips. In some varieties, seed production can be increased. There will be an expanded outlet for potatoes for food processing in Maine from the 1958 crop.

What Part Will I Play as a Citizen?

EXTENSION OF REMARKS
OF
HON. JOHN M. VORYS
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, April 21, 1958

Mr. VORYS. Mr. Speaker, by unanimous consent, I am placing in the RECORD the prize essay of Timothy J. Ucker, 100 East North Broadway, Columbus, Ohio, which is in my congressional district, entitled "What Part Will I Play as a Citizen?"

Each year the American Legion of Ohio conducts an essay contest based on a patriotic subject. The study and effort devoted to this contest by thousands of high-school students is a great stimulus to understanding of the duties of citizenship. The subject this year is especially challenging. This winning essay contains thoughts that could well be weighed and taken to heart by every good citizen.

WHAT PART WILL I PLAY AS A CITIZEN?

Many times I have been asked the question, What do you intend to be when you grow up? I always answered it by telling of my intention of someday becoming an engineer. I never considered what part I would take in the affairs of my country. Now that I think of it, I can see that I shall have certain obligations toward my fatherland and shall receive certain privileges from it.

In the future I will become an active participant in a great organization, the Government of this, the United States of America. I shall be, as every member of this organization is, entitled to all of its rights and freedoms. I shall be free to worship, to speak, and to write as I please. I shall be free to vote as I choose for the people that I wish to head this organization. All of these liberties are enumerated in the Constitution. All will be mine as a citizen.

As a citizen of the future it will be my duty to defend and protect my country, if called upon to do so, to respect its laws and civil authority, and to serve it in whatever other ways are presented to me. As a citizen of the future I hope to assist my Nation politically, economically, and socially in all ways possible for me. And I shall be willing to lend a hand and assistance to it for all

it has given and shall continue to give to its inhabitants. That is, in general, the right to live as free men, under God, and to enjoy security, sociability, and peace of mind.

As a citizen-parent of the future I shall have the obligation to rear my sons and daughters as law-abiding and civic-minded patriots. I intend to encourage the growth of the spirit of national loyalty in their hearts, and to impress upon them the importance of a practical knowledge of the workings and policies of the Government under whose dominion they shall live; so that they may, in their era, willingly share their burdens of the Government and be aware of the freedoms and liberties duly granted to them.

My part in my country's operations and affairs will probably be a minor one in comparison with others who may be called upon to lead and guide it through stress and trouble, but by contributing what I am able, I can help to keep the unity of my homeland intact and maintain the stability of the Nation.

Remember Dr. Cook?

EXTENSION OF REMARKS
OF
HON. JOHN R. PILLION
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, April 21, 1958

Mr. PILLION. Mr. Speaker, I am pleased to insert the following editorial from the Orchard Park Press of April 17, 1958, entitled "Remember Dr. Cook?"

Dr. Frederick A. Cook devoted many years of his life to the exploration of the Arctic and Antarctic regions.

Today, April 21, marks the 50th anniversary of the discovery of the North Pole by Dr. Cook.

The Grosvenor Reference Library of Buffalo, N. Y., has an exhibit this month which shows some of the original effects from Dr. Cook's polar expedition as well as documents by leading explorers and geographers who have supported Dr. Cook's claim.

The editorial follows:

REMEMBER DR. COOK?

In a nuclear age when most of the earth's population are concerned primarily with survival of their planet, few care to pause and reflect upon a question so academic as to who was the first human to stand on the top of the world. Yet, when it is a case of injustice, and the righting of a great wrong, there will always be those ready to champion a cause, no matter how small a niche of history it may be.

Such is the case of Dr. Frederick A. Cook. Our grandfathers will remember him as an unassuming and little-known American polar explorer, who overnight rose to the honor and fame of a modern Columbus. For 50 years ago this Monday, on April 21, 1908, Dr. Cook became the first man to reach the North Pole, culminating over three centuries of vain attempts by the world's leading explorers.

Yet just as quickly he was swept into the confusion of bitter controversy, distrust, and ultimate condemnation. Denounced as a fraud, he sadly departed from the mainstream of American history and was scorned and neglected. He died with the world disbelieving his feat.

The paradox in the tragedy of Frederick A. Cook was that his attainment was supported and recognized by most of his contemporary explorers, and European geographers and mapmakers acknowledged him as the discoverer of the pole years after his countrymen closed the doors of their scientific societies to an impartial study of his claims. The giants of polar exploration, like Amundson, always stood with him against his bitter detractors.

Dr. Cook died in 1940, and is buried in Buffalo, where he lived out the remaining years of his life, poor in health and funds, but rich in friends all over the world who kept faith in him. Now, half a century since his great feat, recognition is coming.

Early this year the Italian Polan Institute acknowledged him as the discoverer of the North Pole, and urged other scientific bodies to grant similar just, if belated, recognition. The Buffalo explorer's pioneer accounts of the vast polar basin in the Arctic Ocean are now being recalled by the scientific teams at work in the International Geophysical Year.

One of the most wronged men of all time, these moves come too late for Dr. Cook, who in his lifetime received only defamement. Like Columbus, he was rejected, stripped of his honors and neglected, and died not to know the vindication that would one day come.

Federal Aid to Education

EXTENSION OF REMARKS
OF
HON. JOHN V. BEAMER
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 21, 1958

Mr. BEAMER. Mr. Speaker, I feel that there has been such outspoken opposition to the principle of Federal aid to education, judging from the letters I have received, that it seems important to present some of these expressions of opposition to the full House.

For this reason, under leave to extend my remarks I include in the Appendix of the RECORD, a letter received from the vice president of the Valparaiso Technical Institute of Valparaiso, Ind.:

APRIL 14, 1958.

Representative JOHN V. BEAMER,
House Office Building,
Washington, D. C.

DEAR MR. BEAMER: This is to inform you of my views on Federal participation in education, or control of education. I definitely want none of either.

Any direct Federal grants, Federal schools or even scholarships would be the first step toward complete Federal control of schools. This would be a tremendous step toward socialism, which I do not want. It is a matter of record that the Federal Government each year increases its participation and spending and then control in all areas in which it is active, with almost no exception. Federal control of education would also be a step toward a police state and a step away from freedom of thought and speech.

Education is a grassroots problem and its various phases must be worked out between the educators and parents, with a keen eye toward how the graduates of our schools fit into the community in which they live and how their can contribute through their jobs and other activities, to the well-being of the community and the benefit of the Nation. I firmly believe that a group of bureaucrats in Washington, surrounded with redtape and politics, could do nothing constructive to the education system as a whole. They could only slow down any progress and restrict the initiative of the individual teacher and schools.

My belief, that the largest problem in our schools today is the attitudes of the parents, of the students and of the teachers, has been strengthened by many recent magazine reports and television programs. In recent decades there has been a gradual change of what we might call the early American idea of devotion to duty. This change in attitude is finally being felt in our educational system, and Federal control would not tend to stop it. Federal control would only increase this change of attitude by stereotyping our schools and decreasing the amount of competition toward a scholastic excellence that exists in some measure today.

Sincerely,

EUGENE E. BULLIS,
Vice President.

Truman and His Memory

EXTENSION OF REMARKS
OF
HON. LESLIE C. ARENDS
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, April 21, 1958

Mr. ARENDS. Mr. Speaker, under leave to revise and to extend my remarks I am inserting in the RECORD an article by Dorothy Thompson, entitled "Truman and His Memory," which appeared in the Washington Evening Star of April 19.

As I publicly stated at the time the House Banking and Currency Committee initiated hearings on the recession, their real purpose is political dramatics. They are designed to try to make the American people believe that the administration has taken no action to stimulate our economy, while the contrary is true.

The article follows:

[From the Washington Evening Star of April 19, 1958]

TRUMAN AND HIS MEMORY—EX-PRESIDENT HELD MISTAKEN IN DENIAL OF STATEMENTS ON 1950 JOBLESSNESS

(By Dorothy Thompson)

The pronoun "I" has always occupied a disproportionate place in Harry S. Truman's vocabulary, and as he has grown older his egotism has grown embarrassingly.

It was painfully noticeable in his appearance at the last Democratic National Convention when he played upon his former position as President to bully the delegates, jabbing a finger at them as he talked, assuming the stance of a strut even while standing still, and leading the laughter at his own lame wisecracks.

He cannot resist the limelight and when performing in it ad libs to grab popular headlines.

He claims a profound knowledge of history, but it is childishly superficial. He draws preposterous analogies and on one occasion (a speech on the theme that dictators are all alike) introduced a purely legendary figure among historic personalities.

He continually accused the Russians of the big lie, representing America (identified with himself) as the white knight of purest truth. But as Prospero said of his brother Antonio in the Tempest, he has often "by telling of it, made such a sinner of his memory, to credit his own life."

In some folios, if I recall correctly, sinner is written traitor, and at any rate, Mr. Truman, who is highly sensitive to the word, has been a traitor to his memory. Government and especially Foreign Service officials have

pointed out several instances in his memoirs where he recalls incidents or statements that appear in no contemporary records. Although anyone quoting Mr. Truman to his discomfiture is accused of garbling, he is, himself, a garbler.

He rarely gets caught up in a real whopper, provable by unquestionable documentary evidence, available to everybody. But he was on Monday, in testifying before the House Banking and Currency Committee on how to end the recession. He remarked that "I" would not "sit in * * * a pool of economic stagnation * * * because of some fear, whether * * * real or fanciful, of inflation somewhere down the road in the future." (Bess must do the family shopping, or he'd know the future is here.)

Republican committee members reminded him that he did in 1950, sit in such a stagnation; that unemployment at that time was 8.1 percent of the labor force as compared with 7.7 percent of a much larger labor force today; and that he had then told Arthur Krock in an exclusive interview to the New York Times, "A certain amount of unemployment, say from 3 to 5 millions, is supportable. It's a good thing that job seeking should go on all the time." To which the ex-President replied, "That exclusive interview did not happen. It came out of the air."

That was the whopper. Every editor in the United States knows it happened. Washington correspondents, jealous of a scoop, breaking the tradition of no exclusives by Presidents, challenged him at his next press conference, where he defended his right to see and talk with anyone he chose. Had there been anything phony about the interview rival newsmen would have pounced upon it. If it or any part of it had been denied, Mr. Krock, a most careful and conscientious reporter, as well as the august New York Times, would have been in a caldron of boiling water. Of course, Mr. Krock submitted his article to the President before releasing it. Even were this not protocol, he and the Times would have done so for self-protection.

Mr. Krock needs no defense. Although it is infuriating to be called a liar, Mr. Krock could and did receive the allegation with equanimity, putting upon it the generous interpretation of a slip in memory.

This is not this columnist's interpretation. Mr. Truman, caught up in his egotistic loquacity, was nettled, annoyed, and blurted off the cuff. He refused to be reminded.

After such an example of sinning memory, it will be hard to believe anything he says.

Such is the result of self-inflation.

Postal Service—Past, Present, and Future

EXTENSION OF REMARKS

OF

HON. WILLIAM A. DAWSON

OF UTAH

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 16, 1958

Mr. DAWSON of Utah. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by my distinguished colleague from Utah, Representative HENRY ALDOUS DIXON, at the dedication of the Smithfield, Utah, Post Office on April 11, 1958. It is an interesting and concise history of postal service and the size to which our present postal system has grown.

The address follows:

It is a genuine pleasure to be here in Smithfield today and take part in the dedication of your new post office. It is always stimulating to have the opportunity of being present when any significant development takes place in any one of our Utah communities. It is a source of double satisfaction to be here in Cache County and address you fine people on this particular occasion.

I am sure that you will agree that today your Post Office Department serves more of our people more intimately and more frequently than does any other branch of our Federal Government. Scarcely a working day goes by but what each and every citizen receives some service from it. The Post Office Department is indeed a sound servant and a fundamental part of our living democracy. Democracy and a free and uncensored postal service have grown and developed together—each dependent upon the other.

HISTORICAL BACKGROUND

A postal system such as we know and take so much for granted is a relatively recent development in the history of man. It is true that the roots of such a service go back into antiquity, but until modern times effective postal services were only for the nobility or the very wealthy.

However, men have communicated over distances with each other for thousands of years. Signals or symbolic objects were used in the distant past to convey certain thoughts. A quiver of arrows as a declaration of war, a pipe as an offer of peace, a pillar of smoke to announce the appearance of a stranger are good examples of that type of communication.

Our modern Post Office Department is simply an organized distillation of men's need to communicate.

You may be surprised to know, however, that the famous lines of tribute to our postmen—"Neither snow, nor rain, nor heat, nor gloom of night stays these couriers from the swift completion of their appointed rounds"—was first written by the great Greek historian, Herodotus, in the 5th century before Christ.

There are biblical references to a postal system in the book of Esther, and in Job there is a passage which states, "My days are swifter than post; they flee away."

The Romans built post roads so that the carriers could ride over a hundred miles daily, and the Aztec Indians of ancient Peru had a parcel-post system to distribute fresh fish among the villages. But these early beginnings were for the purpose of serving the state, and the heads of the state, and only through them serving the people.

THE PUBLIC SYSTEM

The first public postal system was established in 1516 and operated between Vienna and Berlin. A broader and more general public system, one that was really the beginning of our type of postal service, was created by Charles II of England when he commanded the establishment of the famous London Penny Post, in the later part of the 17th century.

Here in America in 1672 New York's Governor Lovelace created mail service between New York and Boston over the route known today as the Boston Post Route No. 1; and in 1683 William Penn established the Philadelphia post office. Shortly before the French and Indian wars Benjamin Franklin became postmaster general for the North British Colonies in America. He later became the Postmaster General for all the colonies under the direction of the Continental Congress.

From those small but significant beginnings has developed the massive and efficient postal service we know today.

SIZE OF THE AMERICAN POSTAL SERVICE

It is difficult to conceive of the size of the American postal system of our time. It is just as difficult to fathom its value to our social and economic life. Let me quote some figures for you to help you visualize the postal service in America in 1958.

1. There are over 37,000 post offices throughout the country.

2. The postal service sells more than 34 billion stamps per year in spite of the fact that more than half of that mail is handled under permit by use of printed indicia.

3. There are more than 32,000 rural carriers traveling more than 1½ million miles each working day—a distance equal to approximately 4 round trips from the earth to the moon.

4. Over 400,000 money orders are issued each day, and if they were piled one on top of the other (flat side to flat side) they would make a stack 1½ times as high as the Washington Monument.

5. The Post Office Department employs more than one-half million people—more than any other Government agency except the Department of Defense.

6. It operates more than 85,000 vehicles—the largest motor-vehicle fleet in the world.

7. This year it will handle approximately 61 billion pieces of mail. A volume equal to roughly one piece for every man, woman, and child in the United States every single day. Incidentally, that is nearly two-thirds of all the mail that will be handled this year in the entire world. The Chicago Post Office alone handles more mail than the entire nation of Canada.

I am sure that you will agree that our postal service is a big business—and it is a growing business. I am told by postal officials that the volume of mail has been increasing at about twice the rate of population growth. That means that by 1965 the postal service will probably be serving 200 million Americans and handling more than 100 billion pieces of mail annually.

THE NEW PROGRAM

President Eisenhower and Postmaster General Summerfield have embarked on a far-reaching program to modernize the postal service—an essential step because of the tremendous volume of mail and its astounding rate of growth. Because of World War II, the scarcity of building materials immediately thereafter, and because of the heavy drain on the Treasury of the United States in meeting the postwar defense needs of our Nation, the Congress has not appropriated any monies for the building of new post offices since 1938. Since then the mail volume has more than doubled. It is little wonder then that many of our post offices are literally bursting at the seams.

Under the President's and Postmaster General's program, the building of new post offices (like this one) built by private capital and leased to the Post Office Department on a monthly rental or a 10- or 15-year basis has been increasing rapidly. Postal officials inform me that now, nation-wide, contracts are being let at a rate of two each day. I understand that this is the ninth new postal facility formally dedicated in Utah in the past thirteen months.

Under a program recently suggested by the President (if adopted) 12,000 new postal facilities will be built in this country during the next three years. Private capital is scheduled to supply more than 1½ billion dollars to construct them, and they will in turn be leased to the Post Office Department. Under the plan, increased postal rates should supply another ½ billion dollars to modernize and mechanize existing post office buildings throughout the country. The plan (if adopted) will, in my opinion, bolster the economy of the country and at the same time provide the kind of postal quarters our dedicated postal employees need to render our people the kind of service to which they are entitled.

POSTAGE RATES

As most of you know, the House of Representatives and the Senate of the United States have each passed a bill to provide for an increase in postal rates. Increased postal rates are badly needed to make the post office Department somewhere near self-sup-

porting. The legislation to provide this needed increase is now in conference between representatives of the House and Senate Post Office and Civil Service Committees. The main difference between the House bill and the Senate bill is that the Senate measure calls for a 5 cent first-class letter rate on nonlocal mail and a 4 cent rate on local letters. The House bill calls for a 4 cent rate on all first-class mail. If the Senate version of the 5 cent nonlocal letter rate prevails, the extra cent is earmarked for the next three years to modernize our postal plants. The extra cent on out-of-town mail will provide about $175 million each year. At the end of that time the 5 cent rate is to revert to 4 cents.

While I am sure that no one wants to pay more for anything than is necessary, it is, I think, amazing that postal rates on first-class mail—the 3-cent rate—is the same as it was in 1932. Like most everything else, the cost of handling the mail has more than doubled since 1932. It seems only reasonable that rate increases for postage be enacted into law.

Both the House and Senate versions of the postal rate increase bill call for reasonable advances in the cost of mailing second- and third-class matter as well as the letter rate increases.

I think that we as American citizens need to face the unequivocal fact that the cost of handling the mail must be paid in one way or another. There are apparently three alternatives: (1) increase the rates; (2) charge the deficit to the taxpayer; or (3) borrow the money from future generations.

According to figures supplied to me by the Post Office Department, the 5- and 4-cents letter rate would cost the average American family about 20 cents per month or $2.40 a year additional for postage expense. At the same time it costs that family about $7 per year to pay its share of the postal deficit through taxation. This is because most of the mail is business mail. I do not see why the average family should subsidize big business through the maintenance of unreasonably low postage rates. You might be interested to know that in Western Europe the average letter postage rate is about 50 percent higher than ours, and their postal employees are paid only about one-third as much as we pay ours.

CONCLUSION

In conclusion I want to congratulate Postmaster Hillyard and the people here in Smithfield on their new post office. I think that it is a genuine asset to your community. I only wish that more of our cities and towns had facilities as nice and as adequate.

I believe that the American people want good postal service. I believe it is essential to the welfare of our people and our Nation that they have it, and so long as I am a Member of Congress I shall endeavor to see that they get it.

Again my congratulations to you on this splendid occasion—the dedication of the new Smithfield Post Office.

An Intimate Report on the U. S. S. R. as Told by Two World Travelers to Emilie Keyes, Feature Editor of the Palm Beach Daily News

---

EXTENSION OF REMARKS

OF

HON. FRANCES P. BOLTON

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 20, 1958

Mrs. BOLTON. Mr. Speaker, Mr. and Mrs. James Hollingsworth, of Palm Beach, Fla., having some weeks ago returned from a trip through the U. S. S. R., gave an exclusive interview to Emilie Keyes. I quote one paragraph from her interesting article, which appeared in the February 2, 1958, issue of All Florida magazine:

The Hollingsworths base their conclusions on firsthand acquaintance with Russian factories where tractors roll off the assembly line at the rate of 1 every 9 minutes, and of the Russian educational system that is turning out 3 engineers to this country's 1.

Mr. Speaker, because of the great interest this article has created and in order that my colleagues may have the benefit of the keen observations of Mr. and Mrs. Hollingsworth, under unanimous consent, I include it with my remarks.

The article follows:

EDUCATION: THE SOVIET'S STRONGEST WEAPON

(By Emilie Keyes)

Sputniks I and II, positive proof of the Soviet Union's great strides in scientific research and productive ingenuity, literally have shaken the confidence of Americans and other peoples of the free world.

Formerly prone to consider his counterpart—the average Russian citizen—as a push-over opponent in a contest of any kind, mental or physical, the average American is now beginning to look askance at this new and formidable Communist. Instead of being treated lightly, as a breather game on some sports schedule, the U. S. S. R. has become a dangerous dark horse threatening the very existence of the free way of life.

With sputniks circling over our land and missile-laden submarines lying offshore in surrounding waters, a timely warning of another Soviet weapon—education—comes from a Florida couple:

Mr. and Mrs. James Hollingsworth of Palm Beach, who spent a month behind the Iron Curtain, told this writer that Russia is rearing a youth that poses that country's most vital threat to the free world. The Hollingsworths were interviewed at their home on Via Palma.

"This is a youth thoroughly indoctrinated in communistic principles and regimented into government jobs where they can contribute most toward world conquest," the couple reported. "Americans needn't delude themselves—communism and atheism are in the Soviet Union to stay."

The Hollingsworths returned to Florida convinced that the Russians worship Lenin and education. They emphasized the fact that while under the rule of the czars less than 10 percent had an education, now there are 5 million Russian youngsters in secondary schools. (The United States has approximately seven million pupils in this age group.)

"The Kremlin wants citizens it can control from cradle to grave," they stated. "When a baby is 2 months old, the mother returns to her job (everyone works) and leaves the baby in a government nursery, later in a kindergarten.

"A famous Russian scientist believed that through conditioned reflexes a child can be molded into any pattern desired, so at the age of 2 months these babies are given exercises; at 18 months they can go through them alone. Many times we saw 2-year-old robots marching in orderly lines to the park. They behave like robots until old enough to think for themselves."

To those of us who are used to parental love, pampering and much slower development of our offspring, this seems to be a needlessly cruel way to introduce a baby to its place in the world. However, it is the communistic way of preparing for mass education of its youth, without consideration of parental heritage of social or monetary position.

Whereas an American tot is given a mechanical toy to play with for amusement only, the Russian child is taught to totally dismantle and reassemble the toy as part of his education. The treatment given a frog might be another example of the difference in the development pace of the two countries' youth. The American boy's frog is a secret, real live plaything that produces some educational interest, but primarily is a source of merriment through pranks of teasing little girls. However, the Russian boy is introduced to the frog through a biology vivisection lesson, and the frog is not considered as a good subject for classroom pranks.

EMPHASIS ON SCIENCE

The great emphasis in Soviet education is in the fields of science and engineering. They have excellent vocational schools, and in 1953 graduated 50,000 technicians. There are 33 universities besides 800 specialized schools.

"Students don't have to be urged to study," the Hollingsworths reported, "for if they don't pass the exams, they get hard labor jobs and, once typed find it virtually impossible to better themselves." They also pointed out that the importance of education in Soviet planning is indicated by the fact that the professor is the best paid worker in the country. In contrast, teachers in the United States receive comparably law wages.

When the Palm Beach couple decided to add the Soviet Union to the list of their interesting global travels, they did not want to become puppets in the hands of Intourist, that government's travel agency. They wanted to see the things that corresponded with their varied interests in this country, so they prepared a list of these interests, such as nursery schools, kindergartens, boys' and girls' clubs, colleges, universities, hospitals, museums, opera, ballet, municipal government, etc.

Backed by letters from heads of organizations with which they have worked, they submitted their preferences to Intourist.

FREEDOM OF MOVEMENT

"It worked," remarked Mrs. Hollingsworth. "We saw everything on our list and on Intourist's, too. We listed the towns we wished to visit, and when we reached Moscow, Intourist had permission for us to visit them all. We had complete freedom of movement within all these towns.

"We were told at the American Embassy in Moscow not to take pictures of military installations, bridges, harbors or airfields. Jim took 32 rolls of color movies without any molestation. At no time were we ever aware of being followed."

They traveled by train, plane, car, subway, and boat, at all times with guide, interpreter and car with chauffeur. Only once, on the train headed toward Leningrad from Helsinki, Finland, did a customs man open one of their bags. Their itinerary included visits at Leningrad, Moscow, Stalingrad, Rostov, Tbilisi, Sochi, Yalta on the Black Sea, and Kharkov in the Ukraine wheat country.

In relating their impressions of the Russian people and the Communistic way of life the Hollingsworths covered both the ominous advances in military and scientific strength and the pathetic retreats socially and morally.

"After three generations of propaganda, fear, regimentation, indoctrination, and education crowned by success in the fields of industry, science, education, agriculture, and health, communism is their god and their religion. The campaign against religion is incessant, starting with the cradle.

"Moreover, our opponents are on a wartime basis; it's as though they were all in the army. Americans have been lulled into

false security. We have been led to believe the Russian worker is clumsy with his hands, doesn't understand machinery and is mentally inferior to us.

"It has taken Russia only 15 years to become industrial geniuses because they have had the benefit of German scientific brains as well as factories and workers from East Germany and Czechoslovakia. Our trip dispelled any doubts and questions we had of Russian mechanical ability."

The Hollingsworths base their conclusions on first-hand acquaintance with Russian factories where tractors roll off the assembly line at the rate of 1 every 9 minutes, and of the Russian educational system that is turning out 3 engineers to this country's 1.

SATELLITE COUNTRY

On their way back they saw in Czechoslovakia what it means to be a satellite country with no ray of hope that communism won't take over industry and agriculture as completely as it has the government.

Like all of the rest of the people in the U. S. S. R., the American travelers were completely cut off from news and information of the outside world for the months of their stay. The people hear and read only what the controlled press and radio elect to make known.

"When you consider," the Hollingsworths added, "that 200,200,000 citizens have lived under circumstances like these for 40 years it's easy to see why communism is here to stay. For they have read nothing but horrible propaganda against the United States and other democracies. Those who can't read are shown horrid cartoons against us.

"They simply don't believe you when you talk about the things we take for granted, such as automobiles and electric refrigerators for every family.

OTHER IMPRESSIONS

On the other side of the picture, the couple was impressed by the general good health of the people—virtually no polio and reportedly no venereal disease—the constant stream of delegations from nations far and near, the be-kind-to-foreigners atmosphere and lack of resentment against visitors who got preferred treatment.

Also among their memories are: the lack of traffic problems (there was virtually no traffic in the enormous public squares), the crowds at the superb ballet, the opera, the theater, the circus—and the poorly dressed audiences.

"There are no smart, chic women in Russia," Mrs. Hollingsworth observed. The sagging, baggy cotton and rayon print dress is the uniform of all Soviet women. Jim called them sad sacks."

The Floridians found it almost impossible to adjust to the idea that no one owns anything personally. Mr. Hollingsworth was unable to buy a painting of any kind in the Soviet Union. Artists paint only for the state. There is no stock exchange for no one owns a share in anything, no private enterprise, no golf courses, and supposedly no tips—unless no one else chances to be looking on at the time.

Foreign travelers can have all the caviar they want at any meal, without extra cost. They get $5 a day spending money from the Government itself, but there is almost nothing that tourists care to buy as souvenirs. A cotton, hand-embroidered blouse costs $45; a Cossack cap, $200.

In summing up their impressions of the Russians' attitude toward the communistic way of life, Mrs. Hollingsworth said, "It was hard for us to keep in mind that you do not miss things you never had nor read about nor saw in the movies. Russia has had three generations who have never had freedom of travel from one town to another, to select their own jobs or change from one job to another.

"We became convinced that the vast majority of the Soviet people are satisfied with the Communist form of government—but with more comforts and a higher standard of living. Formerly they worked for glory and the honor of the U. S. S. R., but now they like money and by working harder and faster they can earn more. Also, for special meritorious work they may get that piece de resistance—a 4-week vacation, with all expenses paid, at one of the seaside rest homes, such as we saw at Yalta.

WORKERS ARE SATISFIED

"We have a feeling most of the workers are pleased as Punch with communism and feel sorry for the poor, browbeaten American laborer. It is no use to try and tell them different, they don't believe you.

"Their housing is shocking, but I never saw so many apartment buildings under construction. Even the highest paid workers are lucky to have a four-room apartment, and all have other people living with them. It's estimated that an average of 4 people live in a 9- by 12-foot room."

Not alarmists by nature, Mr. and Mrs. Hollingsworth returned from Russia more frightened by what that country is accomplishing than before they went.

"Every American should know," they warn, "that Russian leaders have written books on the conquest of the world. They have mapped out their plans step by step and they have not changed their plans except to accelerate them. The new look that we saw everywhere means nothing."

The Propaganda Struggle Between East and West

EXTENSION OF REMARKS

OF

HON. VICTOR L. ANFUSO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, April 21, 1958

Mr. ANFUSO. Mr. Speaker, under leave to extend my remarks, I insert into the RECORD the text of an address which I delivered on Saturday evening, April 19, 1958, before the Delta Theta Phi Law Fraternity of St. John's University School of Law at a dinner at the Waldorf-Astoria Hotel in New York. The address was as follows:

ADDRESS BY CONGRESSMAN VICTOR L. ANFUSO BEFORE THE DELTA THETA PHI LAW FRATERNITY, ST. JOHN'S UNIVERSITY SCHOOL OF LAW, APRIL 19, 1958

Mr. Chairman, distinguished clergy, friends, this is the second time that I have had the distinct pleasure to address the members of this honored fraternity. I am indeed very happy to be here with you once again.

I had been told by a mutual friend that a few remarks on brotherhood and fraternity would be most appropriate on this occasion. Frankly, that would have pleased me too. But then it occurred to me that you did not simply invite me to come up here from Washington to speak to you on a subject which can be handled more capably by anyone in this room. With your kind permission, therefore, I have decided on a compromise subject which I consider to be both timely and appropriate.

Not so very long ago, during the course of an address in Congress, I had called to the attention of my colleagues a very interesting and significant fact, and it is this:

Since 1939 approximately 5½ million square miles of territory and about 732 million people in Europe and Asia have been brought under direct domination or control of the Soviet Union and its partner Communist China. Of this total, no less than 700 million people came under Communist control since the end of World War II, only about 12 to 13 years ago. The strange fact about it all is that in many instances this was achieved by the Communists without firing a single shot; it was done not through war, but by means of propaganda, subversion, and chicanery.

This has made all thinking men's hair turn gray, and me to lose mine altogether, trying to figure out why. At this rate, I am afraid there will be no United States of America, as we know it, within the lifetime of most of the people here tonight—unless we are able to beat the Russians at their own game.

What is this game which is being played for the highest stakes of all time? For us, if we win it spells, freedom, independence, economic prosperity, morality, and human dignity. If we lose the game as played by the other side, it means enslavement, poverty, human degradation, godlessness, and brainwashing.

This game which we have been forced to play is called propaganda, where words lose all meaning, where lies are shamefacedly described as the truth, where day is night and black is white, and where deception is used far more effectively than atomic weapons or missiles. The Russians apply their ingenuity in the field of propaganda merely as a subterfuge to deplete our resources and to bankrupt us financially. They do not expect to engage us in a battle with weapons of total destruction, because they are well aware that it would mean suicide for them too.

No, my friends, it is with a constant barrage of words that they hope to take over control of the free world and bring us down to our knees. In this respect they feel safe because they know we will never start a new war and new bloodshed.

The situation is such that, whether we like it or not, we must match them in the field of propaganda. Unfortunately, however, we are very weak in this field. In promoting a product for sale to the public, Americans are capable of the most imaginative advertising gimmicks; yet at heart they are basically modest, shy, and reserved individuals. When it comes to extending aid to the needy abroad or even to bolster the economics or defenses of whole nations, we don't ask too many questions once the need is established—we just act. We send our aid to the far corners of the earth, wherever it is needed. Yet often these humanitarian and charitable deeds are overlooked by the very nations we strive to aid, while they listen to the glib tongues of Khrushchev and his ilk who shout from the rooftops about the piddling aid given by Russia.

A recent Senate report shows that in the 11-year period 1945 to 1956 the United States assistance programs to foreign countries, including military, economic, and technical aid, amounted to $57 billion. Of this, $47.5 billion was in the form of grants and $9.5 billions in loans. During the same period, Russia has extended only $1.5 billion in assistance to countries outside the iron curtain, and it was almost all in the form of loans (only $125 million in grants out of $1.5 billion). Much of what is termed "Communist economic assistance" is actually paid back by the recipient countries in exports to Russia or its satellites.

Let us look at it from another angle. India and Yugoslavia are reputed to be the two most important neutralist countries. Frankly, they are playing both sides of the street. What are the figures on aid to these two countries, as given them by the United States and by Russia? Here they are:

During the years 1945–57, we have given India in grants, $273 million; in loans, $227 million; total, $500 million.

During the same period 1945–57, we have given Yugoslavia in grants, $780 million; in loans, $56 million; total, $836 million.

Now, let us see what Russia has done for these two countries. The Russian foreign-aid program first began about 2 or 3 years ago. Before 1956, Russia had given no aid to India or Yugoslavia. Since 1956 it has granted to India loans amounting to $270 million, primarily for the construction of a steel mill. The steel mill is still not in operation, while India will have to repay the loan. Meanwhile, Russian propaganda is capitalizing on the construction of a mill for India.

To Yugoslavia, Russia has extended loans in recent years for $465 million for the construction of a fertilizer plant and an aluminum plant, neither of which is in full production.

Thus we have given to these two countries twice as much aid as Russia, and the bulk of our aid (three-fourths of it) has been in outright grants, while Russia has given them only loans.

In extending this aid, whether to India, Yugoslavia, or other countries, we have never given ourselves a pat on the back, nor did we convey to them that Americans were paying for this aid through the nose in back-breaking taxes and assessments, nor that we were indeed sacrificing ourselves for their welfare. Thus, in the greatest public-relations test in the world, the test which will ultimately determine our security and the survival of the free world, we act like amateurs.

Notwithstanding the aid we have given and continue to give to the neutral countries, they lean toward Russia and not toward the United States. Invariably, they support Russia in the United Nations. They are quick to take up every Russian propaganda trick against the West; for example, the current Kremlin campaign for a summit conference and Moscow's unilateral ban on nuclear testing after Russia had completed the dirtiest atomic tests in history. Our emissaries are scorned at, while the Russians are greeted with brass bands, confetti, and searchlight parades. Compare, for example, the reception given to Khrushchev and Bulganin in India a year or two ago, with that given to Secretary of State Dulles.

When we ask: Why? these neutralist or undecided peoples say that we deal with them as superiors, we give them a handout from our tremendous resources, while the Russians, who are much poorer than we are, treat them as equals, as brothers in distress, in a fraternal spirit, without any strings attached to their help. Communist propaganda stresses that Russia's only concern is the welfare of all humanity.

These are nothing more than words, words, and more words. We know that after having gained a foothold in these countries, the Russians will swallow them as they have swallowed all those other countries which I have enumerated a few moments ago. But the millions of people in these backward and underdeveloped countries, who are illiterate and unfamiliar with Communist tactics, are exploited through all kinds of gimmicks by this phoney Soviet propaganda. They are not aware that they are the intended victims, while their extreme poverty makes them fall for it.

What are we doing about it? How are we counteracting this flow of words and lies?

In their vicious propaganda of spreading lies about us and placing halos on themselves the Russians last year spent close to a billion dollars, compared to $95 million on the part of the United States. I do not want this fact to be misinterpreted that we should blindly spend as much or more than the Russians for propaganda. We must be more imaginative. We must have ideas. Our expenditures must be directed into more fruitful channels.

Today we do have two imaginative and dedicated experts in the fields of propaganda and intelligence. I refer to Allen Dulles of the Central Intelligence Agency and George Allen of the United States Information Agency. The Congress will be glad to back these men to the limit if they come up with an effective program to outsmart and outtalk the Russians in retaining the friends we now have and in gaining new ones.

Take the case of the Russian sputniks. We now know that Russian periodicals, in our possession for months before their launching, spoke about them and even described them. Yet we failed to translate these articles—presumably because of lack of funds—and in this way we failed to inform the American people of the threatened danger.

The success achieved by the Communists in this adventure made the undecided and fence-sitting peoples of the world forget all about Soviet brutality and its suppression of liberty in Hungary. It again placed Russia far ahead of the United States in the cold war struggle for men's minds.

Now comes their latest propaganda gimmick—the Kremlin's new peace offensive to terminate all nuclear tests for the safety of mankind. The vast majority of the peoples whom we are trying to reach seem to have overlooked the fact that there is a catch in the Russian pronouncement. We have not yet been able to get across to the neutral and uncommitted nations that this was just another phony type of propaganda; that having concluded a series of elaborate tests herself—in which she released the dirtiest fallout destined to shorten human lives—Russia is anxious to call a halt now before the United States has had a chance to perfect its nuclear research and weapons. Nor did these neutral peoples attach any significance to Moscow's qualification of its pronouncement, namely, that if we went through with our already announced Pacific tests, Soviet Russia would resume further testing.

If we and our allies are to combat successfully the effects of Soviet propaganda, we must develop a new program and new initiative—and we must do it quickly. If we fail to do so, millions of people all over the world will believe Moscow's propaganda about stopping nuclear bomb testing and banning nuclear weapons, while branding us as those desiring to destroy humanity. I, therefore, propose the following bold program:

The United States should issue an official declaration to the nations of the world (with the necessary steps being taken that the message reaches in particular the neutral and uncommitted peoples, as well as those behind the Iron Curtain who are opposed to us) to the effect that the United States desires and will do everything within its power to abolish war and bloodshed as a means of settling international disputes; that it is willing to destroy or discard all of its nuclear weapons and missiles; that it will never again undertake further nuclear tests designed for war purposes; and that it is ready to go so far in the interests of world peace and the security of all mankind as to withdraw all its troops from foreign soil and to liquidate its military bases abroad.

At the same time the United States insists that Russia take similar steps, as follows:

1. Russia must destroy its nuclear weapons and missiles, and abandon all future nuclear tests designed for war purposes.

2. Russia is to remove her troops from foreign soil under Communist domination, including East Germany, Hungary, Poland, Czechoslovakia, and other countries in Europe and Asia.

3. Russia is to agree to genuine disarmament, or if this is not feasible at least to an effective arms-control system.

4. Russia is to agree to the esablishment of an international police force, attached to the United Nations, whose purpose it shall be to help maintain the peace of the world.

5. The Soviet Union is to join with the United States in raising the standard of living of all undernourished and underprivileged peoples of the world.

6. The Soviet Union is to join with the United States and other member nations of the U. N. to promote free elections in all countries and to guarantee the sovereignty of all duly constituted governments.

To attain these objectives, I feel certain the President of the United States would be ready at all times to sit down at a summit conference with other heads of governments and to keep on talking with them until the light of peace shall shine on all.

This, my friends, is the kind of language peoples all over the world, including the Russian people, understand and want to believe.

Add to this propaganda the fact that the nations of the world are today spending more than $100 billion annually on armaments, which could be used to combat poverty and disease and to help raise the living standards of all nations—and you have made a most convincing argument which can be readily understood by all peoples.

We must get this argument across to them, if we are to save ourselves and all of mankind from total destruction.

A Fair Deal for the Textile Industry

EXTENSION OF REMARKS
OF
HON. W. J. BRYAN DORN
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES

Monday, April 21, 1958

Mr. DORN of South Carolina. Senator RICHARD B. RUSSELL, of Georgia is an American. He places the welfare of our country ahead of any personal or political consideration. I commend to the Congress and to the country his eloquent and timely address before the American Cotton Manufacturers Institute:

A FAIR DEAL FOR THE TEXTILE INDUSTRY

(Address of Senator RICHARD B. RUSSELL at the annual meeting of the American Cotton Manufacturers Institute, April 12, 1958)

Mr. Chairman, members of the American Cotton Manufacturers Institute, and fellow guests, it is a happy privilege indeed to be with you this morning. In other years, you have done me the honor to invite me to meet with you. I rarely ever leave Washington when the Congress is in session. This has denied me the pleasure of foregathering with this distinguished group, among whose members are many whose friendship I have enjoyed over many years.

I must confess that I might have visited with you during times when economic and international conditions created a much happier climate. We could all view prospects with much more confidence before the advent of Sputnik and the current decline in our own economy.

This is overbalanced by the fact that I am with you during the presidency of my good friend, Lamartine Hardman. Our fathers were friends before us, and I have enjoyed the most cordial relationship with him and his family for all of my adult life. I am sure that all of you who know him share my high regard for his character, business ability, and warm personal characteristics. He will serve you well as your president during these trying days.

Beyond the personal pleasures involved, it is gratifying to be with this group. A large part of your activities have to do with the processing and merchandising of cotton. In a large sense, this is a commodity in which we have a common interest. The economy of the State that I have sought to serve depends to a great degree on the welfare of producers, processors, and manufacturers of cotton. We also have substantial interests in other textiles. It is by all odds our largest industry, for the value of Georgia's annual textile output is more than a billion dollars.

The cotton business in all of its aspects is one of the oldest in our Nation. It is safe to say that no other single business has contributed more to the building of the American way of life and the great and prosperous civilization of which we are so proud. Time will not permit a discussion of the details of cotton's contributions to American world leadership.

And yet, cotton today is a sick business. A careful study might indicate that many elements of the present recession are attributable to the distress of the cotton industry. It is little wonder that those of us most vitally concerned in cotton and textiles should be disturbed over the precarious condition in which this great industry finds itself. We have not been able to accomplish a great deal, but we have certainly talked about it and tried.

We have agitated to such an extent that one Government official observed in the recent past that before coming to Washington he had thought that cotton was a commodity, but since being there he had come to know it as a religion.

No other industry has been beset with so many difficulties. No other industry knows a higher degree of domestic competition. When one considers the buffets you have endured from national policy, the competition to which you have been subjected, the squeeze of rising costs and declining prices, the fact that you have been able to survive and maintain your enthusiasm is eloquent evidence of your stamina and business acumen.

The great development of all of America's industry and business was brought about by competition. Initiative, self-reliance and ingenuity have been necessary to survive and go forward. Our great textile industry is a product of competition. It expects to meet and solve the normal problems of technical demands, capital investment, new techniques, more modern products that come from research and technological progress. It knows that the best managed plant will get the most business. It expects this type of competition. Where elements and individuals fall by the wayside in this kind of a contest, they are accepted as casualties of our competitive system.

These are the ordinary hazards of business life.

But the textile industry, more than any other major industry in the Nation, has been beset by problems that had their origin in Government and national policy. The industry has not only been called upon to bear its fair share of the taxes to pay for foreign aid, but it has been peculiarly victimized by foreign competition generated by this aid. Unless the present policies are changed or the Congress can be persuaded to take the steps necessary to prevent it, this great industry is threatened with liquidation. It will become the No. 1 casualty of a foreign policy which in some cases seems to be dedicated to the building of unfair competition for American business to develop the economy of foreign nations.

We are now in the midst of a great drive to extend the reciprocal trade program for a period of 5 years. The proposed legislation would give to the executive branch of the Government the power of life and death over American business and industry.

I was a member of the Congress of the United States when the reciprocal trade concept was first enacted into law. I supported that bill. It was originally contemplated that the United States would export to other nations goods that we produced or could produce in surplus quantities. It contemplated that the United States would import from other countries goods or raw products which we either did not produce or which we produced only in negligible quantities. The whole idea was built about the word "reciprocal" and, as originally conceived and planned it was a great piece of legislation.

The act and its several extensions delegated to the President the power to regulate our foreign trade program. The President, of course, could not handle the matter personally and he, in turn, delegated the power to the State Department. For many years, this legislation served a useful purpose. There were few complaints of abuses and it did stimulate world trade on a reciprocal basis.

With the end of World War II, we have seen a change in the purpose of the reciprocal trade program. Instead of being used purely to stimulate trade, the State Department has now seized upon it as a method of extending additional foreign aid.

Since World War II, we have expended directly more than $60 billion in foreign lands for almost every conceivable purpose. We have restored the devastation of war. We have revived sagging economies. We have enabled some nations to reduce their taxes and their public indebtedness at the expense of the American taxpayer. More than that, we have built many industries throughout the world with dollars in part paid as taxes by similar industries in the United States. We have built these industries in low-wage areas and have brought them in direct competition with American industries that are saddled with costs of production in the form of wages and raw materials much higher than those borne by their foreign competitors.

I supported both the original reciprocal trade and the original Marshall plan, to restore the ravages of war and get Europe back on its economic feet.

Several years ago, I concluded that our State Department did not have any foreign policy other than that built on the expenditure of American tax dollars as foreign aid. I was unwilling to continue economic aid after the original objectives of the Marshall plan had been reached. Since that time, I have vigorously opposed the various economic-aid programs.

There has been an increasing resistance in Congress to continue to increase the appropriations of American tax dollars for economic foreign aid. When the State Department became unable to get the appropriations of dollars that they desired, they continued to expand economic aid by administering what should be a reciprocal trade program in such a way as to provide economic aid, not from appropriated funds—but at the expense of certain segments of American business.

I still believe in the original concept of reciprocal trade, but I shall not support a program to liquidate vital American industries, to throw thousands of American citizens out of work in order to create an economy in some foreign land suitable to some dreamer in the Department of State merely because the bill bears the title of "Reciprocal Trade Program."

In the last analysis, the free world is dependent upon the armed strength and the powerful industrial complex of the United States to prevent war and to confine Communist aggression. We cannot maintain the necessary military strength nor the industrial plant essential to its support if we kill the industrial goose which lays the golden egg of taxes by pursuing unrealistic and unnecessarily expensive policies and programs.

I am aware of the importance of a strong Japan to the free world. However, the American textile industry is essential to the maintenance of a strong America. Our friends throughout the world know in their hearts that the free world cannot of itself contain communism any longer than America is able to maintain the military force which deters aggression.

The Congress has the power to save the textile industry and the jobs of all of those who derive their livelihood from it. It can do it by a policy of true reciprocal trade instead of distorting it into a means of extending aid. It can do it by directing that American industries that are in distress shall have priority over offshore procurement, at least in foreign lands that today do not have as high unemployment percentagewise as we do.

We are making the fight. I was one of the sponsors of an amendment to the Mutual Security Act for 1957 which sought to prevent the swamping of certain segments of American business by foreign importation. That amendment lost by a margin of two votes in the Senate.

I propose to continue the fight to try to compel the Government of the United States to deal fairly with its own people in order to protect our own economy as the only means to assure our survival.

Figures are often given as to the number of people whose jobs are claimed to be dependent upon the foreign aid and reciprocal trade programs. It would be interesting to know just how many of the 5½ million Americans who are now unemployed have lost their jobs due to the policies and programs of the Department of State.

If means are not found to change the present operations of the State Department that will sacrifice any and all things at the demands of foreign countries, we can produce an unemployment situation in this country that will pull down the whole structure of our Government.

The Congress has been hastily improvising an extensive program of public works as a means of stemming the rising tide of unemployment. Extreme situations may justify a public works program, but in our economy, tax-supported public works can never be an acceptable substitute for steady employment by private enterprise in a free competitive system.

THE THREAT THAT THE SOVIETS WILL PREEMPT FIELD OF FOREIGN AID

In the attempt to persuade the Congress and the American people to increase our own foreign aid program 13 years after the conclusion of World War II, the proponents of the increases press upon us the threat that unless the United States increases its economic assistance, the Soviets will move in with their own aid program and eventually take over the recipient countries. To me, the least persuasive of all of the arguments for foreign aid is the threat that the Russians will take it over on a worldwide basis. Up until now, outright grants by the Soviets have been insignificant. Their dealings in this field have been in the form of loans, usually well-secured, as in the case of the Egyptian cotton crop—or sales that are made on a cash-on-the-barrel-head basis. It does not speak well for the efficiency of our program to have those who administer it contend that Russia gets more credit for transactions based on sales and loans than the United States can get for outright gifts. If this contention be true, the only thing it proves to me is that the United States needs a new set of diplomats to administer the program.

The fundamental weakness of the whole business is the lack of a clearly defined and easily understood national objective. The American people would feel better about the program if there were a target date for termination or reduction. Instead, they are

only presented each year with arguments in favor of increases in foreign spending.

ADEQUATE DEFENSE ESTABLISHMENT MUST BE MAINTAINED

In this presence, it is stating a commonplace to say that the cost of national defense is the most formidable part of our fiscal problem. In the light of world conditions, no sensible person would advocate wholesale reductions in the strength of our Armed Forces. It has been said that it profits one little to be the richest man in the graveyard. An epitaph as the wealthiest and most powerful Nation in oblivion is not an attractive prospect for the United States.

The success of the Soviet in launching satellites and their stride forward in the field of missiles has intensified criticism of the organization of our Defense Department. I would be the last to contend that great improvements cannot be made, but we must resist the ranger of oversimplification.

Whether we have three military departments or a single Department of Defense, whether there are four members of the Joint Chiefs of Staff or a single Chief of Staff, the responsibility for initiating and implementing defense decisions is with the President and the Secretary of Defense. In the final analysis, many of the reorganization proposals will only determine the sources from which the President and the Secretary of Defense will secure advice. In my opinion, a determined exercise of authority that the Secretary of Defense already posesses could go a long way toward eliminating many of the unnecessary committees and complicated procedures and produce faster decisions.

It could be fatal to place all of our faith in some procedural gimmick as a substitute for vision and willingness to make decisions. There is much room for improvement in the efficiency of administration, but reorganization cannot produce a formula to provide defense with magic instead of money.

Even if we achieve the maximum of efficiency, the costs of adequate defense will remain high. The technological revolution constantly introduces new weapons systems and causes the abandonment of old ones that were of themselves costly. This does not mean that the investment in the old system was unwise. The cost of the B-36 program, for instance, was great. But it was in the nature of peace insurance, and good insurance it proved to be. Let us hope that the new bombers and our ballistic missiles will serve as well.

The cost of the new missiles is exceeded only by their intricacy and complexity. Many obstacles must be overcome to perfect ballistic missiles of intercontinental range.

For example, 1 of these missiles has more than 36,000 components. If each of these components has such a reliability that its rate of failure is only 1 in 100,000, simple mathematical computation shows that only 2 out of 3 firings could be successful.

Another arresting illustration of our difficulties occurs as we work to achieve accuracy in pinpointing targets. What is known as the cutoff velocity of a missile vitally affects its accuracy. This cutoff velocity, which means the speed at which the missile is moving when its power source is cut off, is 23,000 feet—more than 4 miles—per second. This velocity of 23,000 feet per second must be very precise. Every deviation of only 1 foot per second will cause a difference of 1 miles in where the missile will hit after traveling 6,000 miles.

Whatever it may cost, we must maintain adequate military strength and the most modern and powerful weapons. We are confronted by a ruthless and unconscionable enemy that neither heeds nor understands any language other than might.

We have become committed to a series of agreements and treaties that obligate us to respond to an attack on any 1 of 42 countries as an attack on these United States. Most of these nations, and many others who are not party to these treaties and agreements, are, of course, interested in securing financial aid from us, whether it be in the form of dollar aid or preferred American trade. But, in the final analysis, the one outstanding amalgam that holds the free world together is the belief in the chancelleries of all of the nations associated with us that American military might and potential is greater than that available to the Soviet Union. If that faith be shaken, the combinations that we have made at such great effort and expense will fall to pieces overnight.

So firm is my conviction on this score, that I have strongly urged that the increased cost of our missile program should be taken from the military assistance being extended largely in conventional weapons rather than by weakening our country by increasing either taxes or the debt limit.

The fact that the Soviet beat us into space with a sputnik did more to shake the faith of those associated with us and to weaken free-world unity than would be caused by a drastic reduction in the military assistance program.

My faith in the capacity of the American people and our great industrial plant is unshakable. There is no objective attainable by human beings that we cannot accomplish if the American system is properly utilized. We have a long tradition of success and we would be unworthy to strive for less, whatever the odds, but our resources are not unlimited, and it is essential that we confine our efforts to those problems that are really important to our national security and survival. That great aim can be achieved within the framework of our system without frittering away our resources or our heritage.

Too Much Pork

EXTENSION OF REMARKS
OF
HON. RUSSELL V. MACK
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Monday, April 21, 1958

Mr. MACK of Washington. Mr. Speaker, I commend President Eisenhower upon his veto of the $1,700,000,000 omnibus river and harbor-flood control bill. The bill contained too much pork. By the phrase too much pork I mean it contained too many projects that had not been adequately surveyed by the United States Army engineers, too many projects that were opposed by the Army engineers, opposed by the Budget Bureau, and opposed by the Secretary of the Army. The vetoed bill contained too many projects on which local cost sharing, as figured by the Army enginers, was entirely disregarded.

During House debate, I, as a member of the House Public Works Committee, tried by amendment to strike 18 of the most objectionable projects from the bill.

Had these 18 projects been eliminated I feel certain the President would have signed the bill. With these objectionable projects in the bill I felt it was a certainty the President would veto the bill. My proposal to strike these 18 projects from the bill was defeated 234 to 167.

That the President's action has met widespread approval is indicated by many editorials that have appeared in newspapers since the veto.

Connecticut had a number of projects in the bill; yet, despite the fact that Connecticut stood to obtain many projects had the bill been signed, the Hartford Courant, a leading newspaper of Hartford, Conn., lauded the President's courage in vetoing this bill. Said the Hartford Courant editorially:

THE PRESIDENT BLOCKS WASTE IN RIVERS, HARBORS

Connecticut has lost another few years in the fight against floods and erosion. The rivers and harbors measure that the President vetoed on Tuesday was the authorization bill that would have needed a followup with money. But it would have meant setting in motion, at any rate, action on the Mad River, Hall Meadow Brook, East Branch Dam, and erosion-control projects in Long Island Sound.

Who's at fault in this delay? The obvious target for criticism would be President Eisenhower for having had the courage to veto the bill. Yet a sound and thorough examination proves otherwise. It was, instead, the politicians who loaded the measure with unacceptable projects, unapproved projects, what used to be called more frequently, pork-barrel projects. They built a measure that contained worthwhile projects into one that would have cost the taxpayer a pretty penny without a proper measure of return.

There are about 150 projects covered in the bill. The orderly way to have these projects come before the Congress is for proposals to be reviewed by the Army Corps of Engineers and the Budget Bureau. Then, if approved, they could be studied by the Congress. Instead, individual Congressmen make deals to have pet projects slipped into the bill anyway. Sometimes this makes sense; the urgency of the flood problem in Connecticut led legislators a year ago to push for action on Winsted, Torrington, and Litchfield projects without waiting for a report by the Army, which has since approved them. But from the taxpayer's point of view, it can be a sorry mess.

This year, the bill authorized 28 new projects costing $350 million under terms unacceptable to the President. Some, for instance, would have made the Federal-tax payer pay more than his share, giving local areas an easier ride than usual. Four projects costing $27 million had not yet been evaluated for the Congress, although they were willing to spend the money. Three projects, costing $115 million, are not economically justified according to the engineers. Other provisions of the bill represented efforts to sidestep executive decisions unfavorable to specific projects.

The President is given the power of veto against just such congressional waywardness. It is easy for a local Congressman to work hard for his district without bothering about the overall effect. Senator NORRIS COTTON of New Hampshire, who opposed the bill originally, remarked: "Perhaps if there were any real big projects in my State, I would not be so fearless and so statesmanlike" in opposing it. The people of Connecticut can regret that action is again delayed on necessary projects here. It will endure the President's urging that Congress take a new and more sensible look at what it is doing. But it will also resent the way Congress refused to be concerned about waste as it voted the public's funds.

The Washington Star, of Washington, D. C., took much the same attitude as did the Connecticut paper. The Washington Star commending the President for his veto of the bill said:

TOO MUCH PORK

President Eisenhower's veto of the $1.7 billion rivers and harbors bill could hardly have come as a surprise to Congress. The reasons he cited for returning the legislation without his approval were largely the same as those he gave for vetoing a similar authorization nearly 2 years ago. They may be summed up this way: Too much pork.

The measure had some good provisions in it, of course. The President cited favorably $800 million worth of projects previously authorized in connection with river-basin development. But Congress, as it has been accustomed to do in the past, loaded the bill with pet projects desired by special interests back home but not recommended by the Army engineers for various reasons. Mr. Eisenhower indicated that he might have accepted some of these projects if their sponsors had provided for the assumption by local government of its proper share of the cost. As the President pointed out in this message and in his veto message of 1956, "The best test yet devised for insuring that a project is sound" is the "willingness of local people to invest their own money in a joint enterprise with the Federal Government." Indeed, several of the items thrown into the omnibus bill have been denounced by the Corps of Engineers as having no economic justification.

Promoters of the pork-barrel projects had attempted to justify them as antirecession measures. But the President pointed out that, with a few exceptions, many months or even several years might be required to reach the construction stage on them. Meanwhile, there are plenty of other Federal public works of importance that could be started now to stimulate the economy. Many of these already are being rescheduled for immediate construction.

The President made a sensible suggestion as to how Congress can avoid the prospect of a presidential veto on rivers and harbors legislation in the future. He proposed that projects approved by the Corps of Engineers be included in one bill and all the other projects be the subject of separate measures. In that way desirable legislation would not be imperiled by pork-barrel proposals. Any project sound enough to stand on its own feet would be assured of special attention in this way. And a veto of any or all of the additional projects would not affect those which are really essential to the public welfare.

The Evening Sun of Baltimore likewise praised the President's veto of the omnibus bill. It urged that a clean bill without the projects objectionable to the President be developed and enacted by Congress. Here is the Baltimore Sun editorial:

TOO MUCH PORK

President Eisenhower was justified in vetoing the mish-mash of sound and unsound projects contained in the $1,700,000,000 rivers and harbors bill. As he pointed out, the bill authorized some $115 million worth of projects for which there is no economic justification, $168 million worth of public works for which local financial participation has not been worked out properly and $27 million for projects for which there has been no adequate justification. Unfortunately, as the President also recognized, the bill contained such sound projects as the one to spend $28 million in the desperately needed deepening of ship channels into the port of Baltimore. Congressmen logrolled themselves right into this veto, just as they did with a similar bill 2 years ago. The ancient device of voting for another's man's pet local improvement in return for his support for one's own simply doesn't work when the man in the White House stands on principle and pens a reluctant veto rather than give a reluctant approval. Lacking the power to veto separate items in order to forestall the worst dipping into the pork barrel, the President must veto the whole thing, the sound projects along with the unsound ones. And Congress cannot even claim validly that the bill as a whole deserved approval as an antirecession measure. Most spending would have come much too late for that.

What now? President Eisenhower has pointed out a perfectly practical way to separate the good from the bad. Put all the projects favorably reported on by the Army engineers (our port project has such approval) into one bill. Put the more questionable ones into separate bills, so each could be considered by Congress and the President on its merits. Any such sensible course is bound to run into opposition in Congress; dubious proposals would face almost certain death. Nevertheless, something on these lines is going to have to be accepted. The President has twice vetoed pork-barrel bills of this sort. How about Senators and Representatives whose home States do have approved projects doing a little logrolling of their own to see that their much-needed improvements get into a bill which is at least preponderantly sound?

This is a sensible suggestion and one that should be accepted by the Congress. Good projects which have been fully studied and meet all requirements should not be imperiled by including in a bill projects not adequately surveyed or concerning which there is great controversy.

Congress will fail to fulfill its responsibility if it continues to insist on including many questionable projects in the bill and thereby in effect saying, "Take the bad projects along with the good or no bill at all will be passed."

Commemorating Israel's 10th Anniversary

EXTENSION OF REMARKS
OF
HON. COYA KNUTSON
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 1, 1958

Mrs. KNUTSON. Mr. Speaker, under leave to extend my remarks, I request permission to insert in the RECORD, the following fine article from yesterday's New York Times, entitled "Israel's First Decade—And the Future," by David Ben-Gurion:

ISRAEL'S FIRST DECADE—AND THE FUTURE—ITS PREMIER REVIEWS 10 YEARS OF HISTORIC ACHIEVEMENT, INCLUDING THE RECEPTION OF A MILLION IMMIGRANTS, AND LOOKS AHEAD TO FURTHER BUILDING OF A SECURE AND STABLE STATE

(By David Ben-Gurion)

JERUSALEM.—No small number of new countries have arisen in Asia and Africa during the past decade, but Israel differs from them all, both in the origins of her rise to independence and in her history during the first decade of her existence.

In the case of all the other countries concerned, their peoples were never expelled from their own soil but were conquered by foreigners and emerged into self-governments either with the agreement of their masters or as the result of a revolt against them. The Jewish people, on the other hand, had been uprooted from the soil for nearly 2,000 years and scattered throughout the world, and the source of the renewal of their state was the messianic version that lived in their hearts during their dispersion.

At the beginning of the 20th century every sober and practical person regarded the establishment of a Jewish state in Palestine as an absurd and impossible dream. Even at the end of the First World War there were fewer than 60,000 Jews in the country. But it was not only the immigration of a few hundred thousand Jews between then and 1948 that gave birth to the State of Israel. The extent of Jewish immigration into Palestine during the 70 years that preceded the establishment of the state was much smaller than that of Jewish immigration into the United States of America and other countries, but the aims of those who came to Palestine were different from those of the Jews who migrated to any other country.

Beginning in 1878 the Jewish settlers in the land of Israel set about building an independent economy, creating a revived Jewish culture and establishing a defensive force of their own. The aim that guided them was the building of a Jewish state. Only a hundred years ago there was not a single Jew in the world whose mother tongue was Hebrew; today it is the spoken language of hundreds of thousands. Even before the rise of the state, Jews in Palestine tilled the soil, made roads, built houses, hewed stone and manned ships to a greater extent than any Jewish community in any other part of the world.

The circumstances in which Israel's independence was proclaimed were also different from those which applied to the other young states. All the other new countries were established with the agreement—willing or enforced—of their foreign rulers. The midwife of Israel, however, was the U. N. General Assembly. Over two-thirds of the members of the U. N., headed by the United States and the Soviet Union, decided on November 29, 1947, on the partition of Palestine and the establishment of a Jewish state in one part of the country and an Arab state in the other. Then, in defiance of this U. N. decision, Israel had war declared on her even before she was established.

On November 30, 1947, Arab gangs opened the attack on the Jewish community in Palestine, while the mandatory government at times stood by, at times helped the Arabs and occasionally assisted the Jews. In most of these attacks the Jewish Haganah (the underground defense organization of the Jews in Palestine which had existed in various forms ever since the period of Ottoman rule) had the upper hand.

On May 14, 1948, I announced Israel's independence in Tel Aviv. (According to the Hebrew calendar, the 10th anniversary of that date is April 25; since that is a Sabbath, the anniversary will be observed on April 24.) Eight hours later, at midnight, the British authorities left the country and the armies of five Arab states—Egypt, Jordan, Syria, Lebanon, and Iraq—invaded Israel with the aim of wiping the revived Jewish state off the face of the earth.

At that time the state had 650,000 Jewish inhabitants, while the invading countries had a combined population of over 30 million. The Arab armies were equipped with every type of modern land, sea, and air armament, while Israel had no army, only an underground defense organization equipped with light arms: rifles, machineguns, and a few hundred mortars.

The U. N., which was to some extent responsible for the rise of Israel, did not lift a finger in defense of the young state. This invasion by the Arab armies, however, nullified the decisions of the U. N. Assembly—not in the manner that the Arab rulers would have liked to see, but in the opposite sense. The Arab armies were defeated and expelled, the area of Israel was increased, and the new

Jerusalem again became the capital of Israel, as in the days of King David.

But Israel's most distinctive feature is the fact that during the first decade it has trebled its population. At the end of 1957 Israel had a population of 1,976,471, including 1,762,471 Jews and 214,000 Arabs. (If I am not mistaken the United States did not treble its population until 35 years had passed since its war of independence.)

As soon as it came into being, the new State of Israel opened its gates wide to any Jew wishing to make his home in it. The proclamation of independence declared that "The State of Israel will be open to the immigration of Jews from all countries of their dispersion." On the basis of this declaration, about a million immigrants from 79 different countries came to Israel during its first decade.

Of the 3 great achievements of these 10 years—the renewal of the Jewish state after more than 1,800 years of exile and wandering, the amazing victory of the Israel defense forces over the Arab armies in the war of independence and the immigration of a million Jews in the course of the decade—there is no doubt that the last was the most important and difficult. For its sake the state was founded; it was the vision that fired hearts of the fighters for freedom, and it was the goal toward which the efforts of the state and the assistance of the Jews of the world were directed during the first 10 years.

The immigrants who reached this country before the Second World War came mainly from Europe, endowed with capital, education and vocational skills. The great majority of immigrants who have arrived since the establishment of the state, however, came from impoverished and backward countries, without capital, vocational training or education.

The young state, subjected to military siege and economic boycott by its Arab neighbors, was compelled to find housing for the immigrants, to teach them trades, to give them work, to settle them on the soil, to help them to acquire a new language and to educate them to a live as free and equal citizens of a democratic and freedom-loving state. It is doubtful whether this could have been achieved without the devoted assistance of the Jews of the world and especially of American Jewry. Valuable aid was also received from the Government of the United States.

More than a half million rooms have been built in the course of the last 9 years; the state invested over $721,500,000 in building alone during the period. About a quarter of a million immigrants settled on the soil and became diligent farmers, although only a few among them had tilled the land before their arrival in Israel. About 500 new agricultural settlements were established, and the cultivated area was increased from 195,000 acres to 950,000 acres, while the irrigated area rose from 63,000 acres to 275,000 acres.

The greater part of these villages were established by immigrants from Asia and Africa who had had no agricultural training of any kind before their arrival, and yet within a few years they became transformed in Israel into a constructive and creative force, providing the town population with most of its food and, together with the Israel defense forces, maintaining the security of the country's borders. Most of the immigrants were absorbed in industry, communications, and shipping, mainly in vocations in which they had never engaged before settling in Israel.

And just as there was a far-reaching transformation among the million immigrants in the cultural, economic, and social spheres, so there was also a profound change in the appearance of the country.

Agricultural and mining settlements sprang up in wastes that had been desolate and uninhabited for centuries; bare and lonely mountains and hills were covered with forests and orchards. Millions of trees were planted on the sand dunes on the hills and by the roadsides up and down the country. The extensive and pestilential Hula swamps in the north were drained, and thousands of acres of good and fertile land were reclaimed for new settlement.

There have also been cultural achievements on a large scale in the course of this decade. In September 1949 a law was enacted providing for compulsory and free education between the ages of 6 and 14. In 1949 there were 180,844 pupils (including 6,780 Arabs) in the elementary schools; in 1958 the number had risen to 404,900 (including 27,500 Arabs). There was a considerable expansion in secondary, vocational, and agricultural education.

The Hebrew University in Jerusalem and the Technion (Israel Institute of Technology) in Haifa became fertile sources of scientists and technologists of a high standard; the Weizmann Institute in Rehovot has become one of the finest scientific institutions in the world. About 1,200 new Hebrew books are published in Israel every year, which is no small number in proportion to the size of the population and bears witness to the spiritual energies of the young state of Israel.

There has also been important progress in the field of health during the first decade. The infant death rate, which was 52 per 1,000 in 1949, had fallen to 36 per 1,000 by 1957. In 1949 the average expectation of life was 65 for males and 68 for females; in 1957 it had risen to 68 and 72, respectively.

The main feature of the last 3 years of the decade was the more intensive development of the South and the Negev. A railway was built to Beersheba, and a road was laid from Beersheba to Elath, thus joining our country's two seas—the Red Sea and the Mediterranean—by a network of roads. After the Sinai campaign an oil pipeline was laid from Elath to Ashdad on the Mediterranean coast. These three undertakings opened up the Negev for settlement and development, which will be one of our central tasks in the second decade.

During the first 10 years there has been a considerable improvement in the lives of Israel's Arabs—in the economic, social, educational, and health spheres. In all these respects their position is better than that of the Arabs in the Arab countries of the Middle East.

At the end of 1948 the non-Jewish population of Israel was about 120,000. Since then about 30,000 Arabs who were living in the neighboring countries on the day the state was established have been permitted to settle in Israel with a view to the reunion of families. At the end of 1957 the number of non-Jews in the country was 214,000. Modern water installations for irrigation and drinking have been set up in the Arab villages. The improved methods in use in the Jewish villages are spreading among the Arab farmers.

There has been a great change in the education of Arab youth. Every Arab child, like every Jewish child, receives elementary education at the expense of the state. There are Arab students in the Hebrew University in Jerusalem and the Technion in Haifa. The general incidence of disease and the infant death rate among the Israel Arabs is smaller than that in any of the Arab countries.

The Arab farmer is not in bondage to large landholders as in the neighboring lands. A network of cooperatives is spreading in the Arab villages, in growing contact with the Jewish cooperative movement. The Arabs are represented in the Knesset, Israel's Parliament, both as members of Jewish parties and as the representatives of Arab parties. They are entitled to speak Arabic in the Knesset, though some of them prefer to speak Hebrew. In our second decade we must complete a number of tasks which we began in the first decade ,and carry out several tasks which have yet to be begun.

The main goal of our settlement work in the next 10 years is to populate the South and Negev and establish agricultural and industrial settlements in Central and Upper Galilee. The first thing that is required for this purpose is the completion of the Jordan project, so that the waters of the River Jordan may flow to the South and Negev and enable us to double the number of our agricultural settlements in those areas.

From now onward, however, the concept of settlement must not be limited to agriculture. Israel's shipping, to the expansion of which there is hardly any limit, must occupy an important place in our constructive work, and the same applies to the development of mining and industry. During the next decade we shall develop and exploit solar and atomic energy and we may succeed in desalting sea water by a cheap and economic process.

The population of the Negev will be based on pasture, plantations, field crops, mining, industry and crafts, transportation, tourism, and shipping in the Red Sea. I can foresee three great and growing population centers in the Negev during the next decade, Elath, Mitspeh Ramon, and Beersheba: Elath as an international port town, Mitspeh Ramon as a great center of mining and associated industries, and Beersheba as the gateway to the Negev.

The center of the state will continues to be Jerusalem, but there will be an important shift of population southward. During this decade we may expect to see a firm link between the Red Sea and the Mediterranean. The Beersheba railway will be continued as far as Elath; the oil pipeline will be enlarged; the Dead Sea works will achieve their maximum output, and scores of industrial towns will be built in the area stretching from Elath to the Lachish region and the settlements on the Gaza Strip border.

During the next 10 years we shall raise the standards of elementary, secondary, and higher education, foster scientific research, and do all we can to attract men of intellect and science from all countries to Israel and to establish Jerusalem as a world center of science and culture.

In the second decade we must complete the absorption and integration of all the immigrants who arrived during the first decade, as well as taking in and absorbing several hundred thousand additional immigrants from the centers of distress in Europe, Asia, and Africa, and tens of thousands of pioneering youth from the prosperous countries of Europe, America, and South Africa. From the Western countries we shall receive, in the main, a select and pioneering immigration. The driving force behind this latter immigration will not be distress—for it is to be hoped that the Jews of the Western countries will not suffer from economic or political disabilities—but Israel's power of attraction.

During the next 10 years we must enhance our scientific and technical skills, and our capacity and efficiency in work. Increased stability, strength, security and survival itself are possible only if we raise our high standards of quality in all spheres: the quality of our work in field and factory; the quality of our military service; the quality of our science and technology; the quality of the internal social relations among our people. Without constantly growing participation by the best of the younger generation in the Western countries—in Europe and America—we shall find these things very difficult to carry out. On the other hand, the more our pioneering undertakings in the conquest of the desert and the raising of our cultural standards grow, the greater will be the attractive force of Israel; young Jewish intellectuals and scientists from the free and highly de-

veloped countries will find in Israel a broad field of action for their creative initiative. For I have no doubt whatsoever that among the Jewish youth in these countries there is also a latent desire for creative and pioneering work.

There will also be immigrants of a different type from these countries, and from the point of view of quantity they may be in the majority—immigrants whose energy and talents will be expressed mainly in the economic field; in agriculture, industry, shipping, and transportation. There is an excellent example of an undertaking of tremendous economic and defense value which has been set up by a small number of young experts from America in the last few years: the Bedek repair and maintenance workshops for planes at Lydda. In a country whose construction is only beginning there is room for much creative and useful enterprise of this type.

To our regret there has been no interruption in the threats of the neighboring Arab rulers to destroy Israel—but we look forward to the second decade confident in our strength, our creative capacity, and our goodwill; our hands are held out in peace to all people, near and far.

If the Arab States understood the benefits to be obtained from peace and cooperation between neighbors, Israel would be ready to cooperate with them in the political, economic, and cultural fields on a basis of equality and mutual assistance. I am convinced that not only would this be an important contribution to world peace, but it would be of advantage to the Arab peoples.

What these peoples need above all is development, education, health, and the enhancement of the dignity and value of man. In these fields Israel has shown her capacity during the past 10 years, and she would gladly give her neighbors the benefit of her experience. Nor would she limit cooperation only to the economic and cultural sphere. She would also be ready for political cooperation on the condition that it should be aimed at fostering peace in the Middle East and in the world.

In the meantime, Israel is determined to strengthen her military preparedness and to persevere in her work of rebuilding and redemption; to bring in Jews from the lands of oppression and misery; to conquer the desert and make it flourish by the power of science and the pioneering spirit; and to transform the country into a bastion of democracy, liberty, and universal cultural values based on the teaching of Israel's prophets and the achievements of modern science.

Radio Activity Is Boon to Nation

EXTENSION OF REMARKS
OF
HON. PATRICK J. HILLINGS
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 21, 1958

Mr. HILLINGS. Mr. Speaker, an event of considerable importance has been scheduled for the month of May and that is, National Radio Month.

From the day when the first faint reception was received until today when the "beep, beep" signals are heard around the world from orbiting satellites, radio has become an important, necessary part of our lives.

Radio's role in our daily lives becomes increasingly important because it is through this medium that we track our ventures and adventures in outer space.

The National Association of Broadcasters has advised me that Americans own 150 million radio sets—ample testimony to this medium's value to the continued progress of our Nation.

Moreover, statistics show that 66 million Americans listen to radio daily and the dramatic growth of this industry in our vast communications network is exemplified by the 3,600 AM and FM stations now broadcasting in the United States compared with 600 stations just 10 years ago.

Our reliance on radio is demonstrated by the fact that the stations throughout the country are geared to broadcast on a second's notice any threat to our national security, while giving us timely information on disasters and other emergency situations from day to day.

I, for one, salute radio—for while orbiting in space, it has kept its feet on the ground to provide Americans with maximum performance.

Congress Should Act Promptly To Correct Supreme Court Mistake in Mallory Decision

EXTENSION OF REMARKS
OF
HON. O. C. FISHER
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Monday, April 21, 1958

Mr. FISHER. Mr. Speaker, the Committee on the Judiciary is to be commended for reporting H. R. 11477, of which our distinguished colleague from Louisiana [Mr. WILLIS] is author. Action on this bill is urgent, and it is hoped the Rules Committee will promptly grant a rule and clear the measure for House debate.

This bill undertakes to correct what appears to be an obvious mistake made by the Supreme Court in the Mallory case. The error, which seems self-evident even to the layman, was in a misinterpretation placed by the Court on Rule 5 (a) of the Federal Rules of Criminal Procedure.

That rule requires the arraignment of defendants "without unnecessary delay" after being arrested. It provides that an officer making an arrest shall take the arrested person without unnecessary delay before the nearest available commissioner or before any other nearby officer empowered to commit persons charged with offenses against the laws of the United States. The rule does not state that the prisoner must be taken before a committing magistrate forthwith or immediately. It simply provides that it shall be done "without unnecessary delay." The Supreme Court rules that "without unnecessary delay" means, in effect, forthwith or immediately.

With that background, let us examine the Mallory decision and other developments which I think will demonstrate the imperative necessity of prompt corrective action by the Congress.

In the Mallory case, the defendant, a Negro, was charged with raping a white woman in the basement of her apartment house here in the District of Columbia. That occurred on April 7, 1954. With his identity concealed by a handkerchief over his face, the defendant committed the offense in the basement of the victim's apartment project where she went to do some family washing. There was no witness. The following afternoon at 2:30 the defendant was arrested. His brother was the janitor in the apartment where the crime took place. He denied the offense and, along with others, was questioned at some length. In his case he was questioned for 7½ hours, and confessed.

Mallory was detained that night, his confession coming after closing hours for magistrates. He had been questioned for 2 hours, and the 7½ hours elapsed between his arrest and his confession. The following morning he was arraigned. During the time he was held he was given food and water. He confessed freely and voluntarily. His confession was corroborated by supporting evidence. There was no claim that he was mistreated in any manner.

But the Supreme Court reversed the jury's conviction, holding that the 7½ hours during which he was detained before he confessed made his confession inadmissible. So by action of the Supreme Court Mallory was turned loose upon society. Since then he has committed another crime of a serious nature.

COURT DECISION UNSOUND

It is significant that Federal Judge Alexander Holtzoff, who presided over the trial of Mallory and sentenced him, has been very critical of the Supreme Court's decision. Here is his statement, in part:

> It so happens that I was a member and secretary of the Advisory Committee appointed by the Supreme Court to prepare a draft of the Federal Rules of Criminal Procedure. The record of the Committee will show that the words "without unnecessary delay", were deliberately chosen and were not to be taken as synonymous with "immediately" or "forthwith." The notes of the Advisory Committee appended to the Rules discloses the intent of the Committee. To be sure, they are not binding on the Supreme Court, but they fulfill the same analogous role as that played by a congressional committee report in determining what the congressional intent was in framing a statute. The notes of the Advisory Committee indicate that the words "without unnecessary delay" were used as equivalent to "reasonable time."

And some of the authorities referred to in the notes, cited to indicate the intention of the committee, sanctioned a much longer interval of time than is involved in the Mallory case.

Is it any wonder, Mr. Speaker, that even an average layman can see the utter unsoundness of the Supreme Court's interpretation of rule 5 (a)?

SUPREME COURT PRECEDENT HAS TURNED OTHER CRIMINALS LOOSE

This drastic decision, which has shocked not only members of the legal profession and law enforcement officers but also the general public, was cited by the Court of Appeals here last fall in reversing three murder cases. Many can recall the words of the late Mr. Jus-

tice Cordoza when he said: "Justice, though due the accused, is due the accuser as well."

In one of the cases, against Clarence Watson, a Negro, the accused was twice convicted for the brutal murder of Alyce O. Taggart at Scott's Hotel in the District of Columbia. Even though his confession was free and voluntary and well corroborated by other evidence, because of the Supreme Court's ruling in the Mallory case he was turned loose, and he walks the streets today.

In another case, one Russell Carter was duly convicted for murdering 15-year-old Caroline Nelson, whom he had never seen before. He was convicted by a jury, confessed voluntarily, and was protected by all constitutional rights. Yet, by order of the Supreme Court in the Mallory case Carter was turned loose upon society, unpunished.

In a third case one Robert Starr killed his wife on June 11, 1956, in the presence of witnesses. He plead insanity and was duly convicted for the crime. He had confessed, and his written confession was admitted because of its bearing on the issue of sanity. But under the Supreme Court's decision in the Mallory case, the conviction was reversed.

The net effect of the Supreme Court ruling has been to protect criminals and obstruct police officers in their investigation of crime. It means that when a crime is committed and the police pick up a suspect, and it is finally decided in the course of the investigation that the evidence justifies charging him, if during that investigation he has voluntarily confessed, and is arraigned following that determination, the arraignment is too late and the confession is null and void.

JUSTICE BEING OBSTRUCTED BY MALLORY DECISION

In order to comply with the Supreme Court's new doctrine, police will in some instances be constrained to arraign innocent persons and thereby place the stigma of a police record upon them, because there would be no time to clear them by interrogation and investigation before arraignment. Indeed police would hardly dare question a suspect before arraignment because in that event if the questioning led to a confession it would, under the Mallory decision, be null and void.

Moreover, multiple defendants in many cases could not be prosecuted, as has been pointed out by Mr. Dwight S. Strong, president of the National Association of Citizens Crime Commissions. When the first defendant is arrested, if, as required by the Mallory case, he is immediately arraigned that fact would be publicized. It would then be difficult to obtain further evidence implicating codefendants. They would scatter and conceal themselves. The Mallory decision is a built-in shield for clever criminals.

Police Chief Stanley R. Schrotel of the Cincinnati Police Department is quoted as saying:

I can't tell you how to live with the Mallory decision. We haven't had to learn how. I don't know how we could. Unless you have an army of policemen to search for evidence, I don't see any alternative to questioning. It is an injustice to the innocent not to question.

PENDING BILL IS BOTH FAIR AND NECESSARY

The pending bill to correct the grave error committed by the Supreme Court is fair and it is reasonable. It does not sanction the use of confessions obtained by force, coercion, threats or improper promises. It simply provides that mere delay in arraignment, standing alone, is not enough to outlaw an otherwise voluntary confession. And that is the way it should be in order to protect society against criminals. After all, it is our duty not only to provide safeguards to protect the rights of those accused of crime; it is also our duty to provide some protection for people who have not been murdered, robbed, or raped. This measure simply gives the police a reasonable opportunity to question a person suspected of a crime.

VOLUNTARINESS IS THE PROPER TEST

Mr. Speaker, voluntariness has always been the test for admission or rejection of confessions in most if not all of the States. Under that rule confessions that are voluntary are admissible, regardless of the delay in arraignment. If, of course, the delay is unreasonable, it might raise a presumption against the voluntary character of the confession. But that would be a question of fact for the presiding judge or the jury to determine.

The point is that a reasonable delay after a suspect has been arrested before he is formally arraigned should not be the test of whether a confession given during an investigation should be admitted in evidence. Such a rule is dangerous and it is manifestly unsound.

Before I conclude I should like to congratulate the Washington Evening Star for the valuable service it has rendered to the public in publicizing the Mallory decision, with all its implications. That service has helped educate the public and arouse the people to the seriousness of the effect of the Supreme Court's action. It is imperative that the Congress act promptly and effectively to correct the unfortunate blunder made by the Supreme Court.

Long Trains Block Traffic

EXTENSION OF REMARKS
OF
HON. RAY J. MADDEN
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 21, 1958

Mr. MADDEN. Mr. Speaker, the unreasonable length of freight trains in the Chicago land area has brought about traffic congestions at crossings that are inexcusable. In many cases switching trains have as high as 175 to 200 cars and occasionally remain stalled blocking 8 or 10 street crossings for as long as 15 to 20 minutes.

Thousands of man-hours of labor are lost annually by reason of workers of this great industrial area being delayed waiting for freight trains to open the crossings for passage.

The following editorial from the Hammond, Ind., Times reflects the thoughts on the minds of most of the citizens of the Calumet region of Indiana:

LIMIT ON LENGTH OF TRAINS

From Washington, D. C., comes the news that Congressman RAY J. MADDEN, of Lake County, has suggested it may be necessary for Congress to limit the length of trains in congested areas.

This is of particular interest to Calumet region residents, automobile drivers and truckers, in particular, because of the trains blocking crossings for long periods of time.

The Hammond Times over the years has criticized this practice and secured relief from the railroads from time to time, but after a while those who make up the freight trains slipped back into their old practice and added as high as 150 cars and more to trains "snailing" their way through the region.

All who work or live in the Calumet region are aware—or should be—that the railroads are, of course, one of our valuable assets. They account for many industries locating in this area and thus help to provide many jobs. But that fact is sometimes forgotten when those mile-long freight trains tie up a crossing for an exasperatingly long time.

It would seem that the problem could be handled by the railroads themselves without the necessity of passing a law on the subject. For nobody likes to be hamstrung by any more laws than are absolutely necessary.

Congressman MADDEN no doubt had this in mind when he discussed the subject on the floor of the House without actually throwing a bill into the hopper. His warning is more a reminder to the railroads than anything else.

David Reynard, of Cleveland Heights, 1 of 12 Winners of American Legion Essay Contest

EXTENSION OF REMARKS
OF
HON. FRANCES P. BOLTON
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, April 21, 1958

Mrs. BOLTON. Mr. Speaker, one of the events which we Ohio Members anticipate every spring is the trip to Washington of the winners of the year's American Legion essay contest. It is always heartening to see the intense interest of these young people for what is usually their first vist to our Nation's Capital.

I am extremely proud of the fact that this year one of my constituents, David Reynard, 1041 Nelaview Road, Cleveland Heights, Ohio, a senior at Shaw High School, is among the winners. Under leave to extend my remarks, I include his winning essay herewith:

WHAT PART WILL I PLAY AS A CITIZEN?

(By David Reynard)

My promise to America:

I will vote wisely on all issues that come before me for my approval.

I will vote for a candidate on his merits, and will not follow the bandwagon.

I will take an active part in all public affairs and will encourage others to do likewise. I will express my opinion on all mat-

ters which concern me or the society I live in honestly and sincerely, never resorting to bandwagon techniques.

I will give my full, wholehearted support to the winner of any election whether I voted for him or not, because I realize that he is the people's choice.

In short, I will do my best to help build and maintain good government for myself, my fellow citizens, and for citizens of the future to pattern their governments after.

I will support the schools and colleges in my area, so that my neighbors' children, as well as my own, can attend good schools, and gain the finest possible education.

I will do my best to instill good moral values in my children, not forcing any beliefs upon them, but leading them in the right direction, giving light, so that they may see their own way.

I will attend church regularly so as to fulfill my moral and spiritual needs in myself and my family. I will make use of every opportunity to worship God in my own way.

I will join civic organizations and will take an active part in them, so that everybody living in my society will have equal opportunities and freedom, and so that my children will grow up in a world where freedom and equality prevails.

I will teach my children to respect and obey the law to be tolerant toward people who differ slightly from themselves, to respect others' rights and their property, and to practice fairness and honesty at all times in their dealings with others.

In short, I will raise my children in the best way I know how, giving them all the opportunities I have enjoyed and some that I did not.

I will obey the laws set down for me by the legislators I elect. I will aid the law-enforcement agencies whenever possible, will serve on jury duty when my name comes up, and will encourage others to do the same.

I will contribute liberally to charities to help those less fortunate than myself to lead a normal, healthy life.

I will cooperate with all public officials in the performance of their duties, and will aid the police, fire, and city maintenance departments by doing my part to maintain order, preserve public and private property, and preserve sanitary conditions.

I will utilize, but not abuse my rights and privileges as an American citizens, and will defend to the death the right of my decendants to enjoy them also.

I will serve America in the Armed Forces if she decides that I am needed there.

I will keep my Government on its toes and will examine all issues of public interest seriously, doing my best to retain good government.

In short, I will be the best citizen I know how to be.

This, America, is my promise as a citizen to you. I will do my best to make your dreams of a free, happy world come true. Your future is bright. You will become greater and more powerful. You will do great things, and I will help.

Out of Control

EXTENSION OF REMARKS
OF
HON. ALBERT H. BOSCH
OF NEW YORK

Thursday, March 27, 1958

Mr. BOSCH. Mr. Speaker, much attention has been focused on labor unions in recent months and the need for legislation is quite apparent. An editorial appeared in the New York Daily Mirror which covers some very interesting points with regard to prospective legislation.

Under leave to extend my remarks, I include the editorial to which I refer and commend it to my colleagues for careful consideration:

OUT OF CONTROL

A convincing argument for legislation to end monopolistic control over much of American industry by labor unions is made in a little volume masquerading under the doleful title "The Economic Analysis of Labor Union Power."

Lest we be charged with antilabor, anti-union bias, we hasten to add that the author, Edward H. Chamberlin, an honored and esteemed scholar, is professor of political economy at Harvard and editor of the Quarterly Journal of Economics. He long has been friendly to trade unionism.

Professor Chamberlin's point is that trade unionism today is big business, and that its true position in our economic and national life is still largely unrecognized, despite all the revelations before congressional investigating committees.

"The plain facts," says Professor Chamberlin, "are that for anyone concerned with the preservation of free institutions the power position of labor has become truly ominous * * * and that it cries out for analysis from a truly public, as distinct from a labor, point of view."

In the past 25 years, he points out, organized labor has grown from around 3 million members to well over 17 million or, roughly, a third of the nonagricultural working force, and unquestionably dominates the vital mass production industries, mining, construction, public utilities, communications, rail and truck transportation in the United States.

LABOR IS BIG BUSINESS

Working capital, in the form of dues, pours into union coffers at the rate of at least $600 million a year.

Union resources, mainly in the form of accumulated pension funds, run into the billions.

Still, in the thinking of the man in the street as well as the professional economist, industry and business remain the villains in our society while labor, organized and united, is the "underprivileged" have-not.

Since labor has become big business, with labor leaders seeking to extend their power and control through agreements with other unions, Professor Chamberlin feels the time has arrived to enact appropriate legislation to control organized labor just as the anti-trust laws prevent monopolistic practices by big business.

To cite the powers enjoyed by labor unions in the United States today, and their freedom from control or supervision, Professor Chamberlin offers this example:

"If A is bargaining with B over the sale of his house, and if A were given the privileges of a modern labor union, he would be able:

"1. To conspire with all other owners of houses not to make any alternative offer to B, using violence or the threat of violence to prevent them; 2, to deprive B himself of access to any alternative offers; 3, to surround the house of B and cut off all deliveries, including food; 4, to stop all movement from B's house, so that if he were, for instance, a doctor, he could not sell his services and make a living; and 5, to institute a boycott of B's business."

LABOR AND COMPANY POLICY

Professor Chamberlin also sees great danger in recently announced demands by organized labor for a voice in determining company policy on profit distribution, such as that presented the auto industry by Walter Reuther's United Auto Workers.

Unless proper legislation is speedily enacted to resist such trends and relegate organized labor to its proper and merited position in society, Professor Chamberlin warns:

"It is more than a possibility that much that is vital to the competitive character of our economy, and which is responsible for its efficiency, will be lost through a substantial invasion of the management area by labor, and that the public will awake one day to find that a degree of economic control, which it would never have tolerated in the hands of businessmen, has already passed into the hands of someone else."

Still, high and respected labor leaders resist all control—even measures designed solely to protect the funds of the dues payers.

What Part Will I Play as a Citizen?

EXTENSION OF REMARKS
OF
HON. THOMAS L. ASHLEY
OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 16, 1958

Mr. ASHLEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following prize-winning essay entitled "What Part Will I Play As a Citizen?" written by William J. Clemens, of Toledo, Ohio. This essay was chosen as 1 of 12 in a statewide high-school competition sponsored by the department of Ohio, American Legion, with a view to promoting interest among our high-school youth—the citizens of tomorrow—in the responsibilities of their future role as citizens. William Clemens envisions his future responsibilities with remarkable clarity and I have every confidence that he will meet his responsibilities as a citizen with the same measure of sincerity, zeal, and competence as he has demonstrated in defining them. It is with pride that I commend the following essay to your attention:

WHAT PART WILL I PLAY AS A CITIZEN?

(By William J. Clemens)

Contrary to popular belief, citizens are made and not born. We may be born in this democratic country of ours with the right to take advantage of all the privileges of a citizen, but we cannot be citizens in the true sense of the word until we have availed ourselves of these privileges, fulfilled our obligations, and gone beyond the call of duty to add something of ourselves to our community. Acceptance of responsibility, cooperation with others, and contributions of time and money for public welfare are all important.

With this definition in mind, I foresee my role, as follows:

I must provide for myself and my family so that my particular family unit does not become a burden to society. This is very important, because if each of us can take care of himself, then the Nation can progress. It is our duty to take advantage of every educational opportunity and every vocational experience so that we may be qualified to earn and maintain a high standard of living.

I must make myself well informed on all issues concerning my Government, and when I have done this to the best of my ability, I must never fail to vote in all elections. Ignorance on vital issues has been responsible for a great many people misusing the vote. This could be even worse than

not voting at all. A beneficial issue may fail or a good man may not make the grade, because the public is either uninformed or misinformed. In the same way, unqualified persons can be put into office and undesirable issues passed. We must go to the polls knowing the facts.

I must never lose sight of the fact that the security of my own family is directly dependent upon the state of the Nation. I must be as alert to the Nation's problems as to those of my own family.

I must be aware of every situation where I can help my community. This is not necessarily of a political nature, but involves working with youth, church groups, or similar neighborhood activities.

Military service is definitely in the picture for every male citizen, and I will do my best to serve my country in any way that I can. However, I feel this has now taken on a new meaning to each one of us. No longer is it merely a matter of being drafted or enlisting, serving a term, and then forgetting about the whole thing when civilian life is resumed. Now each one of us has a new responsibility to himself and to his country. Each of us must strive to learn everything he possibly can about this strange new era we have been plunged into so suddenly. We must pursue learning not only in the fields of science and mathematics, but also in political science and foreign language to the limit of our abilities whatever they may be. Our survival depends upon each of us using his capabilities to the utmost.

Perhaps my greatest contribution will be to lead my life according to the highest standards I can muster and to endeavor to teach my children to do the same. No matter how the world seems to shake around me, I will try to keep my head and not panic. I will do my own thinking and not be swayed by demagogues. I know that everything I do, everything I learn, everything I am or hope to be, affects my role as a citizen.

This is what I believe—this is the part I will play as a citizen.

School Administrators: Scapegoats of Education?

EXTENSION OF REMARKS
OF
HON. STEWART L. UDALL
OF ARIZONA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 21, 1958

Mr. UDALL. Mr. Speaker, the American people are now engaged in a salutary reappraisal of their educational system. As part of this process, from time to time the charge has been made that those who administer our schools are largely to blame for the weaknesses in our schools.

Unquestionably some of our educators have been both uninspired and shortsighted, but one wonders if this indictment has not been badly overdrawn.

A few days ago a perceptive young editor in my congressional district, Jones Osborn, the editor of the Yuma, Ariz., Daily Sun, had some trenchant comments on this question in his Editor's Notebook column. His observations follow:

THE EDITOR'S NOTEBOOK
(By Jones Osborn)

Ever since October (birth of Sputnik I) we've heard much about our schools.

Would this be a fair summary of those comments:

1. United States schools teach too much frills, not enough basic courses, and standards are too low.

2. Most American parents are unhappy about this and would like it changed, but—

3. Most professional educators are resisting such changes.

Perhaps that isn't a fair summary.

But the Gallup poll tackled the question.

Three thousands parents and one thousand one hundred high-school principals were asked:

"Do you think our public schools today demand too much work or too little work from the students?"

Ninety percent of the principals said "Too little."

But only 51 percent of the parents.

Another question:

"Some people say that colleges should raise their entrance requirements, making it harder for high-school graduates to enter. Do you think colleges should do this?"

Forty-nine percent of principals said "Yes."

But only 27 percent of parents agreed.

In fact, most parents (62 percent) thought standards should not be raised.

I think we might keep this in mind. For in the final analysis, the public schools are just about what the public is prepared to support, no better, no worse.

Shall We Halt H-Bomb Tests Without Russian Inspection Guaranties?

EXTENSION OF REMARKS
OF
HON. FRANK T. BOW
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 13, 1958

Mr. BOW. Mr. Speaker, under leave to extend my remarks, I include the prizewinning essay by Katharin Knippenberg of Hartville, Ohio, entitled "Shall We Halt H-Bomb Tests Without Russian Inspection Guaranties?"

Katharin, an 11th grade student at Lake High School in Hartville, submitted this essary to the Our Times scholarship program sponsored by Wesleyan University. Her achievement has been a source of great satisfaction to her school, her parents, the community, and myself.

SHALL WE HALT H-BOMB TESTS WITHOUT RUSSIAN INSPECTION GUARANTIES?
(By Katharin Knippenberg)

If the United States of America is looking for a sure way to commit political suicide, here it is: Call an immediate halt of our H-bomb tests without Russian inspection guaranties.

Americans are horrified at their own progress in producing a weapon that could destroy so many lives, but what we consider wrong in our country may be entirely correct in another. Halting our H-bomb tests would give the Russians, who lack our moral qualms, the opportunity to build up tremendous stores of hydrogen weapons of their own. With this advantage, Russia could quickly out-distance the United States and our position of world supremacy would be lost.

Certainly, we do not want to live in a world where the constant threat of annihilation hangs over our heads. We want to be able to trust other nations. But when moral standards are so unlike, how far can we go in blind faith?

When the Russians sign an agreement it is usually part of a plan for furthering their cause, although there may be no outward sign of this. When the agreement has served its purpose, it is disregarded and the Russians revert to their original plan. If agreements are made only to be broken, what will happen if there is no ironclad assurance of enforcement of inspection rules?

By reviewing past disarmament conferences, we can see the attitude of the Russians more clearly:

In 1946, Bernard Baruch developed a plan which he submitted to the United Nations Atomic Energy Commission. The Baruch Plan proposed the formation of a world monopoly of fissionable material and production of nuclear weapons. Inspection would be part of this plan and a police force would be set up to punish violators of the agreement.

While parts of this plan were practical, other parts were not. Small amounts of fissionable material could be stolen by a rebel country and could be converted into bombs. Existing stockpiles could be hidden easily. Rockets and launchers could escape detection by being placed underground. In general, a thorough inspection was not possible and nations were not willing to accept the plan on faith alone.

The Russians retaliated with a plan of their own. Roughly, it said, "Ban bombs and trust the Russians." This plan called for halting production of weapons and then starting an inspection system. The difficulty in this plan was, "Would all countries stop bomb production?" If the United States ceased making bombs, and the Russians continued, we would be in a bad position. For this reason, the plan was highly impractical—from any but the Russian standpoint—and was never accepted by the United States.

In 1955, President Eisenhower proposed his open sky plan at the Geneva Conference. This plan was in three parts: Exchange of plans between countries; observers at key points and by aerial photography; evaluation of data received in the first two points. Actually, the open sky plan was more a warning system than a strict disarmament plan.

The Russians seemed willing to accept this plan but always found some technicality which was not to their liking. This situation continued for quite a while, with the final result that the open sky plan never went into effect.

This has been the Russian attitude in the past. Since the launching of the sputniks, their attitude has been more imperious and arrogant than ever. The Russians demanded an East-West conference that would exclude our allies. President Eisenhower refused this request.

Until we understand the culture and the standards of Russia, the United States should not risk her security through bans on H-bomb tests without Russian inspection guaranties.

A Letter From Joey

EXTENSION OF REMARKS
OF
HON. COYA KNUTSON
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 1, 1958

Mrs. KNUTSON. Mr. Speaker, earlier today I spoke to the House about cystic fibrosis—that grim disease. Among the letters I have gotten recently on the subject was one from a 17-year-old victim of cystic fibrosis from my State.

Joey Patton says more in the following three paragraphs than I could possibly say in several thousand words:

SOUTH ST. PAUL, MINN., *April 5, 1958.*
Congresswoman COYA KNUTSON,
House Office Building,
Washington, D. C.

DEAR CONGRESSWOMAN KNUTSON: I am 1 of the "about 7,000" babies who was born with cystic fibrosis in 1941, but I am one of the more fortunate ones, being old enough now to be able to write a letter to you, a lady who, through the kindness of her heart, has taken up the cause of thousands of children who are strangers to her.

Someday I hope to be able to earn a living for myself, and perhaps marry and have a family, but I would want my children not to go through what I have the past 17 years. It's been a hard life, but I'm still here—my brother and sister (both cystic fibrosis victims) are not.

I have read the speech you gave on CF on March 20, and I think it was wonderful. And, I'd like to say—from the bottom of my heart—thank you, Mrs. KNUTSON.

Yours truly,

JOEY PATTON.

A Test of American Character

EXTENSION OF REMARKS
OF
HON. OVERTON BROOKS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 13, 1958

Mr. BROOKS of Louisiana. Mr. Speaker, under leave to extend my remarks I include a speech delivered by Rear Adm. W. G. Schindler, United States Navy, before the Rotary Club, in Shreveport, La., on April 11, 1958. This speech is entitled "A Test of American Character" and it is the type of speech that will provoke real thought and perhaps will provoke some controversy. Nonetheless, the speech is a most forceful one and is the type seldom heard in modern times. It is as follows:

A TEST OF AMERICAN CHARACTER

(Remarks before the Rotary Club, Shreveport, La., by Rear Adm. W. G. Schindler, U. S. Navy, April 11, 1958)

Since the Soviets launched their first sputnik in the United States, and people in the countries of the free world as well, have been greatly concerned over the progress and status of our scientific development. As a nation, we became frantic because of a supposed inferiority in our ability to maintain our established lead in equipment and armament supplied to our Armed Forces. The Congress has appropriated billions in an endeavor to bolster what is considered our lagging efforts to produce war material. Our Department of Defense is being investigated with a view to improvement so that we may not again be beaten by the Soviets in firsts in science and in instruments of war and destruction. The whole Nation has been virtually up in arms in demands for greater efforts and better hardware.

Certainly, we need better guided and ballistic missiles, better performance in our aircraft and warships and better scientific developments—and we need them now. These are grave matters and grave times. But to my way of thinking, even more than these material things in a hurry, we need better manpower, better citizens—and we need them now.

We in this country lack an appreciation of the shortcomings of our own people. We sort of take our superiority for granted. But I'm sure, if you stop to think about it, you'll agree that we don't have the stamina, the faith, the doggedness and, yes, the integrity of our forefathers who founded and developed this great Nation. Now there is evidence on every hand of softness and irresponsibility; a lack of respect for authority, an attitude of "what's in it for me," a desire for undeserved luxury, no appreciation of citizen responsibility—all are becoming commonplace in our national character. These qualities are manifestations of a deterioration of our social systems—of our personnel. They present a problem which must be the concern of everyone with the fate of his country at heart.

I'm going to wade into this problem by giving you a harsh and cruel indictment of our fellow citizens.

In July 1951, at a place called Prisoner-of-war Camp No. 5, Chautong in the People's Republic of North Korea, the chief of intelligence of the Chinese People's Volunteer Army in North Korea wrote a report to his chief in Peiping. The report was entitled "An Estimate of American Military Personnel." This is what it said:

"Based upon our observations of American soldiers and their officers captured in this war for the liberation of Korea from capitalistic and imperialistic aggression, the following facts are evidenced. The American soldier has weak loyalties to his family, his community, his country, his religion, and to his fellow soldiers. His concepts of right and wrong are hazy; opportunism is easy. By himself he feels frightened and insecure. He underestimates his own work, his own strength, and his ability to survive. He is largely ignorant of social values, social tensions and conflicts. There is little knowledge or understanding, even among United States university graduates, of American political history and philosophy; the Federal, State, and community organizations; States rights and civil rights; freedom safeguards, and how these things supposedly operate within his own system. He is exceedingly insular and provincial, with little or no idea of the problems and the aims of what he contemptuously describes as foreigners and their countries. He has an unrealistic concept of America's inherent, rather than earned or proven, superiority and of its absolute military invincibility. This is his greatest weakness. He fails to appreciate the meaning of and the necessity for military organization or any form of discipline. Most often he feels that his military service is a kind of hateful and unavoidable servitude to be tolerated as briefly as possible; then escaped from as rapidly as possible. He is what he himself calls a peacetime soldier. He looks on military service only as a soft and safe job. He resents hardship and sacrifice of any description, as if these things were unfair and unreasonable to him personally. Based upon these facts about the imperialistic United States aggressors, the reeducation and indoctrination program for American prisoners proceeds as planned."

This report I have just read is the estimate of the Chinese after nearly a year of interrogation and observation of American prisoners of war. The report was from a Chinese intelligence officer to his superiors in Peiping. It certainly was not propaganda but, in their eyes, a factual report and estimate on American conduct and reactions under the peculiar conditions of a prison camp.

Now I don't for a minute pretend that this was an entirely accurate estimate. But, on the other hand, we can't be realistic about it and at the same time dismiss it as being a figment of Chinese Communist imagination.

Whether we like it or not, this appraisal of your American youth (for most of these prisoners were young men) points out specific weaknesses and shortcomings manifested by our military personnel in Korea. Furthermore, it reflects certain weaknesses and shortcomings in this generation of Americans and in our parents, teachers, and leaders.

There is a severe criticism of our way of life; of our social system. It is a commentary on manners and morals; on national character and the lack of it. In fact, to use appropriately strong language, it is a disease that might well be considered the number one social disease of America.

Now I want to make another strong statement: The prevention and successful treatment of this disease are essential to the continuing survival of our system. I ask you to think about that: "the continuing survival of our system." For if our system—the American way of life—goes under we can expect a far worse fate than that being meted out to peoples of Soviet satellites—Hungary, as an example.

But before we accept the Chinese appraisal of our manhood let's examine the evidence.

Four days after our ground forces engaged the enemy in Korea—July 9, 1950, to be exact—an American Army officer, taken prisoner 48 hours before, made a 900-word broadcast in the enemy's behalf over the Seoul radio. This man said, among other things, "We did not know at all the cause of the war and the real state of affairs, and were compelled to fight against the people of Korea. It was really most generous of the Democratic People's Republic of Korea to forgive us and give kind consideration for our health, for food, clothing and habitation."

What must we American citizens think of something like that? Here was an American, an officer in the Army, within 2 days after capture, practically committing treason—certainly abetting the enemy. How had such a behavior been possible? Service authorities were dumfounded. Within a few weeks many statements of this sort were picked up at radio listening posts.

The Army began at once the collection of data for a formal study of the behavior of our Korean prisoners of war in all its aspects—medical, psychological, propagandistic, and legal. The study was one of the most searching and exhaustive analysis of human conduct ever made. Nothing was left to chance, opinion or conjecture. Beginning with the first returned prisoners in February 1951, every American prisoner of war was interviewed and interrogated by specialists: counter-intelligence officers, doctors, psychiatrists, lawyers, and administrative workers. These men were drawn from all the services, the Army predominating. No limit was set on the length of the men's answers to questions which ultimately covered several million pages of interviews.

The Communists had warned our men that when they returned to their country they would be subjected to intensive and, it was implied, to brutal questioning by the American authorities. Because of this, the interrogators and specialists were extremely understanding and sympathetic in their tactful handling of the men. Everything possible was done to restore their peace of mind and assist them in a gradual and undisturbed recovery from their ordeal as prisoners of war. Answers to questions were not forced or influenced in any way. What was wanted was facts—facts arrived at naturally and truthfully.

This they succeeded in doing after more than 2 years of careful and exhaustive work. Time does not permit even outlining the many hours spent in obtaining every possible bit of evidence from each man and then checking and doublechecking each fact. The indisputable facts were then pieced together to form the whole story of the American prisoners of war in Korea.

Now I want to give you some of the facts and findings that I have taken from various reports and studies. Much of the material on prisoners of war in Korea was obtained from an article by Mr. Eugene Kinkead and

a paper by Maj. William E. Mayer (Medical Corps), United States Army.

At the beginning various members of the study groups had preconceived ideas about Communist treatment of their prisoners. It was commonly believed that any American falling into Communist hands would be subjected to such brutal, inhuman treatment that he would become insane, or die trying to resist or suffer a moral collapse and become a Communist. Statistics show, however, that of the whole group of prisoners less than 5 percent were mistreated—and most of these cases occurred early in the war when the North Koreans were still in evidence. The incidence of mental disease among prisoners of war in Korea, while there and after their return, was not as high as in the general population in the United States. Thus, the procedure that the Communists imposed upon their American guests did not produce insanity.

The death of the prisoners was appalling; 62 percent survived and came home; 38 percent did not. This was the lowest survival rate, the highest death rate, among American prisoners of war since the American Revolution. It was at first assumed that the 38 percent who died, died at Communist hands. But a searching and intensive investigation disclosed that there was not a single documented case of any American who was ever tortured to death, beaten to death, starved to death, or executed for resisting the Communist brainwashing or indoctrination treatment.

What, then, caused this high death rate? The plain, unvarnished truth is that the men couldn't take it. And they couldn't take it because of many contributing factors. The first one, of course, is that we in America today do not live a hard life. Few of us are very hungry, few of us have to fight for survival. As a Nation, we are drifting away from a code of discipline—a code largely responsible for the establishment and early growth of our country. Our idea of life is generally one of less work, more pay, and more play. We shy from the harsh realities of life and are drawn toward the luxurious. None of this provides us with the fortitude to face up to something unforeseen—like a prisoner-of-war camp.

In Korea it became clear that so-called liberalized, but actually undisciplined, military organization, designed to please mama's boy and boys' mamas, cannot survive when the going got tough on the battlefield or in prisoner-of-war camps. It was the mama's boys who died first. It can be demonstrated that survival in battle depends almost entirely upon organization and discipline and the same applies to survival in case of capture—or, for that matter, in case of any civilian emergency or natural disaster. But I want to make this point clear. It does not mean something arbitrarily forced on a helpless drafter by a tough old sergeant or heartless chief petty officer. It does not mean something forced on young lieutenants by unreasonable colonels. Far from it, discipline is a system of values that requires constant attention and constant building. It is a set of beliefs and convictions which are meaningful to the individual and which actually guide his behavior.

A person who has been taught, and has acquired, good discipline knows right from wrong, knows the reasons for and the worth of obedience to proper authority, knows the value of integrity in himself and others; he does things that need to be done even though he doesn't like doing them; he appreciates and respects the rights and sensibilities of others even though he does not always agree with them in principle. In short he has a guide for his own behavior and this guide has been obtained mainly through the teachings and examples of others.

It was that kind of discipline that made the difference between those who lived and those who died; that often was the difference between those who resisted and those who gave up.

Many prisoners died because of an illness known as "giveupitis." An Army doctor, who as a prisoner himself, reported, "First, the sufferer became despondent; then he lay down and covered his head with a blanket; then he wanted ice water to drink with his food; next, no food, only water; and eventually, if he was not got to and helped, he would die. You could actually predict how long it would take. If you didn't get to him within 3 weeks, he was a goner; if you got to him sooner, he could usually be saved. But in a camp of 3,000 men, which was what we had at the start, and with only a few doctors, it was hard to locate all of these cases."

Why, you ask, even with a shortage of doctors among the prisoners, didn't the prisoners themselves help the sick and despondent? Now here is a $64,000 question. The sad and simple fact of the matter is that the prisoners lacked discipline—both military and personal discipline. The men who were captured in large groups early in the war (incidentally, most prisoners who died, died in the early stages of the war) became unmanageable. Even in prison camps our military regulations require maintenance of organization and rank structure. But in Korea the men refused to obey orders and they cursed, and sometimes struck officers who tried to enforce orders. This sort of thing was, of course, encouraged by the Communists. They informed all newly captured prisoners that command organization no longer existed among them and that they were all of equal rank as simple prisoners of war.

At first, the badly wounded suffered most. Then dysentery took its toll and gradually the inability of the men to take care of themselves in the primitive conditions of the camps further weakened their physical and mental resistance to those things which required personal discipline and good old Yankee resourcefulness to overcome. I do not have the time now to relate incidents of cruel and almost savage treatment of men by their fellow prisoners. Some of these stories are almost unbelievable, but they have been confirmed by evidence and thorough investigation.

Now I would like to consider the other most appalling thing of the prisoners' conduct: Collaboration with the enemy. By collaboration I mean acts of cooperation by prisoners with and for their captors. These acts ranged all the way from thoughtlessly snitching on their fellow prisoners to supplying information of military value to the enemy. One man, by his own admission, related how he gave information to the Communists after 35 minutes of not very intensive questioning. As he explained it, "They said they had ways of making me talk, so I talked." In contrast to this kind of behavior, another man, who had said nothing in the almost 3 years of his captivity explained that he had been taught not to communicate with the enemy, so he didn't.

An Army medical officer, who interrogated many returned prisoners and studied hundreds of cases and thousands of pages of documented testimony, placed the prisoners in 4 categories.

The first of these, or about 13 percent of the total number of collaborators, he placed under the general heading of "hard core." This group consisted of men with little capacity for enduring stress, who capitulated early in the game.

In the second category he placed the opportunists. They would give information, sign petitions, and make broadcasts for the sake of tangible benefits they were told they would receive, such as additional food, cigarettes, or soap or freedom to walk outside the camp. Despite their acts of collaboration, these men appeared no deep-seated convictions about communism and no real understanding about its techniques.

The third, and smallest, group of collaborators consisted of those who actually accepted communism. In general, they seemed to be men who had never formed any strong attachments of loyalties in their past lives. They had no confidence in themselves or were dissatisfied with what they had been up to that time. Thus, they were willing to accept a system as different as possible from the one they believed had done nothing for them.

In the fourth category were placed the great majority—3 out of 4 to be exact. Here were the men who chose what seemed to them to be the line of least resistance. In the absence of group discipline, they tried to substitute a form of conduct or protection of their own. Lacking personal discipline this procedure was doomed to failure. They complied outwardly with less extreme demands and some signed petitions and made broadcasts, but these were relatively harmless. On the whole, this group refused to do anything obviously traitorous.

They believed that the Communists would be more lenient if they acquiesced to demands and that if they didn't they would be punished and even tortured. These beliefs were of their own making largely because of the inadequate quality of their personal character and fortitude. Unfortunately, there was no one around to point out to this group that their atitude was unrealistic and that if their behavior had been based on reality, rather than on fantasy, the entire camp experience would have been easier for all of them. This conduct of outward compliance and lack of personal discipline made the Communist's system operate. Without it, the Communists would have been powerless.

I have pointed out a few factual results of American behavior under presssure. Such behavior, in such proportions, is not good for our country. In fact, unless and until we establish and maintain the integrity, fortitude, hardihood, and faith of our country's forefathers, our very survival is at stake. That statement is made in all seriousness and conviction. Reiterating what I said at the beginning of this talk, we are producing sufficient material requirements of life and for our national defense. What we need is a national and individual effort to improve the quality and character of our personnel.

What the Communists were able to do with our young men in the prison camps of North Korea, they are trying to do with our entire country. They have been working at this for some time. They are hard at work now and they will continue into the future until we or they go under. It is as clear cut as that. Our very survival is at stake.

In an analysis of our people we can examine the problem from two aspects: What the Communists are doing to deteriorate or influence our collective character and what we are doing or need to do to build it up.

At the present time the Communist is operating what amounts to a kind of evangelical warfare. For his evangelist he is obtaining the services of people who initially believe at least a part of the Communist doctrine.

This method of indoctrination and education of masses of people is a very effective one. It is a weapon in a very real war and one which is going on right now all over the world. And it is being used most intensively in the United States—in classrooms, homes, news media, organizations—everywhere around us. This is a war which we are not winning at this time. In this war we can't rely on retaliatory bombing squadrons, radar warning systems, intercontinental missiles, nuclear powered submarines or upon any material fortifications. The fortifications of this battlefield must be moral, spiritual and psychological.

This is a war of ideals and in this war we do have a better weapon. But it's a weapon which, like any other, is worthless unless it is used with understanding and effect.

Our weapon is our ideological principles as compared to those of the Communist. It is the strength of our men and women and teenagers; of our bill of rights; of our freedom of thought and speech; of our individual and collective intergrity, faith, honor and justice. But what we must face up to today is that these strengths are being misused or, what is even worse, unused by us.

We can learn a lesson from the prisoners who returned from Korea. These men were normal American citizens, such as you and I. What was done to them can and will be done with equal success to others. It is in process now and will succeed unless we set up fortification to combat it and defeat it.

The study of American prisoner behavior in Korea forcefully disclosed a deficiency in character and morals as well as physical stamina. It indicated a decided lack of old-fashioned ideas about personal honesty, loyalty, dependability and responsibility. To rectify these shortcomings requires a system of personal and character development and an awareness and determination by everyone that such a system must have universal support.

This kind of character development begins in the home—the military does a very credible job with its young men; but it must have something sound to work on. The character buildup must begin in the cradle and at the parent's knee (and let's hope the day will soon return when some of this development is accomplished across the parent's knee). From the home, the development must be continued and broadened in schools, churches, playing fields, work shops, and offices. As personnel managers and leaders you are in a position to make better citizens of our young American workers. Instill in them the pride of accomplishment of a good job, well done. Make them proud of their earning power—make them see how important it is do an honest day's work for an honest day's pay.

A vital part of the answer lies in an understanding by all Americans of our noble heritage, of our system of ideals and values which underlies our country's greatness. Specifically, it lies in a realization of the fact that we have available to us a power greater than that of ourselves alone. The Communist is an atheist and boasts of it. This is one of communism's great weaknesses. We are a Christian Nation. We should boast of it. It can be our greatest strength.

New Ruling Is Blow to Little Business

EXTENSION OF REMARKS
OF
HON. O. C. FISHER
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Monday, April 21, 1958

Mr. FISHER. Mr. Speaker, under leave to extend my remarks I include an editorial from the San Angelo, Tex., Standard Times, April 16, 1958, which I think is both sound and timely. I commend this particularly to the Committee on Education and Labor, which has jurisdiction over the subject matter. Corrective legislation should be enacted at once.

The editorial follows:

NEW RULING IS BLOW TO LITTLE BUSINESS

Government bureaucracy appears to be moving in on small business again while Congress and the do-gooders beat their breast over little business.

The Department of Labor, through Clarence T. Lundquist, Administrator of the Department's Wage and Hour Division, has announced he will put into effect a ruling on May 5 which will deprive those employees classified as executives from holding this title unless they receive $125 a week. Under the present procedure this title can be held by all those who receive $100 a week and above.

There are not many executives getting less than $125 a week. The only ones we know anything about are those who work for small-business concerns in the smaller cities of the Nation.

Mr. Lundquist's ruling will make eligible for overtime payment all so-called executives receiving less than $125 a week. While Mr. Eisenhower admonishes Mr. Reuther to be reasonable, the President's employee, Lundquist, moves in on the little fellows.

There is no need for Congress to profess interest in little business if this ruling goes into effect. If Congressmen want to help little business, here is their chance. They can talk Mr. Lundquist out of this ruling. The cumulative effect of the ruling will be the penalizing of those little concerns, which are already having a hard time competing with their large competitors.

We doubt if any executive in any business of any size will be affected. But the little-business people, who get such consistent solicitude from every liberal organization and politician, have no means of reaching Mr. Lundquist and his helpers and might just as well await his ax. Little business gets it again on May 5, 1958, unless alert Congressmen act quickly.

Doesn't Help REA Cause

EXTENSION OF REMARKS
OF
HON. FRANK T. BOW
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 13, 1958

Mr. BOW. Mr. Speaker, a note of commonsense is welcome in the current discussion of interest rates for REA loans, and such a note is supplied by an editorial in the Ohio Farmer magazine for April 5. I commend it to the attention of my colleagues.

DOESN'T HELP REA CAUSE

For many years we've lent our full editorial support to rural electric cooperatives. During the years of their organization, the Ohio Farmer carried many articles about them. In more recent years, we've continued to tell of the valuable services they perform for Ohio members.

A rural electric cooperative provided the first power service to our home farm in Guernsey County. We number many REA directors and members as friends. Even so, we can't accept some statements of Clyde T. Ellis, general manager of the National Rural Electric Cooperative Association.

Ellis is against the proposal to increase the interest rate the Government charges when lending money to rural electric cooperatives. Naturally, everyone likes to borrow money as cheaply as possible. And Ellis has every right to express his opposition to the move. But, there's little excuse for building a case upon emotion and sly innuendo.

For instance, Ellis charged recently that the bill to raise the interest rate was designed to kill rural electrification. In a letter to Secretary of Agriculture Benson he declared: "Your decision to give Wall Street the REA loan business obviously is not a fiscal decision. It's a decision to sacrifice rural America upon the golden altar of Wall Street money changers."

The plain fact is that money is a commodity, like anything else. Interest is the rent you pay for the use of money. The Government gets the money it loans to REA cooperatives and many other groups by selling bonds on the open market. During recent months the Government has been paying more to get the money than the 2 percent interest it charges the REA cooperatives. It has been picking up the check for the loss, and to that extent subsidizing REA loans.

Whether that subsidy should continue is the question. If so, the facts justifying the subsidy should be stated clearly and honestly. It's hard to believe that the future of REA will be decided by the fine point of whether the interest rate is raised.

If you're a member of a rural electric cooperative you have every reason to be proud of your organization. You'd like to see interest rates low—as who wouldn't? But, that doesn't mean you expect all the people in the country to help you pay part of the cost in the form of an interest subsidy, does it?

Certainly, when you have right and reason on your side, you don't need to engage in emotional ranting. An emotional approach often implies a weakness of facts. Don't you agree that the interest question can be considered squarely upon facts?

We have not seen a scrap of evidence to prove that the proposal in question would sacrifice rural America upon the golden altar of Wall Street money changers. These emotional charges do not reflect the calm, careful thinking we've always associated with our friends in the Ohio rural electric cooperatives.

San Jose News Takes on Another Federal Power Claim at Trinity

EXTENSION OF REMARKS
OF
HON. CHARLES S. GUBSER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 27, 1958

Mr. GUBSER. Mr. Speaker, in its editorial of March 11 entitled "Trinity Project and the P. G. & E.," the San Jose News helps explode another myth used by the Federal power supporters in their attacks against the Trinity partnership legislation.

In claiming that the P. G. & E. is out to take advantage of the consumer, the all-Federal power advocates ignore one point: that the company is one of the most widely owned gas and electric companies in the Nation—and that this constitutes real public ownership in the highest sense.

As the News notes:

The number of (P. G. & E.) shareholders stands at 225,487 with 143,528 Californians, or 66 percent, owning 46 percent of the outstanding shares.

It would seem that Californians having stock in this company reflect an investors confidence in the future of their State and the future of P. G. & E. Such widespread ownership of P. G. & E. stock certainly does not indicate a soaking of the taxpayer and consumer of gas and electricity.

At Trinity, it is the all-Federal power plan that would soak the taxpayer and consumer. For its advocates are asking the majority to pay the power bills of a few minority preference customers. These bills represent the difference between a production cost of 7.3 mills and a selling price of 4.6 mills per kilowatt hour. This would mean a loss of more than $120 million to the Federal Government during the 50-year repayment period—a loss borne by water users and taxpayers. In contrast with the heavy tax load carried by investor-owned utilities, Government power installations escape taxes almost completely. It is little wonder that the Government can often undercut its own citizens in the marketing of power, at the expense of the Nation's taxpayers?

I have requested that the San Jose News editorial referred to above be included in the RECORD for the information of those who are hearing the current myths of all-Federal power:

TRINITY PROJECT AND THE P. G. & E.

A great gust is whipping up over the issue of whether to grant the Pacific Gas & Electric Co. a partnership in the $262 million Trinity River diversion complex now being constructed as part of the vast Central Valley project. According to the New York Times, it is expected that the issue will play a major dramatic role in the 1958 election campaigns.

One of the charges leveled against the utility company by opponents of the plan is that it is a private operation that will be enriched at the expense of the taxpayer and the consumer. Without at this time going into the financial involvements (we shall touch upon this at a later date when the issue really gets hot), we should like to scrutinize closely what is mean by the word "private."

How privately owned is P. G. & E.? For many years, it has been the most widely owned gas and electric company in the Nation. Only six other firms have more stockholders. The number of shareholders stands at 225,487 with 148,528 Californians, or 66 percent, owning 46 percent of the outstanding shares.

Some 656 insurance companies own stock and 497 religious institutions have holdings thus spreading the earned income among millions. In addition, 433 educational institutions, investment trusts, private and public pension funds also are owner-shareholders. A total of 87,697 women, as opposed to 51,510 men, derive income from their holdings.

Thus the myth of the "private" company is exploded since the average holdings are spread horizontally across the land and affects multiple millions of people.

Item Veto Needed

EXTENSION OF REMARKS
OF
HON. RUSSELL V. MACK
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Monday, April 21, 1958

Mr. MACK of Washington. Mr. Speaker, twice in the past 2 years the President has vetoed river and harbor-flood-control bills that had been passed by Congress. Both bills were a hodgepodge of good projects and bad. He vetoed the bills for that reason.

Some of the projects in both bills had been inserted against the advice and recommendations of the agencies—United States Army Engineers, Budget Bureau, and Secretary of the Army—which are especially charged with the responsibilities of studying such projects and reporting their findings to Congress. In many cases the recommendations of these agencies were ignored. Some projects had not gone through the customary procedure of reporting on them.

When the river and harbor-flood-control bill came before the House there were 132 projects in it which almost everyone agreed were economically sound and desirable. There were 18 projects that were objectionable to many for various reasons. Almost everyone wanted the good projects approved. To obtain authorization of the good projects, however, would have involved approving 18 projects, total cost of which exceeded $300 million, which were not acceptable. Accepting $300 million of objectionable projects in order to obtain the good projects many felt was too big and wasteful a price to pay.

Dispute over issues of this kind could be eliminated if the President were granted the item veto, which he does not now have. Under Federal law the President must accept every project or item in a bill or veto the entire bill. In many States governors have the right of item veto; the President does not.

The item veto would deprive the Congress of no rights it now enjoys. If the President were to veto several items in a bill the Congress, if it had the votes could override his veto of any one or of all the vetoed items.

Had the President possessed the power of item veto, he could have vetoed in the river and harbor-flood-control bill those projects he considered objectionable. Such action would have authorized the good projects in the bill and left to Congress the power to authorize over the President's veto any of the projects in the bill he had vetoed.

The item veto is in keeping with the salutary provision of checks and balances provided by the Constitution. This often would work for less waste and for more efficiency in Government.

The Oregonian, Portland, Oreg., one of the most outstanding daily newspapers in the Pacific Northwest, in an editorial in commenting on the recent veto by the President of the river and harbor bill recommended the item veto for river and harbor-flood-control bills. On this subject the Oregonian editorial said:

ITEM VETO NEEDED

Impasses such as that developing between Congress and President Eisenhower over important bills, including the vetoed rivers and harbors bill, could be prevented by the grant of an additional legislative power to the Executive: The item veto.

Every United States President of modern times has sought authority to accept or reject separate items in appropriation bills rather than deal with an omnibus bill as a unit. Some have taken the view that a constitutional amendment is necessary. President Eisenhower has held, however, to the opinion that congressional legislation is all that is necessary. In May 1957, he publicly asked Congress to pass such legislation.

Congress has much to gain by following the recommendation. The President surely would never veto in its entirety a measure like the rivers and harbors bill if he were authorized to reject items selectively. Such procedure would give greater assurance that worthy projects would pass into law unincumbered by the products of logrolling and the pork barrel. In fact, pork could be expected to be at a minimum in a bill subject to the President's selective veto. Congress would still have the power to pass vetoed items over the Presidential objection; but patently unworthy projects, such as now ride in, would seldom survive.

Foreign Aid Duel With Reds Calls for Caution by United States

EXTENSION OF REMARKS
OF
HON. ALBERT H. BOSCH
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 27, 1958

Mr. BOSCH. Mr. Speaker, as we approach consideration of the foreign aid program for the fiscal year 1959, we should give careful consideration to our aims and whether or not these aims are being met under the program as carried out today.

Under leave to extend my remarks, I include an article by Bishop Fulton J. Sheen entitled "Foreign Aid Duel With Reds Calls for Caution by United States," which I commend to the attention of my colleagues:

FOREIGN AID DUEL WITH REDS CALLS FOR CAUTION BY UNITED STATES

(By Bishop Fulton J. Sheen)

The United States, under Providence, is to play an important role in the preservation of the liberties of the world.

But governments are not completely inspired by an amor benevolentiae or the love of others for their own sakes. Foreign aid has many aspects; military, political, economic and social. One of these aspects which is worth examining is the giving of aid in order to combat communism by keeping the underprivileged nations within the orbit of the free world.

In relation to the assumption that foreign aid combats communism, we would point out 3 cautions and 3 recommendations.

Caution 1: There is nothing in foreign aid of and by itself which makes it an effective weapon against communism. Aid can be given by the United States to combat communism; but aid can be given and is given by the Soviets to further communism.

It is conceivable that the Soviets could give more than the United States, because they give greater primacy to creating new slaves through world imperialism, than to adequate production for those presently enslaved.

Caution 2: It is a fallacy to believe that he who gives the most, is assured of winning the underprivileged. Foreign aid, from this point of view is like courtship, and it is well to remember that a maid does not always marry the one who gives her the biggest wingswept fenders.

The underprivileged nations, to continue the analogy, need not marry at all; they can become old maids, or politically become narrowly nationalistic; or they could be won by a third power, which would be neither the United States nor the Soviets, and of which we speak in a moment.

Caution 3: Avoid seeking to win other peoples into our orbit by economic means alone. To do this would be to put ourselves

on exactly the same basis as the Soviets, namely, materialism.

Denying it in theory, but affirming it in practice, we would thereby assume the basic Marxian principle of the economic determination of history.

And what would be tragic is that we would be doing it to peoples who themselves refuse to accept the primacy of the economic.

Recommendations are as follows:

1. The foreign aid of the United States must introduce some factor besides the economic, political, and military; one which is the strongest in our national traditions and one which the Soviets not only lack, but repudiate.

They have one fear in our dealing with the rest of the world, that we will take cognizance of that defect which makes them suspect by all the peoples of Asia and Africa and that is our belief in God, the dignity of the human person, the freedom of conscience, and the principle that the state exists for man not man for the state.

When we go along with the Communist line that matter alone matters, we are weak and they are strong; when we give economic aid on the basis that matter alone does not matter, they are powerless and we are strong.

2. Along these lines, recognize that there exists what might be called a third world power, which despite many fundamental differences with Christianity and Judaism, nevertheless does believe in God and prayer.

One out of every 7 persons in the world is a Moslem; 375 million of them in the world constitute a great supranational force.

Already the anti-God forces of the Soviets have won over some of their governments and largely because we have been silent on the fundamental differences between them and the Soviets.

Islam can be made sympathetic to the free world more by recognizing its belief in God than by mere economic aid which ignores that belief.

One of the strongest anti-Communist blocs in the world is ignored because in our insistence on the economic, we have placed ourselves on the same level as the anti-God forces.

Food for Thought as We Ponder the Problems of Education

EXTENSION OF REMARKS
OF
HON. KENNETH B. KEATING
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 6, 1958

Mr. KEATING. Mr. Speaker, one of the most highly respected journalists I know is Frank Tripp, chairman of the board of the Gannett Co. He is a long-time leader in the Gannett group of newspapers and radio stations, founded by the late great American, Frank E. Gannett. Mr. Tripp is a veteran writer and editor who speaks with authority and perspicacity on a wide range of subjects. Often, his calm, incisive comments cut away the fat around an issue with clean strokes and bare the marrow for the readers' eyes.

On a number of occasions Mr. Tripp has written about various problems in our educational system. In a recent column in the Gannett papers, he makes some points worth remembering. Although I am firmly convinced of the need for strengthening our reservoir of educated people, and for establishing a Federal loan program for needy college students, I do feel Mr. Tripp's words deserve wide attention. Therefore, under leave previously granted, I insert in the RECORD his column entitled, "A Plea for the Trades":

A PLEA FOR THE TRADES
(By Frank Tripp)

Nobody is paying much attention to the basic education that will man the trades in that effortless tomorrow. Who will build when all of our kids become mental wizards?

While dreamers of a collegiate utopia unfold their plans, nature is creating its eternal majority of commonplace children—new lives that can be frustrated and their usefulness impaired by misplaced higher education, urged upon them by theorists and parents who gamble that any kid may be tutored into an Einstein.

This is to be a visit with some of their dads—that unsung army of craftsmen who have let themselves become important only on election day—and have come to look down upon their own worthy vocations.

Their forebears, and mine, proudly proclaimed that to build is as dignified and important as to create. They held that man's prime obligation to society was to live by his own hands, for all had hands and only the few had genius. Their lives were backlogged by work and practical experience.

The trades and the newspapers were pop's university. He would rather rear a journeyman tinker than what he called an "educated fool," a nonproductive misfit of a codfish aristocracy.

Excepting only the major professions, that was pop's rude estimate of higher education. It was his deliberate slur of the arts—the same arts and sciences that his sons today crave for their children—which brings us down to now.

Out of pop's philosophy survives one inescapable truth—that "all have hands, only the few have genius." The flaw in today's reversal of pop's thinking is that almost every craftsman's third grader has become a potential Steinmetz, who "must never work for a living as his father did"; though crippled Steinmetz slaved as few men have.

The fallacy of it all is that the greater the success the tougher the job. Craftsmen themselves are discrediting the dignity of their trades, degrading the builders of tomorrow.

Preparation for youth's effortless career ignores that work and practical experience will reveal true genius where it exists. Yet diversion, leisure, glamour, and fame, above achievement, have become too much a part of parents' aspirations for their children.

We may build palatial schools and universities, Pentagon in size, reeking in theory; build great industries with automatic machinery that does more thinking than its operatives; raise wages, shorten hours, bestow benefits that drive costs higher than income; leave posterity with hopeless debt, dependent upon Government, craving the moon:

But we never can cram or legislate capacity to learn, or guts to win, into kids who lack such innate ambition and ability.

Westerns never can take the place of reading, or TV dinners the place of corned beef and cabbage. Theory never will displace experience. Automatics and Univacs won't develop minds incapable to produce without them.

Are we breeding today such millions of phenomenons that the three R's are nonessentials to education; college aspirants who can barely spell, write legibly, multiply by 9, learning the alphabet from a telephone directory?

Don't believe it? They come for jobs, and out of high schools. How about some of pop's good old-fashioned "lower education"? He wasn't wrong about that.

We have got to better educate future artisans who will not go to college, and not make millions produce a diploma to get a job, or feel important.

We lavish too much adoration upon geniuses, personages, "honorables" and "stars"; too little appreciation of those who build. We have gone celebrity-cockeyed.

Who else is getting fed up on the applesauce that in America's tomorrow there will ouly be places for wizards, sheepskins, scientists, and stars?

Who else believes that we are overemphasizing higher education, with too little fundamental basis to accept it? Even worse, shaming the common-school millions who must house, clothe, and feed us.

Are we nurturing a Nation of pop's "educated fools" as a means to discover the genius among them?

If you think all this is crazy, just try to fill the apprentice ranks in a good half of the essential trades. They all want to start as vice presidents—their misguided parents expect it.

Some of the Causes for Our Present Recession

EXTENSION OF REMARKS
OF
HON. CHARLES S. GUBSER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 27, 1958

Mr. GUBSER. Mr. Speaker, I recently received a letter from one of my constituents, Mr. E. A. Jackson, which makes a fine point regarding some of the causes for our present recession.

I commend this letter to my colleagues:

JACKSON BROS.,
Saratoga, Calif., April 5, 1958.

Congressman CHARLES GUBSER,
Washington, D. C.

DEAR CHARLIE: I have been wanting to write you for a long time how the tax situation affects us in our business but have hesitated as I feel you must already knw the things I am going to tell you.

I am interested in and am president of the Santa Clara Cold Storage & Freezer Co. in Santa Clara, Calif., which about 40 of us farmers built about 5 years ago due to shortage of storage space for our pears. It is about 1 million cubic feet and cost about $1 million. We borrowed about 50 percent and have over half of our loan paid off.

There is again a real shortage of cold storage space in the summer time and we have been studying the problem of adding some new rooms to accommodate 125,000 boxes of pears at one filling and the estimated cost would be around $150,000.

We can raise the money but it is just not practical to go into the venture if we have to pay 52 percent of our profits in taxes and then again pay 35 to 50 percent of what we get in personal tax.

I wish to point out that if we could be assured that the corporation tax would not be over 25 percent in the future, we would go ahead with our expansion program without hesitation.

It would mean that our company would spend this difference or 27 percent for expansion and a new sound business instead of the Government spending it.

Another important factor against this high 52 percent tax is that the Government is paying 52 percent of the labor bill and other expenses also. This is a very important reason why most companies raise wages so easily.

Our wages and salaries have raised about 50 percent in the last 5 years and under these conditions and with 52 percent tax we just can't see our way clear to expand as we naturally should.

I am thoroughly convinced that the high tax rates both corporation and personal is what is bringing on the recession and will continue in the same direction until real tax relief is given.

If all companies were allowed to keep and use that 27 percent it would be used for employment and expansion which would make a healthy economy instead of the Government getting it to pass out to people for doing nothing.

Taking tax money at the 52-percent rate to give away certainly is not a solution to our problem.

It has been quite a few years now that this plan has been going on and I am sure many of us knew that it would ruin our industries if it continued.

I hope I have made it clear how the high tax rates are affecting our company and assume it does likewise to millions of others.

If you believe in what I have told you do you think it would help to write to others about it? And who would that be?

We farmers who market through Mr. Irving Woodies, of the CES of Sacramento, thoroughly agree with the administration's farm policy and know it will work out right in the end.

Very sincerely yours,

EDGAR JACKSON.

Democrats, Politics, and Panic

EXTENSION OF REMARKS
OF
HON. TIMOTHY P. SHEEHAN
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, April 21, 1958

Mr. SHEEHAN. Mr. Speaker, the current business slump seems to have alerted the Democrat Party to the necessity for stressing to all of our citizens the great dangers we are facing. In a similar situation in 1949 and 1950, they were very quiet and had little to say.

The Chicago Tribune, in their editorial of April 5 entitled "Politics and Panic," points out the difference in Democrat attitudes in these two periods. The editorial is as follows:

POLITICS AND PANIC

A good many influential Democrats are lamenting the current business slump with an enthusiasm that suggests something more than concern for the Nation's economy. It would be naive, in fact, not to associate their cries of panic and their prolific emergency spending programs with the approaching November elections. The more they can plant the idea of a Republican recession in people's minds—whether their programs are adopted or not—the better it will be for them in November.

The administration, on the other hand, has backed away from its earlier touch of panic and from time to time adopts a stoic wait-and-see attitude, tinged with hope.

This attitude has led Speaker RAYBURN to comment somewhat sarcastically: "I see [from the President's remarks] that everything is going to be all right. We heard a lot of that kind of talk in 1928, 1929, and 1930. But I never heard of wishing making it so."

It was no accident that Mr. RAYBURN failed to mention 1948–49. Statistically, that recession was a good deal like the present one. The percentage of unemployment was about the same; production went down slightly less, but income went down a good deal more. Then it was the Democrats who were in office, and it was they who did the minimizing and the hoping.

Speaking of deflation in his economic report in January 1949, 2 months after the recession began and 6 months before business turned up, Mr. Truman said, "We need to have available a range of governmental measures which can be applied as brake or as accelerator, according to the need." Here, clearly, was the Democratic chance to use some of the measures which they advocate today.

Yet in the same report Mr. Truman spoke reassuringly of "our escape from the danger of a general recession," and warned against continuing inflation. In his state of the Union message the same month, he said that the protection of our economy "cannot be attained by Government alone. Indeed, the greater part of the task must be performed by individual efforts under our system of free enterprise."

A few weeks later one of Mr. Truman's leading economic advisers, Leon Keyserling, had this to say: "I am not one of those who believe that compensatory Government spending is a sure or efficient solution for a recession or a depression. We learned from the last depression (in the 1930's) how hard it is to bring about a complete and effective revival in that way."

For a man so closely associated with the great Government-can-do-it notions of the New Deal, this was indeed an example of calmness.

As business grew worse, various remedies were suggested, but Mr. Truman lay low. He let it be known that he was ready to act if necessary, but Government spending did not go significantly higher than it already was; Federal unemployment compensation was discussed, but not pressed, and price supports were not increased.

Business recovered in the fall of 1949. The recovery probably was hastened by the decision of the Democratic administration to take no action. The present excitement of the Democrats is wholly different from their calm view of the problem when their man was in the White House.

Harry, the Medicine Man

EXTENSION OF REMARKS
OF
HON. WILLIAM E. MINSHALL
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 25, 1958

Mr. MINSHALL. Mr. Speaker, upon the occasion of former President Truman's visit to Washington last week, several excellent editorials appeared in the Cleveland Plain Dealer, which I thought should be called to the attention of my colleagues.

The editorials follow:

DR. TRUMAN PRESCRIBES

Our adding machine blew out a gasket yesterday as we were trying to compute the total amount of spending and tax reduction recommended by former President Truman as an antidote to the recession.

The tax reduction was easy—a cool $5 billion, but of course only for middle and low-income groups. When the New Dealers raise taxes it is always the higher incomes that get soaked, but when they reduce taxes (when did they ever reduce taxes?) only the middle and low-income groups are to get the benefit. A couple of bucks to the voter are always worth more than the $16,000 average investment that is required to create a job in industry.

It was when we got into the spending part that our adding machine went haywire. Mr. Truman said that we ought to spend $3 billion more in the next fiscal year for defense outlays than the administration planned, and that we ought to be spending $5 billion more a year by 1964, that we should spend $1,700,000,000 more for education, public health, and public assistance next year, and that by 1964 we ought to be spending $12 billion for these purposes, $2½ billion for the development of natural resources and $2,200,000,000 for housing. And that isn't all. Dr. Truman also prescribed expansion of the unemployment compensation system, increased social security benefits and equity capital for small business. Was anybody left out?

Just the taxpayers from whom all this money is to come, on top of the $72 billion they're already paying. And on top of that, the former President would have the Government lower the interest rate on the public debt. How do you go about that, we wondered, by lowering the redemption price on a $100 savings bond to $90?

In a crack at the Eisenhower administration Mr. Truman said we should not "try to brush recessions aside by pretending that they are a good thing." And of course he glossed over the effect his spending and tax reduction remedies would have on inflation and further reductions in the purchasing power of the dollar.

We would have more confidence in Dr. Truman's nostrums if he had tried them out on the patient in 1950, when the jobless percentage was higher than it is now, and if the results had been successful.

But at that time Mr. Truman didn't call for more Government spending and lower taxes. On the contrary, he was quoted in an exclusive interview with Arthur Krock, then chief of the New York Times' Washington bureau, as saying that a certain amount of unemployment, say from 3 to 5 million, was healthy for the economy and that it was a good thing for job-seeking to go on at all times.

Reminded of this interview yesterday, Mr. Truman described it as having "come out of the air." But Krock said the interview was proposed by Truman, that it was submitted to him before publication, that it was returned approved with a few changes but none in the passage about unemployment.

We will take Krock's word as opposed to Truman's faulty memory.

TRUMAN IN WASHINGTON

Former President Truman was in Washington Monday primarily to tell a congressional committee what he thought should be done to end the recession. His prescription was quite amazing, as we noted yesterday, amounting as it did to another massive dose of inflation. But before the day ended, his economic views were virtually submerged by a question of veracity between himself and Arthur Krock, New York Times' columnist and former chief of its Washington bureau.

This came about when Truman said an exclusive interview he granted to Krock, which was published February 15, 1950, "did not happen, it came out of the air." In his column in yesterday's Times, Krock described how the interview originated and repeated his assertion that it was submitted to the White House for approval before publication. If any substantiation is needed, it is to be found in the record of a press conference the next day at which Truman told other reporters that the interview was authorized and defended his prerogative of giving exclusive interviews to whom and whenever he desired.

With what can only be described as extreme charity, Krock commented that Truman "has played a minor and unfortunate role as an active repudiator of established facts concerning him, even when this reflects without justification on the personal integrity of others. Perhaps a bad memory explains some repudiations. If so, this memory is remarkably bad."

We remember very well the interview in question. At that time the hottest issue in Washington was the Communist infiltration of the Government and the efforts of congressional committees to expose it. And, what seemed at the time to be the hottest subject in the interview was Truman's statement that he still believed the Alger Hiss case, even after Hiss had been convicted of perjury, was a "red herring" designed to distract public attention from the alleged misdeeds of the "do-nothing Republican 80th Congress."

Less attention was given to another statement in the interview that "it is a good thing that job-seeking should go on at all times. It is a healthy thing to have some unemployment * * * from 3 to 5 millions is supportable."

It was when this statement was brought to Truman's attention Monday that he said the interview "didn't happen, it came out of the air." Even the most ardent admirers of the former President among the Washington newspaper corps—and he has some—must have been shocked by Truman's brazen accusation that a newspaperman of Krock's standing would write, and a newspaper of the Times' stature would publish, a fake interview.

Truman's place in presidential history is still to be established. He will be noted for making bold and momentous decisions, but not for adherence to the truth.

Taxpayers' Tenants: Public Housing—the Chicago Scandals

EXTENSION OF REMARKS
OF
HON. O. C. FISHER
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Monday, April 21, 1958

Mr. FISHER. Mr. Speaker, since the time that public housing deviated from the purpose for which the program was originally justified—that of taking care of needy people who are displaced as a result of slum clearance—there have been recurring reports of corruption, mismanagement, waste, and other excesses in connection with the operation of the various projects over the country.

A good example of this is contained in an article which appeared in the Wall Street Journal on April 10, 1958, written by Mr. Ray Vicker. It goes without saying that many public housing projects are operated as fairly and properly as they can be, but it begins to look more and more like that practice is the exception rather than the rule. Let us hope the situation will improve.

Mr. Vicker appears to have done an excellent job of exposing the manner in which many of these projects are being operated. He deals with the excessive cost of upkeep, the threat of new slums in such housing projects, rent delinquencies, union rules, vandalism, and also with alcoholics and unwed mothers. Since American taxpayers are underwriting this program, every one should read Mr. Vicker's report, which follows:

CHICAGO.—At the 15-story Gov. Henry Horner tax-supported public-housing project here, the windows open outward and upward like awnings. A favorite competitive sport of high-spirited lads on warm days is atom bombing. You drop a pop bottle from the top floor, then count the number of windows it goes through on the way down.

In Toledo, Ohio, soaring maintenance costs threaten the solvency of public housing. High rental delinquencies form the central theme of one critical report on the program in Hamtramck, Mich. In Cincinnati public-housing folk are seeking to discourage baby production by unmarried females living in tax-supported apartments and collecting bigger welfare benefit checks for each new child.

Public housing's difficulties with problem families—welfare and police cases, alcoholics, the chronically unemployed, and such—are widespread. These troubles boost maintenance costs, threaten to make slums of new projects, and are hiking the project managers' load in a job which may not be easy under the best of circumstances.

CLOSER CHECKS

The Public Housing Administration, the Federal agency which funnels public-housing subsidies through about 900 local housing authorities scattered around the Nation, now is making closer checks of management practices of these local authorities. PHA wants to be sure taxpayers get their money's worth for the $473 million the Federal Government already has invested in public housing through the subsidy payments.

Chicago, Toledo, Hamtramck, Rockford, Ill., and Zanesville, Ohio, are only a few of the communities where such studies have been made. Currently, other management reviews are underway at Minneapolis, St. Paul, Cincinnati, and various other places.

In Chicago 22 public housing projects are Federally supported to the tune of $3.9 million annually. At least $1 million a year is spent to cover waste, union featherbedding, mismanagement and tenant vandalism, says PHA's Chicago regional office in one such review.

In Washington, Abner D. Silverman, Assistant PHA Commissioner for Management, says nearly 200 management reviews have been made during fiscal 1958. He explains that in 1957, PHA launched a comprehensive audit and analysis program, with every local housing authority due to get such a review once every 3 years. He adds: "The recent study of the Chicago Housing Authority is an example of this new type of review and analysis. It is not an investigation but an overall administrative management analysis and study designed to permit PHA to discharge its responsibilities under the law in a fashion that will prove most helpful to the local housing authority."

DEPRESSION MEASURE

Public housing was first spawned in 1937 as a depression make-work measure. A subsidiary aim was to provide rental assistance to families in the lowest income group. City planners subsequently saw it as a slum clearance weapon.

Social planners saw it as a sociological conveyor belt. Low income, poorly educated tenants—usually former slum dwellers—would come into a project paying minimum rentals. They would have roomier, lighter, cleaner, better ventilated apartments and would raise their own moral and cleanliness standards to match—the theory went. Incomes would rise until families exceeded the maximum allowed in a project. Rehabilitated families would move to new homes of their own. This would permit more low income families to be attracted at the base to start the process over again. Good housing was supposed to reduce juvenile delinquency and crime, promote stable family life and encourage an overall higher standard of living.

The social planners who subscribed to these theories went awry in figuring that good housing automatically stimulates problem families into rising above their previous environment, public housing officials now admit.

"Problem families merely recreate their old environment at the new site," says one midwestern housing man. Growing cynical, he adds: "It isn't buildings that make slums. It's people. Move those people from a slum to a new housing project and they'll create a new slum."

MUSTERING EVIDENCE

Considerable evidence can be mustered to show that, far from stimulating people to rise above sordid environments, public housing may discourage many from trying to better themselves incomewise. They prefer subsidized housing to being forced to move elsewhere if their income rises.

Under the Federal program, PHA, underwrites loans of local authorities which build and operate projects. PHA then assists communities in paying off the debt through annual subsidies. Communities handle maintenance and operating costs from the rents they collect.

Today this depression baby has grown into a sprawling giant. Over 1.7 million people now live in more than 425,000 federally aided low-rental units operated by various localities. Some localities add units of their own with State and city money exclusively, raising the total number of people now living in public housing to around 2.4 million.

This year 35,000 more federally aided units are planned. And once again a recession is being cited as a reason for building public housing on a broad scale.

"There is every justification for low-rent public housing to represent 10 percent of annual housing unit production on a continuing program basis," says the National Association of Housing and Redevelopment Officials; an organization of State and local officials headquartered in Chicago. Such a figure would mean construction of 90,000 to 100,000 units annually.

FLURRY OF INTEREST

There are now over 900 public housing authorities serving 1,225 communities, up from only 265 communities served in 1949.

Recently there has been a further flurry of interest in public housing on the part of communities, say housing officials.

"There are five localities in the Chicago region for which applications for new housing have been made since September 30, 1957," says Brice Martin, assistant to the regional director for the Chicago region of P. H. A. "In addition, there are 27 localities that have evinced an interest in getting housing."

The 10-State Chicago region now has 96 authorities engaged in public housing.

There is no doubt, though, that many a city is having trouble managing the public housing it already has.

Authorities blame a lot of their troubles on the fact that public housing attracts a high percentage of broken families, families with big broods of children by nameless fathers, other welfare cases and shiftless characters who prefer unemployment to work as long as Government agencies provide handouts.

"We are becoming caretakers for problem families," moans one public housing official in Chicago. "Changes must be made in the setup of public housing if it is to survive."

There are, of course, many hard-working, earnest low-income families in public housing projects besides the problem cases. But housing authorities note many of the former sour on their less respectable neighbors and move elsewhere. The problem families then tend to take over, threatening to make slums of the housing developments.

MALADJUSTED FAMILIES

Visit some of Chicago's housing projects and you see what a problem these maladjusted families can be.

At Grace Abbott Homes, southwest of Chicago's Loop, rags are stuffed into 1 broken window of a 15-story building. Steel doors bar some entrances, for anything less strong might be kicked in by rambunctious tenants. Children are playing with automatic elevators, so you walk up several flights of stairs noting how some hall windows are sealed up to prevent glass breakage. Light bulbs are frequently missing, while the jagged pieces of 1 broken bulb still remains in 1 hall socket.

Cockroaches scurry along the floor. On upper floors there is an odor of urine. One tenant complains bitterly that her children can't reach bathrooms in time when playing downstairs because elevators usually are undergoing repairs or occupied.

Fire hydrant caps and hydrant control caps frequently are missing. Brass caps, worth $8 each, are stolen for sale to junkmen as scrap, explains one Public Housing Authority official later.

Such conditions are underscored in a 6-volume report of Chicago Housing Authority operations released recently by Public Housing Authority.

"Vermin infestation is practically universal," says the report. "With some notable exceptions, tenant cooperation in maintenance is most lacking."

In one apartment building of recent vintage, cockroaches are so thick that they are clogging motors of tenant refrigerators, says the Public Housing Authority report. One investigator tells of seeing bed bugs crawling on walls of the model apartment used as a demonstrator at Stateway Gardens development.

CONTROL BUTTONS

Consideration is being given to bolting steel plates over the button controls of automatic elevators. Holes would be drilled so that "each control button can be pushed with a finger through a hole, but the buttons cannot be damaged, since they will be protected by the steel plates," says a PHA recommendation. Rowdy tenants now use hammers to knock off the buttons. Vandalism and tenant damages are costing CHA at least $150,000 a year, says PHA.

Release of the report is resulting in a rash of activity in public housing projects in Chicago. "Many of the suggested improvements already have been made," says Alvin E. Rose, executive director of the CHA.

Sheer size of some of the public housing authorities in large cities poses a management problem. The New York City Housing Authority, swelled by city and State, as well as Federal, projects, now is a $1.1-billion empire consisting of 82 public housing developments. Many of them are cities in themselves. Chicago values the land, plant, and equipment of its public housing at $190 million.

In projects of such size, management's right arm may not know what the left arm is doing. This situation is ideal for strong labor unions to run up operating and maintenance costs through featherbedding and restrictive practices.

LABOR PRACTICES

When PHA dug into this situation at Chicago, it uncovered a long list of practices, including:

Painters wash all painted wall surfaces while janitors wash only the tile, even though both surfaces are side by side.

A carpenter must be used to replace a screw in a bracket.

An electrician must be called to plug in a new refrigerator in an apartment.

Removal of a hot-water heater requires a plumber to disconnect the cold-water pipe and a pipefitter to disconnect the hot-water pipe.

Glaziers install 6.5 window panes per day, though in Detroit glaziers handle 18 panes per day.

Thirteen janitors are employed 8 hours a day each in one project though time studies show 5 janitors could handle all the work on a four-hour day.

In some instances, electricians are used to replace light bulbs.

A MINOR REPAIR

The sequence of operations in making minor plaster repairs to a wall behind the kitchen range is this:

Inspection by the head janitor and preparation of work orders.

The janitor sweeps out and removes debris.

Inspection by plasterer to determine plastering work.

Inspection by painter foreman to determine extent of painting.

A visit by a pipefitter to disconnect the range.

The janitor moves the range out of the way.

The plasterer and a helper repair the wall.

A painter washes and paints the wall.

The janitor moves the range into place.

The pipefitter reconnects the range.

Janitor cleans up.

Chicago's public-housing problems may be worse than average. Yet the city's difficulties illustrate the situations now facing many authorities in other cities.

Pointing in the direction of the LeClaire Courts housing project which ironically is almost in the back yard of his real-estate agency, Ralph Finitzo, bespectacled and graying Chicago home builder, says: "That's the biggest slum in this whole area and it is only a few years old."

NEWSPAPERS AND TIN CANS

Slipping behind the wheel of his 1957 Buick sedan, he drives through the project. Newspapers blow across a lawn. Rusty tin cans lay beside one front door. But a new coat of paint lends a bright touch to the two-story apartments built with monotonous regularity on the site.

"We took so many photographs of this place to show people how a new slum was created that the Chicago Housing Authority got tired of it," says Mr. Finitzo, past chairman of the National Association of Home Builders' public housing committee. Recently CHA sent a crew of painters down here and slapped fresh paint on the buildings."

In another Chicago public-housing project, an unmarried woman with 4 children by 4 different men lives in a tax-supported apartment while drawing aid-to-dependent-children checks from the welfare department.

A Chicago social worker expresses surprise when queried about that case: "Such cases are so common I don't know why you are asking about this one," she said. Then she tells of another woman with an even larger family of children by different fathers.

"There are 6 or 7 children, I'm not sure which without checking records," says this social worker. "Now the eldest girl in the family is pregnant, too, father unknown."

The CHA claims it seeks to discourage illegitimacy in public-housing projects. Says a spokesman: "When a woman with children applies for housing she is given a form to fill out. On this she must list her children and their fathers. If there is more than one father she may not be admitted. However, if it appears that the pattern has been stopped, she may be admitted. She will be evicted automatically should that pattern be resumed again."

In Cincinnati the Metropolitan Housing Authority allows a mother with illegitimate children to enter housing. But it takes a count of the children and has mothers sign a statement that if another child pops up without a marriage license the family will be subject to eviction.

INTERFERING WITH THEIR RIGHTS

"When we first launched this program there were some complaints from women that we were interfering with their rights," says Harry L. Reece, executive director of the CHA.

Problem families not only hike maintenance costs, they may cut revenue. The theory of public housing is predicated on having a spread of tenants in various income brackets, with those in the higher brackets carrying more of a load than those in lower brackets. If you earn more, you pay more. If you earn more than the top limit, you move.

Thus, in Chicago, the minimum rent is $31 a month for the family with an income of $1,705 a year or less while the maximum rent is $96 a month for the 7-person family earning $5,750 a year. To enter a project, the 1- or 2-person family must earn no more than $3,600 while larger families must earn no more than $3,800.

But the housing authority finds that problem families are more heavily concentrated at the low end of the income scale. Once in a project they may not try to increase incomes, yet they cling to subsidized apartments harder than the diligent families.

UPSETTING THE THEORY

Today, 50 percent of tenants in Chicago's projects are paying minimum rents. This upsets the cross sectional rent paying theory. There aren't enough renters at the upper end of the scale for total rents to carry the operations load.

"The current financial picture of the CHA operations holds in the threat of insolvency," warns PHA in its management review of Chicago projects. It urges that "selection of tenants be made from an income grade which will provide tenant families of such incomes which will help to achieve and maintain a representative cross section of low income families and produce more revenue."

A deficit of nearly $500,000 is estimated for CHA in the current fiscal year, a figure which will rise to $1.2 million in fiscal 1960 if steps are not taken to correct difficulties, says PHA.

Increased Federal Forest Timber Sales Will Increase Employment in Many Western Communities

EXTENSION OF REMARKS

OF

HON. RUSSELL V. MACK

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Monday, April 21, 1958

Mr. MACK of Washington. Mr. Speaker, there are only two departments of the Federal Government that make a profit. These are the Internal Revenue Service, which collects the taxes, and the Federal Forest Service, which manages and sells federally owned forest timber.

The Federal Forest Service last year sold 7 billion feet of Federal timber and for that timber received $111 million. This $111 million from the sale of Federal timber after paying for all operating costs of the Department left a $32 million surplus which business would call a profit.

Desirable and helpful as that $32 million profit from timber sales was to the Federal Treasury, it could have been

better. It could have been bigger and better because, while the Federal Forest Service sold 7 billion feet of timber it, according to statements of its chief foresters, could have sold 11 billion feet of Federal forest timber and still have grown timber on the federally owned forest lands as fast as the timber was cut.

The Federal Government by selling 11 billion feet of timber from its Federal lands annually, instead of the present 7 billion feet, can increase the Federal Government's revenue from timber sales by more than $60 million a year. This will be far above all costs involved for the sale of extra timber and will leave the Government an additional profit of many millions of dollars a year to help finance the cost of Government.

Also the making of more Federal timber available will improve the economy of communities in the federally forested areas by assuring these communities an uninterrupted increased supply of logs which their woodworking industries require to assure full employment.

An artificial shortage of timber available for cutting has existed in the Pacific Northwest for several years due to undercutting on Government sustained yield forest lands. This certified shortage has resulted in many communities in curtailed employment.

By selling more Federal timber the Federal Government still, according to its own experts, can grow young trees to replace the old as fast as the old trees are cut. By doing so it can make money for the Federal Treasury and at the same time increase employment and prosperity in the timbered areas.

I am in full agreement with the text of a letter sent to President Eisenhower, under date of April 17, 1958, urging increased timber cutting on Federal forest lands by the Industrial Forestry Association, of Portland, Oreg. The text of the association's letter follows:

The PRESIDENT,
The White House, Washington, D. C.

At the annual meeting of the Industrial Forestry Association, whose members employ more than 63,000 people in western Oregon and Washington today, our subscribers unanimously directed that we send you the following telegram:

"With the United States Government owning every other tree in Oregon and Washington which provide the American people with one-quarter of their forest products, it is imperative that a realistic allowable cut of Federal timber be sold each year. In the last 10 years, through failure of the United States to sell more than 7 billion feet of ripe timber which should have been harvested, the economy of Oregon and Washington has lost three-quarters of a billion dollars. Government's failure to sell the full allowable cut has created artificial timber shortages, contributed to inflation of timber prices, and resulted in fewer job opportunities in our States. We respectfully request that you direct the Forest Service and the Bureau of Land Management to sell each year the full allowable cut under sustained yield forest management. Harvest of the full allowable cut of Federal timber is essential to the new housing program, will increase employment, stabilize communities, speed attainment of long-range Federal forestry objectives, and return increased revenue to the Treasury and local governments."

NILS B. HULT,
President, Industrial Forestry Association, Portland, Oreg.

Time for Congress To Act

EXTENSION OF REMARKS
OF
HON. KENNETH B. KEATING
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, March 31, 1958

Mr. KEATING. Mr. Speaker, the decision by the Court of Appeals for the District of Columbia in the Trilling case last week underscores the widespread confusion surrounding the application of the Mallory decision. The five separate and often conflicting opinions reflect the uncertainty on the bench about what the Mallory rule means. If our judges are so hopelessly divided, how can the police or the public know what they can and cannot do for the security of the community?

It is time Congress acted to put an end to the perils inherent in such varying and clashing viewpoints on a vital matter of criminal justice. We should get right to work and pass the legislation approved by the House Judiciary Committee. It should put an end to the present chaos, provide ample protection for the rights of individual defendants, and allow the continuance of reasonable police methods.

The Washington Star has been in the forefront of the battle to enact Mallory legislation. Their editorial of April 20, 1958, typifies the paper's hard-hitting and logical approach to this urgent problem. Also, in their publication of April 18, the Star outlined the high points of the lengthy and complex Trilling decision. I commend both these pieces to the consideration of every Member, because I am hopeful the legislation needed to cover this crisis will be before us on the floor soon. I also want to commend the Star for continuing to wield its editorial cudgels with such vigor in defense of this community and all communities where the Mallory ruling may come into play.

Under leave previously granted, I insert the article on the Trilling case and the editorial from the Washington Star in the Appendix of the RECORD.

[From the Washington Star of April 18, 1958]

THREE-WAY SPLIT IN APPEALS COURT WIDENS MALLORY RULE DISPUTE

The United States attorney's office and the police department today were trying to unravel a 71-page opinion of the United States court of appeals here featuring 3 different interpretations of what the Supreme Court's Mallory decision means.

The opinion, handed down late yesterday also was highlighted by a recommendation from 1 of the 9 judges that the Federal rule behind the Mallory decision should be reexamined by the rulemaking process or by Congress.

A bill to remedy the effects of the Mallory decision through legislation has been reported out of the House Judiciary Committee and is now awaiting House action.

The decision yesterday involved the 3 housebreaking and larceny convictions of John E. Trilling by 3 different juries before 3 different judges. Confessions figure in all the convictions.

INTERPRETATIONS DIFFER

In the controversial Mallory decision, a confession was barred because of a 7½-hour delay between an arrest and an attempt to bring the prisoner before a committing magistrate. The Mallory decision has been interpreted by several district court judges here as barring all questioning of suspects. Others have called this too narrow an interpretation.

Yesterday's 3 opinions by the 9 judges ranged all the way from asserting that no confessions should be admitted at trials to insisting that police can question suspects.

The differences of opinion were so marked that what became the majority opinion was actually agreed upon by only 2 of the 9 judges—and 1 of the 2 said he agreed reluctantly, believing that 1 of the minority opinions makes sense and ought to be the law.

When all the opinions were sorted out, it developed that by a 5-to-4 vote, conviction on 1 of the 6 counts against Trilling in the 3 cases was affirmed by a 6-to-3 vote convictions on the other 5 counts was reversed.

HOW JUDGES WERE DIVIDED

This was the box score:

Judges John A. Danaher and Warren Burger voted to affirm the one count and reverse the others. Judge Burger said he did so reluctantly and only because he though he was compelled to do so by the Mallory case.

Chief Judge Henry W. Edgerton and Judges David L. Bazelon, Charles Fahy, and George T. Washington ruled that all the counts should be reversed. That gives Judge Danaher a majority on the cases he thought should be reversed.

Judges E. Barrett Prettyman, Wilbert K. Miller, and Walter M. Bastian voted to affirm all the convictions. In doing that they concurred with the part of Judge Danaher's opinion affirming 1 count of 1 case and thus made that part of Judge Danaher's opinion the majority opinion.

There was one other split within the split. Judge Edgerton concurred with the opinion written by Judge Bazelon. Judges Fahy and Washington simply announced that they would reverse the convictions on all counts and remand the cases for new trials on the basis of three Supreme Court decisions—McNabb, Upshaw, and Mallory.

QUICK CONFESSION

Trilling, according to the various reviews of the evidence by the different judges, was arrested at 5:30 a. m., denied his guilt under questioning and was transferred to the headquarters cell block. At 8:15 a. m., a policeman who knew his family confronted Trilling with the evidence police had gathered and he quickly confessed the housebreakings for which he had been arrested.

Subsequently, Trilling was questioned in a murder case and passed a lie-detector test. During an intermission in the murder interrogation, a safe-squad detective went down the list of 15 unsolved safecrackings between January and September 1955. According to the testimony, Trilling denied 7 and admitted 8 at about 10 a. m. He dictated a statement in 1 of the cases at 2:35 p. m.

Between 2:45 and 3 p. m. he was taken to municipal court for arraignment. After arraignment, now in the custody of two deputy marshals, he returned to headquarters where he made another written confession, went to Rock Creek Park to recover tools used in the safe jobs and on his return to headquarters made still another written statement. He was taken to jail at 10 p. m.

Judge Danaher ruled that the first confession—that made to a police friend of the family—was admissible at his trial because it was voluntarily given within minutes after Trilling's being confronted by the policeman with the evidence already amassed against him.

DANAHER'S INTERPRETATION

He said the later confessions had to be ruled out because police failed to get Trilling arraigned without delay and detained him for the purpose of eliciting damaging state-

ments which ultimately established guilt. This, he said, is forbidden by the Mallory decision.

Judge Danaher interpreted the decision this way:

Questions are not forbidden but an arrest and conviction are not to depend on the answers during a period of what may become illegal detention.

He emphasized that he wanted to dissociate himself from Judge Bazelon's opinion and "particularly do I dissent from his conclusion that confessions obtained by questioning an accused before arraignment are not admissible in evidence." He said if the Supreme Court had intended to bar confessions it would have said so.

Judge Bazelon wrote that arrest was not for the purpose of providing an opportunity to question a defendant and that the Mallory decision means confessions obtained before arraignment are not admissible in court.

"The utility for police purposes of questioning an arrested person before arraigning him," wrote Judge Bazelon, "lies in the element of compulsion which results from his fear, in combination with his ignorance, even when no violence is used and no threats are either expressed or purposely implied."

In a footnote, he attacked part of the pending legislation which provides that police must advise prisoners of their rights before the questioning. Even a timely advisory statement by police, he said, would not excuse failure to bring the prisoner before a committing magistrate.

LATER ADMISSIONS

Turning to the confessions made by Trilling after arraignment, he said they were inadmissible because they simply reduced to writing the earlier inadmissible confession, because they came through illegal detention and because the record does not show that the magistrate informed Trilling of his right to be silent. He said the marshal violated the judge's order by taking Trilling back to headquarters instead of taking him to jail.

Judge Prettyman, with Judges Miller and Bastian concurring, said he disagreed with his colleagues, both vigorously and thoroughly. He said he refused to agree that the Supreme Court in the Mallory case established a bare time rule to govern the admission of confessions or that the Supreme Court has forbidden the police to investigate crime.

"The usual, most useful, most efficient and most effective method of investigation is by questioning people," Judge Prettyman wrote. "It is all very well to say that police should investigate by microscopic examination of stains and dust. Sometimes they can. But of all human facilities for ascertaining fact, asking questions is the usual one and always has been. The courts use that method."

The police, he said, cannot question in the mode or for a period which has the effect of extracting confessions not otherwise forthcoming, but he emphasized: "It takes no astute student of police procedure to recognize whether the police are trying to extract a reluctant confession, whether they are reasonably seeking the solution of a crime."

On the score of the confessions made after arraignment, Judge Prettyman said the Mallory rule did not apply there. He said the colleagues who considered those confessions inadmissible must either be holding the confessions involuntary in the constitutional sense or writing a new rule. But, he added, his colleagues did not make clear the basis for their action.

POINTS OUT MISTAKE

He said his fellow judges who wanted to throw out the Trilling confessions "make the mistake of viewing the facts in one telescoped, condensed frame—like looking back at telephone poles on a railroad track."

He said he did not believe there was unnecessary delay between arrest and arraignment of Trilling.

"To my mind," he wrote, "it is simply unrealistic and unsupportable to say that during this day and intense activity, involving many different matters, the police delayed unnecessarily at any point. To generalize, as I think my brethern do, putting a decision upon a single telescopic statement that Trilling was questioned off and on all day from 5:30 a. m. to 10 p. m. is, to my mind, to ignore what actually took place, ignore the speed with which the police went about their work, ignore the complex of offenses involved and lay an erroneous premise for an erroneous conclusion.

He warned that the outlawing of the conduct of the police and processes followed by them in this case will unjustifiably and materially impede the enforcement of the criminal law in this jurisdiction.

Judge Burger, in concurring with Judge Danaher, said he did so reductantly because what Judge Prettyman has said makes sense and ought to be the law. Judge Burger was the one who thought the rule on which the Mallory case was based should be reexamined.

BAZELON CRITICIZED

Judge Prettyman wound up his opinion with some sharp criticism of Judge Bazelon's opinion. He objected that Judge Bazelon in crucial phases of the Trilling story adopted the version giving by Trilling.

"I see no justification for us, who neither saw nor heard the witnesses," he said, "to reject the view unanimously held by so large a number of hearer-viewers."

Judge Prettyman also objected that without any evidence but Trilling's. Judge Bazelon denounced a proceeding in municipal court.

"He (Judge Bazelon) says Trilling's account is uncontradicted by evidence," wrote Judge Prettyman. "So it was; but it was wholly uncorroborated, and it absolutely impeached the validity of a judicial proceeding in open court and the conduct of the presiding judge. With all deference I think the acceptance of Trilling's sweeping denials of all process, without one other particle of proof, is untenable."

He also criticized Judge Bazelon's passing reference to a district bar association committee report which had criticized municipal court proceedings. He said that the report has no standing.

"We ought not," he said, "impugn the integrity and capacity of 12 judges on so slim a showing."

[From the Washington Star of April 20, 1958]

HELP, HELP

A Solomon would stagger away, talking to himself and shaking his head, if called upon to explain what the Mallory rule means in the Nation's Capital today.

It has been almost a year since the Supreme Court handed down its unanimous decision in the Mallory case—a ruling which threw out the confession of a convicted rapist and resulted in his release. Mallory had been held by the police for 7½ hours. The reason for the reversal was that he had not been arraigned without unnecessary delay as required by Federal rule 5 (a).

We thought from the beginning that the Supreme Court's decision was unreasonable in the circumstances of the Mallory case and that its meaning was unclear. Others disagreed, contending that the opinion was both proper and its meaning clear.

Now, almost a year later, comes the opinion of the United States Court of Appeals in the case of John Trilling, an eager-beaver safecracker. This appellate court is composed of nine able and conscientious judges. Yet they are in hopeless disagreement with respect to the meaning of the Mallory rule as applied to the Trilling case.

The division among the judges is cited here, not in any needling spirit, but to illustrate the massive confusion which prevails. Judge Danaher wrote what becomes the opinion of the court, affirming Trilling's conviction on 1 count in 3 indictments. Trilling, in three trials, had been found guilty under all of the indictments. Judge Danaher was joined in full only by Judge Burger, and we will return to Judge Burger later. Judge Bazelon, joined by Chief Judge Edgerton, would have thrown out all confessions and reversed the one conviction. Judges Washington and Fahy came to this same conclusion, but, perhaps significantly, they did not join in Judge Bazelon's free-wheeling opinion. Judge Prettyman was joined by Judges Miller and Bastian. He agreed with Judge Danaher as to the correctness of the one conviction, thus supplying a majority of the court on this point. But Judges Prettyman, Miller, and Bastian thought that all of the confessions were valid and that all of the convictions should have been affirmed.

This, then, is the prevailing state of the law in the District with respect to the Mallory ruling. How can any policeman, prosecutor, or trial judge be expected to know which end is up?

Let's get back to Judge Burger. In a brief statement he said he agreed reluctantly with Judge Danaher because he thought he was compelled to do so by the Mallory ruling. He would have preferred to join Judge Prettyman because what he said "makes sense and ought to be the law." Then Judge Burger said this: "Rule 5 (a) should be reexamined by the rule-making process or by Congress."

To this we say "Amen," although we believe action by Congress is preferable. This community, in which the Mallory rule hits with full and crippling impact, is in desperate need of help. That help can best come through enactment of pending legislation which provides that mere delay in arraignment shall not serve to invalidate voluntary confessions. We earnestly hope the decision in the Trilling case will furnish the extra push needed to get the bill through Congress.

Cystic Fibrosis, Children, and a Challenge

EXTENSION OF REMARKS

OF

HON. COYA KNUTSON

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 1, 1958

Mrs. KNUTSON. Mr. Speaker, if it had been a cattle disease, a constituent of mine recently wrote me, something might well have been done long ago to conquer it. This constituent's letter was 1 of over 900 thoughtful letters, telegrams, postcards and telephone calls I received within 3 weeks after I gave the March 20 address to you on the subject of CF.

In our lifetimes many new words, phrases and abbreviations have found their way into our household vocabulary. Some of these expressions have come and gone; others have stayed with us and have become permanent fixtures of our language. CF is an ugly word. In time, we must rid the language of this word as well as the ugly disease for which it stands. But first, CF must become a rallying word. CF must become a slogan, to gather within us all the cre-

ative energies we can muster, through research, necessary to discover a cure for this disease.

If we hope to eliminate CF from our language, we must first made it an important part in our calendar for action. As I said to you on March 20, we must declare war on CF.

CF is cystic fibrosis. As Sam Dann has so aptly put it, "a physician can define it in 13 words." And if you believe that the number 13 is an unlucky number, let me read you one of the most unfortunate 13-word sentences in the English language:

Cystic fibrosis is a generalized disorder of unknown etiology affecting the exocrine glands.

Now I would not be here talking to you today if I did not think that cystic fibrosis was important enough for current congressional consideration in these complex times so pregnant with problems.

One out of twenty of us in America, it has been estimated, carry the recessive genes which cause this hereditary congenital child-withering disease. One out of six hundred children are born with cystic fibrosis—about seven thousand flesh and blood boys and girls each year. About half of these CF-stricken children die before they reach the tender age of 5; not many of these children survive their teens. Unless we find a cure or new treatment in the meantime, almost 100 percent of CF victims will die of CF before they are old enough to die of something else.

President Eisenhower's heart condition and ileitis did much to trigger medical research in these fields. President Roosevelt's handicap drew attention to polio—and dimes marched against this dread disease. But cystic fibrosis with its thousands of victims, born to die before reaching adulthood, might very well never have a President to carry the banner against it.

The complexion of all I am saying here today would be different if it were impossible to cure this disease, if there were no hope. But as so many parents have written me, from all parts of the country, during the past few weeks, "where there's help, there's hope." Today, we know that there is very little than man cannot do if he puts his mind to it—if he put his God-given mind to it.

Dr. Sheldon C. Reed, director of the Dight Institute for Human Genetics, in Minnesota, has written me:

The prospects for survival of the affected child are improving with medical research.

Last week, I asked the National Institutes of Health and the National Cystic Fibrosis Research Foundation to meet with representatives of my office to discuss the matter of CF research.

I have learned that CF research appears to be getting somewhat shortchanged because NIH has to compete for the congressional dollar, other diseases have been more widely publicized, competent research physicians and clinicians interested in CF are scarce, bedspace at the Institute is hard to come by. Little is known about CF—and little is known about the little which is known.

The House, when it passed on the appropriation which covers NIH, gave NIH the mandate to accelerate its research. Representative JOHN E. FOGARTY, chairman of the subcommittee which handles this appropriation, asked the head of one of the Institutes:

What are we doing in this field [cystic fibrosis] now? What are you doing about it? * * * How much are you spending in that area?

The answer was: "Not very much."

I realize, of course, the great progress which has been made since the disease was first identified by Dr. Dorothy Andersen only 20 years ago. But I am impatient because it would almost appear that only those persons affected personally by the disease are concerned with it. There are, of course, some dedicated researchers in this country and abroad who are investigating CF. I named a few of them the other day when I talked with you. We all are grateful to them.

I plan to insert in the Appendix to this RECORD a few of the nine hundred or so touching letters I have received urging additional research in CF. I cannot answer each one of these letters personally but I want to say that I hope and trust that an all-out war against CF will be forthcoming in the months to come.

I hope that the Senate will endorse the House's mandate to NIH to get substantial CF research underway, and that NIH will get whatever appropriations such stepped-up medical research demands.

Meanwhile I have written the following letter to the Surgeon General of the United States, urging that a conference of CF researchers be called to find out where we are and where we need to go. I have also asked for certain data relating to present NIH research efforts:

APRIL 14, 1958.

DR. LEROY E. BURNEY,
Surgeon General, National Institutes of Health, Bethesda, Md.

DEAR DR. BURNEY: On March 10, 1958, I asked the Congress to declare war on cystic fibrosis. You are undoubtedly aware that this disease strikes about 1 out of 600 children born each year in the United States and that during the past 20 years since the disease was first identified, it has been almost 100 percent fatal. I understand that cystic fibrosis has a lower incidence rate than polio or cerebral palsy but, even so, apparently has one of the highest mortality rates among children's diseases.

Research, of course, is the answer.

On April 9, 1958, representatives of my office met with Drs. Justin Andrews, Donald Whedon, and Norman B. McCullough of the National Institutes of Health, Dr. Robert H. Parrott of the Children's Hospital of the District of Columbia, and officials of the National Cystic Fibrosis Research Foundation. I should like to thank the representatives of the Institutes for their constructive suggestions regarding the following through on our declaration of war against CF. I was assured by them that the Institutes will do everything within their power to bring CF research into proper perspective.

In order that I may properly bring the progress of your CF research at the Institutes to the attention of the Congress, I respectfully request that you furnish the following data on your NIH programs:

1. How many professional persons are now engaged in research on cystic fibrosis of the pancreas: (a) Intramurally? (b) Extramurally?

2. What was NIH expenditure on cystic fibrosis research in 1955, 1956, 1957, and estimated 1958: (a) Intramural? (b) Extramural?

3. How many applications for extramural CF research projects have you considered during the past 3 years?

Of those applications received and considered, how many CF grants were approved?

What percentage of total applications for extramural research grants do those in the field of CF represent?

4. Please list the six children's diseases with highest mortality rates, in rank order of mortality rate, and provide data as to (a) number of professional persons now engaged in research intramurally and extramurally, (b) cost of each of these research programs for 1955, 1956, 1957, and estimated 1958.

5. Are the persons who consider applications for grants (extramural) fully aware of the high incidence and mortality rate of cystic fibrosis?

6. Because the nature of cystic fibrosis research must be carried on at the several Institutes, would it be feasible to get up a research center at the Institutes to coordinate such research? Give reason.

At the meeting of April 9, Drs. Whedon, McCullough, and Andrews all agreed that much of the difficulty in substantially expanding present research activities in cystic fibrosis is the shortage of researchers interested in this area of research. Little is known about the disease.

I therefore respectfully urge that a conference be called by the appropriate Institute at NIH, as an intramural project, a conference of the Nation's leading "cystic fibrologists," as Dr. Andrews called them, to find out what research has been and is being carried on in CF in the United States. Such a conference should let us know where we are and, if a conference report might be published, might stimulate medical professional interest.

Kindest personal regards.

Sincerely yours,
Congresswoman COYA KNUTSON.

Mr. Speaker, in a few days I shall introduce a bill to promote additional research. This bill, discussed last week with representatives of NIH, is presently being drafted for me by legislative counsel.

Let us make "beat CF" your slogan, now.

As Minnesota's Victor Cohn, in his fascinating book entitled "1999," said:

Defeat of most diseases will never be total. One person out of one must always die of something. But we may expect wonderful progress. * * * Medical progress, like all other kinds, fathers problems. Linus Pauling is even worried about the consequences of perfect drugs. What will people die of? But the progress must come. * * * The possible bad comes along with the good, but the good, if past medical history is prediction, should overwhelm us.

One person out of one must always die of something. But, with the necessary research, perhaps we can prevent the spectacle of children dying before they have even a chance to live.

The love of life is a built-in feature of life itself. Today's and tomorrow's CF victims also love life. They are counting on us to do something about CF.

Cystic fibrosis is children's foe. It is a word and a disease and a challenge.

Appendix

Importance of Work of National Health Agencies

EXTENSION OF REMARKS
OF

HON. LEVERETT SALTONSTALL

OF MASSACHUSETTS

IN THE SENATE OF THE UNITED STATES

Tuesday, April 22, 1958

Mr. SALTONSTALL. Mr. President, I ask unanimous consent that the remarks of Veterans' Administrator Sumner G. Whittier at the kickoff rally of the Federal service health campaign, made here in Washington on March 13, be printed in the Appendix of the RECORD. Mr. Whittier has dramatically and effectively brought into focus the importance of the work that a number of our national health agencies are doing to combat the dread diseases that plague mankind.

There being no objection, the remarks were ordered to be printed in the RECORD, as follows:

TEXT OF REMARKS BY THE HONORABLE SUMNER G. WHITTIER, ADMINISTRATOR OF VETERANS' AFFAIRS, IN A KEYNOTE ADDRESS FOR THE NATIONAL HEALTH AGENCIES AT THE KICKOFF RALLY OF THE FEDERAL SERVICE HEALTH CAMPAIGN, WASHINGTON, D. C., MARCH 13, 1958

We, in this country, have made a solemn promise. When our patriotic and bewigged forefathers gathered in Philadelphia we said, in effect, with them: "We hold these truths to be self-evident, that all men are created equal, that they are endowed by their Creator with certain unalienable rights, that among these are life, liberty and the pursuit of happiness."

Whenever men have been put in chains or held in slavery, we Americans, on the basis of that early declaration, have gathered, have armed, have put on uniforms, have fought and often died that men might be free.

If thousands of Americans were suddenly captured, held prisoner and enslaved today we would be angered. We would demand their immediate freedom. We would at once pledge our fortunes and our sacred honor to free them. We would hold rallies, enlist volunteers. We would become an arsenal for democracy.

We have made the promise of freedom, but we have not totally fulfilled it, for there are Americans in bondage. Not in far Communist China, no, not in wastes of barren Siberia, nor the hills of Astrakan—but here in the capital of our free world. There are prisoners held by a tyrant so demanding that these Americans, born of free parents beneath a free-flying flag, have known life, but never liberty, and little of the pursuit of happiness.

For how can you pursue happiness if you are chained by a dread disease, if you are held bedridden? These folks are countless in their numbers. They are a legion who are held in varying states of bondage. And as our fathers pledged that all men might be free upon this continent, let us here rededicate ourselves to the proposition they so nobly advanced.

Doctors and scientists and research men have fought with a sense of dedication, with love and generosity and devotion to drive back the dark frontiers of disease and illness and pestilence, but the malady lingers on. Too many Americans are yet chained.

And though the doctors still wage their relentless siege against the bastions of bacteria and virus, against microbes, against the dread enemies of cancer, heart attack and muscular dystrophy with all their wondrous weapons of streptomycin and inoculation and vaccines and an endless list of unpronounceable drugs—the war is just begun. But we are moving fast. Heavy as our attack is, we need more troops, more support.

The arsenal in this democratic crusade is the arsenal of your generosity. Only giving can drive back the darkness. How dread that darkness can be.

Where do we stand in medicine today? What still needs to be done to fulfill our dream of better health and longer life? Just how will your dollars help?

Let us consider, 1 by 1, the 8 areas you are asked to support through the Federal service health campaign.

The human heart pounds away day after day. Yesterday I had lunch with a man who had held a live human heart in his hand. He said that as he looked at that fragile instrument, he wondered how it could stand up to the incessant beating, beating—minute after minute, year after year. One moment the heart is pumping normally and routinely. Then a stabbing pain. Just catalog in your own minds those you have known struck down by this killer that stalks the poor and the wealthy, the famous and the infamous.

Today, 10 million Americans suffer from some form of heart or circulatory disease. Each year a quarter of a million people under 65 die of heart ailments, in addition to a half million older men and women.

How do you keep hearts beating? By opening your own heart to the American Heart Association. By supporting new and daring research into the cause and control of ailments of this fabulous human pump.

How miraculous an instrument is the human body? Consider what an efficient tool the human hand is. Consider how beautiful the human body can be when Elizabeth Taylor moves gracefully across the screen. Then dwell for a moment on the twisting, crippling effect of rheumatism and arthritis. Consider how they can turn a lovely hand into a gnarled and useless thing. Consider how they can wrench a woman, however young and attractive, into painful distortion.

The Arthritis and Rheumatism Foundation is doing all it can to straighten tortured limbs. Do you realize that more than 1 million are so badly crippled they barely can move about? Are you aware that these diseases strike 1 family out of every 5?

The Muscular Dystrophy Association does all it can—within the limits of your giving—for the youngsters who rarely live to maturity because of this evil malady. Death is always sad and tragic; no matter what age an individual may be we feel a sense of loss; yet somehow the tragedy of death is especially poignant when little children are cut off—their lives unlived—the wonderful things that might have been, wiped cruelly away.

The National Multiple Sclerosis Society does detective work on the mysterious crippler which strikes at nearly half a million Americans, usually in the prime of life. Its cause—unknown. Effective treatment—unknown. All we do know is that once it develops, there is only one course for it to take: slow, relentless, progressive paralysis.

But so long as research can go on, there is hope. If not for today, hope in some tomorrow.

One time I visited a home for crippled children in the city of Boston. The Sister, who was my guide, took me into a ward filled with empty beds, save one. There a little girl was sleeping, her blond head upon the white pillow. Her legs, the nun said, were held in a Bradford splint in an effort to straighten them. As we looked down, the little girl wakened. Fretfully, she called for the Sister who was her particular nurse. When that nurse came the little girl seemed to calm down at the first touch of the loving womanly hand upon her forehead. And as I saw the little girl look up at the Sister, and the Sister look down at the little girl with loving kindness, I saw the power of a weapon greater even than drugs and medicine, the power of love and of compassion.

The head nurse and I walked into another ward. A little girl was in bed there, and hanging on the foot of her bed was a great brace. It was large and black; there seemed to be more brace than little girl. I winced as I looked at it and mentioned its size to the Sister. She said, "It may look ugly to you, but she loves it. With it she can stand with a sense of independence, of self-support." Then she told me of the little girl's father. He had come there to visit his daughter. He had made the brace for her. He had stayed to make braces for other children.

The National Society for Crippled Children and Adults converts your money into hope for the handicapped, into rehabilitation services for disabled men and women, for boys and girls, to help them achieve their God-given independence of body as well as of spirit.

There are so many ailments that assault this castle of flesh and bone in which we live. For many of them there is a group, an organization, such as the United Cerebral Palsy Association—searching, ever searching for answers, and able to continue that search because of your concern and your assistance. One day we shall lick and destroy cerebral palsy.

We have made telling attacks on other diseases, such as the great white plague. Tuberculosis has been dramatically reduced during the past 3 years. There has been a 16-percent decrease in the average daily number of patients undergoing treatment for TB, due largely to the new wonder drugs.

During the last 50 years the death rate from TB has dropped more than 90 percent. But there are still a million Americans who need medical attention for active or inactive TB. And there are 10 percent who have active TB and don't even know it. They are the dangerous ones, who can spread the disease to their families and friends. Thus we must support the National Tuberculosis Association.

And what about cancer?

More than 150,000 men and women are alive today because they heeded the advice of the American Cancer Society for frequent medical checkups. They were able to start cancer treatment in time. Yet 1 out of every 4, who did die of cancer last year,

might have been saved had they, too, listened. Your money goes to help the society spread the word to every city and town in America—a lifesaving word.

Your money also goes for research. The society now sponsors the work of 1,000 scientists in 152 leading medical laboratories in their never-ending war on cancer.

Well, I have run through a catalog of the diseases at which we are aiming our fire in this campaign.

We live in an exciting and adventurous age. When at night we look at the tremendous range of stars, stars in endless spatial sprawl, we know that before long human beings will be abroad in some kind of interplanetary vehicle making milk runs from star to star.

What races of creatures will we find? What distances are there beyond the farthest star? What wonders shall we discover? But if we are looking outward, so too are we looking inward at ourselves to find miracles equally spectacular.

What is it that makes one human mind turn its possessor into a murderer, to be placed behind bars in a prison cell for long years? What makes the owner of one mind an Adolph Hitler, to plunge the world into a bath of blood? What makes another man an Albert Einstein?

What are the answers in this great detective story of medicine to the ills that strike down men? Where do we find the solutions to stay the devastation caused by a strange, weird little virus, too small to be seen by man or miscroscope; the bizarre illness that strikes down a Lou Gehrig; that destroys suddenly and quickly, apparently healthly people? A microbe and an instant of time—then a warm rich live human being has become matter, memory, nothing.

We do not know the answers. But in this age of swiftly moving progress we know that we shall find them. We shall create those answers as surely out of your dollars and your giving, as though you worked in the laboratory, or at the operating table.

A man and woman had wanted for a long time to have a child. At long last, after 13 years of marriage, the miracle happened. She was to become a mother.

They planned long and lovingly for the child to come. At long last—it seemed like years—the day arrived. He took her to the hospital and, like all expectant fathers he paced the floor while she was taken into the delivery room.

After he had smoked a long chain of cigarettes, the doctor appeared. "Mr. Jones," he said. "Congratulation. You are the father of a little boy."

The man beamed. He went almost limp with relief. Then the doctor added: "But Mr. Jones, he was born with a withered arm."

"Have—have you told my wife?" he asked.

"Not yet," the doctor replied. "But I will."

"Let me do it," the man pleaded.

The doctor agreed, and the two of them went into the wife's room. Meantime, the nurses had brought the infant to its mother. It was swathed in blankets so that she couldn't see its little arms. As any new mother would do, she was fondling the infant when her husband and the doctor entered.

Her husband tried to tell her, but the words wouldn't come. The doctor stood by, watching. Then as though fate had directed her hands, she removed the blankets to rearrange them. She saw the withered arm.

There was a long silence. Then she said, "God knew how much we needed him. God must have known how much this little boy needed us."

You and I and your families need our doctors and our hospitals. We need our drugs and our cures. Just think, in this room—1 out of 5. Arthritis, cancer, heart attack—which person will they strike? Count the statistic you may become. Remember the life you save, with your giving, may be your own.

You need the research and the healing. But the doctors need you. They need your support, your dedication, your giving. They need the determined devotion, the unending energy of the key men and the key women who so truly are missionaries in the sacred ministry of healing. I am sure they will not be disappointed.

President Chiang Kai-shek's Testimony on the Importance of Good Friday and Easter

---

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Tuesday, April 22, 1958

Mr. WILEY. Mr. President, one of the most remarkable addresses I have had the privilege of reading was sent to me by my sister, who is in Formosa. It is one which President Chiang Kai-shek delivered on Good Friday.

When the leader of a nation speaks as President Chiang Kai-shek did on that occasion, it seems to me we can be heartened, because out of the East have come the great religions; and here is a leader, indeed, who was speaking to his people in relation to their vital, spiritual needs.

Among other things, he said that several young Chinese scientists who are doing research work in the United States have distinguished themselves by making valuable contributions to the field of science, but in letters written to their parents and friends they confess that they feel a spiritual void in their hearts. President Chiang Kai-shek's address points up the fact that the more advanced materially civilization becomes, the poorer, to some, at least, is man's spiritual life.

I ask unanimous consent that the address be printed, following my remarks, in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

PRESIDENT CHIANG KAI-SHEK'S TESTIMONY ON GOOD FRIDAY, APRIL 4, 1958

Today is Good Friday, and Easter is only 2 days hence. I am here to give you, my fellow Christians and my fellow countrymen, my understanding of the significance of these two holy days.

I feel that in recent years, there has been a decline of moral standards and a degeneration in spiritual life. This is in reverse proportion to the advance that has been made in scientific knowledge and material civilization. Consequently, many people are experiencing an emptiness in their hearts. They are lost because of the uncertainties of life. They are afraid, not knowing where to turn next. They fail to see any meaning in life, nor can they find any purpose in living.

What good, then, can such people do for their nation, and for mankind as a whole, since they are wasting their life in ignorance? In the eyes of those concerned with the spiritual welfare of mankind, this is one of the most pressing problems which calls for solution.

Why should people more and more feel so lost and afraid as time goes on? The only answer is that people cannot find a way to fill the spiritual emptiness in their hearts.

Recently several young Chinese scientists doing research work in the United States distinguished themselves by making valuable contributions in the field of sciences. But in letters to their parents and friends, they confess that they feel a spiritual void in their hearts. This points up the fact that the more advanced material civilization is, the poorer man's spiritual life may become.

KEY TO LIFE AND DEATH

Through his crucifixion and resurrection, Jesus Christ sought to make everybody understand the key to life and death as well as to comprehend the real answer to the question of life and death. By dying for us that we may live, Jesus Christ was crucified and nailed on the cross. This was his way of redeeming us sinners. And this is exactly what Caiaphas the high priest meant when he told the priests and Pharisees at the council: "Nor consider that it is expedient for us, that one man should die for the people, and that the whole nation perish not."

This was to testify that their countrymen received new life through their Savior Jesus. This was also to testify that they acquired spiritual substance in their hearts; that they were no longer slaves to evil and death, or threatened by uncertainty and fear. Jesus said: "Except a corn of wheat fall into the ground and die, it abideth alone; but if it die, it bringeth forth much fruit." Again He said: "He that loveth his life shall lose it; and he that hateth his life in this world shall keep it unto life eternal."

Through these two passages, we can have a general idea of Christian views on life and death, and also understand how important is the meaning of the crucifixion and resurrection for life as Jesus has revealed it to us. Therefore, in commemorating the crucifixion and resurrection of Jesus, we are not merely to recall what happened 1,925 years ago, but to grasp the meaning of life and the purpose of living.

SOUL-SEARCHING AGAINST EVILS

The evil of communism has divided our world, created a dark age unprecedented in history. Some countries are completely shut behind the Iron Curtain, while others are half free and half enslaved. Today people behind the Iron Curtain have lost the freedom of religion, of thought and many other freedoms. In free societies the poor people are victims of fear and anxiety because of hardships of life and dimness of the future, while the rich people feel a spiritual void and the uncertainty of life. They both are prone to fall prey to the temptation of communism. Consequently, I think the turning point of, and the basic solution for the peace of the world, the happiness of the human being, and the success of our anti-Communist revolution, must start from a new self-examination and a new determination to search for the denouement of life.

Jesus warned the world by saying: "Beware of false prophets, which come to you in sheep's clothing, but inwardly are ravening wolves." Nowadays, communism, which aims at conquering the world through hatred and force is trying to deceive the people by false smiles.

If anyone feels that he is inwardly empty, thus yielding to the temptation of communism, it not only means the loss of individual life and the destruction of the soul of the Nation; it will also bring on an unprecedented calamity to the whole mankind.

CHRIST VIS-A-VIS CONFUCIUS

We derive our nature from the spirit of God. This spirit is the spirit of love. In this love lies the truth of the universe and the meaning of life. This spirit of God is, according to the Chinese, similar to divine

nature as propounded by Confucius in his saying: "Heaven's will is divine nature." This divine nature comes with our life, and has been there all the time. We need now only to seek it within ourselves, to rediscover it and to make it meaningful. If every one of us can recover this divine nature of our own, it will certainly fill our inward emptiness. We can thus regain our lives and our lives will be full and meaningful.

As Christians, we are baptized in order to gain rebirth—resurrection—of our lives. We embrace the faith of Jesus Christ. But if we do not have this spirit of love in our hearts, we still shall fail to gain life and resurrection. Thus, although we may profess to be Christians we are only false ones. But if we accept this spirit recover our inborn nature, we shall not only gain resurrection, but also immortality.

It is stated in the First Epistle General of Peter: "Being born again, not of corruptible seed, but of incorruptible, by the word of God, which liveth and abideth forever." This explains that those resurrected are living the word of God, or in God's spirit, not in their inevitably corruptible bodies which are destined to die. That is to say, should a life be born again, it is to change a destined corruptible body into an incorruptible one, or to change a mortal body into an immortal being. Thus, no authority of death will ever dominate us, and no clutches of death will ever menace us. Then, in our hearts, there will be no more fear or anxiety, and our life will be reinforced and can be completely free. Such a life is indicated by Jesus when he said: "We are more than conquerors."

IMMORTALITY OVER DEATH

Many people think that one cannot have eternal life without first abnegating death. Christianity recognizes death as a fact but overcomes that, thereby attaining immortality. St. Paul has told us: "And if Christ be in you, the body is dead because of sin; but the spirit is life because of righteousness." Behind the Iron Curtain today, any hardship, suppression, hunger, danger, and the threat of bayonet and bullets can only hurt a sincere Christian's mortal body, but can never harm his immortal spirit, nor can it separate him from God's kindness and love.

On the contrary, God's kindness and love stand out all the more because of all this hardship, suppression, hunger, danger, and the threat of bayonet and bullets to which the masses are being subjected. People in free societies, by virtue of their love for their nation and for mankind, are withstanding all forms of coercion and temptation. They are enduring sufferings and making sacrifices.

True Christians, however, are never pessimistic and never feel depressed. In Godhead and God's eternal power, they can find hope in the midst of despair, see light in the midst of darkness, and remain as pillars of strength in the midst of moral deterioration by making their life triumph over death in this evil world.

CHRIST AN EXAMPLE FOR US

Through crucifixion and resurrection Christ has set for us an example, for He showed kindness and love in spite of the hatred of men; He sacrificed himself in spite of the selfishness of men; He made eternal life possible for all mankind in spite of the death that men had inflicted on Him. At the very moment when He was completely overpowered on the cross and could not help Himself, He triumphed over darkness, over the world, to save mankind.

From His crucifixion and resurrection we have come to understand more than ever before that love means infinite patience and that life is a finite growth. As long as we have a strong faith, and our hearts are full of love, we shall be able to stand all insults and coercions, to resist all temptations and to ward off all evil approaches.

CHRISTIAN SPIRIT TO PREVAIL OVER COMMUNISM

As Christians, we can bear what others could not, and act when others would not, to defend truth and uphold justice, resist evil enemies and overcome unprecedented calamities. In sacrificing ourselves so that our country can remain free and our Nation can survive, in fighting for the world security and human welfare, and in devoting ourselves to the task of resisting communism and Soviet aggression in the course of our national revolution, we shall become truly more than conquerors.

States Rights—The Law of the Land

EXTENSION OF REMARKS
OF
HON. SAM J. ERVIN, JR.
OF NORTH CAROLINA
IN THE SENATE OF THE UNITED STATES
Tuesday, April 22, 1958

Mr. ERVIN. Mr. President, Charles J. Bloch, of the Georgia bar, has written a timely, significant, and moving book entitled "States Rights—The Law of the Land," which is worthy of notice by every student of constitutional history and law. A review of this book, written by me, appeared in the Winston-Salem (N. C.) Journal and Sentinel on April 20, 1958. I ask unanimous consent that a copy of the review be printed in the Appendix of the RECORD.

There being no objection, the review was ordered printed in the RECORD, as follows:

THE MEANING OF STATES RIGHTS

(By SAM J. ERVIN, JR., United States Senator)

Charles J. Bloch, of the Georgia bar, is deeply versed in history and law. He loves and understands the Constitution of the United States. He knows it was designed to establish an indissoluble union composed of indestructive States.

While attending a congressional committee hearing a year ago, Mr. Bloch was amazed to hear a Congressman voice the astounding statement that the doctrine of States rights "Is the very warp and woof of the philosophy underlying the Communist system." He concluded on the spot that it was high time * * * someone tried to tell the American people the facts of history upon which the doctrine of States rights is based.

The American people are, indeed, fortunate that Mr. Bloch did not leave this task to others. He devoted to its performance his enlightened mind, his understanding heart, his vast learning, and a tremendous research in historical and legal fields.

The result is the recently published States Rights—The Law of the Land, a compact volume of 381 pages. (The Harrison Co., $10) whose lucid and luminous language is readily understandable to lawyers and laymen alike.

SIGNIFICANT VOLUME

The book is timely, significant, and moving. It merits a place in the library of every American who believes that the destiny of this Nation ought not to be dictated by nonelected Supreme Court judges who forsake their proper sphere of action to usurp and exercise constitutional powers belonging to other departments of the Federal Government and the States.

The able and eloquent author analyzes with commendable clarity and conciseness historical facts, the Constitution of the United States, and relevant decisions of the Supreme Court to document and establish these fundamental propositions:

1. The States do not look to the Federal Government as the source of their powers. The reverse is true. The Thirteen Original States became self-governing Commonwealths 13 years before George Washington's first inauguration as President. These sovereign States created the Federal Government. They did this by a Constitution, which delegated to the Federal Government the specific powers necessary to enable it to discharge its limited functions as a central government, and reserved to the States the general powers necessary to enable them to regulate their internal affairs. To make the retention by the States of their reserved powers doubly sure, the first Congress and the States inserted in the Constitution the 10th amendment, which declares in words of utmost simplicity that "the powers not delegated to the United States by the Constitution, nor prohibited by it to the States, are reserved to the States respectively, or to the people."

SOVEREIGNTY ESSENTIAL

The preservation of the sovereignty of the States, within the limits of their constitutional powers, is essential to the preservation of our system of Government. To preserve the sovereignty of the States, the Constitution and the great decisions of the Supreme Court of former days established three cardinal rules to govern the judges of the Supreme Court in judging State action or State legislation. The first rule is that the Supreme Court is not concerned with the desirability or wisdom of State action or State legislation. These are matters exclusively for State determination. The second rule is that in passing on the constitutionality of State action or State legislation, the only question for the Supreme Court to decide is whether such action or legislation is within the scope of the reserved powers of the State. The third rule is that the Supreme Court is not to hold State action or State legislation unconstitutional unless the conclusion to that effect is unavoidable.

3. During the past 20 years a majority of the judges of the Supreme Court have been men who had no judicial experience whatever and little actual experience as general practitioners of law before their respective appointments to the Supreme Court. Instead of adhering to the sound rules designed to preserve the sovereignty of the States, these judges have been instrumental in handing down decision after decision invalidating as unconstitutional State action and State legislation simply because they deemed such action and legislation undesirable or unwise.

GROWING THREAT SEEN

4. Our system of Government will survive only if affirmative action is taken to prevent further inroads by the majority of the Supreme Court on the constitutional powers of the States. This action ought to be twofold in nature. The Senate should reject all future appointees to the Supreme Court save those whose past judicial or legal experiences makes it certain that they will carry with them to that high bench the qualifications and temperaments indispensable to the proper discharge of judicial duties; and the Congress should enact legislation restricting the jurisdiction of the Supreme Court and inferior Federal courts and revitalizing the 10th amendment.

When the reader lays down this book, he instinctively joins in the prayer implicit in the author's dedication: "To my grandsons, for them and those of their age, my hope is that constitutional government may survive."

William F. Knowland, Senator From California

EXTENSION OF REMARKS
OF
HON. STYLES BRIDGES
OF NEW HAMPSHIRE
IN THE SENATE OF THE UNITED STATES
Tuesday, April 22, 1958

Mr. BRIDGES. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD William S. White's article about Senator WILLIAM F. KNOWLAND, which was published in the Washington Evening Star of April 21, 1958.

Senator KNOWLAND is the distinguished leader of the Republican Party in the Senate, and all of his colleagues, whether they be of his own political party or the opposition, have great affection and respect for him.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Washington Evening Star of April 21, 1958]

THE STRANGE ESTEEM FOR KNOWLAND—REPORTS THAT CAMPAIGNING IS LANGUISHING BRING NO DELIGHT, EVEN TO SENATE FOES

(By William S. White)

The United States Senate is peering anxiously at a single political race much in the attitude of a man tiptoeing through the sickroom of an exasperating friend.

The patient in this little figure of speech is WILLIAM F. KNOWLAND. KNOWLAND is throwing over a secure Senate seat, not to mention the Senate Republican leader's post, to try for the governorship of California.

The weight of the informal bulletins coming in from the coast suggests that he is languishing. The outlook for his recovery before November is regarded as poor.

Certainly more than half of the Senate officially and on the record wants KNOWLAND to lose. For more than half of it is Democratic, along with his rugged and popular opponent, Pat Brown.

It is probable, moreover, that upon purely impersonal standards—on KNOWLAND's positions on various major issues—at least two-thirds of the Senate would view an absolute end to his public career as far short of a public catastrophe.

All the same, certainly three-fourths of the Senate—and probable four-fifths of it, quite regardless of party or faction within party—irrationally and determinedly wishes him well.

Not everything is impersonal, even in politics. Its practitioners are human—all too human, perhaps, sometimes. And KNOWLAND, stolid, inflexible and nearly humorless though he is, has unconsciously accomplished a strange feat of institutional public relations.

The very chamber that probably would reject him for most any high office on a strictly objective basis undoubtedly will be generally unhappy if he is rejected on any basis in California.

Certain famous liberals will be, too, in spite of the fact that KNOWLAND is the arch-symbol of conservatism and even though their weakness toward him distresses them even as they wryly acknowledge it.

The inherent seeming improbability of this estimate of the situation is quickly conceded. It is an entirely true estimate, nevertheless.

The explanation does not lie wholly or even mainly in the well-known fact that the Senate in many ways is like a club and that W. F. KNOWLAND is a Member of same. It lies more importantly in his private character, which to the Senate tends to overcome various public liabilities.

KNOWLAND's speeches are much more earnest than brilliant. His work most of the time is more devoted than outstanding. His personal manner makes him a living refutation of the usual rules on how to win friends and influence people.

He is unconquerably tactless, with a sort of genius for saying the wrong thing to the right people at the worst possible time. Far from kissing the baby, he is more likely stonily to ignore it—or to mistake its parents for quite another couple.

Already, though the campaign in California is not far advanced, stories are reaching here of instances of his sure instinct for excessive candor—like impatiently brushing off certain burning local issues with the air of a man with more important things on his mind.

And when the Senate hears these accounts it does not recoil in horror from such professional ineptitude, as with another man it surely would do. It only chuckles and says: "That's old BILL for you."

The phrase "Old BILL" is an accolade. It means that KNOWLAND is a man of utter responsibility, in intention if not always in fact. It means that he is a politician of rare, if not always perceptive, courage. It means that when he has given his word he goes on to the end with it.

KNOWLAND, like nearly all the other orthodox Republicans, gave much sober attention some years ago to trying to beat out the brains—politically—of a man named Dean Acheson, Mr. Truman's Secretary of State.

But KNOWLAND never meanly fought this or any other action. A pretty good authority for this is Dean Acheson, who in public and in private uses the words "honorable opponent" to describe his erstwhile antagonist.

There is not much in common between the elegant, sensitive and witty Acheson and the plodding, heavy man of honest cliches, KNOWLAND. But there is, after all, this one point: They both stand on the upside of that line which, as the saying goes, divides the men from the boys.

Resolution of Jackson Electric Cooperative, Inc., Edna, Tex.

EXTENSION OF REMARKS
OF
HON. LYNDON B. JOHNSON
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Tuesday, April 22, 1958

Mr. JOHNSON of Texas. Mr. President, I ask unanimous consent that a resolution calling attention to the adverse effects of excessive oil imports, passed by the Jackson Electric Cooperative, Edna, Tex., be printed in the Appendix of the RECORD.

This electric cooperative serves consumers in Jackson, Matagorda, Calhoun, Brazoria, and Lavaca Counties, Tex.

There being no objection, the resolution was ordered to be printed in the RECORD, as follows:

RESOLUTION BY JACKSON ELECTRIC COOPERATIVE, INC., BOARD OF DIRECTORS MEETING, APRIL 15, 1958

Whereas the excessive importation of foreign crude petroleum and petroleum products into the United States is drastically affecting our Nation and endangering our national security; and

Whereas the economy of Texas is being depressed by these imports to the extent that due to the loss of tax revenue from State-produced oil, it will soon be necessary that Texas impose either a sales tax or a State income tax on its citizens, to compensate for the loss of tax revenue through curtailed oil production brought on by excessive imports; and

Whereas the royalty owners of Texas are losing many thousands of dollars each day because of these imports: Now, therefore, be it

Resolved, That we, the board of directors, representing more than 5,000 members of the Jackson Electric Cooperative, Inc., respectfully request that you give your support and vote for H. R. 11781 by Congressman IKARD, which, in our opinion, will tend to remedy the foreign oil-import problem.

Respectfully submitted.

JACKSON ELECTRIC COOPERATIVE, INC.,
E. S. YOAS, *President*.

Attest:

W. M. SELLS, *Secretary*.

Community School Teacher

EXTENSION OF REMARKS
OF
HON. RALPH W. YARBOROUGH
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Tuesday, April 22, 1958

Mr. YARBOROUGH. Mr. President, since our entry into the space age there has been much discussion about the faults of American education, many proposals for changing and reforming various features of our educational system, and a great deal of very critical remarks aimed directly at our public schools and public school teachers.

While there are many improvements that could be made in our educational system, especially in the area of providing more scholarships for worthy students, I think we must never lose sight of the enormous contribution to education and enlightenment that has been made by the community school teachers. In many small rural communities, the community school teacher gave instruction in all subjects to all school age children in the area. It was from the community school teacher that many Americans learned the three R's and got their first knowledge of history, science, music, and culture generally.

One such community school teacher was Mrs. Lena Antrobus of Clarendon, Tex. Mrs. Antrobus, 71 years ago, in July of 1887, first came to Clarendon, where she was to become the first school teacher in the community.

The Amarillo Daily News, one of the most influential daily newspapers in the Texas Panhandle tristate area, carried an article by Tommie Saye in its issue of Friday, April 18, 1958, which vividly describes the life of Mrs. Antrobus, who celebrated her 91st birthday Sunday, April 20.

Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the article entitled, "Clarendon's First Teacher Celebrates 91st

Birthday," by Tommie Saye, from the Amarillo Daily News of Friday, April 18, 1958.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Amarillo Daily News of April 18, 1958]

CLARENDON'S FIRST TEACHER CELEBRATES 91ST BIRTHDAY

(By Tommie Saye)

CLARENDON, April 17.—It was in July 1887—71 years ago—that Mrs. Lena Antrobus got her first look at old Clarendon. Her first view was from a perch atop the seat of the covered wagon that brought her and her husband, George, from Owensboro, Ky., to their new home in the Texas Panhandle.

Sunday Mrs. Antrobus celebrated her 91st birthday in her home here.

When the couple arrived in Clarendon, plans had begun for relocation of the town on the railroad line. The young couple staked their tent at the railroaders' camp, northeast of the depot, where the railroad was drilling a water well preparatory to establishing a division and terminal and shops.

They lived in the tent while their one-room house was being built, and the young bridegroom worked for the Mayfair Lumber Co., which did a booming business during the formative years of the town. Mrs. Antrobus witnessed construction of the city of Clarendon.

She became the community schoolteacher because she was interested enough in the children to spend long afternoons reading to them. The Clarendon parents reasoned that if she were going to read fairy tales to the youngsters she might just as well add some basic instruction in the three R's. She was qualified to do so, since she held a teacher's certificate. Fees were set at a dollar a month, but practically no one paid.

The whole community turned out to see the first train puff into the depot of Clarendon. As Mrs. Antrobus remembers it, the train consisted of an engine and caboose, carrying railroad officials on an inspection trip. It was an important day in the beginning of a thriving community.

In 1888 Mr. Antrobus bought a section of land a mile east and 2 miles south of town. The family moved to the farm in the summer of 1890 and continued to live there about 20 years, though Mr. Antrobus continued to work in town. Little of the land was ever put under cultivation.

The couple built their home on a rise near the center of the section, with good view of the surrounding country. The Antrobus house on the hill did signal service during the Indian scare in 1891. The telegraph operator at Clarendon had received a message from the operator at Salisbury that Indians from the reservation were raiding the country.

Several Clarendon families sought refuge at the Antrobus home. In Clarendon, some of the men decided to take the battle to the Indians. They broke into the Henry Taylor hardware store and took 11 guns and ammunition. They then boarded a locomotive and headed for Salisbury—where they found no telegraph operator and no Indians. The only casualty of the scare was the hardware stock.

After the first building boom, Antrobus went into the coal business. Then, as farming become more important to the area economy, he sold farm implements.

This was the beginning of the Antrobus Hardware & Implement Co. He opened a coal and transfer business in 1892; in 1898 added general hardware and leather goods, and by 1911 his stock also included furniture and rugs.

Almost every pioneer merchant sold on time. Bills were paid in the fall when crops were gathered or cattle sold. Some bill were carried over, automatically placing the merchant in the loan business.

By 1916 Antrobus was devoting most of his time to the loan business and he eventually sold his hardware business to his son, Barcus, and son-in-law, O. C. Watson.

Their present store building and hotel was constructed in 1926. Col. Ernest O. Thompson of Amarillo, who operated the hotel for about 5 years, named it the Antro. It was sold in 1946, and the name changed to the Donley Hotel.

Antrobus continued to operate his business until his death in 1938.

Prior to the husband's death the couple had done extensive traveling. Their trips took them to the east and west coasts and to Mexico City. They took a voyage from New York, through the Strait of Gibraltar to the Isle of Malta and later cruised from Florida to Cuba.

Through the years, Mrs. Antrobus has lost none of her zest for going places and doing things. When she decides to go visiting, she purchases a ticket, calls her son Barcus and her daughter, Mrs. Watson, says goodby—and goes.

She travels to see her son, Ed, in Tucumcari, N. Mex., to visit 1 of her 3 daughters, Mrs. Florence Magden of Lubbock, Mrs. Edith Mercer of Fort Worth and Mrs. Lucy Stargel of Oklahoma City.

She took her first plane ride at age 80, flying from Fort Worth to San Antonio to visit with a granddaughter. "I enjoyed every minute of the trip," she says.

She has been a member of the First Methodist Church of Clarendon since a few months after its organization in September of 1888. Through the years she has held offices in the Women's Missionary Society.

She is a meticulous housekeeper and a good cook. These skills shine when her 6 children, 13 grandchildren, and 26 great-grandchildren gather at her home during the Christmas holidays.

Mike Mansfield, Senator from Montana

EXTENSION OF REMARKS

OF

HON. JAMES E. MURRAY

OF MONTANA

IN THE SENATE OF THE UNITED STATES

Tuesday, April 22, 1958

Mr. MURRAY. Mr. President, we Montanans are proud of my distinguished colleague, the Honorable MIKE MANSFIELD, and the great record of service to his State and the Nation which he has built during his tenure in the Senate and in the House of Representatives. Senator MANSFIELD's decision to stand for reelection is warmly approved by the vast majority of the people in our State of Montana. Recently the Daily News, published in Lewistown, Mont., summed up very well some of the reasons why Senator MANSFIELD deserves and receives the support of the people of Montana.

Mr. President, I ask unanimous consent to insert the Daily News editorial, entitled "Senator MIKE MANSFIELD Gets Our Vote," in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

SENATOR MIKE MANSFIELD GETS OUR VOTE

We expected and hoped that Senator MIKE MANSFIELD would seek reelection. So, while his announcement of this intention comes as no great surprise, it is nevertheless most welcomed news.

The Daily News heartily endorses Senator MANSFIELD's candidacy not because he is a Democrat but because of his magnificent record—because America and the free world need the tremendous contributions which he has shown himself capable of making.

As majority whip in the Senate and as ranking member of the Senate Foreign Affairs Committee, Senator MANSFIELD has been in recent years one of the leading architects of American domestic and foreign policy. And, in many cases wherein our national policy has faltered or failed it was precisely on those points wherein the administration or the Senate failed to follow Senator MANSFIELD'S advice.

Because of his leadership, his ability, his character and his dedication to public service, Senator MANSFIELD has become a new national figure, known and respected from Maine to Florida, and from New York to California. He has given new luster and stature to Montana's name over the Nation and the world.

All this, of course, is known and appreciated by Montanans in all walks of life and among all shades of political faith. Therefore, the matter of Senator MANSFIELD'S candidacy is not a question of whether he will be returned to the Senate or not. It is inconceivable that anyone could defeat him, although stranger things have happened. Montanans can show their appreciation for his selfless service by giving him an overwhelming vote of confidence.

Veto of River-Harbor-Flood-Control Bill Approved

EXTENSION OF REMARKS

OF

HON. RUSSELL V. MACK

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Monday, April 21, 1958

Mr. MACK of Washington. Mr. Speaker, the river and harbor flood-control bill vetoed by the President contained an item of $44 million of authorization for the Los Angeles flood-control area. This was one of the large items in the bill.

Despite the fact that Los Angeles stood to gain much from the bill becoming law, the Los Angeles Times approved the President's veto of the bill. The Times believes the President on sound ground, as also do I, in vetoing a bill that contained too many objectionable projects as the price to be paid for obtaining projects including the Los Angeles one which everyone admits has merit and to which no one objected.

The Los Angeles Times approving the veto of the bill editorially said:

DEATH, WE HOPE, OF THE WATER BILL

The President's veto of the $1,500,000,000 water projects authorization bill was not unexpected; he had vetoed a similar bill 2 years ago and for practically the same reasons. What he objected to was that the bill was a hodge-podge of good projects and bad; some have been described as a waste of money. Under the bill provisions were made for the construction of 150 navigation, beach erosion, flood-control and power projects scattered across the country.

Some of the projects in the bill had been inserted against advice based on careful

study and considered judgment of the professional services and other executive agencies concerned, according to the President.

That didn't stop Democratic legislators—as well as some Republicans—from pushing for it, however. The Democrats particularly have been demanding its passage as a weapon to fight the recession even though it was obvious that it would take time, perhaps years, to get the spending started.

But the President's veto doesn't mean the end of the story. The Senate early this month voted 52 to 11 to accept a compromise version of the bill as drafted by a House-Senate committee. That majority, if it held, could easily override the veto.

Anyway the President has shown that he is not going to be stampeded into signing any and all measures sent to him with the representation that they will help end the recession. We hope Senator KNOWLAND can pull enough of his fuzzy-minded colleagues into line to sustain the veto.

Early Release of United States Citizens Held Prisoners in Communist China Urged

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 22, 1958

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolution adopted by the greater Wilkes-Barre Junior Chamber of Commerce urging that the Federal Government take action to accomplish the early release of United States citizens unlawfully held as prisoners in China by the Communist government of that country:

RESOLUTION

Whereas the Greater Wilkes-Barre Junior Chamber of Commerce, in the city of Wilkes-Barre, county of Luzerne, Commonwealth of Pennsylvania, has been informed that there are citizens of the United States unlawfully held as prisoners in China by the Communist government of China; and

Whereas the members of said organization strongly believe and urge that it is the responsibility of the United States Government to continually use all proper means to secure the immediate release of such citizens of the United States: Now, therefore, it is hereby

Resolved, That the members of the aforesaid Greater Wilkes-Barre Junior Chamber of Commerce hereby urge that the proper officials of the United States Government take immediate and continued action to accomplish the early release of the citizens of the United States unlawfully held as prisoners by the Communist government of China, and that a copy of this resolution be forwarded to the President of the United States, United States Senators from Pennsylvania, and the Member of the House of Representatives from Luzerne County.

I hereby certify that the aforesaid resolution was duly adopted at a regular meeting of the Greater Wilkes-Barre Junior Chamber of Commerce, on Tuesday, March 18, 1958, at Wilkes-Barre, Pa.

WILLIAM A. STREY, JR.,
President, Greater Wilkes-Barre Junior Chamber of Commerce.
STANLEY NOVINSKY,
Executive Secretary, Greater Wilkes-Barre Junior Chamber of Commerce.

Reciprocal Trade and Plywood Imports

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Tuesday, April 22, 1958

Mr. NEUBERGER. Mr. President, recently a discussion occurred in the other body, involving plywood imports, between Representative CHARLES O. PORTER, of my State of Oregon, and Representative RUSSELL V. MACK, of the State of Washington.

Congressman PORTER opposed legislative quotas on plywood imports, while Congressman MACK advocated them.

It is significant that a leading daily newspaper, the Portland Oregonian, of April 5, 1958, published a documented editorial which declared that Congressman CHARLES O. PORTER "takes the broader view in this instance." I ask unanimous consent that this effective editorial from the Oregonian be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

PLYWOOD IMPORT QUOTAS

Involved in the proposed imposition by Congress of import quotas on plywood is more than protection of the domestic plywood industry. It touches directly the problem of world trade and commercial and political relations between the United States and Japan, which is the source of most of this country's plywood imports. Representative CHARLES O. PORTER (Democrat, of Oregon) who opposes the quota bill introduced by Representative RUSSELL V. MACK (Republican, of Washington) takes the broader view in this instance.

Recently W. G. Hellar, vice president of Heidner & Co., Tacoma importers and exporters of plywood and other products, circularized the Douglas-fir plywood industry with a statement which appears to make a good deal of sense.

His figures indicate that imports have not had an adverse effect on domestic production since 1951, the period in which Representative MACK says imports of Japanese plywood increased from 13 million square feet to 686 million. In that period, Douglas-fir and other western softwood plywood production rose from 2,866 million square feet to 5,750 million, Mr. Hellar said. And the production of hardwood plywood in the Western States, a product with which the imports compete, rose from 75 million square feet to 288 million.

Figured on a three-eighths-inch rough basis, the usual method for computing Douglas fir plywood production, imports from Japan last year amounted to less than 5 percent of plywood production in the Douglas-fir area. They did not compete with Douglas-fir plywood either in price or in use, since the bulk of the Japanese plywood imported to this country is in the form of doorskins for flush doors, which domestic producers did not produce in the sizes, thicknesses, and appearance grades required, according to Mr. Hellar.

In a statement to the House Ways and Means Committee, Jack Davidson, president of the Imported Hardwood Plywood Association, admitted that the hardwood plywood imported from Japan is to some degree competitive with domestic hardwood plywood, but the bulk of the United States plywood industry produces softwood plywood, with which the imported hardwood ply is not competitive.

The Japanese doorskins have made possible the great growth of the flushdoor manufacture in the United States in recent years, and imported plywood has been a factor in the increased use of wall paneling in low-cost homes and in the trend away from painted wood and steel kitchen cabinets, he told the committee. Serious curtailment of hardwood plywood imports would not result in much greater use of more expensive domestic hardwood plywood, he said, but would, rather, cause a greater use of hardboard or other substitutes or abandonment of decorative wood paneling in low-cost housing.

There is danger in Congress' imposing quotas on any item. Plywood quotas might be followed by similar restrictions on any number of products which could result in retaliation against American exports and the loss of jobs dependent on exports. Trade not aid is not a one-way proposition.

Mr. Hellar has suggested that, if the Douglas-fir or domestic hardwood plywood industries feel they are being hurt by foreign competition, they should bring escape-clause action under present tariff laws. If injury is proved, the Tariff Commission and the President can provide a remedy through higher duties and quota restrictions. This seems a better approach than through congressional action.

Courage With Blindness

EXTENSION OF REMARKS
OF
HON. STYLES BRIDGES
OF NEW HAMPSHIRE
IN THE SENATE OF THE UNITED STATES
Tuesday, April 22, 1958

Mr. BRIDGES. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the front-page editorial entitled "Very Special Courage," which was published in one of New Hampshire's leading daily newspapers, the Manchester Union Leader, on Saturday, April 19, 1958.

The editorial refers to the magnificent adjustment made by Forrest A. Garland, of Sanbornville, N. H., whose service to his country in time of war resulted in total blindness. Mr. Garland's courage, in overcoming his handicap and achieving success as an active and useful member of his community, represents the finest kind of example for all those similarly afflicted.

The editorial provides a heartwarming comment on the personal philosophy of this heroic veteran. I believe it merits the attention of every Member of Congress.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

VERY SPECIAL COURAGE

"And courage never to submit or yield."

Very special significance marks the line just above; a very special significance because it was written by John Milton, blind poet who could not see the visible world but who did see its beauties and its mysteries.

"And courage never to submit or yield" most certainly also applies to Sanbornville's Forrest A. Garland, whose war service resulted in blindness, but who does not consider himself handicapped. No, indeed. Think of the fact, as only one example of his valor, that the autobiography he is writing is entitled Blindness Has No Part in My Life.

That is no empty phrase. Forrest Garland lives the title. He works; he plays; he is very much a part of the community. He enjoys companionship and is himself a good companion. "Anyone who is blind or has physical disability should never doubt being able to live a normal life," he declares, and adds, "I go on doing just like everybody else."

While Forrest does not consider himself extraordinary, the truth is that he is most certainly of heroic mold. He might have become embittered. He might have made himself totally dependent upon the ministrations of others. But Forrest Garland is made of sterner stuff. He is independent; he leads a useful life; and he is happy in his normal life.

He does not want and he does not need pity. He glories that he is respected, much-liked and accepted as a part of the community. He does for himself, and it is our opinion that he does much for others. Discernment other than Milton's has described the Forrest Garland type of valor. Shakespeare said:

"For courage mounteth with occasion."

Forrest Garland was born with strength of character, from which courage stems. And when the need came, that courage mounteth, and grew strong and lasting. Recall his philosophy:

"Anyone who is blind or has physical disability should never doubt being able to live a normal life."

The Old Quest for Peace in the New Age of Science

EXTENSION OF REMARKS
OF
HON. HENRY M. JACKSON
OF WASHINGTON
IN THE SENATE OF THE UNITED STATES
Tuesday, April 22, 1958

Mr. JACKSON. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address entitled "The Old Quest for Peace in the New Age of Science," which I delivered before the 11th annual Borah Foundation Conference, at the University of Idaho, Moscow, Idaho, on March 20, 1958.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

THE OLD QUEST FOR PEACE IN THE NEW AGE OF SCIENCE

(Address by Senator HENRY M. JACKSON)

I deeply appreciate the invitation to come to the University of Idaho and to participate in your annual Borah Conference.

I do not know of a more appropriate group before which to discuss the quest for peace in this perilous age.

For 11 years now this forum has given its participants new insights into foreign policy and the problems of peace. Indeed, this conference has achieved a well-earned national reputation.

As we meet, satellites are flying through the air above us. Newspapers are filled with H-bombs, outer space, intercontinental missiles, antimissile missiles, and anti-anti-missile missiles.

In truth, everywhere we turn in the question of war and peace, we see the influence of science. There is no doubt that science has greatly complicated the problem of keeping the peace.

As one commentator put it: "The road to hell is paved with good inventions."

Gone are our two precious allies of the past, time in which to mobilize, and distance to protect our homeland. Today whatever force is required, either to deter war or to win it if deterrence fails, must be on hand, ready at all times.

On the other side of the world, we face an adversary who is deliberately determined to use science and technology as the handmaiden of ultimate world conquest.

As a result of Soviet advance in science and technology, they now challenge us across the board, in military prowess, in science, in economic and political affairs, in education, in person-to-person relations, indeed in about every area of activity.

It almost goes without saying that we must meet the material challenge by producing enough weapons, launching satellites, overcoming recessions, and increasing the rate of our industrial growth and development.

These are the dramatic things which we must do.

But there is real danger that we will think of this contest as only one of: number of planes against number of planes, range of missile against range of missile, size of satellite against size of satellite.

I'd like to talk with you now about a very undramatic, very commonplace, very obvious thing—and yet the most important thing of all—people.

The history of international politics, when you come down to the essence of it, is the history of individual human beings.

What are their loyalties? How hard will they work? What ultimately matters is what human beings believe in and how well they labor for it.

What counts is what a farmer in some remote Indian village, some university student in troubled Indonesia, or some civil servant in the new state of Ghana, believes and does.

There are over 2 billion people in the world. Roughly one-third follow Moscow. Another one-third follow the free way of life, the traditional centers of which are North America and free Europe. The final one-third are the uncommitted peoples across the broad sweep of the Afro-Asian area.

What matters is this: Will Moscow be able to hold the people behind the Iron Curtain and keep them working effectively and productively?

Will the free world be able to hold itself together, with its people working effectively and productively?

And what will happen to the uncommitted peoples?

At this point we face a great paradox. On the one hand, we have our free tradition saying that the individual is everything, the individual person is what counts. On the other hand, we have Marxism saying that individual people are nothing and that all that matters are the laws of history. Yet despite this, it is the Soviets, more than we, that in practice seem to realize what really matters—people.

Look how they appeal to the ordinary person's hunger for peace. By a remarkable public relations job Khrushchev persuades many people that the Soviet system has really changed since Stalin's day, into something less dangerous.

Take the recent example of Hungary—turning loose brutal murderers one day, turning loose the dove of peace the next. Within weeks after the enormous bloodletting in Hungary, the Kremlin was back in business cooing peace, and getting people to believe it.

Khrushchev's refrain seldom varies: "We want peace and the other side wants war," a heady tune for peoples who yearn for a future of peace and progress.

Not so long ago, the Kremlin showed no concern for other peoples—except to support Communist factions abroad. Today, however, Moscow gives the impression of being concerned with everyone. Anyone who is not aggressively against them is called friend. Khrushchev courts non-Communists, like Sukarno and Nehru, every bit as diligently as Stalin once courted his Communist agents.

Last January, a Gallup poll in New Delhi, India, asked this question: "Which is doing more to help peace in the world, Russia or the West?" The answers came out this way: Russia 54 percent; West 18 percent; don't know 28 percent. Note the ratio: 3 to 1 for Russia.

Another recent Gallup poll asked citizens of 12 world capitals: "Who is ahead in the cold war, Russia or the West?" The answers came out this way: Russia was rated ahead in 10 capitals, in some cases by 4 or 5 to 1, among those who gave definite answers. The West was rated ahead in only two capitals.

Around the whole globe today we are clearly on the defensive.

How has this happened?

One reason is that Moscow uses deliberate lies as a matter of policy and manages to fool many people a lot of the time.

A second reason is that we are an open society—we live in a goldfish bowl. People can see not only what is right with us, but everything that is wrong with us. People cannot easily see what is wrong with Moscow. Moscow lets the rest of the world see only what she wants them to see. No reports of the ruthless purges are issued by the Kremlin press. No accounts of the Siberian prison camps ever get through Kremlin censorship.

A third reason for our difficulty is that Moscow is consciously and deliberately going about being nice to people—ready to snap the trap shut when the time comes. The voice of Moscow is perhaps the least important weapon in the Soviet arsenal.

Rising Soviet industrial strength gives Moscow goods and brains for export, and Soviet leaders now exploit economic aid as an instrument of political warfare. More than 2,000 Soviet technicians are at work among the uncommitted peoples. Moscow has welcomed a steady stream of visitors from Asia and Africa for training programs behind the Iron Curtain.

A fourth reason for our defensive position is that Russian experience is just a generation away from that of the uncommitted peoples. Only recently the Soviet Union was a backward, feudal, and underdeveloped country, too. Persons in less well-developed countries are encouraged by Soviet experience, partly because it is closer to their own.

By contrast our experience as an old industrial nation seems very far ahead of theirs. The American standard of living is roughly 3 times as high as the Englishman's, 6 times as high as the Italian's, 11 times as high as the Turk's, 18 times as high as the Peruvian's; but it is 40 times as high as the Indonesian's.

When President Sukarno went to Moscow he reportedly told Khrushchev: "You people are still close to your revolution. You've managed to rise from feudalism, just like we're trying to do. We have more in common with you than with the West."

Finally, our own ineptness contributes greatly to our difficulty. Too often we give the impression that the only people we care about are those who play the game our way. We insist that people be in our own image. We suffer from a kind of national superiority complex. What America needs most is to learn the meaning of humility.

Take for example a familiar attitude toward allies. We expect allies to agree with us and to do what we want. We object when they don't. Yet this pressure to conform only alienates our good friends.

After all our allies are independent nations with their own special concerns. They are, and should be, free to take positions which differ from ours on many issues.

We need allies. But we want allies, not satellites.

As another example, take a familiar attitude toward neutral nations. We think that neutrals are somehow not playing fair. We want them to choose sides once and for all and join our coalition.

When, however, we try to dragoon them into alliance with us, we simply drive them further away.

The underdeveloped countries are not pawns in the power game, as some Americans think. They are young nations with interests and goals of their own. Burdened by pressing domestic problems, a nation like India prefers neutrality to the added cares of an alliance.

Soft neutrals who become overdependent on Communist help are a hazard. Hard neutrals, however, who recognize the full danger of Russian tactics are not a hazard, so long as they remain as independent of Moscow as they do of us.

Granted that we now find ourselves on the defensive, what are we going to do about it?

First of all, we must alter our own basic attitude. We should stop trying to mold other peoples in our own image.

Moscow tells people to be themselves, but what she really means is for them to be Communists. We too often say, "be like us," when all we need say is "be yourselves."

We should adopt the principles of the good politician. A good politician recognizes that different groups have diverse interests. He makes it his business to understand the state of mind of his constituents. He gets around to learn what people are thinking. He finds out what they want and tries to help them reach their goals. Where possible, he strives to assist each group in pursuit of its objectives.

Ladies and gentlemen, this approach to other peoples has important implications for our entire foreign policy. I believe that if we took this approach seriously, we could get off the defensive. We could promote programs that will gain us the friendship and respect of other peoples.

Let me suggest three particular programs, which I feel deserve our most urgent attention.

First, we should substantially increase our technical cooperation program, and make it a vehicle of our traditional respect for human dignity and liberty.

The proposed technical assistance program for fiscal 1959 is very modest. It would cost only $163,500,000. I think we are missing a great opportunity and that we should expand the export of technical know-how to help people help themselves.

An increase in this area could be offset by reductions in military and economic aid. We get a better return for our dollars if we encourage more person-to-person cooperation and give less in the form of handouts.

Our friends abroad want material help. But they look also for intellectual and spiritual inspiration. Their hearts as well as their economic systems need a lift. One way to meet this need is to promote programs in which we work with other people rather than just do something for them.

Why should not our technical assistance program send thousands of Americans abroad each year to work together with the uncommitted peoples and so help strengthen the basis of common humanity that unites all people of good will? As nurses, doctors, soil conservationists, experts in mental health, and engineers, they could demonstrate by dedicated labor their genuine concern for the welfare of the people.

I wish we could arrange for large numbers of our young people, who are fresh from their college and technical training, to go abroad say for a term of 2 years.

No person should be recruited for the program simply because of his or her technical competence. Participants should also have these qualities: first, a catching idealism; second, an interest in people for their own sakes—they should genuinely want those with whom they will live and work to be better off and happier, irrespective of the Soviet threat; and third, they should be looking for contributions which others can make, treating their work as a 2-way street.

In summary, participants in the program should be guided by the true spirit of humility.

This country need not and should not carry the sole burden of an expanded technical cooperation program among the uncommitted peoples. The entire NATO community can join in the effort.

There is a prevalent notion that unless America runs the show, America will not get the credit. But this is far from the case. Today, we are likely to gain more credit if we do not insist on doing it all ourselves, but rather join in genuinely common undertakings.

There is no more important task than speeding common scientific and technical programs within the NATO alliance. Such programs will promote the security and welfare of the Atlantic community. They will also assure a greater reservoir of brains and know-how for technical cooperation in Asia and Africa.

Second, we should expand the exchange-of-persons programs in the free world, and offer a full-scale person-to-person exchange program to the Soviets.

We have many excellent exchange-of-persons programs in the free world, including the highly successful Fulbright program. But we could do far more than we are doing.

The best way to learn what other people are thinking and hoping is to go to see them, talk to them, and live among them. The best way for people to find out what we are really like is to come to see us.

When Nehru visited this country he went to see some of our most advanced welfare institutions, an insane asylum, a community center, and a public school. He reportedly commented: "If this is really typical of America, then I have certainly misunderstood you."

This is not the occasion to discuss the details of a greater exchange effort. I believe every proven and workable program should be pushed, both those financed by private money and those supported from public funds.

What I want to emphasize today is this: We should not limit our exchange efforts to the free world. I believe we should offer the Russians a full-scale person-to-person exchange.

We may find that Moscow wants only the present token program—a few students, a few technicians, orchestras and movie stars. Whatever the Soviets have in mind, however, we should be well out ahead of Moscow in our proposals.

Quite probably exchange programs with Communist countries will net few dividends for peace. But it makes sense to keep open the lines of communication with ordinary people behind the Iron Curtain.

During my trip to Russia in 1956 I was deeply impressed with the friendliness of every-day Russians. I had an opportunity to go into their homes and to meet them, both in European Russia and in Asiatic Russia. I found that the Soviet leaders had made little headway among their people in destroying the good name of western people, despite 40 years of vicious propaganda.

Even people who fall under the sway of evil ideas are not necessarily evil persons. One can talk to them and exchange ideas in many areas outside the realm of politics.

Perhaps we can make some headway if we send skilled specialists to Russia, for example, in surgery, in mental health, in family welfare, in classical studies, and even folk songs. These people can talk to their counterparts in Russia without becoming involved in ideological controversy. Some common understanding might be developed in fields of common interest. Certainly Soviet political ideology will be the last area to yield to any reconciliation.

Why should we not challenge Russia to give 50 Indian leaders the chance to go behind the Iron Curtain and then have those same 50 leaders come to visit us?

If Moscow accepted such a proposal, all to the good. If Moscow rejected it, still we could not lose. Neutral nations would be treated to a demonstration that Russian talk of freedom is a pretty shallow thing.

I am proposing that we maintain pressure on the Russians—that we keep them on the defensive in this field where they deserve to be on the defensive. Of all countries, America should never be caught reluctant to open its doors to those who want to visit us and get to know us.

Third, we should strengthen our education in the social and humanistic studies, including foreign languages, and assure ourselves the tools for working with other peoples.

Since sputnik we have heard a good deal of talk about our deficiencies in science education. These deficiencies are, indeed, serious and need correction. We cannot afford to be second best in technological progress.

Equally, however, we cannot afford to ignore the disciplines which can help us turn our technological progress to the benefit of mankind. A renaissance is needed in the teaching of the social and humanistic studies in history, economics, literature, philosophy, and foreign languages.

Every American should be steeped in the humane tradition including scientists, engineers, and technicians, themselves. When the critical issues lie, as they do today, in the area of the relation of science to human behavior, then science training by itself is not enough.

In particular, I want to urge greater foresight and greater effort in the study of foreign languages.

Compared to the Soviet Union we are doing a fifth-rate job in language training.

An estimated 10 million Russians are studying English. Less than 8,000 Americans are studying Russian.

Every child in a Soviet high school is required to study German, French, English, Spanish, or Latin. One-half of our American high schools do not even offer modern languages. In the American high schools which do offer foreign languages, less than 15 percent of the students take them.

Russian universities teach well over 40 different foreign languages including Manchurian, Uigur, and the Burmese, Vietnamese, Malayan, and Indonesian languages. I might point out that Russian universities also have to teach the 17 native languages spoken in the Soviet Union.

Some of the Russian grade schools now even instruct 8- and 9-year-olds in Chinese, Hindi, Arabic, Parsi, and Urdu.

One can almost anticipate what countries are next on the Soviet calendar of conquest from their language curriculum.

America still lumbers along emphasizing the colonial languages, French and German. How unimaginative can we be to send our emissaries to the former colonial areas speaking only the language of the old rulers?

For example, Telugu is the language of 33 million people in India. Not six people in this country, however, can read a newspaper in Telugu. Yet members of a Soviet

delegation arriving in India can speak it and read it.

In person-to-person contacts Americans should talk the native languages, even the dialects. We should equip our technicians to meet the village chief at his door, address him in his own tongue, and offer to work with him on a project he holds dear. This would promptly make us a new friend.

To prepare for mastery of a language one needs one elementary text, preferably with accompanying tapes or phonograph records, as well as a student dictionary and a series of graded readers. These works take years to produce and require the talents of highly trained linguistic scholars. And until these materials are available there is no possibility to teach the language on a sound basis.

Yet today there are about 40 important languages of Asia alone for which our working tools are sketchy or nonexistent.

Urgent steps should be taken to put this country's language-study program in good shape. This will take a national effort. We need a long-range plan. Then we need coordination among all the interested public and private agencies to get the plan implemented.

In conclusion, let me say this:

The past is littered with the wreckage of nations that made only a material response to the challenge of their times. We must not make that mistake.

In our struggle with the Soviet Union we have one weapon which the Soviets do not have, and cannot have. That weapon is our democratic tradition of respect for human dignity and liberty.

The Kremlin can build the same planes and missiles we do, it may build even better ones. The Kremlin can use the slogans of freedom, it may even use them better. But it does not have the respect for human dignity and liberty that really counts.

Our greatest strength is our intellectual and spiritual heritage. May we, in our time, prove true to that heritage.

Meet Chester R. Bartalini

EXTENSION OF REMARKS

OF

HON. GEORGE P. MILLER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, April 21, 1958

Mr. MILLER of California. Mr. Speaker, I am happy to announce that my friend of long standing, Chester R. Bartalini, was recently elected president of the California State Council of Carpenters. "Chet," as he is known to his hundreds of friends, is a remarkable man who has come to leadership in his union through his own efforts. He is a conscientious, hard worker whose ability is respected by all who know him.

In his climb to the top he has been assisted by his good wife, Flo, who has given unstintedly of her own time to civic affairs and PTA matters. The Bartalinis are a wholesome, American family and one that I am proud to know.

The California State Labor News Service, in its April edition, has an article that I am privileged to insert in the RECORD.

STATE LEADERSHIP CAPS TWO LIVES OF STRUGGLE

C. R. Bartalini, newly elected president of the California State Council of Carpenters, is a man who has lived two union lifetimes.

Active as a rank and filer and official hereabout for more than 20 years, he is generally regarded as a homegrown product.

Lean, of medium height, and soft-spoken, a stranger might guess him to be a sedate man who has led a quiet life.

Which proves only that you can't judge by appearances, because Bartalini cut his teeth on unionism in the faraway Illinois coalfields and helped write the pages of one of the toughest and bloodies struggles in American labor history—the battle between the independent Progressive Miners and John L. Lewis' United Mine Workers.

Bartalini was born in 1903 in the copper mining country of the upper peninsula of Michigan, where his father worked briefly in the mines, then resumed the meat-cutting trade he had learned in his native Italy.

An old-country Socialist enthusiastic about consumer cooperatives, the elder Bartalini threw himself into the cooperative movement in 1912 and began traveling around the Middle West, setting up cooperative stores, and finally, in 1917, the family located in Kincaid, in the heart of the southern Illinois coal country.

In 1919, at the age of 16, young Bartalini went to work as an apprentice carpenter and 2 years later was hired by the Peabody Coal Co. as a millwright and carpenter, becoming a member of the United Mine Workers.

There was a vigorous tradition of union democracy in the Illinois coal fields, and Bartalini became imbued with it. And when Lewis set out in the twenties to consolidate absolute power over the UMW it became clear that there would be a collision.

One abortive move to set up an independent union failed in 1929, but by 1932 the rank-and-file led local unions were stirred up enough to force the State officers of UMW to get a court injunction which prevented Lewis from interfering with the Illinois unions.

The Illinois contracts expired in April 1932, and the operators decreed heavy wage cuts. The miners walked out of the pits and voted down two contract offers. When it was obvious the second offer was going down to defeat in a vote count in Springfield, a mysterious holdup took place in which the tally sheets were stolen. Simultaneously Lewis met with the operators and signed an emergency contract.

The striking miners refused to go back under this agreement and formed a 9-mile-long auto caravan, a peaceful cavalcade with their women and children, to go to the next county and persuade the miners there to come out of the pits. They were directed into an ambush by State troopers, and at the county line the caravan was riddled with rifle and machinegun fire by sheriff's deputies.

By coincidence Bartalini was riding in the lead car, which was shot up like a sieve, but he was unhurt.

After the retreat there was an angry mass meeting at Gillespie, Ill., and the Progressive Miners Union was formed and embarked on its war with Lewis and with the operators who backed him.

In the years that followed there were shootings, dynamitings, and the slow violence of starvation, as the militant but smaller miners group was finally starved out. Bartalini became a rank-and-file leader, member of the strike committee, and was in the thick of things all the way.

As head of the relief committee for his area, he was instrumental in getting the first allocation of Federal relief, through a direct appeal to Mrs. Eleanor Roosevelt. The Progressive Miners also claimed the honor of winning the first representation election in the United States, for a mine at Mark, Ill., in 1933, under the newly enacted section 7–A of the NRA.

Later he toured the State as an organizer for the Progressives, unpaid, traveling on a tankful of gasoline and bumming his meals as he went.

Back at home, his wife, Flo, and six small children made out as well as they could. Some of the time they slept on pallets in the cellar afraid to sleep on the upper floor because the house had been shot up so often by the gun thugs. "Finally, we just stopped putting glass back in the windows," Bartalini recalls.

The unequal battle went on until 1936, in fact, the progressive miners never did give up, and hang on in some areas today. But by then the outcome was clear. Most of the real stalwarts never got back into the mines and had to move on.

For Bartalini that meant moving to California, because a branch of the family had settled out here, "and because it was as far west as I could go without getting my feet wet."

He came to Oakland in 1936, joined carpenters local 36, and by 1937 was settled enough to send for his family in Illinois to join him.

Within a year he had been elected secretary of the local and delegate to the District Council. He became the first rank-and-file member to win a place on the Carpenters Bay Area Negotiating Committee. There were suggestions that he run for business agent, but he refused, preferred to work at the trade.

Later he refused to run against the incumbent Bay Counties District Council secretary, Dave Ryan, even though he disagreed with him on policies, and it was not until Ryan retired in 1950 that he consented to become a candidate and was elected to this post, to which he has been reelected 7 times.

During these years, Bartalini notes with some pride the Bay Counties carpenters became the first of the basic construction crafts to win a health and welfare plan, and pioneered also with vacation and pension plans.

Meanwhile, as secretary of one of the biggest and most active district councils, he became active on the State scene and at this last State convention of carpenters was elected president.

Bartalini lives in Alameda and is active there in civic affairs. His hobbies, when he gets time for them, are hunting and fishing, and he is president of the Alameda Rod and Gun Club and active in the Associated Sportsmen of California.

Senator Cooper Speaks for TVA Self-Financing Bill

EXTENSION OF REMARKS

OF

HON. JOE L. EVINS

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 22, 1958

Mr. EVINS. Mr. Speaker, last week the distinguished Senator from Kentucky, JOHN SHERMAN COOPER, addressed the annual convention of the Tennessee Valley Public Power Association. In his address, Senator COOPER made some highly pertinent comments on the effects that would follow the passage of the TVA self-financing bill, presently pending before this House. The Nashville Tennessean, on Friday morning, April 18, presented a very brief and cogent report of Senator COOPER'S splendid address,

and I ask unanimous consent that it be inserted in the Appendix of the RECORD for the information of my colleagues.

COOPER SAYS TVA BILL BLOW AT RECESSION

(By Nat Caldwell)

The TVA self-financing bill is "the best kind of anti-recession measure," Senator JOHN SHERMAN COOPER, Republican, of Kentucky, said here last night.

Senator COOPER, speaking to the annual convention of the Tennessee Valley Public Power Association, pointed out that the self-financing bill could mean the investment of $2 billion in the valley in a 10-year period.

"Here in the Tennessee valley is an unparalleled opportunity to encourage the investment of wealth-creating funds," Senator COOPER declared. He pointed out that the original bond ceiling in the measure that already has passed the Senate is $750 million for the first 4-year period and, if the ceiling is raised in similar steps, the total figure for a 10-year period would be $2 billion.

WITHOUT UNITED STATES EXPENDITURE

All this stimulation of the growth and wealth of this section can be accomplished without any expenditure of Government funds, he said.

COOPER, interviewed following his speech, said that the 500,000-kilowatt Devils Jump and the smaller Laurel dam on the Upper Cumberland are "ideal projects for the Corps of Engineers to undertake on a cooperative basis with the TVA to create still more jobs."

Senator COOPER said he feels sure that the House of Representatives will vote favorably on a self-financing bill if it contains "roughly the same provisions of the bill the Senate passed last year."

G. O. Wessenauer, TVA power manager, speculated that the area's power requirements will multiply by 8 times in the next 25 years.

Wessenauer qualified his speculation upon the valley's ability to keep up with the Nation's population increase.

"IS REASONABLE"

"This is not a prediction," explained the TVA power manager. "But it is, I believe, a reasonable speculation."

He pointed out that electricity use in the seven-State power-service area served by the Tennessee Valley Authority multiplied by 20 times in the 25 years since TVA was established.

Wessenauer explained that his forecast did not include possible increased use by atomic energy or other large defense industries.

The breakdown of increased power use for the next 25 years in the speculation of the TVA official included:

Residential use, up 12 times—100 billion kilowatt-hours annually.

Farm use, not including farm residences, up to 10 billion kilowatt-hours annually.

Commercial and service use, a tenfold increase—30 billion kilowatt-hours annually.

Jobs for Disabled Veterans

EXTENSION OF REMARKS

OF

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 22, 1958

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Wilkes-Barre Times-Leader of April 16, 1958, on the subject of jobs for disabled veterans who have received vocational rehabilitation:

JOBS FOR VETERANS

The Times-Leader Evening News wishes to acknowledge receipt of a letter of appreciation from A. G. Palmer, manager of the Wilkes-Barre regional office of the Veterans' Administration, on the current sequence in the Joe Palooka comic strip, featuring the rehabilitation of a disabled veteran and emphasizing that he can compete successfully in employment with his able-bodied fellow countryman, that he desires to stand on his own feet and that he asks only for the chance to prove himself.

The strip's Chip Shoalders is more than a comic strip character; he is a symbol of the self-respect and independence it is possible to achieve through vocational rehabilitation. The strip draws attention to the fact that rehabilitated disabled veterans, given an opportunity, are competent, valuable employees.

Approximately 8,000 World War II veterans (Public Law 16) and 450 Korean veterans (Public Law 894) have been trained and rehabilitated in the 32-county area, served by the Wilkes-Barre regional office of the Veterans' Administration. At the present time 250 Korean war veterans are in training.

Many of these veterans are residents of Luzerne County and are attending King's College, Wilkes College, Pennsylvania State University Extension in Wilkes-Barre and Hazleton, Wilkes-Barre Business College, McCann School of Business in Hazleton, Wyoming Valley Technical Institute, and Nanticoke Vocational School.

Like Chip Shoalders, they will be seeking employment when they complete their training and will have something to offer prospective employers. In fairness to them, the veterans want to be considered on their abilities rather than their disabilities. They have received vocational counseling and the medical staff of the Veterans' Administration has determined they have the physical capacity to handle the job for which they have trained. Despite service to their country, they ask no special consideration. Surely, they are entitled at least to the same opportunities others receive in the labor market.

Resolutions Memorializing Congress To Enact Legislation for the Protection of a Spouse and Children Who Have Been Deserted or Abandoned

EXTENSION OF REMARKS

OF

HON. JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 22, 1958

Mr. McCORMACK. Mr. Speaker, under permission to extend my remarks, I include resolutions recently adopted by the General Court of Massachusetts memorializing Congress to enact legislation for the protection of a spouse and children who have been deserted or abandoned.

THE COMMONWEALTH OF MASSACHUSETTS, OFFICE OF THE SECRETARY,
Boston, Mass.

RESOLUTIONS MEMORIALIZING CONGRESS TO ENACT LEGISLATION FOR THE PROTECTION OF A SPOUSE AND CHILDREN WHO HAVE BEEN DESERTED OR ABANDONED

Whereas many women and children are being abandoned and deserted by their husbands and fathers; and

Whereas in many instances even though there be no desertion or abandonment, husbands, and fathers willfully fail to provide adequate support for their spouse and children residing in another state; and

Whereas the guilty spouse in these matters almost invariably has crossed over State lines and boundaries to accomplish the desertion or abandonment, and may be immune from any existing State or Federal laws: Now therefore, be it

Resolved, That the general court of Massachusetts respectfully urges Congress to enact legislation for the further protection of abandoned or deserted spouse or children, making it a Federal criminal offense for a spouse to desert, abandon, or fail to provide adequate support for his spouse and dependent children where said guilty spouse has crossed State lines or boundaries; and be it further

Resolved, That copies of these resolutions be sent forthwith by the Secretary of the Commonwealth to each Member of Congress from this Commonwealth.

House of representatives, adopted March 24, 1958.

LAWRENCE R. GROVE, *Clerk.*

Senate, adopted in concurrence, March 31, 1958.

IRVING N. HAYDEN, *Clerk.*

[Attest]

EDWARD J. CRONIN,
Secretary of the Commonwealth.

Address Entitled "What About the Budget Now?" Delivered by the Director of the Budget

EXTENSION OF REMARKS

OF

HON. HARRY FLOOD BYRD

OF VIRGINIA

IN THE SENATE OF THE UNITED STATES

Tuesday, April 22, 1958

Mr. BYRD. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address made by Mr. Maurice H. Stans, Director of the Bureau of the Budget, before the Houston chapter of the American Society of Chartered Life Underwriters, at Houston, Tex., on April 9, 1958.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

WHAT ABOUT THE BUDGET NOW?—AN ADDRESS BY MAURICE H. STANS, DIRECTOR OF THE BUREAU OF THE BUDGET, BEFORE THE HOUSTON CHAPTER OF THE AMERICAN SOCIETY OF CHARTERED LIFE UNDERWRITERS, THE HOUSTON CLUB, HOUSTON, TEX.

It is a pleasure for me to be here this evening to talk with you about the Federal budget. My aim in doing so is to try to convey to you some idea of our problems and your responsibilities in connection with our Government's spending. I would like to take some of the mystery out of our Federal budget, in the hope that you will agree with me that there are some things we, you and I, can do about budgets and taxes, if we try hard enough.

To begin with we need a definition, and that is easy. One definition is that a budget is a set of calculations that confirm your worst suspicions. A budget is a financial plan. That's true if we speak of our personal budgets, our family budgets, our business budgets, or our Federal budget. They all answer the question: How much do we expect

to take in and how much do we plan to spend?

For the Federal budget our money comes in mostly from taxes. It goes out for national security, for agriculture, for veterans, for natural resources, and for other programs that the people, through their representatives in the Congress, want the Government to carry out for them. The President, through the Bureau of the Budget, prepares and proposes a financial plan each year. The Congress has full power to change it in any way.

Through that process of representative government, our Federal budget—and the same is true of our State and local budgets—is a reflection of how we as a people are choosing to divide responsibilities between public agencies and private individuals. In these times the Federal budget has a particular significance as a mirror of our overall policies for national security and national welfare.

THE 1959 BUDGET

I'd like to turn now to the 1959 budget which was transmitted to the Congress in January. Some things have happened to that budget in recent weeks. But these events do not change the basic validity of our recommendations in the budget for meeting our national security needs or for providing adequate, but not excessive, domestic programs in the years ahead. Therefore, I'd like to go over these recommendations for you.

The 1959 budget calls for planned expenditures of about $74 billion next fiscal year. I can tell you what makes up this amount in a few rounded figures:

	Billions
Security and international, including the Department of Defense, atomic energy, and mutual security	$47
Interest	8
Domestic programs	19
Including:	
Veterans	5
Agriculture	5
Labor and welfare	4
Commerce and housing	2
Natural resources and general Government	3

From the standpoint of our citizens, there are two basic things this budget set out to do:

First, to meet adequately and completely the security needs of this country. This is certainly an objective no one disagrees with.

Second, to lay the groundwork for significant reductions in expenditures for domestic programs in future years. Here there is a lot of disagreement.

SECURITY PROGRAMS

Now, I'd like to give some particulars about the portion of the budget dealing with our security. The important point here is that the budget provides much more in the way of funds for missiles, nuclear weapons, and space-age development than is indicated by looking at the relatively small change from the previous budget total. To show that, I want to call your attention to significant changes in emphasis which have been taking place.

First. Expenditures in 1959 for missiles, for nuclear armed or powered ships, for atomic energy, for research and development, and for science and education will increase more than $3 billion over 1957, which ended a few months before the success of the first Russia sputnik.

Second. Over this same period, spending for other military equipment and aircraft of declining importance will decrease about $1.5 billion. We are directing resources to highest priority needs rather than adding new programs to old ones.

Third. More than three-quarters of the total procurement funds in 1959 will go for new types of equipment which hadn't been developed or weren't being bought in production quantities as recently as 1955, the first full fiscal year after the Korean conflict.

Fourth. Nearly half of the missile program for 1959 will be for the five longer range ballistic missiles—Atlas, Titan, Thor, Jupiter, and Polaris. Only one of these was past the technical study stage 2½ years ago. In 1953, only $1 million was spent on longer range missiles. By last year, $1 billion was spent on them—1,000 times as much. In 1959, we will expand this program still more.

As you can see from these comparisons, the shift to modern weapons is not a sudden thing. We have been reshaping our military strategy and forces over a period of years. Now we are in a position to take advantage of the successful developments and to add immeasurably to the power of our forces.

As a matter of fact, since the 1959 budget was prepared we have found that certain of these developments can effectively be speeded up even more. The President last week requested $1.5 billion in additional funds from the Congress to step up and expand further some high priority activities, and defense expenditures will now be higher than the budget figure.

We are determined to keep our defenses up to date in the space age. We are equally determined that defense spending be devoted to essential items and that pressures for pump priming do not lead to unnecessary military expenditures.

Now let me say a few words about our cooperation with other free nations. We are going to spend almost $4 billion for this purpose in 1959. Over three-quarters of this amount is for military hardware and support of armed forces other than our own. Countries we have helped in this way today maintain 200 army divisions, 23,000 aircraft, and 2,300 naval vessels. Without our help, such large forces could not be maintained and our own military outlays would have to be much larger. This help certainly increases our own security and the security of the free world immeasurably.

To promote peace and lay the groundwork for a long-time expansion of our foreign trade, we are also helping other free nations to develop their economies. Up until now, this help has been largely in the form of grants. From here on out, we expect to put a larger part into loans which will be repaid to us.

DOMESTIC PROGRAMS

Now, more than ever, with pressures on the budget increasing, we should be selective not only in our military programs but in our domestic programs. We must be sure that we spend where it will do the most good and not just for the sake of spending. We should continue to press for economy in all areas where expenditures fail to meet the test of need or the test of Federal responsibility. Furthermore, we must make every effort to insure that fully justified Federal programs are carried out in an efficient manner and on a sound financial basis. We need to do these things to preserve fiscal soundness in Government.

With these objectives in mind, a good part of our total effort is directed toward better management of Federal programs. At the present time we have underway, for example, a governmentwide program for improvement of financial management that is focused on the development of financial information that will better portray the actual costs of agency operations. In addition, there is currently before the Congress legislation that would strengthen controls in the appropriation and use of available funds. This would be accomplished by placing a limitation in each appropriation on the amount of goods and services that could be received under that fund during a given fiscal year. Legislation for this purpose has been strongly supported by the President. Through improved practices such as these, we shall be able to control Federal expenditures better.

In this connection, however, I'd like to dispel one illusion and that is that the Federal budget can be cut severely simply by squeezing employment costs a little more. That just isn't so. Four years of close attention to this matter have produced large provable savings, but that well has just about dried up. Government civilian employment is down almost a quarter of a million since January 1953. Future reductions will still be possible in what we call bureaucracy, but they will not save billions, I assure you. Our civil servants, by and large, are devoted and competent. The fact to be emphasized over and over is that if we are to reduce Federal spending substantially, we must do it by changing the basic programs of the Government.

With this in mind, we took a good look at all of our domestic programs when we prepared the 1959 budget and we proposed changes in a number of them which would lead to sizeable savings. I'd like to tell you about some of these changes—proposals that involve revising programs where needs are changing, transferring responsibilities to the States, reducing subsidies, and encouraging private rather than Federal lending. These proposals could lead to several billions of dollars of savings within a few years.

The proposed revisions are the kinds of actions that ought to be taken even at a time like the present when we are doing things to bolster economic activity. About this, I want to stress two points:

First, most of these proposals for savings would not begin to be effective until over a year from now. Their full effect would come even later, when I am confident our economy will again be expanding. Government programs and expenditures have a strong momentum and can't be turned off at will. It takes time to get changes and a start has to be made.

Second, we should never stop trying to assure that the Government's resources are used in the best possible way for the long run good of the country. That is the idea behind our economy proposals. They are sound and moderate. Many of them are long overdue.

Altogether, we offered 17 proposals to reduce expenditures or increase receipts. The budget message tells more about them, but I would like to list them here.

PROPOSALS TO REDUCE EXPENDITURES

Three of these proposals dealt with programs where shifting emphasis or changing needs are lessening future requirements for specific types of Federal assistance. These are agricultural conservation, grants for hospital construction, and veterans' pensions. These programs can be gradually reduced.

Then there are six grant programs for which the administration proposed an increase in State and local participation and a decrease in the Federal proportion, but with no reduction in the total combined outlay. In two cases, waste treatment facilities and vocational education, we proposed to eliminate completely the Federal payments beginning in the fiscal year 1960. We would at the same time give up some revenue to the States. In four other grant programs, we proposed reducing the Federal share of costs gradually. These are grants for public assistance, for urban renewal, for schools in federally affected areas, and for natural disaster relief.

Next, the administration made proposals designed to free the agricultural economy from excessive controls. The President recommended that the Secretary of Agriculture be given greater discretion in establishing price supports for basic crops, that the Soil Bank acreage reserve be ended after the 1958 crop year, and that the use of private capital in the rural-electrification program be encouraged.

PROPOSALS TO INCREASE RECEIPTS

Now, let me turn to some recommendations which would increase receipts. These are also designed to reduce the burden on the general taxpayer.

When the Government provides a service which gives identifiable individuals or groups as quasi-commercial benefit above and beyond the benefits to the public generally, it should charge those groups for that service, rather than place the full burden of the cost on the general taxpayer. Accordingly, the President made several proposals in the field of user charges.

1. Postal rates: In every year since the close of World War II there have been large postal deficits. These have placed heavy and unfair burdens on taxpayers to the advantage of large users of the mails. Actually, the Post Office is operating largely on 1932 selling prices and 1958 costs. The postal legislation now pending would raise rates on all classes of mail except fourth class. The recommended increases should result in an addition of $700 million to postal revenues in the fiscal year 1959, with $175 million of that going to an overdue post-office modernization program.

2. Aviation gasoline taxes. The Federal Government provides a wide range of special services benefiting private users of the airspace. It is increasingly appropriate that these users pay their fair share of the costs. The cost of new facilities alone will total $1 billion over the next few years to meet the needs of the jet age. It is proposed that taxes on aviation gasoline be increased and that the same tax be levied on jet fuels.

3. Other service charges. Beyond this, all agencies have been instructed to prepare legislative proposals generally designed to permit them (a) to recover full cost of services that provide special benefits, and (b) to obtain a fair market value for the use or sale of Federal resources or property.

4. Interest. Next are the interest rates in Federal credit programs. When the Government lends money, it should receive an interest rate that covers the interest it pays to borrow the same amount of money. For programs under which the Government guarantees loans made by private lenders for various purposes, interest rates should be permitted to be high enough to attract private lenders. The President suggested that authority be provided to vary the rates for guaranteed or insured loans in line with market conditions and under proper safeguards.

I wish I could go into these proposals more fully, but that would take far too much time. However, I sincerely believe that if you will look into them you will agree with me that they are worthy and that they deserve favorable action by the Congress.

THE BUDGET OUTLOOK

Well, what's happened to our 1959 budget and its proposals?

As I indicated earlier, defense needs will cost more than we estimated in the budget. Even more strikingly, the current economic setback has also changed the budget outlook. The early signs of an economic downturn were just appearing at the time we prepared the 1959 budget last fall, and we have since gotten a better measure of the recession we are in, although it is still too early to tell what its extent and duration will be.

The impact, in many ways, has been unfortunate. In the surge to find ways of relieving the current swing in the business cycle, Congress has turned down most of our proposals to reduce the cost of Government activities. It has given the impression that it is not interested, right now, in economy. By turning on vast new programs for spending, it has moved far away from any hope of balanced budgets for 1959 and possibly several more years. The loss of our economy proposals is disturbing, especially since, even in times of stress, it should be the aim of Government to be selective in its course of spending.

I don't mean to imply that the recession doesn't require action. In fact, to date, the administration has taken a number of actions to do its part in promoting economic recovery. At the same time, the Federal Reserve authorities have eased credit and increased the supply of money. Highway construction, urban renewal, and other activities are being increased. Many steps have been taken to stimulate home building. Work on construction of needed facilities already underway, such as water-resource and reclamation projects, is being speeded up in orderly fashion, and we have also increased our 1959 appropriation requests for these purposes. We are accelerating repair and modernization of Federal buildings and the purchase of equipment and needed supplies. Other proposals are now pending before the Congress, such as the extension of present periods of benefits for the unemployed.

These are just some of the things which have been done so far. I would like to point out that the programs and projects which are being speeded up are useful and needed. They are generally the kinds of things that can be started up quickly and provide employment quickly, and do not drag out over extended periods of time.

With the resulting increases in spending over what we had estimated in January, present indications are that the budget deficit in the current fiscal year could be at least a billion dollars higher than the $400 million we estimated at that time. And this deficit could be more if tax collections fall off. It now looks, too, as though we will have a rather large deficit in 1959, instead of the surplus we had planned. An important factor in this picture is the amount of revenues we will collect, but we don't have a sound basis for making new estimates of receipts as yet.

What happens now? You have all heard much talk recently about various kinds of large scale new public works programs. Such programs, apart from their merits or faults, are not the answer. I repeat—large public works programs are not the right answer for the country now. We must remember that it takes a lot of time from the initial stage of planning to the point where spending is actually taking place on a construction project. In fact, the normal pattern is for only 7 to 10 percent of the total cost to be spent the first year. So what we get from these slow-moving projects are bigger budgets later on when that may be the last thing we want.

We've got to guard against the tendency to think that the way to start the economy upward again is for the Government to go on a spending spree. The President has pointed out that the administration will do everything that it can constructively do to bring about a resurgence of employment and production. At the same time he stressed the fact that the course of our huge, complex economy depends on what individual citizens do, and the millions of economic decisions which they freely make every day. The proper relation of Government to the growth and vigor of such an economy must necessarily be to stimulate private production and employment, not to substitute public spending for private spending, nor to extend public domination over private activity.

So let's not overemphasize the role of the Government in bringing about economic recovery. And let's remember that if we overdo the expenditure of money by the Government we may find ourselves back fighting inflation again as we were a short time ago.

In my personal opinion, if, and I underline this word, conditions reach the point where a large scale shot in the arm seems needed, a selective tax cut ought to come first. It could give more spending power to individuals and businesses quickly. This spending power would lead to more employment than slow public works programs. But we should take a long, careful, calm, look at conditions and give the economy a chance to show its strength before we embark on tax cutting.

Just last year, we moved up into a $70 billion budget, and there was a great public outcry. Now with the programs Congress is considering, we are threatened with $80 billion budgets for the next few years, which could well mean extended deficit spending. And we can't ignore one simple fact about running deficits now or later. If we spend, we must pay. Eventually we reach the day of reckoning. It's been truthfully said that unbalanced national budgets are like pants without suspenders. You can't keep them up forever.

A new billion dollar program for some purpose may sound like a good thing. But we might choose differently if we remember that it isn't going to be paid for out of one more billion dollar check from General Motors. It's going to be paid through millions of payroll deductions, and taxes on cigarettes and automobiles and washing machines and railroad tickets, and lots of other nickels and dimes collected on billions of transactions. It is we, you and I, and 173 million other Americans, who pay for what Congress appropriates. Sometimes I think that this is a fact that is completely lost on our lobbyists and lawmakers.

CONCLUSION

So, in conclusion, I want to urge upon you that we must keep a sense of perspective about our national problems and the budget. The President tries to maintain a rational and calm approach. Neither the challenge posed by sputnik nor the current recession should be allowed to stampede us into hasty, ill-considered action which will add unnecessarily to our future burdens. The desirable objectives of the proposals in the 1959 budget should not be lost because of frantic preoccupation with temporary conditions. Our economy has taken breathers before and has snapped back and gone on to higher and higher levels of prosperity. It will now.

As professional and business men, you in this group have a particular interest in stable economic growth and in the preservation of the value of our money. So I earnestly hope that each of you will make your views known, as often as you can, in favor of sound, sane financial policies for the Federal Government—policies which limit the Government's activities to those things that it can do better than the people can do for themselves, policies which insure 100 cents of value for every necessary dollar collected in taxes. In this way we will preserve our free incentive system. In this way we will use our resources most sensibly for our collective protection and well-being. In this way we will build security for the future—a future with a legacy of national strength and personal security in a world at peace.

Russian Hydroelectric Development

EXTENSION OF REMARKS

OF

HON. JAMES E. MURRAY

OF MONTANA

IN THE SENATE OF THE UNITED STATES

Tuesday, April 22, 1958

Mr. MURRAY. Mr. President, we have all listened with interest and deep appreciation to the reports the distinguished senior Senator from Louisiana [Mr. ELLENDER] has given us about his

several trips to the Soviet Union. The Senate Committee on Interior and Insular Affairs and the Senate Committee on Public Works had the benefit of his first-hand observation in joint hearings conducted earlier this year by the disinguished junior Senator from Wyoming [Mr. O'MAHONEY] on comparative river development in the Soviet Union, China, and the United States.

I was greatly pleased when the National Rural Electric Cooperative Association and its general manager, the Honorable Clyde T. Ellis, invited the Senator from Louisiana to present his films and comments to an audience of some 85 persons from Capitol Hill, the press, and electric-consumers groups, last Thursday night. The Senator from Louisiana told the audience that Russian hydroelectric development is so huge it staggers the imagination. He showed and described electric turbines more than three times the size of the largest turned out in the United States, and hydroelectric dams tripling the output of Grand Coulee. The power being produced by this massive Soviet system is being tied together by a vast transmission grid system.

Mr. President, it is past time when the American public should wake up to the facts as to Soviet progress in hydroelectric power development. It is past time when the American public should compare that development in Russia with our Nation's paralysis in this field, thanks to the administration's fanatical opposition to desperately needed Federal multipurpose projects.

Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a press release dealing with Senator ELLENDER'S speech before the NRECA and the statement of Mr. Ellis in presenting Senator ELLENDER. I commend these statements particularly to the newspaper editors, the columnists, and the radio and TV commentators of the United States, who will, I trust, help report the facts as to Soviet progress and American decline, and arouse this Nation from the lethargy into which it has been lulled.

There being no objection, the press release and statement were ordered to be printed in the RECORD, as follows:

SOVIET PROGRESS CONTRASTED TO IKE'S SHORTSIGHTED VETO

Russian hydroelectric development "so huge it staggers the imagination" was contrasted to President Eisenhower's shortsighted veto of the omnibus rivers and harbors development by Senator ALLEN ELLENDER, of Louisiana, Wednesday night at the headquarters of the National Rural Electric Cooperative Association in Washington, D. C.

Speaking before an audience from Capitol Hill, the press and electric consumers group, Senator ELLENDER showed films he took during his trips to Russia each of the last 3 years. He showed and described electric turbines over three times the size of the largest turned out in the United States, and hydroelectric dams tripling the output of Grand Coulee.

Inventions to transmit electric power 1,000 miles without much loss were an eyeopener to Senator ELLENDER. Three hundred miles is considered the outside economic transmission distance for electric power in the United States.

Both industry modernization and increased agricultural output will result from Russia's big multipurpose river development, said Senator ELLENDER.

While acknowledging this progress, the Senator declared that the United States has an opportunity to make the people of Russia envious of us if the American economy is kept in a healthy condition. The Senator pointed to the educational system as a probable seat of the downfall of communism in Russia.

Meantime, however, the Senator observed that Soviet scientific education is being aimed at exploiting maximum water and mineral resources, and converting millions of acres of additional land to productive agricultural uses through irrigation.

While he termed agricultural processes antique compared to America, Senator ELLENDER said he observed a great deal of progress in the modernization of Russia's industries during his 3 annual trips to that country. The industries are being built as a consequence and at the dam sites where new hydroelectric plants are being installed.

The host, National Rural Electric Cooperative Association, presented an outline of Federal hydro projects already authorized which can be undertaken to offset Russian gains in the race to demonstrate our economic superiority, at the meeting. NRECA general manager Clyde T. Ellis described it as strictly a minimum program but a realistic appraisal of the very least we can and must do to keep from being completely overwhelmed by the Soviet.

The NRECA proposal includes starts on 7 new projects already authorized by Congress, accelerated planning for 5 additional projects, and a speedup in 20 projects already under construction.

RUSSIA'S HEARTLAND ADVANTAGE—AMERICA MUST MOVE OR LOSE

(Statement of Clyde T. Ellis in presenting Senator ALLEN ELLENDER at meeting sponsored by Electric Consumers Information Committee)

Geography, population, and resources are the principal factors which determine the strength—or weakness—of a nation. To keep America strong, we must use our natural advantages as wisely as possible, because in the economic cold war the advantages are not all on our side.

Soviet Russia possesses more of these natural advantages than does the United States. For that reason, if for no other, our national security demands that we make the fullest and most efficient use of our resources and cease squandering some of them as we have in the past.

Look at a map of the Soviet Union, and you start to see what I mean. It contains most of what the geographers call the world island's heartland. It was the original theory of Sir Halford Mackinder that, based upon location, population, and natural resources massed there, if a single nation could control eastern Europe and western Asia that nation would be in a position to control the world militarily. One of the foremost authorities, Mackinder revised his theory many years later, but still pictured the heartland dominantly occupied by Russia at one end of a world power lever and America on the other. Both have defensive depth, but Russia has far more.

Russia's 8½ million square miles spread nearly halfway around the globe. The U. S. S. R. contains one-sixth of the earth's total land area. It is almost three times the area of the United States. Together with her satellite countries, the Soviet already possesses most of the world's geographic heartland.

Soviet Russia's population is almost as great as the combined populations of the United States and the United Kingdom. It totals about 200 million people. In utilizing manpower, the training or education and the organization of the people of a nation are as important as the numbers. Again, by sputnik and in other ways the dictators of the Soviet Union are demonstrating that they intend to use all of their resources to the fullest advantage, and to direct those resources first to attain world power.

But it is in the field of natural resources that we are losing a most significant race. While the Communists are driving ahead aggressively, many fear we are recklessly neglecting our Nation's strength. At a recent farmer's union meeting in Denver, Alex Radin, of the American Public Power Association, said that only about 25 percent of America's hydro potential has been developed. Of all the factors of national security, natural resources is the one which we could exercise the most control over and the one which we should be conserving and using most carefully.

An official United States military publication of a few years ago had this to say, (Armed Forces Talk, 359, Office of Secretary of Defense):

"The extent to which an area takes advantage of the natural resources available is always important. From the earliest days of recorded history, nations have developed into world powers as their skill improved at turning out their natural resources in such surplus quantities that they could use them for trading with other countries or could produce more and better weapons than other countries. Historians like to call this kind of progress technological advancement."

ELLENDER REVEALS RUSSIA'S POWER RIVALRY

I have seen nothing that demonstrates the peril of our neglect of our resources as well as the observations Senator ALLEN ELLENDER, of Louisiana, has made, and the Army's Corps of Engineers has confirmed, since the Senator's return from his third tour of the Soviet Union. From what I see, there is now ample proof that the United States past and present efforts to effectively develop its river resources will soon be dwarfed by the Soviet Union, both in individual projects and in the broad scope of the recurring 5-year plans.

From another source let me quote the December issue of News Front, an authoritative magazine published for management executives in American business, industry, finance, government, and the military:

"Most immediately important to the U. S. S. R.'s mushrooming—and menacing industrial growth is the vast increase in river-derived power. Output, 800 million kilowatt-hours in 1932, multiplies 29 times to 23.1 billion in 1955.

"The 1960 target is 59 billion, but this is only a fraction of future goals.

"Soviet plans can be expressed as a series of mammoth TVA's, moving ever eastward from European Russia into the heart of Siberia."

Other figures show that we are fast losing our advantage in producing electricity, the prime power of modern civilization and this is true despite the fact electric power is America's fastest growing major industry, doubling its output every 7½ to 10 years, come peace or war. In total electric power production—half of it hydro—the U. S. S. R. increased its output 13 percent in the 1 year of 1955, from 170.1 billion to 192 billion kilowatt-hours. This is much faster than the United States rate. The increase in total installed electric generating capacity in the United States between 1940 and 1956 was 268.8 percent, while in the Soviet Union it was 389.1 percent.

Ten years ago the United States had a 4 to 1 advantage in generating capacity. That margin has already been cut to a 3 to 1 advantage, and from everything we can learn the Soviets are determined to catch

up with us as fast as possible.[1] Our country's no new starts policy on multipurpose projects in fiscal 1959 will certainly help them.

AGRICULTURE ADVANCES, TOO

But the development of river resources going on in Russia should also be of concern to us from the agricultural standpoint. To quote the opinion of the editors of News Front again:

"Feeding and supplying the world's soaring population, which is increasing 43 million a year, is the challenge of our time: 70 percent of the world's people are still poverty-stricken and underfed."

"The imaginative exploitation of the world's rivers for irrigation and production of hydroelectric power is a key part of man's worldwide struggle to better himself."

More than half of the people there are engaged in farm work compared with one-fourth in the United States. With a third more people, Russia has been able to put less land under cultivation to produce food and fiber because too much of the land has been too dry or too cold. Good farming land covers only about 9 percent of Russia.

The new river development projects now undertaken by the Soviets are designed to help overcome these disadvantages. Not only do they intend to irrigate large areas, but, by the diversion of rivers, their scientists are convinced they can change the climate of some Siberian areas to make them agriculturally productive.

CAN WE AFFORD TO FIDDLE?

In the fact of these facts, I ask you one question: "How many more Hells Canyons can we afford?" We are still committed to squander 75 percent of its water storage, half of the power potential, and more irrigation benefits. Elsewhere similar situations exist. Look at the atomic power issue, where we seem content to sit back and use up other nonrenewable raw material resources at a geometrically accelerating rate, indefinitely, if necessary, rather than make use of the many times more abundant atomic energy to generate power as soon as we really can.

While we are intensely interested in obtaining more plentiful sources of hydroelectric power at lower costs for rural electrification and other uses, we are also interested in our Nation's security and world leadership. We think it is time that all Americans begin thinking about keeping our Nation strong, and ahead. It may be later than we think.

Right now the two national consumer-owned power groups of the United States—the American Public Power Association and the National Rural Electric Cooperative Association—are working together to develop a list of river development projects which we think should be undertaken immediately. (A list of mutlipurpose river projects authorized by Congress but not begun, is attached.) We are doing it at this time because we believe the stepped up activity is urgent to prevent our present recession from developing into a full-fledged depression. But with broader perspective, I believe it is equally urgent that the United States Government immediately review its river development programs, both those underway and planned for the future, from the standpoint of our national security needs.

Senator ELLENDER, at least some of us who heard you before the Senate joint committee felt that we were sitting in on the most startling story since sputnik. In my opinion the free world is indebted to you for shocking us out of our Rip Van Winkle resources slumber. The floor and screen are yours.

[1] See fact shee attached showing United States of America-U. S. S. R. comparisons.

The Recession—The Time To Get Ready Is Before It Happens

EXTENSION OF REMARKS
OF
HON. WILLIAM E. PROXMIRE
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES

Tuesday, April 22, 1958

Mr. PROXMIRE. Mr. President, whenever anyone suggests that the recession is serious, and can get worse, and that some really vigorous efforts ought to be made to end it, the cry is raised that he is a "prophet of gloom and doom." He is charged with undermining public confidence, and with setting up the kind of psychological mood that makes a depression more likely.

Mr. President, I do not believe that one who wants to meet a present danger is an alarmist. I do not believe that one who wants to prepare for a prospective danger that is even worse is a prophet of gloom and doom.

The last time I slept in a hotel, the fire escape was right outside my door. It did not destroy my confidence to know that the hotel had taken reasonable precautions. It made me sleep better. When I go back to that city, I am going to stay at that hotel again. And if I can get that room next to that fire escape, I am going to do that, too.

In his syndicated column published today, the distinguished columnist, Walter Lippman, sounds the warning that the time to prepare for disasters that can occur is before they happen. That is the way to keep them from happening, or to lessen the severity of what does happen. Now is the time, says Mr. Lippmann, to take massive action to stop the recession in its tracks, and to be prepared to prevent a slide into a situation even worse than the one that now confronts us. If these preparations prove not to be needed, that is fine; everyone will rejoice. But there is no reason to think that prudent precautions are wrong because they are not used. The lodger does not complain because he has not had to use the fire escape. The voyager does not grieve because he has not had use for the lifeboats.

The most important point in Mr. Lippmann's article, I believe, is this: If we do take measures to combat real depression, we shall almost surely not have to rely on them. The reason is that the assurance that the Government of the United States will not permit a real depression to happen, will not tolerate large-scale unemployment and bankruptcy, will have a salutary effect in restoring confidence. The postponed purchases, the delayed plans to build, will be carried out when people believe that the Government is ready for any economic eventuality and is determined to meet it resolutely and successfully.

Mr. President, I ask unanimous consent to have printed in the Appendix to the RECORD the article entitled "On the Recession."

There being no objection, the article was ordered to be printed in the RECORD, as follows:

ON THE RECESSION

(By Walter Lippmann)

There is as yet no very general popular pressure for stronger measures to reflate the economy than the measures which the administration is taking. It does not follow, however, that stronger measures, such as a tax cut and larger public works, should not be prepared and made ready for early adoption. For the critical fact is that in the business cycle remedies do not work quickly. The sooner they are adopted—whether on the upswing or on the downswing—the less strong do they need to be.

It is evident enough today, for example, that in the upswing between 1955 and 1957, the authorities waited too long to check the inflationary rise of consumer credit and capital expenditure and wage and price increases. In reverse, it is probable that we have already waited too long before acting against the recession which began last summer. In fact, during autumn when the slump was already evident, the administration was actually cutting down expenditures in the Defense Department.

The moral of it is that public opinion is not a sound guide in the management of the business cycle. When the inflation of 1955–57 was under way, the politicians and the public resisted measures to restrain credit and the rise of the wage-price structure. When the cycle turned after the middle of 1957, the politicians and the public were demanding retrenchment which would have been very suitable 18 months earlier. Indeed it may be regarded as a working rule that for the successful management of the business cycle, the responsible authorities must be ahead of public opinion and prepared to take measures which cannot be popular until their delayed results are experienced. The authorities must not wait to be pushed but they must lead the way, be it to deflate a boom or to reflate a slump.

There are reasons for thinking, so it seems to me, that we are at a point where a turn for the worse is so distinct a possibility that it is the part of wisdom and prudence to anticipate it. It may, of course, be true, as Secretary Weeks and the President hope and believe, that we have reached the bottom and that in a few months the recovery will be underway. But it could be true that we have not reached the bottom of the recession and that if our policy is to wait and see, we may be depressed to a deeper bottom from which it will be still harder to rise.

Is this alarmist talk which undermines confidence? In the old days when banks were often in trouble and faced with a run by their depositors, the best way to stop the run was by such a powerful guarantee of the bank's solvency that nobody wanted to draw out his money. The same principle is applicable, it seems to me, to the current phase of the recession. To say that prosperity is just around the corner is less likely to restore confidence than it would be if the administration and the Congress set in motion such strong measures that confidence in the maintenance of employment and of profits is restored.

There are at least two reasons for thinking that we may not be at the bottom of the recession. For one, there is no good reason to suppose that there will soon be a rise, instead of the present decline, of what businessmen invest in plant and equipment. Unless, however, there is a reasonably prompt and substantial rise in private capital expenditure, there is no good prospect of a recovery without compensating outlays of public capital in defense and public works and subsidized housing and other facilities.

The second reason for being vigilant and alert is that there are many signs that, as regards the depressed durable goods, the consuming public are in a mood to save their money, to make do with what they have, to scale down their debts, to buy at secondhand, and to keep their affairs as liquid as possible. Why? Because they are afraid of unemployment, of part-time unemployment, of declines in retail purchases and profits. There is a danger here, psychologically not unlike the state of mind which used to lead to runs on a bank. "A decision," said Professor Schlichter recently, "of consumers to cut their debts rapidly could be dangerously deflationary."

This is a very vulnerable point, and a policy of wait and see is dangerous. There is no use preaching confidence, there is no use expecting a man to buy an automobile he does not have to have, if he is worrying about whether he may lose his job. What he needs to restore his confidence is the sight of the Government preparing to do as much as is needed, perhaps more than is needed, to reflate the economy.

In the debate about these matters there is an underlying issue of economic philosophy. There are those who believe with the classical economists that a recession is a necessary readjustment after an inflation of prices, wages, and debts. It is a painful readjustment. But it is necessary to the ultimate health of the economy.

On the other side, there are those who believe, as does for example Mr. Marriner Eccles, that humanly and politically it is impossible for a modern democratic society to endure and to tolerate the severe depression which would really readjust wages, prices, and debts.

They are, I believe, right, and that it is better, as Mr. Eccles said, "to accept the present price, wage, and debt structure," to support it by a reflation, than to take the enormous risks of a readjustment by a big depression.

Congressional Privileges

EXTENSION OF REMARKS
OF
HON. PRESCOTT BUSH
OF CONNECTICUT
IN THE SENATE OF THE UNITED STATES
Tuesday, April 22, 1958

Mr. BUSH. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial from the Hartford Courant of March 23, 1958, entitled "The King Can Do No Wrong." The editorial has to do with the customs of the Congress, and I think will be very interesting to Members of both Houses.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE KING CAN DO NO WRONG

There used to be an accepted belief among the people that there was a divine right of kings. A corollary was the theory that the king could do no wrong. In the new Republic of the West, those ideas were abandoned. Instead, we adopted in a general way the principle of Thomas Hooker that all power flows from the people. It's getting pretty obvious though that a new privileged class is being set up in this country. That privileged group is Congress, and its principal spokesman is SAM RAYBURN, Speaker of the House.

It was Mr. RAYBURN who announced pontifically that no Senator need respond to the call of the House investigating committee, to testify as to undue pressures on Government regulatory commissions. This was done on a quid pro quo basis, so that no Member of the lower House of Congress need ever fear that he will be subjected to inquiry by any Senate investigating body. The skeletons will lie buried.

All this legislative backscratching comes on top of Congress' miserable persistence in concealing its traveling expenses from the taxpayers. One must consider Hooker's famous dictum about the seat of all political power with cynicism, in view of the reluctance of Congress to tell the people what it spends on junketing, and how it spends the money.

There are perfectly good reasons for protecting Members of Congress against pressures, particularly in the expression of views. For that reason a Member's speeches are privileged on the floor of Congress. The people of a State have the right to pass that judgment. But in the present Congress, we have a refusal of Members of Congress to testify as to their activities in using pressure on regulatory bodies. It is a Congress that gave itself a raise in pay, contrary to all precedents. It is a Congress that hides its expense accounts, and says the people have no right to know where this part of their money goes. It is a Congress that set out once to investigate elections and auxiliary income of its Members, but stopped short. Indeed it is a Congress that has become more than an exclusive club. It sounds very much like a bunch of men who have forgotten where the seat of all power lies.

Social Security Benefits

EXTENSION OF REMARKS
OF
HON. JACOB K. JAVITS
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Tuesday, April 22, 1958

Mr. JAVITS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a resolution adopted by the Sirovich Day Center as to the expansion of social-security benefits.

There being no objection, the resolution was ordered to be printed in the RECORD, as follows:

We, the members of the Sirovich Day Center, 203 Second Avenue, New York, N. Y., a cultural club of over 800 retired persons, in regular meeting assembled passed the following resolution:

"Whereas most of our members depend for their living on social-security benefits and whereas many of them receive small checks so that they have to live in substandard houses and to subsist on meager diets that create a health hazard; and

"Whereas many of them when sick cannot afford proper medical care, their sickness becomes aggravated as a result of such neglect; and

"Whereas these persons contributed so much to the building up of this country and have therefore a valid moral claim on the Nation to take care of them properly in their declining years: Now, therefore, be it

"*Resolved*, That we ask the Congress of the United States to amend the social-security law. So as to improve our economic condition. We support the Forand bill wholeheartedly. It is a step in the right direction. We feel, however, that its provision for a minimum of $50 a month is far from sufficient in view of the prevailing high prices. We, therefore, beg of you to set the minimum at $75 per month; and be it further

"*Resolved*, That copies of the resolution be sent to President Dwight David Eisenhower, Congressman Wilbur D. Mills, chairman of the Ways and Means Committee; Senators Jacob K. Javits and Irving M. Ives, and Congressman Leonard Farbstein."

PETER J. GALLEGOS, *President*.

Construction Jobs on Lloyd Center in Portland, Oreg.

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Tuesday, April 22, 1958

Mr. NEUBERGER. Mr. President, ground was broken on April 11 on the $21.4 million Lloyd Center development on Portland's east side. The Lloyd Center represents the plans made many years ago by the late Ralph B. Lloyd, who died in 1953, and this development will be a living memorial to him. The foresight by Mr. Lloyd, his four daughters and their associates who have carried forth this project will mean a great deal to my city, and it represents a firm belief in the future of Portland and of Oregon. In this time of severe unemployment, hundreds of workmen will find jobs in building Portland's future, as as result.

Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an excellent article by Paul Hauser, staff writer for the Oregonian, which appeared in that newspaper on April 14, 1958. The article is entitled "Planner's Vision Nears Fruition With Start on Lloyd Center."

There being no objection, the article was ordered to be printed in the RECORD, as follows:

PLANNER'S VISION NEARS FRUITION WITH START ON LLOYD CENTER

(By Paul Hauser)

The cab driver was sad. As he wheeled his cab along Lloyd Boulevard he told this woman fare the reason for his sadness.

"I and my friends are very sorrowful," he said. "A great man has died, a man who had great plans to build a fine thing on all this property. It would have put many, many people to work and have been a wonderful thing for Portland."

He said more things about this Mr. Lloyd who had died a week or so before at his home in Beverly Hills, Calif. Then he had arrived at his fare's destination, Ireland's at Lloyd's, and stepped out to open the door for the lady.

The lady recalled that ride in 1953 last Friday after the ground-breaking ceremonies for the multi-million-dollar Lloyd Center development, which will be an active, working memorial to Ralph B. Lloyd and his patient faith in Portland.

ASSURANCE GIVEN DRIVER

"I thanked that cab driver for the fine things he said about Mr. Lloyd," said Mrs. Richard Von Hagen. "He was my father, I told him. I tried to assure him that the rest of us would do all we could to fulfill the plans of our father. I hope he knows today that we are doing it."

"I think father always had confidence the rest of us would finish what he had planned," said Mrs. Mark Dees, the eldest of the four daughters of Ralph Lloyd and now chairman of the board of the Lloyd Corp.

"Of course, this will be a memorial to him," said Mrs. Dees, "but it's the only kind he would have had. He would never have been interested in a memorial building as such, a static thing."

Behind the groundbreaking and the award of $21,400,000 in construction contracts Friday were nearly 40 years of patient gathering of land and patient waiting for the time.

PORTLAND LAND BOUGHT

Ralph Lloyd's big fortune came first from oil, but he was in Portland, a Portland resident at a house at 375 NE. Multnomah Street, long before he struck oil. He bought his first Portland property then, in 1907, and kept on adding to it through the years. His first big acquisitions here came in 1926.

Where the ground was broken Friday across Multnomah Street from Holladay Park is just nine blocks east of where Lloyd lived when he was in Portland from 1905 to 1911 as vice president and general manager of the National Wooden Pipe Co.

Looking off past the Interior Building, built by the Lloyd Corp. for the Government, to the slope down to Union Avenue, one of the Lloyd daughters recalled that her father came back to Portland to buy the property around Holladay Park as soon as he made his first big strike.

CROWN PIECE ACQUIRED

"He always called it the crown piece," she said. "The top of this knoll he saw as a central place between the hills. He talked often of its marvelous location and especially of its fine drainage. He looked at things like that."

Lloyd was in his early thirties when he first came to Portland, but he was already experienced in large operations. He had been superintendent, following his graduation in 1898 from the University of California, of the Ventura Land & Water Co., his father's 12,000-acre cattle ranch.

Ralph Lloyd's father had been an officer in the Confederate Army. After the war ended he moved westward. Ralph Lloyd was born in Neosho, Mo., on February 28, 1875. A few years later the family moved westward again, this time to Ventura County, Calif. There Ralph Lloyd grew up, riding the hills after stray cattle and becoming one of the best horsemen in the valley. Until age and illness made it impossible he continued to find horseback riding one of his greatest relaxations.

MRS. CROTTY BORN HERE

When Lloyd came to Portland in 1907 to look after the family interest in the pipe company he was not long married. He married Miss Lulu Hull, of Los Angeles, in 1904. One of the daughters, Mrs. Homer Crotty, was born in Portland.

"Our mother was always a loyal rooter for Portland," said one of the daughters. "She loved it here and she hated the desert country. She liked it for the homes. She thought of it as a home city."

Lloyd obviously liked Portland, too, for through the past 30 years no one figure has more frequently expressed faith in the future of Portland than Lloyd and the corporation he left behind him.

The faith continued despite disappointments and blocks.

The greatest disappointment was inability to go ahead with the plan revealed in 1930 for a 24-story hotel because of the deepening of depression. The excavation for the hotel was dug. It was used in recent years as Holladay Bowl for the musical comedy productions of the Portland Symphonic Choir but the hotel never developed. When plans were almost set for another start, World War II stopped them again.

ORGAN GIVEN CHURCH

Lloyd began buying a little Portland property up and down Union Avenue while he was living here. He was a good neighbor, took an interest in the community, attended the Methodist Church that stood then at the corner of Northeast Union Avenue and Multnomah Street (where he donated an organ) and was always studying.

"He was an engineer type of fellow," an old neighbor recalls. "Very quiet and reserved, careful and competent."

Lloyd studied about oil.

He had an idea there was oil under the ground in Ventura County where as a boy and a young man he had ridden rounding up cattle. No one else thought there was oil there, but according to his daughters, Lloyd had been convinced it was there somewhere from the time he was 15 years old. There were peculiar outcroppings on the land that to him indicated oil-bearing strata. So he studied oil geology.

OIL STUDY CONTINUES

In 1911 the Lloyds sold out their interest in the pipe and tank company. Lloyd's father was getting too old to run the ranch. Lloyd went back to Ventura County and took over the management of the ranch. He became a farmer, for the ranch was becoming less and less a cattle ranch as acres of range were plowed into lemon groves. Ventura County was becoming the greatest lemon-producing county in the United States, as it now claims to be.

The ranch was a moneymaker. It also took lots of work. But whenever he had time to spare, Lloyd continued his oil studies.

"Instead of taking vacations when the time came for them, I rested awhile from the ranch work, and spent my entire time on oil matters," Lloyd told a reporter in 1929. "I studied the district from every angle. I was sure there was oil there. I submitted my proofs to men considered wise. Some of them were polite enough not to laugh."

GUSHER BLOWS IN

With a partner, also the son of a southerner, Lloyd kept at his theory. He saved as much as he could and put it into oil exploration. Then in 1920 his first gusher came in. More and more oil wells followed. Soon Lloyd was a millionaire, a figure in the oil industry and known as the father of the Ventura Avenue oilfield.

So Ralph Lloyd was transformed from a lemon grower with crazy ideas about oil to a capitalist. Before long he was back in Portland buying property again. One of the first pieces he bought was the property on Union Avenue alongside Sullivan's Gulch. After Lloyd built a boulevard up one side of it, it became the site of the Sears retail store, the first large building Lloyd built in Portland. It was completed in 1929.

Early the next year Lloyd announced he planned to build a big hotel as the first part of a development on the property he had been acquiring near Holladay Park. In September 1930, a model of the proposed hotel was unveiled before a committee of the National Association of Building Owners and Managers brought to Portland to go over the plans and assess their practicality.

DEPRESSION LEAVES HOLE

But the depression that had started with the stock market crash a year before grew worse. The model, the hole dug for the basement and the nine-hole golf course that was to have been the back yard of the hotel was as far as it came to realization then.

Now part of the Lloyd Center will be a 300-room hotel to be built by the Sheraton Corp.

When Lloyd made his hotel announcement in 1930, he was 55 years old. Men who knew him then recall him as a soft-spoken man whose words carried the ring of firm conviction.

Lloyd wasn't the man to sit back and relax just because he had some producing oil wells. Work was his rule of life. He kept expanding his oil interests and went into oil exploration. (With others, the Lloyd Corp. will soon be making a deep test near Prineville.) He bought city property, but particularly in Portland, and bought into banks.

WORK LLOYD'S HOBBY

At his death in 1953 the Lloyd Corp. properties included more than 50 oil wells in Ventura County, producing more than 5,000 barrels daily, lemon groves, walnut groves, cattle ranches, timberland, and business property.

Richard Von Hagen, now president of the Lloyd Corp. and a business associate of Lloyd beginning in 1938, said the other day that Lloyd's work was his hobby.

"He always took a brief case home and continued on after dinner. His work was always the most interesting thing to him."

Forthrightness and foresight were Lloyd's outstanding qualities as a businessman, Von Hagen believes.

"He was just a smart man. He had a lot of knowledge of a lot of things. He was not a lawyer, but he sure could have been a good one. He was very astute."

Through all his studies Lloyd maintained his belief that Portland, blessed with water resources and a great hinterland, will be one of the leading metropolitan centers of the West.

WATER DEEMED VITAL

"Water. That was one of the great things here to father. He was always discouraged with southern California because water was so hard to find," one of his daughters said the other day. "He always thought of the promise of Portland, because it has a great hinterland and, above all, water. He believed in its natural resources."

While he put no hourly limits on his business studies, Lloyd was not a business machine who never turned from his desk or his briefcase.

He maintained a small portion of the original ranch holdings as a cattle ranch and there he loved to go and invite his daughters, their husbands and his 10 grandchildren to come for an outing.

He loved to get us all together on the ranch. He enjoyed his grandchildren. He liked to take them riding into the hills. I think he enjoyed nothing more than to go out to see a heifer with a calf. He was a fine rider.

SOUTHERN SONGS FAVORITES

At night there would be songfests, for Lloyd loved music and liked to sing.

"He had a beautiful voice," Mrs. Von Hagen said.

The favorites were southern songs. He particularly liked the Stephen Foster ballads and of those Beautiful Dreamer was his most frequent choice. Sometimes he would sing and Lulu (Mrs. Von Hagen) would accompany him on the flute. Other times he accompanied himself on the player piano, which he dearly loved and for which he had a great collection of rolls.

After Lloyd died in 1953, it was revealed that about a third of his fortune was left to the Lloyd Foundation. It has carried on charitable and philanthropic donations of various kinds under the trusteeship of the four Lloyd daughters. Among its largest contributions have been gifts to the California Institute of Technology, in which Lloyd was long interested, and to various civic projects in Ventura County.

Fiftieth Anniversary of Discovery of the North Pole, April 21, 1958

EXTENSION OF REMARKS
OF
HON. JOHN R. PILLION
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 22, 1958

Mr. PILLION. Mr. Speaker, under leave to extend my remarks in the RECORD, I would like to call attention to the following statement prepared by Mr. Robert Holder, of Snyder, N. Y. April 21, 1958, is the 50th anniversary of that date when Dr. Frederick A. Cook, a resident of New York State, discovered the North Pole and claimed it for the United States.

Dr. Frederick Albert Cook gave out the first descriptions of the North Pole which were published in the New York Herald of September 2, 1909.

Five days later, on September 6, 1909, Robert Peary announced that he had reached the North Pole on April 6, 1909. It is important to note this second conquest of the pole a year later.

If there is ever any dispute concerning the ownership of the North Pole, we can claim the top of the Arctic by the right of discovery by two brave Americans. The strategic importance of the Arctic is known to every schoolboy today; 50 years ago it was an almost useless mystery.

Arctic interest has been stimulated by the scientists during this International Geophysical Year when many nations are seeking the answer to the many Arctic mysteries. The work of the pioneer explorers serves as a springboard for present-day research. I would like to mention some highlights of Dr. Cook's epic journey across the unknown Arctic wastes.

In an airline measurement the distance from his Greenland camp is about 700 miles. This distance was for him to be extended to a walk of 4,000 miles over land and sea with the shadow of death daily on the horizon. It was the longest sledging record in history.

Dr. Cook's reaching the North Pole was the result of precision planning. Profiting from his studies of the work of other explorers he concluded that previous failures had been due to too heavy equipment and the attempt to maintain large parties. His equipment was specially designed. Hickory was taken to Greenland where the sledges were constructed. His special sled was the result of over 10 years experimentation which started when Amundsen and Cook served their apprenticeship together on the Belgian Antarctic Expedition, 1897–99. It is significant that both these men, who apparently were made of the same stuff reached the extremities of the earth because of streamlining their equipment—Amundsen, South Pole, 1911; Cook, North Pole, 1908.

Dr. Cook knew that, because of ice conditions, April was the best month and that a dash was important. He was certain that a small party could travel faster.

The expedition consisted of 2 Eskimos, young and in their prime; 26 dogs; 2 sleds loaded with 800 pounds apiece; and the leader, Dr. Cook, who was 43 and in perfect condition. They reached their goal in 34 days, sledging an average of 15 miles a day. These 520 miles were endless days of torture, of extreme thirst and slow starvation. Their ration of a pound of pemmican daily was not enough and their bodies slowly wasted away. They did not mind the cold which ranged as low as −50° but suffered from the bitter gale winds which peeled their skin from their cheeks and noses. It was a lifeless world, with no radios, no airplanes, no means of communicating with the world, and no hope of rescue. It is a story of forced marches beyond human endurance, yet the will and the mind somehow gave them the courage and strength for an almost impossible task.

Cook's route was over game lands discovered by Sverdrup, which gave the North Pole seekers another advantage. The liberal diet of raw meat kept the three men in top trim.

After the pole was reached there was the trip back. Instead of the return being easy, as it was expected it turned out to be the most heart-rending part of the entire trek. The story of the return is perhaps more exciting and pathetic than the dash for the pole.

Dr. Frederick A. Cook wrote two books about his North Pole experiences: My Attainment of the Pole, and Return from the Pole, and every American would do well to read these inspiring tales of what was perhaps one of the most heroic exploits in Arctic exploration, if not in the history of all exploration.

The Parade of Progress Sponsored by the Greater Wilkes-Barre Junior Chamber of Commerce

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 22, 1958

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following two editorials—one from the Wilkes-Barre Times Leader of April 14, 1958, and the other from the Wilkes-Barre Record of April 15, 1958—on the Wyoming Valley Parade of Progress sponsored this year by the Greater Wilkes-Barre Junior Chamber of Commerce:

[From the Wilkes-Barre Times Leader of April 14, 1958]

PARADE OF PROGRESS

If the public will match the enterprise of the Greater Wilkes-Barre Junior Chamber of Commerce and the enthusiasm of local business, the success of the Wyoming Valley Parade of Progress, opening in the West Side Armory on Tuesday evening, is a foregone conclusion. There is every reason to believe the community will cooperate. In fact, with so many attractions—displays, entertainment and prizes—it is difficult to see how local residents can stay away, no matter what their other engagements for the week.

The theme this year is Casual Living for Tomorrow. This provides tremendous possibilities for the participants and it has a general appeal, for it affects every household and, for that matter, every individual.

The parade of progress has made tremendous strides and the current recession, instead of having an adverse effect, actually has stimulated the sponsors and exhibitors, for it affords the community an opportunity to make a contribution to recovery. The timing is perfect.

For this initiative, the Jaycees and cooperating firms rate a salute.

[From the Wilkes-Barre Record, April 15, 1958]

PARADE OF PROGRESS

Every 2 years, members of the Greater Wilkes-Barre junior chamber of commerce sponsor Wyoming Valley parade of progress. Today marks the opening of this popular spectacle in the west side armory.

The show will be complete with all the trimmings. A street parade will be held this afternoon through central city, with fireworks at the conclusion to help focus interest on this evening's opening.

An Army floodlight will illuminate the night sky from in front of the armory to let the people of Wyoming Valley know something is going on all week in this community.

This year's show has large promise of being one of the best ever. There will be gifts for the children and grownups, and interesting showings for all the family to see.

Harry Powell and Carl Schmitt, Jr., directors, typify community leaders of the present and future who are giving freely of their time and efforts in this major Jaycee project.

Directors and members of their hard-working committee have been heartened by the response of Wyoming Valley merchants and business people in renting booths and floor space at the west side armory. It's a healthy sign for our region with its close to 350,000 people. It's an encouraging sign of the times, an indication that with progressive-minded young men like the Jaycees out doing things, our Wyoming Valley can well be on its way to an era filled with new promise.

Whether you have attended the parade of progress in other years, the 1958 show with its new features promises to be worth seeing. With 5 evening shows and 1 matinee listed, Wyoming Valley will have ample opportunity to stop in at the armory this week.

Results of a Poll

EXTENSION OF REMARKS
OF
HON. HAROLD C. OSTERTAG
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 22, 1958

Mr. OSTERTAG. Mr. Speaker, I have recently concluded a poll among residents of the 39th Congressional District of New York, asking their opinions on 20 of the most important issues before the Nation. More than 7,000 persons replied to the questionnaire.

There has been great interest in the poll, among both the people whom I am privileged to represent and among many persons and groups outside my district. So that my colleagues and all these other interested persons and groups may have the benefit of the results of the poll, I include in the RECORD the results of the poll:

	Percentages		
	Yes	No	Undecided
1. Do you favor a greater Federal responsibility to increase science education?	67.6	28.5	3.9
2. Should Congress enact a Presidential disability law?	76.0	17.4	6.6
If such a law were passed, whom do you think should decide whether a President is disabled: (a) the Vice President (3.9); (b) the President's Cabinet (29.6); (c) a commission of executive and legislative officials (49.9); Undecided (16.6).			
3. Would you favor a system of pay television?	8.3	87.7	4.0
4. Do you favor extending statehood to—			
(a) Hawaii?	81.7	12.5	5.8
(b) Alaska?	85.3	9.0	5.7
5. Do you favor an increase in postal rates to reduce the annual postal service deficit?	70.1	26.3	3.6
6. Do you favor a pay increase for—			
(a) Postal workers?	58.7	32.1	9.2
(b) Other Federal Government employees?	34.4	49.6	16.0
7. Should Congress enact legislation to provide Federal regulation of welfare and pension funds now under—			
(a) Union control?	66.2	24.1	9.7
(b) Employer control?	50.5	36.4	13.1
8. Should the Federal minimum-wage law be amended to—			
(a) Raise the present $1 hourly rate?	46.8	46.8	6.4
(b) Extend coverage to more workers?	72.1	17.7	10.2
9. Should the social-security law be amended to—			
(a) Abolish the present annual $1,200 ceiling on earnings?	47.8	35.5	16.7
(b) Raise the $1,200 ceiling?	60.1	22.5	17.4
10. Do you favor increasing the present $4,200 social-security tax base, and the tax contributions, if benefits also are raised?	53.1	38.4	8.5
11. Do you favor reducing nonmilitary Federal spending to permit a tax cut?	62.1	30.8	7.1
12. Do you favor a wider farm price support formula of 60 to 90 percent of parity and an increase in acreage allotments, instead of the present 75 to 90 percent of parity?	27.6	52.1	20.3
13. Should these provisions of the agricultural Soil Bank program be continued:			
(a) The conservation reserve?	41.6	34.1	24.3
(b) The acreage reserve?	25.2	48.1	26.7
14. Should atomic energy for peaceful purposes be developed by (a) the Federal Government (11.1); (b) private enterprise (27.3); (c) a partnership of both (57.3); Undecided (4.3).			
15. Do you favor the proposed multibillion dollar program for construction of civil defense shelters?	26.3	64.9	8.8
16. Should we continue our foreign aid programs of—			
(a) Military assistance?	56.3	33.1	10.6
(b) Economic assistance?	60.6	30.3	9.1
17. Should the United States exchange atomic-weapons information with our allies?	58.2	32.1	9.7
18. Do you favor closer cooperation with NATO countries in political, economic, and cultural fields, in addition to our military alliance?	80.1	13.8	6.1
19. Do you favor increased cultural and commercial relations with Russia?	52.6	39.1	8.3
20. Do you believe the United States should seek new negotiations now with Russia on disarmament and world political problems?	57.9	34.2	7.9

Federal Aid for Hospital Construction

EXTENSION OF REMARKS

OF

HON. JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 22, 1958

Mr. McCORMACK. Mr. Speaker, under permission to extend my remarks, I include resolutions recently adopted by the General Court of Massachusetts memorializing the Congress of the United States to extend and amend the Hill-Burton Act providing Federal aid for hospital construction.

THE COMMONWEALTH OF
MASSACHUSETTS,
OFFICE OF THE SECRETARY,
Boston, Mass.

RESOLUTION MEMORALIZING THE CONGRESS OF THE UNITED STATES TO EXTEND AND AMEND THE HILL-BURTON ACT PROVIDING FEDERAL AID FOR HOSPITAL CONSTRUCTION

Whereas his Excellency, the Governor, in his annual message to the general court on January 1, 1958, stated, "The Federal law providing for Federal assistance for hospital construction expires in 1958. I urge that you recommend that the operation of this law be extended"; and

Whereas the basic distribution formula of the Hill-Burton Act, Public Law 725, should be reexamined in order to provide more fully for the hospital needs in States with a number of large cities and metropolitan areas; therefore, be it

Resolved, That the general court of Massachusetts respectfully urges the Congress of the United States to extend the provisions of Public Law 725, 79th Congress, and to amend its provisions so as to provide more fully for the hospital needs in States with a number of large cities and metropolitan areas; and, be it further

Resolved, That copies of these resolutions be sent forthwith by the State secretary to the presiding officer of each branch of Congress and to the Members thereof from this Commonwealth.

House of Representatives, adopted, March 31, 1958.

LAWRENCE R. GROVE, *Clerk.*

Senate, adopted in concurrence, April 2, 1958.

IRVING N. HAYDEN, *Clerk.*

[Attest]

EDWARD J. CRONIN,
Secretary of the Commonwealth.

Secretary Seaton Commended by Conservationists as a Man of Action

EXTENSION OF REMARKS

OF

HON. JOHN P. SAYLOR

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 16, 1958

Mr. SAYLOR. Mr. Speaker, in administering the public lands, the minerals, the wildlife, national parks, and other great natural resources entrusted by the American people to the care of the Department of the Interior, Secretary Fred A. Seaton has consistently demonstrated courage and devotion to the public interest. In an unusual tribute, the delegates to the 22d annual convention of the National Wildlife Federation, held in St. Louis February 28–March 1 and 2, 1958, adopted a resolution commending Mr. Seaton for a series of significant actions. The text of the resolution follows:

Be it resolved, That the National Wildlife Federation commends and applauds Secretary of the Interior Fred A. Seaton upon several important actions taken in recent months for the benefit and protection of natural resources in the United States and Alaska, to wit:

1. New and protective regulations signed January 11, 1958, restricting and controlling oil and gas leasing and mineral development on the National Wildlife refuges and game ranges in order to protect the wildlife values.

2. An Executive order signed December 24, 1957, providing for the diversion of fresh water from the Colorado River to restore the Topock Marsh and maintain the Havasu National Wildlife Refuge as an important waterfowl-management unit in the Pacific flyway.

3. A preliminary order signed November 19, 1957, taking the initial steps toward withdrawal and establishment of the Arctic Wildlife Range in northeastern Alaska.

4. Recommendation of legislation to provide for Federal acquisition of the Klamath Indian Marsh as a National Wildlife Refuge and for Federal acquisition or disposal of the Klamath Indian Forest in a manner to assure sustained yield management.

5. His unqualified declaration made before this convention that he will render in the immediate future a decision upon the vexing problems relating to National Wildlife Refuges and waterfowl management in the Upper Klamath Basin of Oregon and California.

Mr. Speaker, it should be noted here that with respect to point No. 5 in the above resolution, Mr. Seaton has again shown he is a man of action and a man of his word. He recently announced his decision in this vexing and long-unsolved controversy. The existing waterfowl refuge lands in the Upper Klamath Basin will be held intact for conservation purposes until or unless substitute wildfowl habitat along the flyway has been provided. Legislation is being prepared to back up this decision and safeguard the waterfowl resources of the Pacific flyway.

Mr. Seaton made a speech at the opening session of the National Wildlife Federation convention which sounded a realistic and forward-looking keynote not only for the Federation's meeting but for the 23d North American Wildlife Conference which followed immediately in the same city. His address, described in the federation's news bulletin as 'bristling with specifics,' follows. Under leave to extend my remarks, I commend it to the study of my colleagues.

MR. SEATON'S ADDRESS

Mr. Swift and gentlemen: As you may have noticed, I paid rather close attention to those generous remarks which my old friend Ernie Swift made about me, and I suppose that I would be a whole lot less than honest if I didn't tell you that I enjoyed every word he said. The only difficulty, I think, is that because he is a friend and a fellow worker in this conservation cause, he perhaps gilded the lily a little too much. Of course, you understand I do not say that as any criticism of him. I simply say that out of common honesty and candor.

I understand that the Annual Cooperative Wildlife Research Unit meeting was

temporarily adjourned this morning so the people in attendance could come here, and, of course, I am particularly thankful. What the final reaction will be to the decision that they should come listen to this speech remains to be seen, of course, but then I am also told that this program is now 22 years old and that in that time more than 2,700 students have been graduated. I think you will all agree with me that this is a very considerable and worthwhile accomplishment.

I thought I would talk to you today about some matters with which some of you are certainly much better acquainted than I. Nevertheless, I think we ought to talk about those matters for a few minutes, not only to get them on the record, but also to make certain that we understand one another.

Back in 1903, at Stanford University, Theodore Roosevelt, speaking on the subject of natural resources, exhorted the Nation "To leave to future generations the heritage unimpaired and, if possible, even improved."

It seems to me this clarion call sounded by President Roosevelt continues to echo in our own day and that it is a call which all Americans, regardless of their business or profession, would do well to heed.

In the 50 intervening years since that speech I think it is a fair statement to say that conservation practices, by private citizens, State agencies and the Federal Government, have greatly increased. Moreover, I think it is admitted that today there is unprecedented citizen interest in the management of this Nation's natural resources, particularly those under Federal jurisdiction. Now, only with such public interest, understanding and action can we ever hope for effective legislative and administrative results.

Here I would like to point out that organizations such as yours have long recognized that fact. To you and to them is rightfully due a major share of the credit for the progress made thus far in the proper husbanding of our natural resources in America.

Then, if you don't mind, I should also like to make a personal observation. As Secretary of the Interior, I owe much to all of you. Many times your representatives have spent long hours with me discussing difficult and complex problems, benefiting me with information and counsel. Time and again members of local units of your organization and others have written or spoken to me their opinions and their suggestions.

Let me assure you here and now with complete sincerity that I am aware of that debt of gratitude and conscious of my responsibility because you have been so cooperative with me.

Now, we know that there are a multitude of major Federal laws, old and new, which today govern the use of publicly owned resources and that many of those laws are complex. Sections of some of them appear to collide with sections of others. Nevertheless, they do set the framework within which the officials of the executive branch of Government must act.

You know, in trying to make right and proper decisions within the framework of those laws, I sometimes recall to mind a famous cartoon character of some years ago. Many people in this room, I am sure, will remember him. His name was Skippy, drawn by a British cartoonist who died a few years ago.

I am thinking of a cartoon which appeared one Christmas Eve. It showed little Skippy about age 8, in his night clothes, down on his knees by his bed making his prayers. This is what he said: "Dear God, please make me a good boy." Then he thought, and I think with all reverence added, "But God, please don't make me too good a boy because you know better than anybody else what an awful tough neighborhood this is."

Sometimes when people with conflicting opinions gather in my office and the time for decision arrives, I must confess to you that I think a little bit about Skippy and his prayer. Nevertheless, in spite of all the difficulties, these laws, taken together are, I believe, inspiring evidence of a people's determination to deal as prudently and wisely as they can with the bounty that nature has conferred upon them. On that fact, I am sure all of us can agree.

Now then, what are some of these laws? Well, for public lands, we have major legislation dating from 1801; for the water we have similar legislation dating from the Reclamation Act of 1902; for minerals we have the basic mining law of 1872 and its successors; for timber we have the Forest Reservation Act of 1891 and subsequent amendments; for grazing we have the Taylor Grazing Act of 1934.

The development of our unparalleled national park system has taken place under a variety of general laws which date back to 1906. I think that a major victory of this area certainly was the launching, in 1956, of the Eisenhower administration's program to improve the national park system of this country. That program is widely and commonly known as mission 66.

Major legislation for fish and wildlife is, as you know, relatively recent. It includes the Migratory Bird Treaty Act of 1918; the Migratory Bird Conservation Act of 1929; the all-important 1934 Duck Stamp Act; the 1934 Coordination Act, with its later amendment of 1946; the Pittman-Robertson Act of 1937; and finally the Dingell-Johnson Act of 1950.

These measures, I remind you, came into being largely through the efforts of many of you.

Similar efforts received a long-due, if not overdue, reward in 1956, when the Fish and Wildlife Act was passed by the Congress. With the passing of that act, we were able to create, in the Department of the Interior, the office of Assistant Secretary for Fish and Wildlife.

Through the cooperation of many people in and out of the Government, of both political parties, this historic forward step was taken.

Now, then, despite the progress that has been made, I believe this Nation's natural-resources program could still be better balanced. Administratively, we are making every effort in our national planning to protect fish and wildlife, recreation, and associated values. Nevertheless, if these are to receive full and appropriate protection, they must have appropriate additional recognition in Federal law. Of that, I am, personally, deeply convinced.

I will say to you here and now that as Secretary of the Interior I shall continue to do everything possible to further the enactment of such legislation in the Congress.

Now, for a moment, if you please, let's consider the real and justifiable need for such legislation.

The demands on our recreational and wildlife resources are growing with incredible intensity. Cities, roadways, and industrial plants, for example, are devouring land in America at an annual rate of almost a million acres, and that, I do not think I need to remind you, is an area larger than the State of Rhode Island itself.

Moreover, our country's population is growing at a fantastic rate, and by 1968 it may well be that we will number 200 million people.

Nevertheless, there is a growing awareness in America, again fostered to a major degree by you people and your associates in the conservation movement, that we simply have got to get on with the job of getting ready for tomorrow and a whole series of tomorrows.

As a matter of fact, in the past few years the Nation has accomplished much to meet the challenges posed by such trends. Since 1953, the Government has added almost 50,000 acres to its Federal wildlife refuges, not enough, no, but plenty if you consider some of the opposition that has been registered to putting a single acre more in wildlife refuges.

In the current fiscal year, the Department of the Interior is investing nearly $57 million in sports fisheries and wildlife programs. That $57 million is almost 60 percent more than the corresponding amount for the fiscal year 1953, and yet I confess that there is much, much more to be done in that area.

In the past 2 years alone, the Department has had nearly a 5-fold increase in its investment in river basin studies. One of our immediate problems in that area is the proposal to erect a dam at the Nez Perce site in Idaho on the Snake River just below its confluence with the Salmon. Unless there is conclusive evidence that such a structure would not do irreparable damage to the anadromous fish runs up the Salmon River, I must oppose it.

The Pittman-Robertson and Dingell-Johnson funds are now providing $21½ million to States for sports fisheries and wildlife programs. Perhaps this is not enough yet, but it is the largest annual amount in our history. In the Havasu Lake National Wildlife Refuge in Arizona, water is now being diverted from the Colorado River into the Topock marsh. This, as you know, will end stagnation due to Federal dredging operations which began in 1949. This action is helping to restore that area to its former excellence as a winter ground for migratory waterfowl.

The Department of the Interior and the Department of the Army last year reached an agreement acceptable generally to conservationists by which a buffer strip was made available to Fort Sill in the southern part of the Wichita Wildlife Refuge. That agreement eliminated a serious threat to the refuge and its intended purposes, and I say now to you that the Department of the Interior has no intention whatever of reducing the effectiveness of this outstanding wildlife area by opening more of its acreage to military use. I might add further that my ability to maintain that position will be quite a bit due to the cooperation I know I shall get from you and your associates.

The Congress has recently passed the so-called military lands withdrawal bill, H. R. 5538, which makes applicable on military lands the fishing and trapping and hunting laws of States and Territories in which they are located. This legislation also stipulates that no military withdrawal of more than 5,000 acres can be made without specific consent of the Congress.

As I am sure you know, the Department of the Interior has wholeheartedly supported this legislation.

In case the word has not reached you today, I was called from Washington a couple of hours ago and told that the President had today signed that legislation.

Well, I think that a fair summary is that much has been accomplished but that there is still much to do.

It is time, for one thing, to make constructive amendments to the Fish and Wildlife Coordination Act of 1946. In my opinion, that is a legislative must and the sooner it is done, the better. The Department of the Interior is now working with other Federal agencies on just such amendments, which, among other things, would legally require that greater consideration be given to fish and wildlife conservation in the planning of Federal water resource projects.

In brief, the proposed amendments will go beyond the present legal protection against damage to fish and wildlife values. The amendments will actually require the enhancement of those values, and I am happy to report to you that we have made good progress toward getting an agreement

with other Federal agencies. As soon as that job is done, in, I personally believe, a few days or weeks at the most, I shall at once submit proposals to the Congress and strongly urge their enactment.

Second, we urgently need legislation to establish a national outdoor recreational resource review commission. The administration is enthusiastically supporting that proposal before the Congress. It will lay a base for application of recreational resource criteria to include wilderness and associate values in any comprehensive survey of this Nation's lands. I say to you that the sooner that commission can get on with its job, the better for all of America.

Because of the impending termination of Federal trusteeship over the lands of Klamath Indians, we need legislation which will continue the sustained-yield management of the forest, and preserve the marsh as a wildlife area. The administration has sponsored such legislation, and it is now before the Congress. The marsh, once purchased by the Department of the Interior, would become a wildlife refuge. The forest, kept intact, would continue in perpetuity to produce timber on a sustained-yield basis, to help prevent floods and to protect the migratory waterfowl and other wildlife which now find refuge within it.

There came to my desk yesterday a recommendation for solution of the Klamath-Tule Lake problem. Because of its complexity, it has required intensive and sympathetic study by my staff and by the assistant secretary for water and power and also the assistant secretary for fish and wildlife. Upon my return, I shall resume work on this problem myself. We will make every effort to announce a decision within the next few weeks at the most.

As a matter of fact, this subject came up for discusison informally in my room last night, and one of my good friends from out in that area pleaded with me to make this decision as soon as possible. In the course of that conversation, we got a little curious historically and discovered that the problem has been pending in the Department of the Interior since the days of Secretary Krug. I don't say say that as a criticism of one of my predecessors, of course, because it was pending there not only under him, but also under Secretary Chapman and Secretary McKay. This is just an example of how complex some of these problems are.

Around the Department of the Interior we are determined not to let these things lie on the shelf. We will try to make decisions—right decisions—as soon as possible so that people will have a chance either to object or approve.

Well, another thing we badly need is special legislation enacted in this session of the Congress to authorize metalliferous mining by lease or permit only for the proper protection of the proposed new Arctic Game Range. As you know, I have taken steps to set aside this 9-million acre area of Northeast Alaska for the protection of grizzly and polar bears, Dall sheep, wolverines, caribou and migratory waterfowl. This single addition to the Nation's wildlife system will send the acreage of Federal wildlife lands soaring to a new record total.

Informally, just last week I had a discussion with the Canadian Ambassador, and members of the Department of the Interior have had informal and exploratory conversations with members of the Canadian Government, hoping to work toward the day when the Canadians will find it proper and right to do on their side of the international boundary the same thing we have now done on our side.

As you all know, what we must do above everything else is to make certain that nothing defeats the purposes of the new regulations which have been issued to govern oil and gas leasing on Federal wildlife lands. I am sure we are all together on that.

These regulations provide that on Federal wildlife refuges there will be no leasing, except when Government oil reserves, in other words, oil belonging to the people of the United States, are threatened by drainage because of nearby drilling. On the game range lands of the United States, the Bureau of Land Management and the Fish and Wildlife Service will together determine which areas should be recommended to be opened for leasing and drilling. Similar legislation will also apply to the Federal-State cooperative lands and the wildlife areas in Alaska. In any case, the approval of the Secretary of the Interior must be obtained. I have not the slightest intention either of shirking my responsibilities or hiding my mistakes behind somebody else.

Recently a congressional question has been raised about the validity of this new departmental regulation of which I have been speaking. I have been informally told that hearings will be scheduled on that subject. Let me assure you here today that I stand ready to defend my action, both as to its legality and as to its contribution to the public good and, again, I must say that I shall need your help in that battle on Capitol Hill.

Finally, more than ever before, we need to continue to strengthen public support for all constructive conservation measures. The half century behind us is rich in legislative, administrative, and organizational achievements in the field of Federal natural resources management, conservation, use, and development. Even so, as I indicated a few minutes ago, we must continue to forge ahead. So I propose to each of you today that each one of you launch a sort of a personal mission 2,000, not for one resource, but for all of them. With the utmost diligence, let us continue to work together to assure that the latter part of this 20th century, as the first, will be an era of outstanding brilliance and accomplishment for the cause for conservation in America.

Glen Alden Corp. Announces Changes in Its Executive Positions

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 22, 1958

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Wilkes-Barre Times Leader of April 16, 1958, which comments on the changes made in the executive positions of the Glen Alden Corp., with headquarters at Wilkes-Barre, and the world's leading producer of anthracite coal:

[From the Wilkes-Barre Times Leader of April 16, 1958]

GLEN ALDEN CHANGES

Announcement that Harry W. Bradbury, former vice president of Lehigh Valley Industries, had been elected to a similar post with the Glen Alden Corp., and that Harold B. Wickey, former Lehigh Valley vice president, would be named a vice president of Glen Alden and assistant to Mr. Bradbury indicates that List interests, now in control of Glen Alden, are not going out of the coal business. Mr. Bradbury will have charge of the corporation's coal division.

This is good news to the community from payroll and tax viewpoints and ends speculation about the immediate future of the industry as a result of the retrenchment program and subsequent moves. With two seasoned executives like Mr. Bradbury and Mr. Wickey named to these important posts, it is apparent that, for all the pressure, Glen Alden or List Alden, if merger plans are not disturbed, not only will carry on operations, but possibly will expand them.

Glen Alden must have something in mind when it hires two men of the caliber of Mr. Bradbury and Mr. Wickey, while retaining the services of William Everett as consultant. Francis Case, president of Glen Alden, will remain in an advisory capacity and the indications are he will devote his time and talents to other subsidiaries.

The decision to bring Mr. Bradbury into the Glen Alden was no surprise. It had been reported for several months and it now develops he actually had been elected to the post last December.

Timely Proposals for the Solution of Our Present Economic Dilemma

EXTENSION OF REMARKS
OF
HON. GEORGE H. CHRISTOPHER
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 22, 1958

Mr. CHRISTOPHER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an article which was written by a small-business man, Mr. E. H. Hardinger, from my hometown of Butler, Mo.

Mr. Hardinger's article reflects serious thought and makes timely proposals for the solution of the present economic dilemma in which we find ourselves today. It would be well for each Member of the House of Representatives to read Mr. Hardinger's thought-provoking article:

Beware, lest we talk ourselves into a disastrous national depression. Every newscast, newspaper, and almost everyone one meets is talking about a depression. True, we have millions of workers out of jobs, but idle, thoughtless talk cannot help, and without realizing it we may create a doubt or fear in the listeners' minds, doing much harm. True, we all should be much concerned about our present local and national economic conditions, which, in some respects, differ from anything we have experienced in the past.

Those of us who went through the unforgettable depression of the 1930's see similarities to conditions preceding that national calamity. However, we must all keep a level head at this time and realize that, should we go down into a depression with our national debt and other conditions as they are today, this would mean a national catastrophe such as we, who are living today, have never known.

Whatever mistakes we have made in the past 40 or 50 years are history—they cannot be righted now. Let us be careful we do not make bigger mistakes in the future. Our present economic dilemma is being aggravated by our constantly inflated price-squeeze situation which is bringing about a depressive condition caused by inflation. A depression caused and brought about by inflation is a new and very dangerous situation.

As a descendant of several generations of conservative thinkers which were right in

their day, and being a progressive, conservative thinker on my own, I am forced to liberalize my views and thinking to the point of the foreseeable and long-range future in very liberal terms. It is too late to turn back now. We must go forward or else we will fall. In the long span ahead, 5, 10, or 20 years, I see nothing but constant inflation. Where or how it will end, I don't think anyone knows.

I believe our large present-day unemployment will dwindle during the spring, summer, and early fall months, then reoccur again during the late fall and winter months next year and will continue to follow this pattern for no telling how many years unless, of course, some national emergency arises which would incur full employment. As one who certainly does not like to pay higher and higher taxes, I feel the time has come for the Government to establish, or make possible the establishment by the various States, a national public-works program of a permanent nature to take up the slack in unemployment as soon as it starts to occur. The idea behind this would be that a man working at his regular job, but got laid off, would have a job waiting for him sponsored by the Government. The average American worker spends his money as he makes it—sometimes before. Full employment has always resulted in prosperity and good conditions for all. With inflated living costs, the average worker can only stand a few weeks of unemployment before it begins to hurt. When layoffs occur, these men and their families must be fed, clothed, and kept warm some way.

What good is a tax cut going to do a man who is out of work and isn't paying any taxes or any prospects of a job? To further increase or extend their unemployment compensation only tends to destroy their incentive to work and earn an honest living. With a properly organized and administered public-works program in readiness, the day a worker is laid off his regular job, he could apply in his county area and be put to work within a few days. This type of help is twofold, the worker earns his living and everyone shares in the results—better roads, streets, more schools, recreational facilities, and dozens of other worthwhile public improvements would be made which are needed and useful to all. The public-works wage scale need not be high but livable; thus, when skilled workers jobs are open, these workers would return willingly. The physiological effect of a man having assurance of at least a job, if only at a minimum wage would have a stimulating effect on consumer buying.

I know there are many things happening today which we do not like and conditions are not as many of us would like them to be. But, again, we must face facts and reality, and in my opinion, this simple, uncomplicated public-works program can and will be, if put into effect, the cheapest and best way of solving the periods which appear certain to occur from year to year. It will keep our country in a continued prosperous condition. With so many interests connected with our vast economy, I believe a plan of this nature would help the most and do the least harm at a minimum cost of any other proposals to date.

If we must talk, don't let us talk idly, but with commonsense to the right people. As it has always been, the average man or woman can do more on election day than others more powerful. Let us remember to elect on election day men and women for important places in our Government who stand for the things that best represent our own interests and the interest of those about us.

Readjustment of Life Adjustment

EXTENSION OF REMARKS
OF
HON. JOHN A. BURNS
DELEGATE FROM HAWAII
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 3, 1958

Mr. BURNS of Hawaii. Mr. Speaker, the pages of the RECORD have contained many indications of the great interest of the people of the United States in education. The pros and cons of our educational system have been given a fairly thorough review.

I include herewith an editorial from the Raven Review of St. Benedict's College for April 1958. It is a thoughtful, objective presentation, shedding more light than heat on the matter:

READJUSTMENT OF LIFE ADJUSTMENT

We had made a resolution to let the subject of education rest for a while. But a gentleman with whom we have been arguing violently for as long as we can remember made a characteristically outlandish remark at our last encounter which has been bothering us ever since. The supreme irony of the age, he says, is that our democracy has evolved an educational system eminently suited to totalitarianism, while the Russians seem to have developed a program that would be just right for a democracy.

The Russian system, he points out, emphasizes the ideals of intellectual excellence and self-discipline proper to a society of freemen; the American way, on the other hand, neglects the training of both mind and will in favor of life adjustment, coddling, and conditioning our youth to unthinking conformity with the mass.

Close upon these subversive observations comes the campaign of the Luce publications to revitalize the American school system. Time and Life have come out with an unprecedented assault on the ideals of the Deweyites entrenched in the entire program of primary and secondary education. And the facts they cite are a startling confirmation of our friend's cantankerous assertions. The neglect of intellectual discipline had long been fairly obvious from our contacts with products of the system in college classes. But the fostering of group pressure to conformity was something we had only suspected.

The stupidity underlying this preposterously anti-democratic procedure baffles the understanding. Even Life in its portrait of a typical high school student frittering away his time and talents in ignorant self-indulgence, maintains that this kind of nonsense develops qualities of leadership. Our critical friend anticipated this claim also. To his own lethargic high-school students who are complacently submitting to training for leadership, he challenges: Leadership for what?

The least that can be expected of a leader is that he should know where he is going and where he is now. If he is unconscious of the intellectual tradition that produced him, of the roots of his own government and the economic principles of his society, not to speak of the revolutionary scientific developments of his own age, he is not likely to have any definite goals toward which to lead anybody. The prospect of the blind leading the blind in this fashion is enough to make the scalp crawl.

The question of the goals of education itself has been raised by the editors of Life in an emphatic manner: "Exclusive devotion to techniques and group adjustment should never again be allowed to hide the fact that American education exists first of all to educate the individual in a body of learning, with a tradition and purpose behind it." With this we heartily agree. But what tradition and what purpose the editors fail to state.

The fundamental disagreement in our society about what a man is and what he is for lies at the very root of the question of how to educate him. Some think he is the end result of accidental biological mutations; others, that he is the chance product of a complex of economic forces; others again, that he is a creation of intelligent love, with a destiny beyond space and time dependent on the responsible use of freedom.

The difficulty of reconciling these conflicting concepts led the Deweyites long ago to ignore them altogether and devote themselves to mass conditioning processes. And we have made little progress in solving the dilemma since that unhappy day. But we can take this grain of comfort from the obvious bankruptcy of life adjustment programs, that it may force us back to a reliance upon intellectual values before the thought police are ready to take over.

Alcorn Too Optimistic

EXTENSION OF REMARKS
OF
HON. A. S. HERLONG, JR.
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 22, 1958

Mr. HERLONG. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Ocala, Fla., Star-Banner of Wednesday, April 16:

ALCORN TOO OPTIMISTIC

In a speech delivered at a Republican fundraising dinner in Birmingham, Meade Alcorn, GOP national committee chairman, predicted that the Republicans can make net gains in the South this year if more GOP candidates will challenge incumbent Democrats.

He does not agree with those who say the Republicans cannot duplicate their 1956 successes in the South. He reiterated a prediction that his party could increase its present House membership of 9 out of 114 seats in the South and border States if it did not let the Democrats win by default in so many districts.

"It is my firm belief," he said, "that an incident such as Little Rock will never lead thinking voters to turn their backs on the great overriding accomplishments of this Republican administration."

Mr. Alcorn is too optimistic. All the straw polls indicate that the Democrats will sweep both Houses of the Congress, if they do not become too cocky and confident. Some of the best informed political writers in the country, including David Lawrence, Roscoe Rrummond, and we believe, Walter Lippmann, agree that the Democrats will extend their majorities in the House and Senate.

Nearly everyone who has no political bias is agreed that the odds are with the Demo-

crats for many reasons, not the Little Rock school incident alone.

Take the Senate races as an example. The Republicans will have 22 Senate seats at stake while only 11 Democratic Senators will be up for reelection. For the Republicans to make any gains, it would be necessary for them to hold their 22 seats and gain some of the 11 Democratic seats.

Senator GEORGE SMATHERS, chairman of the Senate Democratic campaign committee, recently made some predictions about the congressional elections this year and the presidential elections in 1960.

Florida's junior senator believes the Democrats will ride high in November, but that big gains in both House and Senate could backfire on them in the 1960 presidential race. He predicted that the Democrats will pick up from 5 to 7 Republican Senate seats, and that they will elect all of their candidates in the South handily.

SMATHERS is on sound ground when he says his party will have no difficulty in holding the South in the congressional races. He also believes it stands to gain in the Far West and Middle West because of economic troubles there. In support of this prediction he pointed to the dissatisfaction in the farm belt over the administration's farm policies.

SMATHERS predicts that the big issue in November will boil down to the Nation's economic situation, not satellites, outer space problems, foreign policy or Little Rock. He thinks the United States should be caught up with the Russians in the race for outer space by election time, so that should not be an issue.

He points out that the Republicans are hard hit in that five of their top Senators are not seeking reelection. These include Senators JENNER of Indiana, SMITH of New Jersey, MARTIN of Pennsylvania, PAYNE of Maine, and KNOWLAND of California.

If the sentiment in Florida is any indication of the political feeling in other States, the South will swing back into the Democratic column this coming November. It is difficult to find a Florida Democrat who voted for President Eisenhower in 1956 who is willing to say he will support the Republican ticket this November. In addition, reports are coming in from south Florida that some Republicans of many years standing are changing their registration to the Democratic Party.

It is of interest in connection with the Alcorn and SMATHERS statements to mention the reason SMATHERS thinks that big gains this year could backfire in the presidential election in 1960. He points out if the party makes substantial gains in Congress this year, and world or domestic conditions worsen later on, the Democrats, not the Republicans, would be responsible, as he says "when things aren't going too well, the voters like to make a change."

Facts Should Rule

EXTENSION OF REMARKS
OF
HON. WALTER ROGERS
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 22, 1958

Mr. ROGERS of Texas. Mr. Speaker, a great deal has been written and said about the natural gas bill—both in this Congress and in previous sessions. The real need for, and the true benefit of, the legislation has been virtually lost in the maze of information which has been disseminated relative to this vital legislation. The issue has been forcefully and succinctly stated in a very fine editorial which appeared in the Vega (Tex.) Enterprise of March 28, 1958. This fine newspaper which serves the community of Vega so well is owned and published by Mr. John R. Hines. Under unanimous consent, I insert herein the editorial entitled "Facts Should Rule":

Human fallibility and downright bad judgment continue to plague the effort to relieve natural-gas producers of some of the burdens of Federal regulation—burdens which, in the view of many, were never intended by Congress.

About 2 years ago, it will be remembered, a corrective bill passed Congress. But improper lobbying methods had been used in its behalf and because of this the President used his veto. Significantly, in the veto message, he expressed himself as being in general agreement with the bill's intention.

This year it seemed that another and similar bill, known as the Harris-O'Hara bill, had an excellent chance of gaining approval. Then the sponsor of a fund-raising dinner for a leading Congressman solicited money on the grounds that this Congressman supported the gas bill. A furor resulted and it is now said that the bill's chances are poor, if not actually dead.

If that is so, the country will be the loser. As one observer points out, "The entire gas-producing industry is being charged with an act it did not authorize and with which it had no responsibility." There is only one way to view such proposed legislation, and that is on its own merits. Natural-gas production is a highly competitive and extremely risky undertaking. Prolonged regulation of the kind now in effect cannot help but discourage exploration, and deprive the country of gas it wants and needs.

There is not question here of excusing unethical conduct as it may have been applied to this or any other piece of legislation. But facts should rule.

Israel's Independence Day

EXTENSION OF REMARKS
OF
HON. JAMES T. PATTERSON
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 22, 1958

Mr. PATTERSON. Mr. Speaker, on May 14, 1948, when the courageous and farsighted Zionist leaders in Palestine proclaimed the birth of the State of Israel, they took the destinies of the Jewish nation into their own hands. At the time this seemed a daring, and somewhat dangerous act. Today, 10 years after that momentous and epoch-making event, it is abundantly clear that their courage paid off. In a single decade Israel has moved from a struggling newborn state to a powerful political and cultural force in the Middle East. Israel is not only a safe haven for refugee Jews, but also a model democratic state in a sea of ancient feudal countries.

Our friendship and respect for Israel continued as we have seen the desert blossom and a democratic society spring up in a part of the world that knows mostly feudal and autocratic governments. It is widely recognized that Israel has used American foreign aid to better advantage than any other state in the Middle East. A well-educated, industrious people they have set forth with the enthusiasm and vision that only pioneers can muster to their cause. They have worked hard and have built a thriving modern nation where formerly there was little but desert, poverty, and disease.

But there is also a close friendship between our two countries because of the compatibility between our deepest national interests. We share a common interest, the development and preservation of international conditions that make it possible for democratic societies to grow and to survive.

On the anniversary celebration of Israel's Independence Day, I wish them more power and full success in their efforts to make the desert bloom and to provide security for their people.

Funds for the Construction of Armories

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 22, 1958

Mr. McCORMACK. Mr. Speaker, under permission to extend my remarks, I include resolutions recently adopted by the General Court of Massachusetts memorializing the Congress of the United States to provide forthwith for the allocation of funds for the construction of armories or related facilities.

The resolutions follow:

Resolutions memorializing the Congress of the United States to provide forthwith for the allocation of funds for the construction of armories or related facilities

Whereas by Public Law 783 of the 81st Congress there was established a program whereby the Federal Government would contribute approximately 75 percent of construction within the States for military purposes; and

Whereas Public Law 302 of the 84th Congress extended this program of assistance to the States in their armory construction to a period of 8 years from 1951; and

Whereas Congress has already authorized construction of 8 armories or related facilities for the Commonwealth of Massachusetts but the allocation of the funds by the defense or Budget Bureau has been made for only 3 of the 8 projects; and

Whereas the delay in the allocation of the funds after authorization by Congress has resulted in serious delay, inconvenience and loss to the Commonwealth of Massachusetts: therefore be it

Resolved, That the General Court of Massachusetts respectfully urges Congress to enact legislation which will eliminate the delay on the part of the Budget Bureau and Department of Defense in allocating the funds authorized by Congress for the construction of armories or related facilities; and be it further

Resolved, That the secretary of the Commonwealth transmit forthwith copies of these resolutions to the presiding officer of each branch of Congress and to each Member therefor from this Commonwealth.

Centennial of Temple B'rith Sholom

EXTENSION OF REMARKS
OF
HON. PETER F. MACK, JR.
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 22, 1958

Mr. MACK of Illinois. Mr. Speaker, the congregation of Temple B'rith Sholom in Springfield, Ill., is celebrating its centennial. The Springfield Hebrew Congregation was organized on April 2, 1858. This event must have been one of unusual interest for Abraham Lincoln. For the first President of the congregation, Julius Hammerslough, was a friend of the Springfield lawyer who soon was to become President of the United States.

In recognition of Temple B'rith Sholom's 100 years of spiritual leadership to the Jewish people of central Illinois, I include here an editorial from the April 17 issue of the Illinois State Register.

CENTENARY OF TEMPLE B'RITH SHOLOM TO BE NOTABLE EVENT

Into observance of the centennial of Springfield's Temple B'rith Sholom, countless inspiring elements in the religious, moral and material progress of this community are woven. Among notable personages to participate will be Rabbi Herman Eliot Snyder, for 19 years (1928–47) Rabbi in Springfield, now honored with life assignment at Sinai Temple in Springfield, Mass.; and Dr. Abram L. Sacher, president of Brandeis University.

Rabbi Snyder will speak at services tomorrow night. Dr. Sacher will deliver the anniversary address at the gala centennial dinner, Sunday, April 20. Dr. Sacher also served Temple B'rith Sholom while associated with the history staff of the University of Illinois.

Springfield congratulates the entire congregation of the Temple headed by Rabbi Meyer M. Abramowitz, spiritual leader; Louis Schwartz, president of the Temple; Albert Myers, Jr., general chairman of the centennial committee, and Mrs. Jerome Lewis, president of the Temple sisterhood.

The cornerstone of the present Temple at Fourth and Scarritt Streets was laid May 18, 1916, and the building was completed and dedicated September 9, 1917. Historically the congregation was organized under the name of the Springfield Hebrew Congregation on Sunday, April 2, 1858, 18 years after the Springfield city charter was issued, and 40 years after Illinois was admitted to the Union.

Among the original incorporators were men who pioneered in Springfield; Louis Benjamin, Silas Leon, David Gottlieb, Morris Myers, William Myers, Benjamin Nusbaum, Samuel Rosenwald, Elias Salzenstein, Daniel Seligman, and Solomon Stern.

The first president was Julius Hammerslough, a friend of Abraham Lincoln, who was followed by Morris Myers, Samuel Rosenwald, Sigmund Benjamin, Albert Myers, Joseph Hammerslough, Louis J. Samuels, Michael Eckstein, M. J. Kellner, Adolph Lubin, Caspar Brown, Herman Cohn, Albert Myers, Jr., Clyde A. Meiers, and Louis Schwartz. It is interesting that Sigmund Benjamin served as president for 40 years. One of the secretaries, Simon Hammerslough, served for 25 years, and Treasurer B. A. Lange served for 52 years.

The first house of worship was located at 426 North Fifth Street and the building, erected at a cost of $7,500, was dedicated September 10, 1876. The North Fifth Street Temple served its congregation for 40 years. Springfield is a community in which racial and religious distinctions are respected. The congregation of Temple B'rith Sholom, under the capable and consecrated leadership of Rabbi Meyer Abramowitz, will move forward in a steadily expanding program of community service. Interfaith fellowship and understanding flourish in the kind of soil Springfield provides. The same should be true throughout America and the world. All nations must travel toward this great goal if the world is to have a just peace.

The Turn Is Coming

EXTENSION OF REMARKS
OF
HON. HUBERT B. SCUDDER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 22, 1958

Mr. SCUDDER. Mr. Speaker, under leave to extend my remarks in the CONGRESSIONAL RECORD, I desire to include an editorial from the Humboldt Standard of March 15, 1958.

The lumber industry is one of the most sensitive industries in our country and it is refreshing to find such a editorial when pessimism seems to be the vogue.

The editorial is as follows:

THE TURN IS COMING

Passage of the $1,850,000,000 emergency housing construction bill in Washington recently, came as good news for the entire Nation. For this region it was especially stimulating, for obvious reasons. It was well timed, since springtime naturally brings building revival.

Already, lumber companies here had reported an increase in new orders. Now, with ample money becoming available, the pace is bound to quicken. In common with everyone hereabout, we hope the machinery of government will function quickly, that work may commence.

We are fortunate, here in Eureka and Humboldt, that our great basic industry caters to mankind's most fundamental need, next to food. In fact, food and shelter might well be rated as one, since men's primal objective is to provide security for their wives and families.

As has been noted before, a record-breaking crop of young people is growing up throughout the Nation. Every day, now, sees more and more of them coming into the market for new homes. Anyway you figure it, the lumber business must of necessity increase its output.

First reports indicate that the Federal housing appropriation should provide 600,000 jobs, nationally. That means that such lumber producing centers as this region will get a high pro rata of the newly created work, since ours is the basic source of supply.

The proposal to increase interest rates on GI loans by one-fourth of 1 percent, though, seems to fall short of both commonsense and purpose desire. The rate will still be too low to interest private capital and, conversely, will have a dampening effect on borrowers.

Rather, shouldn't Government finance GI loans directly, at the present 4½ percent rate? No donation is involved there. The money would be hired out for good and constructive purposes at a reasonable return. Better to lend to our own people, as versus foreign giveaways.

Be that as it may, large additional sums of money soon will be at work supplying a fundamental necessity. And rest assured we will feel it here. A fast growing nation will not be denied new housing.

Financing Small Business

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 22, 1958

Mr. MULTER. Mr. Speaker, on March 31, 1958, the Federal Reserve Board transmitted to the chairmen of the Banking and Currency Committees and the Select Committees on Small Business of both Houses of Congress a document on the financing of small business which was very clearly labeled a study of financing of small business. The Board of Governors was very careful in the letter of transmittal not to refer to the document as a report. The four chairmen of the congressional committees joined in the statement, submitting this study to the Congress for its attention. They, too, carefully referred to it as a study and not as a report.

In the preparation of the document as a committee print for use by Members of Congress, unfortunately, somebody placed upon the cover of the document the word "report" instead of "study."

That has brought about an unfortunate situation, due to careless reporting and careless editorializing on the part of some members of the press. One editorial in the Wall Street Journal editorialized about this study, indicating "it would be well if Congress paid attention to it" and further stated that the "report" indicated the Small Business Administration was a temporary and a "distress organization," holding out no promise to small business primarily because the agency was set up "to grant loans to applicants who cannot get them anywhere else." It then goes on to say that this is unsound business practice, and the Government should not encourage loans to poor credit risks.

It is easy to write, but it takes real hard work to become properly informed before writing.

Not only was the study not a report but the study itself very plainly states that no member of the Board participated in the writing of the material submitted, and, on the contrary, the "views expressed are those of the authors and do not necessarily reflect the views of the Board of Governors of the Federal Reserve Bank."

Now let us turn our attention for a moment to the contents of the study to determine whether or not there is anything there to sustain the criticism and improper conclusions found in the news item.

The study very properly states that the law has always required of the Small Business Administration and its predecessor lending agencies, that before the Government makes any credit available,

it must appear that the loans cannot be obtained from private financing.

This provision has been found sound and workable. It is necessary in order to protect private enterprise from Government competition.

That does not mean, however, that loans are to be made to bad risks. As a matter of fact, the Government lending agencies, and particularly the Small Business Administration, have a very good record in that respect. Actually, there have been more complaints made against the Small Business Administration because it adheres too strictly to the requirement of the law that no loan be made unless there is "reasonable assurance of repayment." The loss ratio by the Small Business Administration is much, much smaller than that experienced by private lenders.

There are many reasons why small business can get no loans from private lenders other than the fact that it is a bad credit risk. There are plenty of good credit risks among the small-business men of the country who have been unable to get private loans. The Small Business Administration is filling that void to the limited extent permitted by existing law.

There is nothing in the study as presented by the Federal Reserve Board which justifies the conclusion that Government encourages private lenders to consider poor credit risks.

There is no doubt that the Government can and should play a greater role in connection with making risk or equity capital available to small business and there is much to be said for making loans available for a term beyond the 10 years permitted by the existing law to the Small Business Administration. Constructive criticisms along those lines will be helpful to the Congress in performing its duty. News items and editorials, such as referred to above, will do nothing except to create confusion.

In connection with the foregoing, I am pleased to call to the attention of our colleagues the following letters written to and received by the ever-vigilant George J. Burger, vice president of the National Federation of Independent Business.

Experiments by Teen-Age Rocketeers

EXTENSION OF REMARKS
OF
HON. FRANCIS E. DORN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 22, 1958

Mr. DORN of New York. Mr. Speaker, this is the third in a series of articles by George Allen, which have been appearing in the New York World-Telegram on experiments by teen-age rocketeers, and was published on April 17, 1958:

OUR TEEN-AGE ROCKETEERS: LETTERS TELL OF THE BANG BOYS GET FROM MISSILES

(By George N. Allen)

Teen-age rocketeers who are answering First Army questionnaires describe their hopes and frustrations with candor few adults could muster. The hundreds of pleas for aid and advice pouring in to Capt. Bertrand R. Brinley, First Army news chief, display fearlessness, determination, scientific ability, and much unconscious humor.

A 15-year-old wrote:

"I would like to take this opportunity to thank you for the wonderful work you are doing for us.

"P. S.: Only two of our rockets have exploded."

Another rocketeer has taken tragedy in his stride:

"Our launching date is March 7, 7:32 p. m. (This is the date last year when the vice president of our club blew his left thumb off at the first joint with a bomb we composed.)

"Our club will gladly accept any technical and safety advice as well as constructive criticism."

Captain Brinley said he answered this request by return fast mail.

An upstate would-be astronaut sent an appeal for help in finding more like-minded boys:

"When I got your questionnaire on junior rocket societies I found that my answers were all noes, none, or I don't know. You see, there is only one of me."

RESULT OF SUPPRESSION

Another boy writes of the result of suppression, and the dangerous attitude it may engender:

"I agree with you on your view that amateurs shouldn't experiment with fuels that they know nothing about. But as for having an adult with you whenever you set off a rocket, I can't agree with you in all cases (mine for example). A friend and I are planning to put up a rocket this spring and I'm sure that if I let [my father] find out about it that it would be the first and last one that I put up. He would say that it was too dangerous or he might not give any reason at all. He's not stupid or anything, it's just that all he ever hears about rockets is that they explode and kill people. So the only way that you can do something that they think is 'too dangerous' is to keep quiet about it."

THRILLS OF SPACE

A high-school junior wrote Capt. Brinley of the thrills of space science:

"I plan to become a chemist, eventually specializing in rocket propulsion and its problems. * * * With me rocketry is no passing fad concentrated just on firing rockets into the air. I admit I love to hear the roar of the rocket's exhaust and watch it climb into the sky balanced on a jet of white-hot gas. But I want to know what makes the rocket tick, what keeps it from falling over, how could it perform better, and so much more. I want to know all kinds of physics and chemistry; I want to build and fire all kinds of rockets."

A group of rocketeers at Riverdale Country School are among the lucky few who have adult help. Science teacher Anthony Keasbey acts as a safety brake on their enthusiasm, buying their fuel, storing it and permitting them to mix it only at the isolated launching site. The Riverdale Amateur Rocket Association (RARA) has launched about 40 rockets.

COORDINATOR EXPLAINS

Club Coordinator Martin Baker, 14, and eloquent beyond his years, explained how he feels about amateur rocketry and Captain Brinley's efforts to help:

"Rocketry is much too dangerous to do merely as a hobby. It is a scientific project to gain knowledge of the world about us. After 4 years of amateur rocketry and then study in college, I'll have a pretty good knowledge.

"I think," he continued, "that Captain Brinley's plan is wonderful, and I wish he could get cooperation from people. Wernher von Braun got help from the German Government in his rocket experiments, while our police departments were chasing American fooling with rockets. The result is that the Germans got the V-2 and the United States got nothing."

RIGHT TO EXPERIMENT

A member of a group working on a 100-mile-high 2,000-mile-an-hour instrumented rocket declared firmly:

"Of course, we have a right to experiment. Don't forget that we teen-agers are the ones who will be designing, launching, and maybe riding in those space ships to the moon everyone is talking about now."

Mark Edmiston, 16, a member of the 6-month-old Yonkers Rocket Research Society, asked this reporter:

"Please show them we're not a bunch of nutty teen-agers throwing caution to the winds."

Brooklyn's Future—Extrapolated

EXTENSION OF REMARKS
OF
HON. EUGENE J. KEOGH
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 22, 1958

Mr. KEOGH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by Mr. Andrew S. Roscoe, president of the Equitable Savings & Loan Association, before the Rotary Club of Brooklyn, on Wednesday, April 2, 1958, at the St. George Hotel in Brooklyn:

BROOKLYN'S FUTURE—EXTRAPOLATED

My fellow Rotarians and guests, this is my fourth visit with the Brooklyn Rotary, and I am deeply grateful for the privilege. First we discussed public housing; later we treated with Brooklyn's contribution to our social pattern and last year it was my great honor to point up Brooklyn's enterprises.

My topic today, Brooklyn's Future—Extrapolated, covers a lot of territory. So does this variation on my consistent theme—our community.

Extrapolation is a word used in mathematics and statistics and particularly associated with graphs and charts. Extrapolation, then, may be defined as predictions based on virtual certainties rather than upon mere prophecy.

Allow me, please, to state my conclusion right at the outset. I visualize a great future for this community, and I will make an effort to justify my forecast on a single premise, and that is the integrity of the Brooklyn pattern, the integrity of the people of Brooklyn.

This meeting reminds me of an occasion some years ago when I delivered the commencement address of the American Savings & Loan Institute in Troy, N. Y.

At the end of my speech, I was charged by Father Kennedy, professor of sociology at Siena College, with being at heart a philosopher. I had said that economics, political science and sociology are branches of philosophy, branches of human principle. Perhaps I am a philosopher in the sense that I believe that economic functions cannot be studied in a vacuum. And I do believe that our great democracy represents a moral plan in which economics, political science and sociology are parts of the human pattern designed for the greatest good for the greatest number. I further believe that the American scheme, in general, and the Brooklyn scheme, in particular, are so nearly ideal that unless the relationship between these

three branches of philosophy-economics, political science, and sociology is properly synchronized, "the gears simply will not mesh; the machinery will break down." Our Brooklyn machinery may have slowed down, but the machine is there and can again roll at higher and higher speeds, if that is what we want.

Let me illustrate my point. This borough in 1950 had attracted 12 percent of the total family income of the 10 leading American cities. In 1956 its total "take" was 10.4 percent although the average income almost doubled. This means that we in Brooklyn have not shared in the national prosperity to the extent of the other 4 counties of the greater city as well as the other 9 cities. In 1950 the average family income in Brooklyn was almost the same as that of the greater city, but in 1956 we were $800 per family behind the other four counties. This is indeed disconcerting.

How did we get here?

Our national economy is progressing at a tremendous pace, and we are living in a highly competitive era. States and cities, as well as the individual enterpreneurs, compete for economic attainment. Our State has been losing business to other States steadily and we, in Brooklyn, have been losing business to other communities consistently. The State, the city and Brooklyn must meet the grim factors of more advantageous labor markets, tax exemptions, bonuses, cheaper power, longer daylight and better transportation facilities offered by other areas.

We are told that other areas with vast empty spaces offer greater opportunities to industry in contrast with the problem of assembling industrial sites in fully occupied older cities.

Then there were other factors. Industry is of great importance to a community because local industry generally employs local labor. A community's income consists of the income of its residents employed within the community as well as the income of its residents employed outside of the community. The aggregate of the earning power of those families employed outside of local commerce and industry is a very important factor in the pool of community prosperity. This second group composed of residents employed beyond the immediate area is attracted to a community by the atmosphere of that community, its social conditions and, of course, its housing accommodations. Families in the modest income group will work and live in communities where shelter is available within their means just as families in the middle income and the high income class reside in communities where they too, can buy the most for their money by way of shelter and living conditions.

Obviously, from our statistics, we can arrive at the conclusion that we have lacked the kind of housing facilities in a volume that appeal to the high middle income class and the high-income group.

Our statistics further indicate that an impressive percentage of our families are in the lower middle income class and the low-income group. A large group of small-income citizens naturally affect the aggregate family income, the buying income, the community prosperity. Ethnically, Brooklyn residents consist of 2,350,000 whites, 280,000 negroes, and 140,000 Puerto Rican Americans. Some of the whites, negroes, and, if such information as we have is correct, a considerable percentage of the Puerto Rican Americans are in the low-income group, with many families depending on our public agencies for their shelter and daily bread.

Other factors have made strong impact upon Brooklyn's economics and social structure.

After the First World War and more particularly during the early stages of the depression, we developed a new pattern of cooperation of government with enterprise. The Government collects taxes from local areas and redistributes these taxes in many different forms through Federal aid to our waterways, road system, and the price support of farm products, and as well through subsidies to other sectors of our scheme, such as the construction of Government office buildings, including post offices. Added to these efforts are the defraying of some of the cost of local social welfare effort and, last but not least, contributions to housing standards by the Public Housing Administration or its insured agencies, such as the Federal Housing Administration and the Veterans' Administration. During the war, Government-enterprise partnership was probably best expressed through the encouragement of the construction of industrial plants.

Many communities have taken full advantage of the benefits of this partnership and have built new industrial plants as well as a gigantic number of title I middle-income housing and some public housing, including projects to aid the problems of relocation of tenants from areas selected for accommodating the middle-income group.

How many new industrial plants did we build during the war? What percentage of title I middle-income housing have we attracted to Brooklyn in contrast, as compared to Manhattan? Did we take full advantage of the endless millions of the great Federal Home Loan Bank System to encourage the construction of new 1- and 2-family homes during the thirties and immediately after the war? Have we availed ourselves to the fullest extent of the opportunities that this Government-enterprise partnership have provided?

The answer is "No." The responsibility of taking advantage of opportunities thus presented is not up to the Government, but rather to private enterprise. We see a fantastic redevelopment program in Manhattan. When you see the new Bowery at night, you almost pray that the same street lighting could be afforded to at least some of our streets in Brooklyn.

That public improvements attract new business and new residents is no longer subject to debate. Therefore, we must have greater public improvements to attain greater community prosperity.

Yet despite this disheartening picture, we have a great borough. We have almost 3 million people occupying 260,000 residential buildings, of which almost 180,000 are 1- and 2-family homes erected on a comparatively small area of 80 square miles. And of these dwelling units 1,500 1- and 2-family houses were built in 1956 and almost 15,000 during the past 6 years.

Florida is not the only community that was ingenious enough to pump the water out of swamps to create land. Our borough government has reclaimed thousands of acres in Bergen Beach, Canarsie, and elsewhere for useful purposes, and our parkway commission has pumped the ocean out to provide the world's most magnificent parkway.

Our downtown area, which in Brooklyn follows the same pattern as many other cities, contains not only the civic center, but also a great education center, a veritable campus of colleges of national and international distinction as well as great department stores, banking institutions, insurance companies, utilities companies, and professional buildings.

We find that our economy is stable, the exodus of industry notwithstanding, and that there is every indication that the present recession has not affected Brooklyn to the extent of its impact in other cities. Living conditions in Brooklyn, considering the cost of living, are far better than in many other cities in the United States. The merchandising policies of our great department stores and their mass purchasing power, the benefits of which accrue to the most modest specialty shop, are able to provide good merchandise at very reasonable prices, enabling that low wage dollar to buy a whole lot more than can be bought in other communities.

Our utilities and banking institutions provide services with greater economic benefit, thus meeting the competition of other communities. And while the overall picture in Brooklyn perhaps is somewhat disconcerting, the essential soundness and stability of our community promise a foundation upon which a glorious future can be built.

We have our great waterfront; we have our port authority. We hope to see in the field of housing the enterprising ingenuity of some of our real-estate people to promote the planning of sound title I middle income housing projects.

Our civic center very shortly will become a utopia of civic pride. And while the loss of some of our enterprises in the retail field is unfortunate, the throngs seen on Fulton Street on a Monday morning are certainly an indication that downtown Brooklyn remains one of the busiest of American shopping centers.

But we need more dynamic enterprises; we need greater support of our public officials in their efforts to obtain a fairer share of the redistribution of tax dollars. We need a new post office. The efforts of Postmaster Quigley and that of our Congressmen alone cannot provide us with a badly needed new center of postal activities. Mr. Quigley and our Congressmen must have the support of the rank and file of the citizens of Brooklyn. The leaders of our community must be ready to examine the success of competitive communities and meet that competition. If what we have is worth preserving, worth developing, it is worth struggling for.

We need more than that.

Under the heading of economics and social problems comes the treatment of the needs of our most modest income group. There we need vigorous, forthright, forward thinking. Perhaps some cold-blooded thinking. While we fully appreciate the humane objectives of any social program, we might study the economic side of a long-range project designed to bolster our community assets. Let us presume that our annual direct and indirect relief bill (and I am taking these figures out of the air), may amount to $100 million. A soundly conceived program calling for an accelerated adjustment of our destitute citizens may return much more than the cost of rehabilitation in increase of withholding taxes and in sales taxes. Are we ready to consider a broader program of relief and human rehabilitation? If the cost of such investment is put at a billion dollars, should we fear, should we falter? What we must determine is whether we shall allot $100 million each and every year for many, many years to come or face the problem, spend the money, and do the job of human rehabilitation and thus convert what now appears to be a liability into a great community asset.

We have talked a lot about the problems of our low-income citizens. We have talked endlessly about the Puerto Rican problem. We have heard some beautiful presentations. We learned that the people in Puerto Rico have settled in fine new one-family homes, some of which were financed by our institutions; they are the same people and they are making great progress. And at the same time, our Puerto Rican Americans living in overcrowded slums or in some of those great vertical slums which we call public housing portray a different picture. Yes, we have talked a lot. I believe we have made some progress, but the process seems very slow. Brooklyn can go along at the current pace

and still be a prosperous community. If during the past 6 years our average family income fell $800 behind the average family income of the other 4 counties, we can visualize that during the next 6 years, we might fall behind $1,200, $1,400, or $1,600 in family income in comparison with the other 4 counties, even though our average family income may increase substantially. This, however, means that our progress will not be as substantial as that of the other 4 counties of the greater city and the other 9 leading cities. It would seem to me that the time has arrived to stop talking and to do something about this problem.

Aside of the humane angle we must recognize the impact of a large group of small-income citizens upon the economy of Brooklyn, the city, and the State. There are billions and billions invested in the greater city, and I cannot believe that the managers of these investments would want to see their collateral impaired by permitting Brooklyn to become a slum colony. I cannot believe that in this great age when we have broken the sound barrier and have brought, on the horizon, sunset and sunrise to the same point, that this economic and social problem cannot be solved. The time has arrived for analyses and action. We could start the ball rolling right here.

If you, my fellow Rotarians, who have contributed so much to this community are willing to espouse this project, my associates and I are ready to turn night into day to participate in this great effort.

I visualize that you and I can invite moral and substantial support and evolve a sound and constructive program. Such a program must provide:

(a) Decent shelter at reasonable rentals.

(b) Education designed for the youth and the adult to the end that social adjustment in a new community may be less harsh than at present and, above all, to the end that potential skills and mental resources shall be employed purposefully to attain higher wages and a higher standard of living.

(c) A forthright social-welfare plan to eliminate hunger and substandard living in periods of industrial recession or adjustment.

(d) Just, relentless, moral support and continuing vigilance to the end that there shall be no exploitation of any American group by labor, by enterprise, or by both, for such exploitation can lead only to corruption, crime and despair.

If we do this I visualize Brooklyn as America's most prosperous community. We have our waterfront, we have our commerce and industry, we have our homes and churches, we have almost 3 million people and we have integrity. Yet history may well question our integrity if we allow hopeless, entrenched poverty to continue as we stand idle.

Integrity is a word that cannot be qualified—it is not divisible. It means wholehearted, complete devotion to total truth and honest, objective thinking. Brooklyn is a great community. It will grow and prosper as long as you and I and its leaders insist on its integrity—its human needs, its destiny, its duty to its people and to our great Nation.

Rural Population Changing Rapidly in Webster and Adjoining Counties

EXTENSION OF REMARKS

OF

HON. MERWIN COAD

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 22, 1958

Mr. COAD. Mr. Speaker, recently the officials of the Department of Agriculture held a book-burning ceremony in order to destroy 2,500 copies of a report which was considered unfavorable by the administration. The books which were destroyed quoted farm people the country over as to why people were leaving the farms. Personally, I do not think we should try to destroy the evidence, I believe we should get it into the open and study the situation so we can get at a solution. Farm people love the type of living which is afforded on the farm. I was born on a farm and lived nearly half of my life on a farm. I know why people love living on a farm. But it is not good when an economic situation disrupts the living patterns of our people.

Recently the Fort Dodge Messenger printed a very important article along this line. This article is factual and relates what our people on the farms are facing:

RURAL POPULATION CHANGING RAPIDLY IN WEBSTER AND ADJOINING COUNTIES

"Having deciding to quit farming, I will hold a closing-out public auction of my livestock and machinery on the farm located at ——."

How many times have these words appeared in newspaper advertisements, or in handbills on the lumberyard wall, or tacked on the barn of another farmer?

Perhaps this is not unusual in itself until one begins to realize that many homes on these farms will not be lived in again. The land will just merely become a part of a nearby farming operation. Another farmer has been lost and another farm has been made part of a larger unit. More than 1,000 fewer farmers began tilling the soil this spring in Iowa.

There are two major problems in agriculture today. One involves the amount of mechanization and manpower for an existing farm unit. The other is in regard to the oversupply of farm products that are being produced with the aid of modern technology in relation to the demand from the consumers.

The excess output is one of the major causes of the part of the farm-income problem that shows up in unfavorable prices today.

Modern mechanization plus excess output is causing the dwindling number of farms and the loss of farm population to the city.

This article will deal mainly with the latter problem, that of the changing rural population.

Changes in rural America between 1910 and 1940 were relatively slow. That slower pace makes the changes of the past 15 years seem unusually dramatic. For example, in 1910, 32 million persons lived on 6.4 million farms; in 1955, 22 million persons were living on fewer than 5 million farms.

Iowa is losing farmers to the city at the rate of the population of one county each year. Over the Nation as a whole 100,000 farmers leave the soil each year to compete for jobs with the city worker.

Ronald Doster, who farms 3 miles northwest of Knierim, is an example of what is happening.

"I have been farming 120 acres for several years but it just hasn't been enough to take care of my family and all of the expenses incurred on the farm," Doster commented.

Doster's father, John, sold out this winter and retired from the 160 acres that he had been farming. Ronald will take over the operation of the home place this year.

"Now I can justify owning my own combine and corn picker on the 280 acres. Otherwise I needed almost as much machinery on the 120 as I will on the 280 acres," he stated.

Mechanization and lower farm incomes together have made the rapid changes in farming in recent years. In order to make the huge, new, modern equipment economical under times of lower farm prices farmers have competed for existing farmland. Those who were not able to obtain more land to make the best use of their potential labor force and machinery are gradually moving off the farm.

The average size farm in Iowa is approximately 180 acres. "The average farm should be nearer 240 acres for the most efficient unit to utilize the modern equipment of today," Carl Malone, farm economist of Iowa State College, said at the farmer-guest day of the Fort Dodge Kiwanis Club last fall.

Farm population, number of farms, and city population in the Messenger area is changing rapidly as is other areas of this great agricultural State. The following information will be of interest to many who are concerned with Iowa's changing population.

The table below shows the average size of the farms in the State and in a seven-county area, the percentage of decrease in numbers, and the percentage of increase in size in a period from 1939 to 1954:

	Average size of farms (1954)	Percent of change	Percent increase in size
Iowa	177	−9.6	10.6
Calhoun	183	−8.0	6.8
Greene	187	−11.4	13.4
Hamilton	175	−5.8	5.4
Pocahontas	190	−1.1	1.0
Webster	186	−6.5	8.6
Wright	191	−6.7	5.6

The rural population is dropping in every county, a fact known to most people but many perhaps do not realize that the total population in many counties, including the towns and cities has also dropped. The following chart shows the trends in rural as well as total population from 1940 to 1950, including the State:

	Percent change rural population	Percent change total population
Iowa	−14.7	2.3
Calhoun	−14.3	−1.7
Greene	−20.0	−4.4
Hamilton	−14.9	−1.3
Humboldt	−10.0	−2.5
Pocahontas	−11.6	−4.7
Webster	−16.1	6.6
Wright	−10.8	−1.9

The total population of Iowa has increased. This is due largely to the increase in the larger cities in the State. An example of this can be seen in the above chart. Webster County is the only county in the group that has shown an increase in total population. This is due mostly to the increased population in Fort Dodge because the rural population has dropped by 16.1 percent and the rural towns have shown a very small increase and in some cases have actually shown a decrease.

Population trends in the towns in Webster County from 1940 to 1950 are:

	1940	1950
Badger	231	201
Barnum	184	198
Callender	377	357
Clare	233	179
Dayton	732	703
Duncombe	341	378
Fort Dodge	22,904	25,115
Gowrie	1,028	1,023
Harcourt	268	205
Lehigh	1,004	991
Moorland	215	203
Vincent	192	193

Other larger towns in the area in addition to Fort Dodge have increased in size but because of their original size were not able to compensate for the large decreases in farm population. The following chart lists county-seat towns in the seven-county area of over 2,000 population. Pocahontas was excluded because its population was less than 2,000.

	1940	1950	Percent change
Eagle Grove	4,024	4,176	3.8
Fort Dodge	22,904	25,115	9.7
Humboldt	2,819	3,219	14.2
Jefferson	4,088	4,326	5.8
Rockwell City	2,391	2,333	−2.4
Webster City	6,738	7,611	13.0

Most of the above figures do not go beyond 1950, the latest year figures were available. Since that year even more drastic changes have been indicated, but these figures give the general trend.

The total farm population in the United States has dropped to 13 percent. This compares with approximately 25 percent in Iowa, the largest agricultural State in the Nation, in percent of total population. This has caused and will continue to cause many social changes and problems in the church, school, small business, and elsewhere, farm economists point out.

Assistance to States for Research and Training Programs Combating Juvenile Delinquency

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 22, 1958

Mr. McCORMACK. Mr. Speaker, under permission to extend my remarks, I include resolutions recently adopted by the General Court of Massachusetts memorializing the Congress of the United States to enact appropriate legislation granting financial assistance to States for research and training programs combating juvenile delinquency:

Resolutions memorializing the Congress of the United States to enact appropriate legislation granting financial assistance to States for research and training programs combating juvenile delinquency

Whereas the problems of juvenile delinquency are national in scope; and

Whereas the cost of research and training programs to combat juvenile delinquency exceeds the financial resources of the local communities and States: Therefore be it

Resolved, That the General Court of Massachusetts respectfully urges the Congress of the United States to enact legislation granting financial assistance to States and local communities to enable them to carry on research and training programs to combat juvenile delinquency; and be it further

Resolved, That the Secretary of the Commonwealth transmit forthwith copies of these resolutions to the presiding officer of each branch of Congress and to the members thereof from this Commonwealth.

House of Representatives, adopted March 25, 1958.

LAWRENCE R. GROVE,
Clerk.

Senate, adopted in concurrence March 31, 1958.

IRVING N. HAYDEN,
Clerk.

A true copy. Attest:

EDWARD J. CRONIN,
Secretary of the Commonwealth.

The Country Editor

EXTENSION OF REMARKS
OF
HON. WALTER ROGERS
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 22, 1958

Mr. ROGERS of Texas. Mr. Speaker, you will remember, I am sure, my remarks in this body last spring concerning the award of the National Editorial Association to the Nation's top columnist. This award was tendered to Mr. H. M. Baggarly, the brilliant editor and publisher of the Tulia (Tex.) Herald. Mr. Baggarly's weekly column, The Country Editor, of April 3, 1958, reflects in a most sensible and profound manner on certain ills which beset our country currently. In order for all the Members to have the benefit of Mr. Baggarly's remarks, I, under unanimous consent, insert herein a portion of his fine column of April 3:

THE COUNTRY EDITOR
(By H. M. Baggarly)

Whenever Americas' thinking is focused on a popular topic of the day—the shortage of scientists, delinquency in the New York schools, and the Little Rock incident all are examples—editorial opinion invariably follows two streams, both at extremes.

Of course, current editorials are primarily concerned with the business recession.

On one hand, we have those who paint dismal pictures of our 5½ million unemployed, who see a depression such as the one of the 1930's just around the corner and under every rock, and who are in fact prophets of gloom.

Then there is another group which refuses to see anything in the immediate future but a rosy, glamorous, expanded picture of Utopia. They ignore statistics showing unemployment and farm depression. Their philosophy seems to be that thinking makes it so, so they determine to live in a sort of dream world completely apart from reality.

This newspaper cannot follow either of these extremes. In the first place, we are completely aware of the pitfalls and unhappy results of negative thinking. It isn't good for a patient. It isn't good for a nation. We must always be as optimistic as conditions permit. When we can't see around the corner, it is always best to assume that nothing sinister lies ahead. We must never borrow trouble.

Ever since the close of World War II there have been persons who expected the bottom to drop out at any moment. Some people here in Tulia sold their property in 1946 and 1947 because they just knew the peak had been hit and depression would descend within weeks.

We always have prophets of gloom about us. When times are hard, they tell us that we cannot afford to progress or build and that the worst is yet to come. When times are booming, they tell us that we cannot afford to go forward because prices are too high and there's a rainy day coming.

Certainly we must never forecast depression for political reasons. We must never exaggerate adverse business or farm conditions in order to strengthen a political point.

On the other hand, only fools and ostriches bury their heads in the sand, refusing to face reality. Our world is real as well as psychological. Thinking does not always make it so. The cemetery is full of people who refused to believe their ailments were real.

Somewhere in between these two extremes is an intelligent attitude toward the various aspects of this world in which we live.

Depression might be compared to cancer. Both are deadly. Both are to be feared. Both are real. Neither is immediately recognizable. By the time either becomes obvious, it often is too late to halt its progress. Although the experts have not affected a sure cure for either, progress has been made. Many cancer cases are being cured. Likewise many things that once created depressions have been conquered. We have such safeguards as unemployment insurance, social security, and other things which would soften the impact of any depression, regardless of its severity.

They tell us that cancer has 7 danger signals. They tell us that if we would only look for and report any of these signals to our physicians, 'cures could almost always be effected.

They insist that we be realistic about these signals. They insist that we report these apparently harmless signs even though usually they have no significance. More times than not, the doctor will tell us that we have nothing to fear. But certainly we have everything to gain and nothing to lose by being alert to any of these 7 danger signals of cancer.

We don't know how many danger signals depressions have. We do know that experience has—or should have—taught us some of these signals. One is economic trouble on the farm. Another is anything that adversely affects the buying power of any large segment of our society, whether it be the farmers and smalltown businessmen, or labor.

Depression's danger signals should be watched with the same vigilance we exercise in watching for cancer's danger signals.

And if we find an economic malignancy, it must be treated immediately before it has time to spread—if a cure is to be expected.

The depression of the 1930's was the most severe and lengthy in our Nation's history. This was due to the fact that those in charge of our country refused to do anything about it in its early stages. They were like those today who refuse to believe that they might have cancer. They just refuse to believe it. We were told that "prosperity is just around the corner." They told us that the law of supply and demand would eventually solve our economic crisis. They told us to wait for nature to take its course.

Depressions are as normal as cancer. No one ordinarily can be blamed for causing a depression just as ordinarily one can't be blamed for the cancer which afflicts the body. But one can be blamed when he does not take advantage of treatment, when he ignores danger signals.

Certainly we must not talk ourselves into depression. We must look for every sign of economic well-being. It is well to rejoice when our particular business is good. This is no time to halt expansion and improvement. This is no time to preach the doctrine of inevitable depression—the doctrine that we have always had depressions, we always will, and there's nothing we can do about it. Time was that the tubercular patient was given no hope. He became reconciled to his fate because "people always succumb to the disease and they always will."

Today the cancer patient often has hope. Someday, no doubt, most all cancer cases will be cured. Yesterday it wasn't so.

Poland's Constitution Day To Be Observed on May 3

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 22, 1958

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter from Mr. Charles Burke, Washington representative for the Polish American Congress, Inc., as well as a statement on Poland's key position in central eastern Europe, also by the Polish American Congress, Inc.:

POLISH AMERICAN CONGRESS, INC.,
Washington, D. C., April 15, 1958.

The Honorable DANIEL J. FLOOD,
House Office Building,
Washington, D. C.

MY DEAR CONGRESSMAN FLOOD: May I draw your attention to the approaching anniversary of Poland's Constitution Day, Polish national holiday, which for 167 years is being celebrated on May 3.

This act of wise statesmanship, enacted by the Polish Diet in 1791 in Warsaw, by unanimous solemn vote, brought about important political, social, and educational reforms destined to strengthen the Polish state at a time of threatening dangers from imperialistic neighboring powers.

Men who undertook the task to guide the Polish nation on the path of social progress, belonged to the most enlightened brains of 18th century Poland. They were inspired by the ideals of the American Declaration of Independence and influenced by the French proclamation of the rights of man and citizen.

The principles laid down in the May 3 constitution survived while Poland was struggling for independence and were referred to in the constitutional laws of the reborn Polish state after World War I.

Free Poland's Constitution Day was May 3, and it is still observed in the hearts of the people within the country and throughout Polish communities in the world.

The imposing on Poland in 1953, under Soviet directives, of a constitution on Communist pattern, similar to that of all other peoples' republics, did but reaffirm the attachment of the Poles to their historic charter of 1791.

It became a tradition for Members of the United States Congress to commemorate on the floor of their respective Houses Poland's National Day on May 3, to evoke links of friendship between both nations, and to stress United States interest in the fate of Poland.

Members of the United States Congress, who visited Poland lately, unanimously agree that although the Polish Government is Communist, the Polish people are not. American visitors are impressed by the friendly feelings of the population toward the United States of America. As a matter of fact, the western trend in Poland has not been eradicated in spite of great efforts of Communist propaganda to discredit the western democracies.

The commemoration of the May 3 constitution by the United States Congress will undoubtedly find a favorable response among the people in Poland.

Your support of the cause of Poland on that occasion will be greatly appreciated by the Polish American Congress.

I take the liberty to enclose for your attention a memorandum listing a few items of actual interest concerning Polish problems.

Yours sincerely,

CHARLES BURKE,
Washington Representative, Polish American Congress, Inc.

POLAND'S KEY POSITION IN CENTRAL EASTERN EUROPE

The subjugation by Soviet Russia of the formerly free and sovereign countries of central eastern Europe after World War II proved to be—as time went on—one of the main sources of international tension. A direct consequence of this shift of power was the division of Europe, totally artificial from a historical, cultural, and economic point of view, and detrimental to the very idea of a united Europe.

The demarcation line dividing Europe is based solely on Soviet power policy considerations with the purpose to serve farther expansion of international communism.

Thus the ideological conflict between communism and the free world was brought nearer to Western Europe and therefore to the United States of America resulting in a state of cold war in the relations between East and West.

Poland, by her geographical situation, number of inhabitants, and natural resources, formes a key position in central eastern Europe.

As a general rule United States foreign policy has in the past concentrated its main interest on Germany and Russia, and less attention was paid to the countries situated between those two powers.

This attitude was largely responsible for the fact that wartime agreements, such as Teheran and Yalta, were concluded with the U. S. S. R. in disregard of Poland's vital interests as well as of the other Eastern European countries.

Similarly the idea of finality with regard to European nations under Soviet hegemony which found some adherents in the United States of America, and was expressed by certain American writers—curiously enough on the very eve of the events in Poland and Hungary in 1956 which contradicted flagrantly this assertion—showed underestimation of the importance of Poland and other captive nations as potential factors of security and peace in Europe.

CONDITIONS IN POLAND AND UNITED STATES ECONOMIC SUPPORT

The people of Poland, in spite of ruthless Communist subjugation on the Stalin pattern, have maintained their patriotism and moral resistance. Their feelings and beliefs did not flinch under Communist indoctrination and terror. This also applies to the much exposed young generation.

The Poznan revolt and the October events of 1956, which took place under popular pressure, have shown the resistance of the Poles against Soviet rule and their aversion to every form of communism. Ideological slogans, like "Polish road to socialism" proclaimed as a new program by the Gomulka regime are regarded by the average Pole merely as tactical moves, Communist-style.

It is fully realized that the country finds itself in a compulsory situation toward Soviet Russia. The suppression of the Hungarian freedom rising by Soviet troops, practically without any reaction of the Western powers, remains as a threatening memento.

Under these circumstances but a slim restricted margin is left for the development of direct relations with the West and the United States of America in particular.

It seems therefore profitable to the United States of America to take advantage of every possibility to give the people of Poland moral encouragement by proving interest in their fate through concrete facts such as economic support recently granted. Although this might represent a calculated risk it is in line with psychological and political necessities, considering the feelings of the Polish people who looked to America for economic support.

SOVIET INSISTANCE THAT THE STATUS QUO IN CENTRAL EASTERN EUROPE BE RECOGNIZED BY THE UNITED STATES OF AMERICA

Soviet recent successes in intercontinental missiles and sputniks are being exploited by the Kremlin to obtain final recognition of its domination over the countries of central eastern Europe.

In his address of December 20 last, delivered to the Supreme Soviet, Khrushchev asked the West "to recognize the status quo—that is the situation characterized as it is by the existence of Socialist and capitalist states."

His language became violent in Minsk, on January 22, when he replied to President Eisenhower's proposal, that "in the interest of peace and justice the right of free choice of the captive nations be discussed at the summit conference."

In the subsequent exchange of letters and memoranda with the United States of America and the Western powers, the Soviet Union took a menacing attitude with regard to every proposal to place on the summit agenda the problem of the captive nations. The U. S. S. R. termed such a request as an insulting interference in the domestic affairs of those countries, in spite of the fact that this request was motivated by agreements and treaties binding the Soviet Union.

It is evident that Soviet Russia reserves for herself the exclusive right to exercise control over these countries using the respective Communist parties as docile instruments of action.

It is useful to remember that any country subjected to communism is considered by Soviet Russia as virtually conquered for the Soviet bloc with all consequences deriving therefrom. This means in practical terms that any effort on behalf of the people of that country to replace the Communist system of government by a democratic one, through free voting expressing the popular will, is regarded as a hostile interference in the omnipotent right of the Communist Party to rule the country and therefore as an act of aggression against Soviet Russia and other member-states of the bloc. The use of Soviet troops to extinguish the Hungarian freedom rising constitutes an evident proof of Soviet policy methods.

Judging from a wider perspective of possible future developments in other parts of the world—this shows a real menace of international communist infiltration.

The obstinacy with which the Soviet Union opposes any discussion of problems relating to the captive nations and insists so strongly now on the sanctioning of the status quo finds additional explanation in the following consideration:

The Poznan revolt of 1956, followed by subsequent developments in Poland and the

Hungarian uprising, are proofs that the countries behind the Iron Curtain are in fact a weak spot in the Communist Empire. The more so that the repercussions of these events were far reaching as far as the Soviet bloc is concerned, and their influence strongly felt in the Communist Parties abroad.

U. N. O.'s reactions to brutal methods applied by Russia to Hungary, although expressed by resolutions, which were without practical consequences, had a negative effect on Soviet propaganda. The Kremlin is therefore anxious to close once and forever the Hungarian chapter.

In addition to that the Soviets try to obtain a complete disinteressment of the Western Powers, and United States of America in particular, with regard to the countries submitted to their influence.

In this way the U. S. S. R. would acquire a totally free hand in their action against all efforts of the people to gain more independence.

From our American point of view even tacit acquiescence to Soviet maneuvers aiming at the sanctioning of Moscow-sponsored Communist domination of formerly free and sovereign countries—would alienate the people of those countries and be detrimental to the United States of America from a moral, political and military point of view.

Florida Canal Support

EXTENSION OF REMARKS
OF
HON. A. S. HERLONG, JR.
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 22, 1958

Mr. HERLONG. Mr. Speaker, Gov. LeRoy Collins, of Florida, has announced his support of the proposed Florida cross-State barge canal. Under leave to extend my remarks in the RECORD, I include an editorial from the Ocala (Fla.) Star-Banner, which follows:

GOVERNOR COLLINS SUPPORTS CANAL

In his monthly radio address last night from Tallahassee Gov. LeRoy Collins announced his support for the Florida cross-State barge canal.

Governor Collins said that the canal proposed for construction across north Florida from the St. Johns River near Palatka to a point near Yankeetown on the gulf coast, passing just south of Ocala, would be a tremendous boon for industrial development of the State. Furthermore, he said the canal is nearer to becoming a reality than the people of Florida generally recognize.

The Governor repeated a statement he has made previously that the project might be a source of some antagonism, but that he considers it worthwhile and that it deserves the support of the whole State.

Governor Collins reached his decision after the most careful study of the proposed canal. Some months ago, when asked about the canal he said that he considered the project to be dormant. He also expressed some concern about the effect digging the canal would have on the underground water table of Florida.

As the canal has been dormant over a period of years, and the Governor was not conversant with steps that have been taken to bring it to life again, it is understandable why he was not too well informed about the project.

To obtain up-to-date information about the proposed barge canal, the Governor addressed a letter to the Florida Canal Authority, and made particular reference to the effect the waterway would have on the groundwater table of the State.

This information was recently furnished the Governor in a comprehensive brief prepared by H. H. Buckman, consulting engineer for the canal authority. This brief consisted of a condensed review of the more salient facts relative to the cross-Florida barge-canal section of the Intracoastal Waterway system, together with maps and charts which were prepared to explain the physical features of the proposed waterway, and its more important economic and defense aspects with respect to both the State of Florida and the United States.

Contained in the review brief were statements by the United States Corps of Engineers and Herman Gunter, director of the Florida Geological Survey.

The Chief of Engineers of the United States Corps of Engineers, in submitting his report on the canal to the chairman of the House Rivers and Harbors Committee, made this statement:

"A lock canal for barge traffic following route 13–B would in no way affect the ground water supply in the area. By providing 3 locks on the east slope and 2 on the west slope with total lifts of 55 feet, the water surface of the summit pool could be maintained between elevations 42 and 55 feet which is the range through which the water table in the adjacent area has fluctuated in the past."

Herman Gunter, in a letter addressed to the canal authority (July 3, 1956) made this statement:

"The members of this department feel that the engineers have accurately summarized the effect that a controlled lock-barge canal would have on adjacent water levels. The Florida Geological Survey personnel believe if the normal average ground water levels are maintained along the profile of the proposed barge canal, there should be no change in the ground water levels throughout recharge areas centered in Polk County, southern Clay County and southern Georgia, nor would there be any damage to the water levels of the southern peninsula. The stage levels of Silver Springs and Rainbow Springs would be free to fluctuate within their normal range * * *."

This information, together with a full review of the economic and defense value of the proposed canal, is contained in the brief placed in the governor's hands just prior to the meeting of the executive committee of the Intracoastal Canal Association of Louisiana and Texas in Jacksonville, March 24.

Governor Collins was invited to meet with the Texas-Louisiana group and he held informal talks with the executive officers of that association. It is evident he was impressed by the enthusiastic support of the ICALT for the Florida barge canal, and also by the resolution of support previously adopted by the Mississippi Valley Association at its annual meeting in St. Louis February 10.

At that time the MVA pledged its support of the barge canal in these words:

"We offer the project our wholehearted approval and ask that the officers and staff of the association cooperate with other organizations interested in the project in the same fashion as they work with various groups on other matters affecting the national interest."

The more information Governor Collins has obtained about the canal, the greater his interest has been. Now he has come to the logical conclusion that the barge canal is a great project that "will be a tremendous boon for industrial development of the State," that it is nearer to becoming a reality than the people of Florida generally recognize, also that it deserves the support of the entire State.

Previously, at his conference with the Louisiana-Texas delegation in Jacksonville, the Governor suggested that a statewide conference to be held for a discussion of the canal project to sound out public opinion.

Canal proponents would welcome such a conference. Opposition to the canal, centered in two small areas on the lower west coast and lower east coast, is based on sectional jealousy and not shared by the general public.

There are thousands of new residents in Florida who have no knowledge of the canal project, or the feeling prevalent when it was proposed to construct a ship canal which many feared would damage the ground-water table.

These people need to be told of the tremendous impetus to industrial development that would follow construction of an inland waterway across the State. A statewide conference would provide the forum for full and accurate information about the project and its possibilities for industrial development.

A sizable delegation will go Washington at some date to be decided upon, in early May, to appear before a subcommittee of the Public Works Committee of the House to ask an appropriation of approximately $1 million to start work on the canal.

Governor Collins' endorsement of the proposed waterway, if he is represented at that hearing by the director of the Florida Development Commission, R. B. Fuller, Jr., and Rear Adm. S. P. Ginder, director of the industrial services, division of the FDC, should be most helpful.

Canal proponents are confident if the House Committee on Public Works recommends an appropriation to start work on the canal, with the support of the Mississippi and Louisiana-Texas Waterways Association, Congress will approve the project. Senator Holland has said that if such an appropriation comes to the Senate from the House he will work for its approval by that body.

Business Failures

EXTENSION OF REMARKS
OF
HON. COYA KNUTSON
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 22, 1958

Mrs. KNUTSON. Mr. Speaker, there is an article in the April 18, 1958, issue of U. S. News & World Report which should cause widespread interest and concern. It begins on page 83. Its title is "Recession's Toll: 45 to 50 Firms a Day."

The part that immediately struck my eye was this:

Failures in States around the Great Lakes held close to 1957 levels in the first 2 months of 1958, but now, on the basis of weekly reports, have risen sharply over a year ago.

In speaking of the rising rates of failures, the U. S. News article asserts:

Failures among retail clothing stores are running about 15 percent higher than a year ago. Liabilities involved in these failures are about double the volume of a year ago.

There is a considerable increase in the number of eating and drinking places going broke, indicating that people are eating out less often, taking more meals at home.

Failures are nearly half again as high among stores selling hardware and building materials.

While casualties among furniture stores are running about the same as in 1957, there

is a considerable increase in the liabilities of the firms that are failing.

Overall, failures among retailers are up more than 13 percent over a year ago and there is an even bigger increase—34 percent—in liabilities involved.

Failures are higher than a year ago among wholesalers of food and farm products, apparel, dry goods, lumber, building materials, and hardware.

In manufacturing, failures are up for lumber, paper, leather and leather products, coal mining, and iron and steel products.

Now to go back to the lead paragraphs of this U. S. News article:

On an average day in this recession period, 45 to 50 American firms close their doors and go out of business.

If the present rate continues through the year, more than 14,000 businesses will go to the wall in 1958. This will be the highest annual total in nearly 20 years.

So far in 1958, business failures are running 12 percent higher than in 1957 and 27 percent higher than in 1956.

In addition to the businesses going broke, others in growing numbers are closing down voluntarily, getting out while they are still solvent. Many others, hard pressed, are merging with competitors, hoping to make a go of it.

The increase in business failures, in general, is greatest among retailers.

Older firms, in business 10 years or longer, account for a growing share of failures.

Mr. Speaker, this trend in business failures is nothing new. A like situation prevailed in the late twenties and early thirties. In those days, as it is now, statistics had a way of hiding the grim facts. The U. S. News says that from 45 to 50 businesses a week are closing up shop in this recession. This amounts to one firm per State. On the surface, it does not sound like a catastrophe.

But let us go into it.

For instance, Peterson's Paper Mill—the main industry of a Minnesota county-seat town—closes its doors. The entire population of the town is around 3,000 people. The paper mill employs about 150 men. These 150, plus their wives, plus their children, make up one-fifth of all the inhabitants. The usual customers stay away from Schultz's Hardware Store. The regulars do not show up at Red's Cafe. Schultz closes up. So does Red. Their customers begin to look worried every time they pass the First National Bank. That makes the officers of the bank look worried, too.

What has been a recession takes on the identifiable earmarks of a depression. A depression, as we well know, is a chain reaction of closed business places, bankrupt banks, and empty wallets.

It cannot be cured by having the owner of a family farm be a part-time farmer and a part-time town jobholder. Only part-time economists go for that.

It can be cured by doing everything humanly possible to stabilize the security of the family farm. If—and when—this is done, community and State and Nation can, once more, be brought back to prosperity.

Fourth Year of Hot War

EXTENSION OF REMARKS
OF
HON. DONALD L. JACKSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 22, 1958

Mr. JACKSON. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include the following article from Parade magazine:

FOURTH YEAR OF HOT WAR
(By Victor Lasky)

ALGIERS, ALGERIA.—In a largely desert area four times her size, France is grimly waging a war now in its fourth year, a conflict not only splitting the free world but threatening to spread far beyond Algeria's borders.

Yet, in the United States it still is a war not many people understand. We are very much involved. We were involved in last February's French bombing of a Tunisian village, in which scores were killed or injured; American planes were used. We were involved when Robert Murphy, No. 3 man in the State Department, then undertook to help settle the hard feelings between Tunisia and France; those feelings stemmed largely from Algeria. We remain involved because both France and the Arabs are—or should be—our friends.

France has some 550,000 troops—four times the number used in Indochina—trying to crush a rebellion by a shadowy, elusive enemy backed by the Cairo-Moscow axis. France's fate as a major power is at stake. "Without Algeria," a cabinet member said emotionally, "we are another Portugal." Involved, too, is the fate of 1,200,000 Algerian-born French who know no other land, and some 150,000 Jews are whiplashed by Arab hatred.

And in the Sahara's potential mineral riches, France sees economic salvation. For one thing, the oil beginning to flow in the desert lessens France's distasteful dependence on Nasser's Suez Canal.

In short, this is no simple conflict between die-hard colonials, seeking to hold a last bit of empire, and a liberty-loving populace led by an Arab George Washington. It's far more complicated. And there is no George Washington.

If anything, the rebels take their cue from Egypt's Nasser, whose Voice of the Arabs, broadcasting from Cairo, tells Algerians: "The French overlords will only clear out in an atmosphere of constant terror. Kill them unmercifully. Wipe them out. Butcher them.

DEATH WITHOUT WARNING

But here among bustling crowds, crawling traffic, expensive shops, banks, modern apartment houses, cinemas, it is hard to visualize Algeria's capital as a city whose streets only recently ran with blood.

"It's a new kind of war," said newsman Maurice Gaubert at the Hotel Aletti bar. "No front lines. No major battles. Just boredom punctuated by sudden death. Someone leaves a package under that table. No one hears the ticking. Then—boom—we're blown to bits."

Other things jar you: The bulletproof vests sold in men's shops, the clerk explaining, "Just the thing to thwart an assassin's bullet, Monsieur" * * * the midnight-to-5 curfew making a silent Algiers resemble a movie set * * * being frisked for weapons by department store guards * * * the endless military patrols.

And optimism everywhere—the feeling that the war is in its last stages. Or almost everywhere. In the Oranais region, a short car hop from Algiers, you run into a rifle-toting French farmer. The other day his two foremen, driving to town, narrowly escaped ambush. "For us," he said, "the war continues." Like many farmers, he lives as if under siege. At night, his farmhouse becomes a tiny fortress in constant touch by wireless with a nearby army post.

"This is my land," he said quietly. "It was handed down by my father and his father before him. I'm ready to die for it."

The war abounds in paradoxes. For example, while its $4 million daily cost nearly bankrupts France, Algeria itself enjoys unprecedented prosperity, rising agricultural and industrial output, a construction boom.

And this is a war-within-a-war, Moslem against Moslem, as two groups seek to control the rebellion. And neither the National Liberation Front (FLN) nor the Algerian National Movement (MNA) is adverse to bumping the other off, gangland-style.

The French cite the vendetta as one reason they won't sit down with the rebels. "Which faction?" they ask. "Who besides themselves do they represent?" They point out that of the 10,000 men, women, and children so far killed by rebels, over 8,000 were Moslems.

Actually, the term "native" is a misnomer if applied only to Moslems. Most of the 1,200,000 Europeans were born here and consider themselves Algerians. These settlers, whose ancestors took hold of a barren land, reclaiming thousands of acres of brush, swamp, and desert, constitute the major argument for the contention that Algeria is a part of France.

Meanwhile, the war has spilled into France where last year FLN-MNA terrorists killed or wounded over 3,000 Algerian Arabs. At stake are funds exacted from 350,000 Moslem workers to aid Algeria's freedom fighters. So terrorized are the Moslems that many contribute their hard-earned francs to both factions.

Curiously, when the war first flared on November 1, 1954, it was treated lightly. Only when hundreds, then thousands, then tens-of-thousands of troops failed to restore order did the French realize this was a full-scale rebellion.

Soon the straggling rebels with shotguns became commandos with mortars. In the big cities—Algiers, Oran, Bone, Constantine—terrorists struck indiscriminately, shooting, stabbing, strangling, and bombing.

Before long the Europeans too were committing mayhem. Last summer, following a dance-hall bombing in which dozens of youngsters were killed and injured, hysteria—fanned by agitators—swept Europeans. Soon mobs headed for Arab districts, burning shops, overturning cars and waylaying passing Moslems.

In the buff-tinted government General Building, that towers over Algiers, the French proconsul angrily banged his big mahogany table as reports flowed in the mobs were out of control.

ORDER—JUST IN TIME

At stake was Robert LaCoste's pacification program designed to show Moslems they can live in peace with Europeans. And LaCoste knew the terrorists were seeking to infuriate Europeans against Moslems to bring about an irreparable break.

LaCoste ordered the rioting curbed at all costs—none too soon. A dozen Moslems and a French woman were dead. Meanwhile, the army was routing the FLN killers hit by hit and terrorism began to subside. Though it may not rank with Napoleon's exploits, the Battle of the Casbah had to be won if control of this city of 600,000 was to be regained.

In the office of tweedy, half-American Mayor Jacques Chavallier hangs a map on which a red dot pinpoints each act of terror in Algiers. "Got so you couldn't tell the map for the dots," he said. "Now, thank God, the dots are fewer."

Son of a Louisiana-born mother, Chevallier, who once attended a New Orleans Catholic college, has long been the pessimistic, lonely man in the middle because of pro-Moslem views. But since a recent law increasing Moslem self-government, Chevallier is more optimistic about Moslems rallying to the French.

In the midst of terrorism, Chevallier waged a battle of housing by building 6,000 houses for Moslems living in bidonvilles, so-called because their shacks are made of bidons, large tin cans. One such shanty-town in the heart of Algiers consists of 24 slum acres perched on a hill overlooking the Mediterranean. Its 15,000 inhabitants only a year ago were dominated by FLN terrorists. Now the area is peaceful. On the success of bidonvilles all over Algeria may depend the future of the French populace that currently is outnumbered 8 to 1.

Meanwhile the war continues. The French keep pursuing an elusive enemy who, greatly outnumbered and with no fixed bases, avoids direct contact. Instead, slipping down from the mountains in small groups, the rebels strike hard and disappear into the landscape. They stage hit-run attacks on isolated outposts, blow up rail lines, and ambush French patrols.

"Sure, we're winning the war," said a colonel at an outpost on the Tunisian frontier, "but at this rate we'll be winning it 50 years from now."

The colonel was bitter. The night before a large rebel arms convoy had crossed over from Tunisia. Several of his men were wounded.

"As long as they can run in arms from a privileged sanctuary in Tunisia, we'll never crush this rebellion," he said.

UNSEALING THE FENCE

The French had hoped to seal off the border by erecting an electrified, mined, barbed-wire barrier, running 200 miles from the Mediterranean to the desert. "Our electric chair," the colonel said, grimly. "At first, dozens were electrocuted."

And mule and camel arms caravans were largely curbed. But soon the rebels learned to cope with the "fence." Now, they blow up isolated sections with grenades, explode the mine fields by running cattle through them, then slip past.

The colonel's bitterness reflected top-level French frustration in not being able to invade Tunisia to destroy the training bases and arms depots supplying the rebels inside Algeria.

"If we were to do that, America would condemn us," said Robert LaCoste, Algeria's tough, blunt-talking Socialist boss. Interviewed exclusively by Parade, the governor general indicated that Tunisia was uppermost in his thoughts. LaCoste expressed perplexity as to why the United States regarded Tunisia's President, Habib Bourguiba, as trustworthy when he constantly devises intrigues to deceive the West. LaCoste also criticized the aid which Bourguiba is openly giving the rebellion while professing friendship for France.

United States strategists are aware of Bourguiba's faults, including his dictatorial inclinations and his ambitions to dominate all of North Africa. They were, of course, happy over his March 20 statement that Tunisia will stay with the West.

As for his support of the rebels, United States strategists say he has no choice since FLN forces could quickly overwhelm his small army. Any anti-FLN action would reinforce pro-Nasser Tunisian elements.

Toward all this, the United States has tried to steer a middle course. It has attempted to keep Bourguiba happy while not offending the French, who last fall blew their stocks when we shipped some small arms to Tunisia.

The Arab world, meanwhile, was fit to be tied last January when the United States backed a $655 million loan to France—the FLN immediately charging the United States with "supporting French colonialism."

The upshot of it all was that the United States found itself in the incredibly awkward position of indirectly aiding both sides of the rebellion, satisfying neither.

The United States is desperate for Arab friendship. But the French, too, are sensitive, believing strongly in their case. Without this historic ally's industrial and military potential there can be no effective NATO alliance. And as made clear to me by their table-pounding diplomats, the French can be pushed just so far.

So the United States is on the spot. Only Moscow is happy. Moscow has long been fishing in Algeria's troubled waters. A Soviet foothold here would outflank Europe's defenses, could mean control of the Mediterranean and confront the United States with an Atlantic-based enemy. Moreover, Algeria is a potential gateway to all Africa.

"It's not that the rebels are Reds," explained an intelligence officer. "But they're being used by the Reds who've infiltrated their ranks, providing leadership and know-how."

More ominous is the FLN's acceptance of Moscow's overtures. FLN leaders showed up at the recent Cairo parley where Moscow unveiled its newest Trojan horse, the Nasser-blessed Afro-Asian Committee. The FLN announced it would welcome Communist arms. Soon after, the French intercepted a Yugoslav ship 45 miles off Algeria, with 150 tons of Czech-made arms.

But to an elderly Arab shoeshine "boy" in Algiers, all this is insignificant compared to the recent sight of an American who had dropped in for a shine. It was a most welcome omen, a reminder of far happier days when GIs did the town and tourists headed for the Casbah.

As he briskly shined the Parade correspondent's shoes, the Arab appeared steeped in thought. Pausing, he asked hopefully, "Monsieur, do you think the Americans will be visiting us soon?"

Medical and Hospital Payments Within the Provisions of the Social Security Act

EXTENSION OF REMARKS

OF

HON. JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 22, 1958

Mr. McCORMACK. Mr. Speaker, under permission to extend my remarks, I include resolutions recently adopted by the General Court of Massachusetts memorializing the Congress of the United States to adopt legislation which will include medical and hospital payments within the provisions of the Social Security Act:

Resolutions memorializing the Congress of the United States to adopt legislation which will include medical and hospital payments within the provisions of the Social Security Act

Whereas there are a large number of persons in the Nation who are unable to meet the increasing cost of medical and hospital expenses: Therefore be it

Resolved, That the General Court of Massachusetts respectfuly urges the Congress of the United States to enact legislation which will include medical and hospital payments within the provisions of the Social Security Act; and be it further

Resolved, That copies of these resolutions be transmitted by the Secretary of the Commonwealth to the President of the United States, to the presiding officer of each branch of the Congress, and to each Member thereof from this Commonwealth.

House of Representatives, adopted March 24, 1958.

LAWRENCE R. GROVE,
Clerk.

Senate, adopted in concurrence March 31, 1958.

IRVING N. HAYDEN,
Clerk.

A true copy. Attest:

EDWARD J. CRONIN,
Secretary of the Commonwealth.

Surplus Foods for Needy Americans

EXTENSION OF REMARKS

OF

HON. CHARLES H. BROWN

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 22, 1958

Mr. BROWN of Missouri. Mr. Speaker, among the many problems that plague the Nation—our gravest domestic problem, I think, is that we have too many people trying to pay 1958 living costs with a 1948 income. People who established their social security or railroad retirement base when the average annual wage in this country was $1,000 are caught in a vice. People getting a $55-a-month old age assistance check—or $60 from the Veterans' Administration—are, too. A young industrial worker, temporarily unemployed, trying to keep a big family of growing youngsters together on a $30-a-week unemployment compensation check, is in the same vice.

Just the bare necessities of life—food, clothing, and shelter—have become a nightmarish problem to some 20 million American people.

For years, the retired and disabled have clung fast to the hope that, sooner or later, the cost of living will come back around to their level.

But it has been over a decade now since the inflation spiral started. Every day, we get more and more on a wartime footing—more and more of a wartime economy; and the end is nowhere in sight.

We are a Nation renowned for its abundance and its capacity to produce; but we have always had trouble distributing what we produce.

In recent years some progress has been made in housing, especially in the cities. Public housing projects have provided some of our retired people with shelter at discount prices. But too many of our people are trying to exist on inadequate diets. To them, food is a problem.

It is absurd for even one person to be hungry or on a totally inadequate diet when the Nation's Government is accumulating and maintaining stockpiles of surplus foodstuffs.

Surely, within the framework of our free enterprise system, there is some way to get our food surplus into the stomachs of those who need and should have it.

Every once in awhile, I hear the Secretary of Agriculture say that he wants to get some of this blessing of abundance into the mouths of people instead of in Government warehouses.

The Secretary has made some commendable progress in getting his surplus food into foreign mouths—at a 50 percent discount under Public Law 480.

But we are making no progress at all getting this food into 20 million American mouths—the pensioned, the needy, and the unemployed. There is no 50 percent discount for our own—that is only for the Pakistanians, the Japanese, the Yugoslavs, and others overseas.

I question the wisdom of this foreign discount policy not alone on the grounds that charity begins at home. I think we are overlooking a real opportunity for expanding the American farmer's market here at home, and the Government is buying the food, anyway.

Any good sales promotion manager would probably take one look at what we are doing and say: "Look—you are so fascinated with the green grass on the other side of the ocean that you are ignoring completely the best territory you have for increasing food sales.

"Get to work on these 20 million pensioners, disabled, and unemployed Americans who have been forced to cut down to one-half the milk they really want, or who are buying a half-dozen eggs when they really want to buy a dozen. There is your sales opportunity.

"And do not kid yourself that you will get the business by cutting the price one-half cent or 1 cent. Go after it the way the soap companies do—with a coupon operation. That is one of the fastest sales stimulators there is."

Mr. Speaker, this committee is holding hearings on a food-stamp program. At long last, the Congress is getting down to business on a device by which this Nation can extend to 20 million deserving people a cost-of-living pension raise, in the form of a food-coupon program that will really stimulate sales and consumption of some farm commodities—a double-barrel job, if it is done right.

Now, what kind of a program would it have to be, to be right?

Well, I am no expert, but let us think together a little bit:

First, it must be handled through established channels of trade. We believe in the free-enterprise system and we must not circumvent or injure processors, wholesalers, or retailers.

Second, the regular channels of trade are familiar with coupons. They redeem and cash in coupons at grocery stores all over America every day. Why not call the program a food coupon plan instead of a food stamp plan?

Third, if we expect the program to increase per capita consumption—and I feel it should—there is where we get into merchandising.

I respectfully suggest that food coupons should not cover 100 percent of the retail price of a quart of milk or a pound of butter, except in cases of dire need. The coupon should be good for 50 percent of the retail price and the purchaser pays the other 50 percent in cash.

In this way, coupons can be distributed to twice as many worthy people for the same redemption cost; and it would stimulate more net increase in total food consumption.

If 20 million purchasers went into stores with coupons worth 12 cents on a 24-cent quart of milk, you would get more real stimulation into milk consumption than if 10 million purchasers went in with coupons worth 24 cents on a 24-cent quart of milk.

A per capita increase of 10 quarts of milk a year, multiplied by 20 million people is a total increase of 200 million quarts. But if the coupons were made redeemable for 100 percent of the retail price and thereby could be made available only to 10 million people, even if consumption increased 15 quarts each—the total increase would be less.

In instances where the sole purpose is relieving dire need, where people have no money, coupons would have to be worth full retail value. But to do the double-barrel job of getting food to people who cannot buy enough of it and at the same time stimulate consumption for producers—I wonder if the coupons should not be good for 50 percent of the retail value, with the purchaser putting up 50 percent of the retail price in cash.

There is another reason for the 50-percent-of-retail price coupon; and that is the farm value of surplus foodstuffs that best lend themselves to a food-coupon program represents less than 50 percent of the retail cost of the food through normal trade channels.

A coupon good for 24 cents on a 24-cent quart of milk actually is getting into consumption only about 10 cents worth of farm surplus milk. There is 14 cents for processing, transporting, distributing, and so forth.

Now, if you could move that quart of milk into consumption with a 12-cent coupon and 12 cents consumer's cash, the Government coupon is about the equivalent of what the CCC will pay for that much dried milk to put it in a warehouse.

And do not underestimate the power of a 12-cent coupon to get a housewife to purchase a 24-cent quart of milk, or a 40-cent coupon to get her to purchase an 80-cent package of flour.

The soap companies, the coffee blenders, the cereal manufacturers can prove to you that it works.

This is a way to stimulate increased consumption and take a big step forward toward eating our way out of some of this surplus production.

Now, everyone knows that it will not make any real dent in the 1 billion bushels of corn or the 900 million bushels of wheat now owned by the CCC.

Coupons cannot solve the problem-crop difficulties which plague us.

Certain commodities will lend themselves to a food-coupon program; and others will not. But let's not give up on the food stamp idea just because every commodity might not fit into it. Let us take those that do fit and see how it works.

The commodities that lend themselves most favorably to a food-stamp program, in my opinion, are fluid milk and cream, butter, cheese, wheat flour, dried beans, poultry meat and eggs, and red meat.

Right now the CCC does not own any red meat, poultry meat, or eggs. They do hold quantities of every other commodity I mentioned, and are apt to acquire additional quantities at any minute.

Now what about costs?

Here is what the average American spends at retail price for the following foodstuffs, now in surplus:

Commodity:	Per year
Fluid milk	$34.90
Cream	4.35
Butter	6.30
Cheese	4.85
Wheat flour	4.70
Dried beans	1.05
Cornmeal	1.05
Oatmeal	.55
Rice	1.05

Retail expenditures per capita for other foodstuffs run approximately:

Product:	Per year
Eggs	$16.80
Broiler meat	8.40
Turkey	1.68
Red meat	85.00

The average American consumes about 14 quarts of fluid milk a year. This is an average. Obviously, many people drink more than 14 quarts a month.

Chances are, our pensioners and our needy did not drink 7 quarts of milk a month last year. But if they got $1.50 worth of food coupons each month with their Government check—the coupons good for one-half price on each quart—they could buy their 14 quarts for the same amount of cash they have been spending for 7 quarts.

This would be really expanding markets. And the program can be as big or as small as Congress wishes to make it.

If the 5.5 million people now receiving public assistance were to receive coupons for milk, and flour, and other products now in Government surplus, and each got $29.40 a year—the cost of the food coupon program would total $165 million a year—or about $75–$80 million more than it costs the Government to hold the food in storage as is done now.

Actually, it may not run even this much, because present surplus disposal policies, wherein the food is sold in foreign markets at a 50-percent discount plus ocean transportation costs, are quite costly.

Personally, I would like to see this coupon program include more people. Everyone in the lower brackets of social-security retirement, railroad retirement, veterans, unemployment compensation, and so forth, need it.

There are some 16 million receiving retirement, disability, and survivor benefit checks from United States Government agencies.

Say, 8 million of them get less than $80 a month. They could well be included in this program and not exceed the $1 billion authorized.

For less than $200 million a year, the unemployed could get a 50-percent discount on food in surplus. Why not coordinate this program with any changes in unemployment compensation now under consideration?

Milk, cheese, butter, flour, cornmeal, eggs, and poultry meat could move into the mouths of 20 million deserving Americans—our disabled, blind, our needy, and our sorely pressed retired. Instead of piling it up in warehouses, or selling it all to the Japanese or Pakistanis at a 50-percent discount, we could sell some of it to 20 million of our own people at the same 50-percent discount.

Surely, we can summon enough wisdom among us to devise a food-coupon program that will help alleviate some inflation problems and move surplus food into American stomach instead of storage.

Resolution Protests Administration's Farm Policies

EXTENSION OF REMARKS
OF
HON. COYA KNUTSON
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 22, 1958

Mrs. KNUTSON. Mr. Speaker, the Marshall County Democrat-Farmer Labor in convention assembled April 19, 1958, passed a resolution condemning the disastrous administration farm policies. Under unanimous consent I insert in the RECORD the warning and proposal as to remedies.

The resolution follows:

Whereas it is the planned policy of the present Secretary of Agriculture and the Republican administration to force the small farmer out of farming; and

Whereas should this policy continue it will have serious economic consequences for the farm population as well as for the United States as a whole; and

Whereas it is morally wrong for a powerful branch of the United States Government to deliberately set out to ruthlessly eliminate a large segment of our population; and

Whereas since 1952, according to the United States Department of Agriculture, farm income has declined from $14.3 billion to $11.5 billion; and

Whereas the farm population has been reduced from 15.5 percent of the population in 1952 to 12 percent of the population in 1957, according to the United States Department of Agriculture; and

Whereas during the past 5 years of the Eisenhower-Nixon-Benson farm program the farmers share of the food dollar has dropped 7 percent while prices to the consumer went up 2 percent: Now, therefore, be it

Resolved, That the Marshall County Democrat-Farmer Labor in convention assembled this 19th day of April 1958, do hereby deplore the depression in farming brought on by the policies of the Republican administration, and hereby request that farm prices be restored to 100 percent of parity; that the present provisions of the Soil Bank law be most carefully studied with a view toward improvement or substitution of a better program; and that farmers, rather than processors, be allowed to set the policies and administer the farm program; and be it further

Resolved, That copies of this resolution be sent to Congresswoman Coya Knutson and to Senator Hubert Humphrey, and to Byron Allen, State commissioner of agriculture, and to the State Central Committee of the Democrat-Farmer Labor Party.

Free Enterprise and the Recession

EXTENSION OF REMARKS
OF
HON. J. ARTHUR YOUNGER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 22, 1958

Mr. YOUNGER. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the following article form the San Francisco Examiner of April 20, 1958:

FREE ENTERPRISE AND THE RECESSION

NEW YORK, April 19.—The insistent clamor for action in Washington to reverse the recession trend raises questions about the nature of our economic system.

Whether for better or for worse in the last quarter of a century the New Deal and the Fair Deal introduced assumptions about the responsibility of the Federal Government which alter the philosophy behind the American system.

Under a pure competitive system of free enterprise, Government's role is largely restricted to setting up the traffic rules.

But under the guise of advancing social responsibility, the role of government in economic affairs has significantly widened.

While neither of the two major parties show any disposition to resist the new trend, there are differences of degree to which the new philosophy of government in the economic arena is accepted.

This was dramatized at a recent press conference when President Eisenhower was asked by a reporter how to make the recession recede. The Chief Executive's reply was "buy." When pressed as to what to buy, he indicated "anything."

Contrary to the impressions of some, this expression by President Eisenhower was neither frivolous nor haphazard.

It stems from his profound philosophic devotion to the American free society in which the selection of goods and services, of jobs, and of ideas and spiritual concepts are subject to individual determination.

While through the long decades of American history such dependence on self-reliance, rather than Government crutches, has produced the greatest level of popular material well-being that the world has ever known, it takes courage to defend a free economic society in interludes of dips in the near-term economic trend.

When the national economy is taking 1 step backward before taking 2 steps forward, the incidence of trouble bears down heavily on that group which is temporarily squeezed out of opportunities for gainful employment.

Both parties accordingly now accept a compromise with pure individualism to the tune of favoring Federal-State unemployment benefits. Both the administration and the political opposition also advocate extending the time of the payments during the current recession.

But humane adjustments to the rights of unrestrained competition are not tantamount to accepting the principle that the creation of job opportunities is a Central Government function.

Yet implicit in the clamor for passing new Federal laws is the assumption that job opportunities spring from governmental action.

The President's emphasis on buying helps to clarify the manner in which the American national economy differs from a regimented centralized planned economy in the Communist mold.

Behind the Iron Curtain, the area for individual discretion in the choice of goods and services, jobs and ideas is extremely narrow. The decisions as to what should be produced and in what quantities is made by little commissars in big jobs. The risk of anticipating future customer behavior is reduced by the arbitrary and dictatorial policy of substituting the judgment of dictators for that of the people.

Thus, under Soviet type dictation, a central decision can be made whether to concentrate on rockets and de-emphasize passenger automobiles. While such directness may superficially seem to simplify the whole complicated problem of making and exchanging things in the contemporary world, such regimentation robs contemporary living of much of its graciousness, charm and self-expression. Furthermore, the spiritually satisfying free economy has proven to be, through the decades, the most successful and productive.

A price we pay for freedom is some intensification of business risks and of fluctuations.

It is academic to dwell on the inherent merits of our system unless it satisfies popular yearnings.

Accordingly, at this juncture, it behooves men in business management to be active in talking steps specifically calculated to deal with the causes of recession. These foci of infection in the national economy stem from maladjustments, imbalances, and disparities accumulated during the boom. The recession can be shortened by dealing thoroughly with these casual factors, and thus responding to the evident mandate of customers for better values.

Union leadership, which also should be devoted to free enterprise, should show responsibilities this year in bringing to the bargaining table concepts which will make for economic health. Unless the unions and management make freedom work, there will be unreasoning clamor after the European precedent for governmental intervention in setting wage and other standards for employment.

Thus, personalities in business who through better advertising, better merchandising and product improvement create an expansion in demand will be responding to the public desire for an increment in employment opportunities.

Thaw Rather Than Freeze

EXTENSION OF REMARKS
OF
HON. PERKINS BASS
OF NEW HAMPSHIRE
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 22, 1958

Mr. BASS of New Hampshire. Mr. Speaker, under leave to extend my remarks in the RECORD, I include two fine editorials of the 2d of April which appeared, respectively, in the Washington

Evening Star and the Christian Science Monitor. These editorials summarize the President's wise veto message of the bill freezing farm price supports.

[From the Christian Science Monitor of April 2, 1958]

TO THAW FARM CONTROLS

There are honest differences of opinion about how best to help American farmers who are in economic trouble. There is also politics. We shall not attempt to judge what motives dominated the move in Congress to freeze crop price supports and acreage allotments at last year's levels. But we do believe President Eisenhower displayed wisdom and courage in vetoing the bill.

It is easy to understand why many farmers feel crop prices should be artificially supported. They see big labor and big business boosting their own prices year by year. Since farmers cannot so readily limit supplies to hold up prices, they believe that the Government should give them special help. Such help has been attempted through limiting acreage and buying crops at an above-market price.

But this has proved largely self-defeating. The little farmer and the marginal grower who most need help seldom raise enough to get much benefit from price supports. The big corporation farms, which often can make a profit at half the current price-support levels, get the big Federal payments. And surpluses are piled up which overhang the markets. Meanwhile growers tend to price themselves out of markets and to become dependent on Government aid.

It is this situation which causes the President to say that a thaw rather than a freeze is needed. Last year, by tremendous efforts—and at the risk of incurring retaliation from countries which object to dumping—the Government sold surpluses abroad and cut its holdings by $1 billion. It naturally does not wish to cultivate new surpluses with high price supports. We believe Mr. Eisenhower is right in saying that the best interest of the Nation and the farmers lie in loosening controls.

[From the Washington Evening Star of April 2, 1958]

FAVORING A THAW

The essence of President Eisenhower's veto message on the bill freezing farm price supports was that what the farm economy needs is a thaw rather than a freeze. He supported his thesis adequately in reciting the consequences that would result from even a temporary return to the inflexible support formula. These consequences would be the piling up of more surpluses in Government warehouses, restricting the growth of markets, doing little or nothing for the small operators and merely postponing the time when agriculture can be released from the straitjacket of controls.

At the same time, the President offered some rather impressive evidence that administration efforts to gradually relax controls and whittle down the structure of jerry-built subsidies have been more beneficial than otherwise. Under the flexible support program, for example, the farm price index is 9 percent higher than when last under rigidly high supports, and the brightest picture is found in the segments of agriculture without production controls and price supports. In addition, Mr. Eisenhower pointed out that extending 1957 supports to 1958 despite changes in demand, in supply and in surplus stocks * * * would completely disregard economic fact."

In place of this ill-advised and at least partly politically motivated legislation, the President has proposed an alternative program—administrative and legislative. It tends, in brief, toward a further removal of Government restrictions and with increased authority to move burdensome surplus stocks abroad. It is not a formula for going backward as was the vetoed legislation. Both the farm economy and the Nation as a whole could expect to benefit if these recommendations were translated into action.

Funeral Sermon for Congressman August H. Andresen

EXTENSION OF REMARKS

OF

HON. H. CARL ANDERSEN

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 22, 1958

Mr. H. CARL ANDERSEN. Mr. Speaker, it was my sad mission earlier this year to attend the final services for our beloved colleague, the late August H. Andresen, of Minnesota.

Those of us in attendance had the privilege of hearing a most eloquent sermon from a distinguished United Lutheran Church pastor who knew well our departed colleague. Rev. Orville K. Wold choose his text from II Kings 20: 2–3, 19, 20, and, under leave to extend my remarks in the Appendix of the RECORD, I am including this beautiful tribute to August Andresen which I know many of his friends will enjoy reading:

A STATESMAN AND HIS GOD—FUNERAL SERMON FOR CONGRESSMAN AUGUST H. ANDRESEN, UNITED LUTHERAN CHURCH, ORVILLE K. WOLD, PASTOR, JANUARY 20, 1958

Text from II Kings 20: 2–3, 19, 20.

This is the second time in a period of 8 months that this family has come into this church for similar reasons. The first was the funeral for Mrs. Andresen last May.

The Honorable August H. Andresen has been memorialized in eulogies in the many groups in which he has been a figure.

His colleagues in Congress spent 90 minutes last Tuesday paying him tribute.

Local groups all over the First Congressional District of Minnesota, and elsewhere in our State, and wherever the influence of Mr. Andresen touched, have recalled the work of this public servant.

Few conversations on the streets in this area have not included his name this past week.

There is neither the need nor the time this day for me to compile or edit these things that have been said so well—by so many of you.

We can feel particularly well pleased that so many of these things did not wait for review until this week. A year ago last fall, August had an opportunity to hear these things with his own ears at a testimonial banquet in Winona. At commencement at St. Olaf College last spring, his alma mater recognized him with a distinguished alumnus award. That which has been said on these occasions counts immeasurably more than that which is being said about him this week.

In the Old Testament there is a record of a statesman, whose name was Hezekiah, King of Judah. It could just as well have been the name of any God-fearing man in public office, no matter where or when or whom he may have served. In the 20th chapter of the Second Book of Kings there are details surrounding his death.

We shall not press this account into a perfect likeness of any other person or situation in life; yet there are some things here that speak to us for such an occasion as this. There is above all a glimpse of a relationship of this statesman with his God that comes through an experience of the king with his pastor.

First of all, the passage reveals a prayer of the king; secondly, a conviction of the king about the source of his faith; and thirdly, his record. When you have said that much about a man, there is not much left to be said.

I. A PRAYER OF A MATURED STATESMAN

This was a moment of extreme grief, in which the king was calling upon his spiritual counselor, Isaiah. He was sick unto death. He prayed: "Remember now O God, how I walked before Thee in faithfulness and a whole heart." Then he wept bitterly.

It takes a brave man to call God's attention to one's past at any time, and especially on one's death bed. When a man as wise as Hezekiah prays it, it must mean that he has lived life circumspectly. The gist of his prayer seems to be, "Let God be the judge. It is my business to be faithful."

The remarkable thing about life is that God expects more of us by way of faithfulness than by way of perfection.

We make our moral and spiritual errors, and call them sin.

We make our errors of judgment. Men may be impatient and unsympathetic with us, but we find in the mercies of God a great sympathy.

God does ask for perfection too, but he knows the problems which we have in contending, and he is sympathetic.

The claim to mercy which Hezekiah made was on the basis of his faith and faithfulness to his God.

We are not in a position to pass final judgment on each other, but we do recognize a sense of duty in our departed public servant which demonstrates a faithfulness to one's task. In the issues of government as in religion you do not expect to find all men agreeing with you at all times. That is not the purpose with which one pursues his service. He does it to fulfill the interests that bring in the purposes of the Creator God in the domain of men.

No man is indispensable, but some men serve the interests of, God and men better than others and in larger fields of endeavor.

There are services to the whole of society which men in the position of Congressman Andresen and his colleagues are committed to make.

There are services to individuals that need to be recognized apart and above the group. In our type of society this is important. There are times when exceptions need to be made to the rule; conditions that surround the person that may make the rule do him an injustice. August seemed to be a master as determining when such exceptions could be made without jeopardising the whole.

He was faithful to his constituency. He was sensitive to their needs, and never did he separate himself from the folks he represented. He recognized that he could reserve the right of his own judgment; but people respected his attention to their needs, so that when his judgment was contrary to their requests or expectations, they understood that they too could be wrong in what they expected.

He was faithful to his conscience. He sensitized this conscience in divers ways; one of which was attendance at public worship. When he was in Washington he worshipped with the congregation of the Church of the Reformation under Dr. Folkemer. When he was home, he was faithful in attendance at this, his home congregation.

He was faithful to his calling. His father heeded the call to the Christian ministry. August heeded a call to another duty; first to the profession of law; and from there into the service of government. This, too, is of God, and for this too, God gives gifts,

and sets men apart for particular service to Him and to men whom He has created.

Different men at the close of their lives having been given different assignments have expressed themselves to their Creator. It must have been satisfying for Hezekiah at the close of his life to look back and be able to say: "I have walked before Thee with faithfulness and a whole heart."

As Jesus drew near the close of his earthly life, there arose out of that magnificent high-priestly prayer, a similar satisfying surrender: "Father, the hour has come; glorify Thy Son that Thy Son may glorify Thee. This is eternal life, that they may know Thee the only true God, and Thy Son whom Thou hast sent. I have glorified Thee on earth. I have accomplished the work which Thou gavest Me to do." Most men may not be that certain of their assignment. We are not able to be that sure. Jesus was.

We may be able to express ourselves better with the apostle Paul: "The time of my departure has come. I have fought the good fight, I have kept the faith. I have finished the race. Henceforth there is laid up for me the crown of righteousness, which the Lord, the righteous judge, will award to me on that day, and not to me only, but also to all who have loved his appearing."

II. A GLIMPSE AT THE KING'S CONVICTION ABOUT A WORD FROM GOD

Toward the close of the conversation of the king and his pastor, come these words of Hezekiah: "The word of the Lord which you have spoken is good."

There is a word from the Lord for such times as these in which we live; for such a duty as was that of Mr. Andresen; and for such grief that he was destined to bear this last year.

There are some laws which man does not make, and some conditions which man's laws cannot control. There are some parts of his destiny made on man's behalf about which he does very little.

Some men spend a lifetime searching creation, and are guided by natural laws which God has written into them.

Others will spend a lifetime taking God's cues to determine moral laws which govern their relationship to each other, and to their God. In our Judeo-Christian heritage these spring from 10 simple commands of Moses.

As free creatures, God holds us responsible to adapt His wise and loving desire to fluctuating circumstances. He speaks to us. God works through men who are chosen by Him to make these adaptations and applications for their times within the framework of His desire.

We thank God for men who are sensitive in their search for the will of God.

His word and His will have been made known to us through His Son, Jesus Christ. Laws that men made sent Him to a cross. Yet there is more to the cross than that. It was here that He shared the experience of death, as He has shared in all of the other experiences of flesh with men. Yet it was here, the writer to the Hebrews reminds us, that "He destroyed him that has the power of death * * * and delivers all who through fear of death were subject to lifelong bondage."

This is the victory invested upon man in the Christian faith. We may still weep. We may still grieve, for we are complex creatures. Some have said that the grief of August these 8 months has hastened his demisal.

It is not strange. Our Christian faith is not some anasthesia to provide an escape from reality. Our faith is a direction of life. It is not a "do-all." It is simply a trust in One who can do all. They said of Jesus, "He does all things well."

It is not surprising that August should grieve. Without being blessed with children in his home, he and Julia were drawn to depend upon each other that much more.

He leaves a host of friends, here and in Washington. No one but those in public life know how lonely public life can become. Reisman, a sociologist, has described our modern American society as "the Lonely Crowd;" man, lonely, though surrounded by crowds.

The word that Hezekiah spoke to his pastor, I have heard Mr. Andreson speak as he left the church on a Sunday morning, "The word of God, spoken, is good." The message of the Holy Scriptures is relevant and good.

III. THE RECORD OF ACCOMPLISHMENT

"The rest of the deeds of Hezekiah, and all his might; how he made the pool and the conduit and brought water into the city are written in the book of the Chronicles of the Kings. And Hezekiah slept with his fathers". This is the record for Hezekiah.

That which August has accomplished may be found in the CONGRESSIONAL RECORD, and in the memories of the people whom he served. The details may lean in the area of agriculture, conservation and labor.

There is also a Book of Life which God must keep. Something which God chooses to record may be written there.

But this is the record of the moment of greatest victory: "Now after the Sabbath, toward the dawn of the first day of the week; Mary Magdalene and Mary went to see the tomb. And behold, there was a great earthquake; for an angel of the Lord descended from Heaven and came and rolled back the stone, and sat upon it. His appearance was like lightning, and his raiment white as snow. For fear of him, the guards trembled and became like dead men.

"But the angel said, 'Do not be afraid; for I know that you seek Jesus who was crucified. He is not here; He is risen, as He said. Come, see the place where He lay. Then go quickly and tell His disciples that He has risen from the dead and that He is going before you to Galilee" (Matthew 28). Jesus is the King who mastered death, man's final enemy.

Here is the fulfillment of Job's anticipation: "I know that my Redeemer liveth, and because He lives, I, too, can live."

Wilderness in New York

EXTENSION OF REMARKS

OF

HON. LEO W. O'BRIEN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 2, 1958

Mr. O'BRIEN of New York. Mr. Speaker, a great deal of the national interest in wilderness preservation that is now focused on the wilderness bill has developed through the years from beginnings in my own State of New York. At the latest annual convention of the New York State Conservation Council held in Albany, the speaker at the banquet, on October 4, 1957, had as his subject Where Wilderness Preservation Began. That speaker was Howard Zahniser, one of our national conservation leaders, the executive secretary of the Wilderness Society. Speaking of Albany, the Adirondacks, and the Catskills he said: "This is where wilderness preservation began." He then traced the development of New York's early appreciation of wilderness values and after discussing New York's present conservation program, led the banquet audience in a reading of article XIV, section 1, of our State constitution, which requires that the Adirondack and Catskill Forest Preserve shall be forever kept as wild forest lands. Finally, he related New York's experience to the natural need for a firm wilderness policy. "New York State," he said, "with such excellent experience in perpetuating wilderness in the forest preserve, can be of great help in seeing such a program firmly established naturally."

Mr. Speaker, I ask unanimous consent that the address entitled "Where Wilderness Preservation Began," by Dr. Howard Zahniser, be printed in the Appendix of the RECORD.

The address follows:

WHERE WILDERNESS PRESERVATION BEGAN

(Address by Executive Secretary Howard Zahniser of the Wilderness Society delivered at the annual banquet of the New York State Conservation Council in Albany, October 4, 1957)

I am very happy to be here to bring you the greetings of the Wilderness Society and those throughout the United States and in other countries whom I represent as the executive secretary of the Wilderness Society. People everywhere—some 12,000 of them are on our own roll of membership—people everywhere are doing their best to see that wilderness preservation needs are met anywhere. I mean anywhere there is a need for bringing to a focus the interest of the people dispersed through the country, who are concerned with these problems. In a sense I represent them all here tonight.

Last summer, the summer of 1956, on the 9th of July, my wife and our four children and I left our home at the Nation's Capital and drove that day through the metropolis, New York City, and camped that night, along the Sacandaga River, on the edge of a stretch of wilderness that extended for some 20 miles beyond the river along which we made our camp. Had we walked half way across that stretch of wilderness, we would have been at least 10 miles from a road in any direction. In one day, at this late date in our American history, we had been able to travel from the capital of the country, through its metropolis, and camp that night on the edge of a vast expanse of wilderness. Such is the opportunity that we still have in this country.

PIONEERS IN WILDERNESS APPRECIATION

A century ago this year, in 1857, a writer by the name of S. H. Hammond wrote a book entitled "Wild Northern Scenes." In this volume he talked about his own Racquette River country. He began to express fear lest civilization push its way to that wild country. Here is what he said:

"Had I my way, I would mark out a circle of a hundred miles in diameter and throw around it the protecting aegis of the Constitution. I would make it a forest forever. The old woods should stand always as God made them, * * * and new woods should be permitted to supply the place of the old so long as the earth remained."

That was written in 1857. Next year the Atlantic Monthly in July carried an article by Henry David Thoreau about a series of trips he made in 1853 in the Maine woods and, at the close of the article in the July issue, Thoreau first presented a question as to why shouldn't we have our national preserves, in which the bear and panther, and some even of the hunter race, might still exist, and not be civilized off the face of the earth—"not for idle sport or food, but for inspiration and our own time recreation?"

Some years earlier in 1833, George Catlin, a Philadelphia lawyer who became a great western artist and painter of western scenes, writing a letter to the Daily Commercial

Advertiser in New York City, made a suggestion about having great national parks. He had suggested a Government policy that would preserve some of these lands "in their pristine beauty and wildness, in a magnificent park."

J. T. Headley in his 1849 volume The Adirondack; or Life in the Woods, wrote: "I love nature and all things as God has made them. I love the freedom of the wilderness"—a phrase that is of great interest and is used a great deal by us. That was back in 1849. The book was a compilation of letters that he had written to his friend, Henry J. Raymond, a fellow reporter on the New York Tribune, who later founded the New York Times, who, himself, later became a writer on the Adirondacks. In 1855, he published a series of articles describing a Week in the Wilderness.

Most of us have heard about the Rev. William H. H. Murray, "Adirondack" Murray, whose 1869 book stirred so much interest and enthusiasm. One of the most interesting suggestions he made about the use of, and the appreciation of, the wilderness was a suggestion that churches send their pastors to the wilderness for vacation. He said when they came back—his words are too good to paraphrase:

"For when the good dominie came back, swarth and tough as an Indian, elasticity in his step; fire in his eye; depth and clearness in his reinvigorated voice, wouldn't there be some preaching. And what texts he would have from which to talk to the little folks in the Sabbath school. How their bright eyes would open and enlarge as he narrated his adventures, and told them how the good Father feeds the fish that swim, and clothes the mink and beaver with their warm and sheeny fur. The preacher sees God in the original there, and often translates him better from his unwritten works than from his written word."

Of equal interest to me is a complaint the Reverend Mr. Murray made that, while he was writing these words, there was so much city noise in Boston, where he was writing, that it bothered him very much. To me, living in the midst of the clamor and roar of airplanes and the rush of traffic, I am interested to know that back in the midst of this earlier century, which I have considered quiet and serene, he was complaining:

"How harshly the steel-shod hoofs smite against the flinty pavement beneath my window, and clash with rude interruptions upon my ear as I sit recalling the tranquil hours I have spent beneath the trees."

So noise, I guess, is a relative thing.

VERPLANCK COLVIN AND WILDERNESS PRESERVATION

Those expressions of appreciation and those innovations from George Catlin in 1833, S. H. Hammond in 1857, and others are pleas for preserving areas of wilderness which must have fired the imagination and determination of Verplanck Colvin.

One of the reasons I like to come to Albany is that I remember that, a decade and a century ago—I think in 1847—Verplanck Colvin was born here in Albany. He walked the streets of this capital city and worked in its halls and corridors for the preservation and appreciation of the Adirondacks, which he knew better than any other man ever yet has known them. (I have read such tributes made by those who should know better than I the degree of his acquaintance and that of his possible rivals.) He took the measurement of these mountains. He was a surveyor, and, as William Chapman White says, lectured without stopping for 20 years on the need for the creation of an Adirondack Park or timber preserve. When the State Park Commission was established in 1872, he became superintendent of the State survey. He was largely responsible for the creation of the Adirondack Forest Preserve in 1885.

When the legislature created a Forest Preserve and Commission it said: "The lands now, or hereafter, constituting the Forest Preserve shall be kept forever as wild forest lands." That was confirmed by and strengthened by the 1894 constitutional convention, which adopted article 7, section VII. (Later you took 7 and 7 to make article XIV.)

Let's all stand and read that article XIV, section 1. It is in your program opposite the menu.

(Convention rises.)

(Reads article XIV. Section 1:—"The lands of the State, now owned or hereafter acquired constituting the forest preserve as now fixed by law, shall be forever kept as wild forest lands. They shall not be leased, sold or exchanged, or be taken by any corporation, public or private, nor shall the timber thereon be sold, removed or destroyed.")

(Convention is seated.)

That was an historic declaration of a sovereign State of the United States declaring in its basic, fundamental law a purpose to keep forest lands forever wild.

Among the "Selected Papers and Addresses" in the recently published volume entitled "Louis Marshall: Champion of Liberty" edited by Charles Reznikoff, I have read with special interest the record of the debate in the 1915 constitutional convention on the forest preserve. Mr. Marshall said then, in leading the debate in defense of the forest preserve—he had been a member of the 1894 convention also—"If I were asked to state what the most important action of the convention of 1894 was, I should say without the slightest hesitation that it was the adoption of section 7 of article VII of the constitution which preserved in their wild state the Adirondack and Catskill forests."

As succinct a statement as I have yet seen on the forest preserve was in a January 14, 1952, editorial in the New York Daily Mirror. It says:

"The single most valuable possession that we, the people of New York State, all 15 million of us, own in common, and hope to maintain for our children and grandchildren forever is the forest preserve."

WILDERNESS PRESERVATION IS AMERICAN PURPOSE

This recognition of the value of wilderness as wilderness is something with which you have long been familiar here in New York State. It was here that it first began to be applied to the preservation of areas as wilderness.

The Federal Government, by an act of Congress approved by President Abraham Lincoln in 1864, granted the Yosemite Valley to the State of California upon the condition that it should be "held for public use, resort and recreation."

Two decades later, by an act of Congress approved by President Grant, Yellowstone National Park was dedicated and set apart as a public park or pleasuring ground for the benefit and enjoyment of the people, and provision was made for the preservation from injury or spoliation of all timber, mineral deposits, natural curiosities, or wonders within said park, and their retention in their natural condition.

But here in New York, in 1885, by State legislative action and then in 1894 with constitutional force, you, the people of New York State used the term "forever wild" to describe a land management purpose. The people of this State thus began to cherish wilderness in a way that became more and more explicit as our great National Park System came to be valued because it not only protected for the public its superlative areas of scenic wonders but also included areas of wilderness, and as the United States Forest Service began to establish primitive, wilderness, wild, and roadless areas within the national forests.

It was in the southwest in 1924 that the type specimen of these national forest areas was established by regional administrative action in the Gila National Forest. Aldo Leopold had begun in the 1920's to point out to the Nation the importance—recreational and ecological—of the national forest wildernesses and also the growing threats to their persistence; and it was he who was chiefly responsible for the establishment of the Gila wilderness.

ROBERT MARSHALL AND NATIONAL POLICY

By the 1930's, when a national policy for wilderness preservation in the national forests had emerged, the great wilderness interpreter and champion from New York, Robert Marshall, had not only written his now classic interpretation entitled, "The Problem of the Wilderness" but had also achieved his position on the staff of the United States Forest Service where he was able to contribute so notably to the establishment of areas for preservation and to the formulation of regulations for their protection. He was a forester, a thinker, a writer, a philanthropist. He had learned wilderness in the forever wild Adirondacks. Here, with two companions, he had been the first to climb all 46 of the peaks 4,000 feet high or higher. He had also seen the great western areas of still living wilderness melting away "like the last snowbank on some south-facing mountainside during a hot afternoon in June." Activated by those observations and inspired by his own knowledge he set out to see preserved as many as possible of the areas of wilderness throughout the United States under his jurisdiction.

Paul Schaefer has told me also how, on Mount Marcy, he once saw Bob Marshall stirred with the need for mobilizing people who would, as citizens, support such governmental policies. It was Robert Marshall from the Adirondacks who was the principal founder of The Wilderness Society. In our country, you know, when any public purpose becomes distinct, some organization is formed. We are "experts" in the formation of organizations. The Wilderness Society in the fullness of time became the American people's public evidence of a distinctive purpose, and it was Robert Marshall from the Adirondacks who was central in that organization.

THE FOREST PRESERVE CONCEPT

The concept of the forest preserve is one that I know is deeply cherished. It is indeed a noble and brilliant concept. To sense the practical idealism of this concept—this establishment of a forest preserve within the Adirondack and Catskill Parks—is to feel a deep admiration and a pride too in the noble realism of the people of the State. Here are these great parks with their intermingled State and privately owned lands. Within their "blue line" boundaries there is established a special and unique kind of human land use. Here the public purpose is the preservation of wild forest lands in their unspoiled wildness, in the public interest.

Elsewhere the people of New York State, I also recognize, are realizing the similarly great and noble public purpose of providing State park and other recreational areas for the enjoyment of the outdoors developed and improved by all our various kinds of modern conveniences. But, within these blue lines the public purpose, in the interest of all the people, of the present and succeeding generations, is the preservation of wild lands in their primitive splendor and beauty.

An impressive aspect of the program that has developed in carrying out and developing this forest preserve concept is its recognition of the way in which private enterprise can meet the needs and convenience of the public. As time goes on and generation succeeds generation, there can thus be realized in an orderly, harmonious, democratic

fashion, the perfection of the forest preserve as a perpetuation of these wild lands, with areas in private ownership near and adjacent for the accommodation and assistance of the ever increasing number of visitors who will most assuredly be seeking out these wild retreats.

NO NEED FOR NEW-FANGLED ZONING

Thus there has been developed here in New York State this unique concept. Here we do not need any new-fangled zoning. Here we already have one of the greatest pioneer zoning programs that has been developed in our great American, modern experienced management of public lands. The forest preserve itself is a zone, if you wish to call it that. The Adirondack and Catskill Parks are zones. This whole concept of the forest preserve within specially established State parks is New York's own zoning program.

The citizens of New York State, with their often demonstrated concern for the preservation of these wild forest lands, should most assuredly, in my opinion and observation, look most searchingly at any zoning programs proposed as substitutes for their own wise provisions which so effectively began accomplishing zoning purposes long before ever the term became as popular as it now is. Surely, it is much better, in safeguarding the Forest Preserve, to be old-fashioned with parks and preserves that protect the wilderness, than to be brilliantly modern with something called zones that permit the destruction of the wildness of these forest lands that is being cherished.

The citizen who lives in a Class A Residential Zone is nonetheless distressed by the intrusion into his neighborhood of a commercial development simply because the intrusion was preceded by the zoning action of an up-to-date board of zoning adjustment. Similarly, the loss of New York State's wilderness will be no less shocking to its people simply because it may be accomplished by means of a zoning program.

ESTABLISHING A NATIONAL PROGRAM

New York State, with such excellent experience in perpetuating wilderness in the Forest Preserve, can be of great help in seeing such a program firmly established nationally. That possibility now exists in some legislation we refer to as the wilderness bill, based on the same assumption in our national program that we have been discussing here: that our civilization is such that it is destined to occupy all areas except those we deliberately set aside for preservation unmodified; and, secondly, that if we are to have areas of wilderness existing in perpetuity, existing forever wild, we must have them through a public program for designating areas and protecting them faithfully through the years, as you have done here.

As we face this problem nationally, we do not have the opportunities that existed in 1885 and 1894. We come to the preservation of the wilderness—the raw material out of which we have fashioned our civilization—we come to the preservation of this basic resource, last.

The first and greatest of our resources is the last we have recognized as being in need of protection. As we come to it, we find that the first of the assumptions to which I referred has already been realized in our national programs. Every area of wilderness we have within our national public lands is now dedicated to some other purpose.

Fortunately, some of these purposes are absolutely consistent with the preservation of wilderness. The national forests contain areas of wilderness that can persist while still serving their multiple purposes as national forests for the preservation of watersheds, for the use of sportsmen, and other recreationists, for research, and so forth. In many ways they can continue to serve their basic purposes as national forest lands and still be preserved as wilderness.

Similarly our national parks—48 of them we calculate—have areas of wilderness. Out of 274 wildlife refuges, some 20 of them have areas of wilderness.

THE WILDERNESS BILL

We therefore propose, as a national policy and a national program, to stabilize these areas as areas of wilderness within a National Wilderness System. That is the Wilderness bill purpose. We do not propose to change the administration of these areas. We do not propose to interfere with their integration with other areas of land handled by various agencies. We are suggesting merely at this opportune time in our history that we say to the administrators of these areas: "Treat them as wilderness." Wilderness is a character that land has while serving maybe another purpose that is consistent with it.

FOREVER WILD

After all, it is not so important to know where wilderness began as it is to know that it is going on and on for generation after generation. You have a wonderful phrase here "forever wild" which is an inspiration and a characterization of the nature of our own undertaking.

We are not fighting a rear guard action. We are not simply trying to delay the inevitable taking over of all our wilderness lands by a fast moving civilization. We are trying—in this time of emergency, which is also a time of opportunity—to fashion a policy and develop a program that, if successful, will persist in perpetuity so that we shall always have these areas of wilderness.

Let us not think that we are minority fighting against a great majority which is inevitably going to crush us. We are not. We are representatives of a great majority.

Every time in my experience of a dozen years in working intimately in this field—every time that the people of the United States or of any State, have had an opportunity to express themselves on this issue, they have said, "Let's preserve our areas of wilderness."

If nationally we can do this, as I think you have done it here in New York State, through a policy which is enunciated and put firmly into our basic laws, and then can develop a practical reasonable program within that policy, I think we can expect to have these areas of wilderness persist on and on. I know that it is a daring thing—a bold thing for a man whose life lasts 40, 50, 60, 70, or 80 years to be talking in terms of eternity, but that is indeed what we are doing. We are thinking of the eternity of the past that now exists in these areas of wilderness, and we have the presumption to say that we are going to do our best to make it possible for those areas from the eternity of the past to exist on into the eternity of the future. That is our faith.

Tree Farming and Land Ownership

EXTENSION OF REMARKS

OF

HON. FRANK W. BOYKIN

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 22, 1958

Mr. BOYKIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a most interesting and informative article written by Mr. Ivan R. Martin, extension forester, Alabama Polytechnic Institute, entitled "Tree Farming and Land Ownership" which appeared in the March 15, 1958, issue of Alabama Business, published by Bureau of Business Research, School of Commerce and Business Administration, of the University of Alabama:

TREE FARMING AND LAND OWNERSHIP

(By Ivan R. Martin)

One hundred thousand acres a year are going back to trees in Alabama. This has been going on for the past 20 years. It is no cause for alarm. It helps prove that Alabama farmers are smart. A row-crop farmer wisely shies away from his submarginal land and concentrates his efforts and fertilizer on his best acres. Aggressive pines come back on land left out of cultivation. Farmers know that pines are profitable and raise land values. As these trees grow they are attractive to our wood using industries. The owner is then in the enviable position of having two profitable paths from which to choose. He can manage his woodland and enjoy returns from timber sales or he can sell out for a price equal to many times his original investment in these unproductive acres. Either path is his right under our zealously guarded system of free-tree economy.

The land-ownership pattern in Alabama deserves more honest analysis than it has received by some in later years. Inaccurate analysis gives rise to statements such as this: "Paper mills are buying up all the land. They bought up all the farms and ran the people off. That is why we have fewer farmers, less cotton, less milk, fewer rural schools, broken communities, and lower income for farmers."

Comparatively few farmers have chosen the sellingout road. This may seem strange, considering the bird in the hand attitude that is so prevalent. On the contrary, a rapidly increasing number of our farmers are keeping their land and applying good cutting and management practices. Alabama Land Statistics, an August 1957 release of the United States Forest Service, comparing 1945 Reappraisal Report figures with 1953 Timber Resource Review statistics, comes as a shocker for those quoting dolorous phrases about farmers selling out.

This release shows that during that 8-year period Alabama's farmer-owned woodland acreage increased by 855,000 acres. It also states that during the same period pulp manufacturers increased their timber holdings by only 329,000 acres.

Another highly important and rapidly growing group of woodland owners can be found among professional people and businessmen. For example: a doctor with 5,000 acres; a lawyer with 1,500 acres; a probate judge, a Government worker, an insurance man, a preacher and an automobile dealer with acreages ranging from 600 to 4,000. This adds up to a huge acreage and is seldom considered as being objectionable. When this type of forest ownership plus farm woodland ownership are added together, we reach a startling total. Most of these are under 5,000 acres (which surely includes few pulp mills). In this size group, Alabama Land Statistics shows an increase in number of ownerships from 147,800 to 169,583—or 21,783 more than in 1945. The acreage jumped by a whopping 1,478,000 acres to a total of 14,601,000 acres. Ownerships of 50,000 acres and over, by comparison, dropped from 23 in 1945 to 20 in 1953 and picked up only 354,000 acres. The acreage of the under 5,000 acres group increased nearly as much in 8 years as the total woodland ownership of all pulp company lands in Alabama. These small woodland owners have one thing in common—a desire to find a good place to put some extra money. Most of them manage their woodlands very well. The Forest Service sadly stated in 1953 that "only 34 percent of the farmers and 44 percent of the other small owners are cutting their timber so as to keep their land in highly productive

condition." This is cause for jubilation, not sadness, because the same agency reported that in 1945 only 2 percent of such holdings were cut correctly.

Let's check on another oft-heard remark, "land bought by wood-using industries is forever taken out of agricultural production."

Another quick look at Alabama Land Statistics indicates that there might be something to the story. This release indicates a rapidly dropping acreage of Alabama cropland from 10,397,000 acres in 1945 to 7,123,000 acres in 1953. These 3,274,000 acres didn't all go to trees. Pasture land showed a 2,684,000 acre increase that probably came primarily from seeding down cropland to permanent pasture in our rapidly expanding cattle program. Some pastures were made by clearing scrubland and other unproductive areas. However, county agents' annual reports for the last 5 years of this period showed only 154,236 scrub acres reclaimed for pasture.

An actual check on the land acquired by one of Alabama's paper companies revealed that 96.48 percent of their land was purchased in large tracts, primarily from lumber companies. Only 3.52 percent from small landowners. In that area, the Alabama Division of Forestry statistics show that 84.2 percent of the land is in forests. But let us use the figure of the agricultural economist that states that the average Alabama farm is 35.9 percent cropland. Then 1.26 percent of this company's land is cropland. Just out of curiority, let's see who this company chased off the land, by their own admission, quoting their woodlands manager as follows:

"In our land acquisition activities—and this is true of the land acquisition activities of other paper companies—we have changed the ownership pattern of timberlands little, if any. The bulk of the lands which we now own, and which other paper companies now own, were acquired from other large owners and only minor and incidental areas have been acquired from farmers and small landowners. On the lands which we have acquired from other large landowners there are farms and pastures, some of which have tenants living on them. In fact, we have well over a hundred farm tenants and have encouraged them to stay on the property because of our belief that people are indispensable in this business of raising trees and delivering wood to the mill yard. This is by no means the only importance of people because we also know that each and every one of us is important as neighbors, as employers, as employees, as customers and in every other way that involves living and working together."

Let's check another paper company and see what is worrying its woods division manager. By his own statement, "The bulk of southern pulpwood is produced by a steadily shrinking pool of farm labor."

Trend	Millions		Percent change
	1945	1975	
United States population	140.00	212.00	+51
Total civilian labor	53.80	88.20	+64
Farm labor	8.56	4.90	−43

"We do regard land ownership and its intensive management as the essential ingredient in timber planning—and timber planning as the only logical and reliable guarantee of company earnings—or as a friend of mine recently said, 'A mill without land is like Sally Rand without a fan.'"

"Only 30 percent of our wood requirements are obtained from company lands; however, with continuous advance planning in the purchase of market timber (farm wood, etc.) we have been reasonably successful in stabilising wood deliveries. Sixty percent of our daily wood usage arrives by truck, and feeds our chippers with pulpwood less than 12 hours from the living tree—green wood yields more fiber and by-products, a properly attended forest is a living, self-supporting storehouse, always on tap, to supply our basic needs. Agricultural production responds to short-range planning. There is no such thing as 'short range' forest management." Here we see the trend toward partial control over perishable raw materials, as in our meatpacking industry, and can realize its importance. We also see the industry's desire to keep farm labor available as pulpwood cutters—of mutual benefit to both.

Apparently, these companies are not living up to their Simon Legree reputation. And, granted that foresters are usually poor farmers, their bad effect on the few hundred acres of cropland the mills own should not seriously reduce Alabama's total crop production on over 7 million acres.

A far more important factor in reducing cropland acreage has been our allotment program which landowners themselves repeatedly vote for by overwhelming majorities. In 1930 cotton acreage alone, 3,596,000 acres, accounted for over half of our present cropland. During the decade ending in 1955, we averaged about 1,500,000 acres; 1956, 1,050,000 acres; 1957, 735,000 acres in cotton and 265,000 acres in the Soil Bank. Our farmers, in their efforts to stay within the law, consistently underplant their allotments on a statewide basis. This brings on another cut in allotted cotton acreage based on 5-year averages of acres harvested. In 1955 cotton acreage allotments were cut 7 percent—4 percent national cut plus 3 percent because of underplanting. Trees have had no hand in this change in land use.

A 1958 release of the Southern Pulpwood Conservation Association also reveals some important facts on land ownership as follows:

Less than 1 acre in 20 is in paper company ownership.

Less than 1 acre in 10 acres of all woodland is in paper company ownership.

To be specific, SPCA states that "paper companies own in fee simple and manage for others on long-term leases only 1,567,800 acres of forest land out of our total of 32,689,900 Alabama acres." If valued at $40 per acre (some cost them more, most cost less), they have approximately $1 invested in land to guarantee the even flow of raw materials necessary to supply $4 worth of paper-making equipment and buildings. They could be accused by their stockholders of being a little lax for depending so heavily on outsiders since such a huge investment is at stake in pulp mills—over $219 million at the end of 1957, and they are still pending.

Few critics of land ownership by wood using industries have adjusted their thinking to the realization that wood, like any vegetable crop, is perishable. Some crops, like baled cotton, can be stored. Most animal and vegetable products can not be stored long without deterioration. Every industry that requires fresh raw materials is realizing that some control over the arrival of these materials is essential. Only one other industry among the top five in the United States requires perishable materials. That is the meatpacking and distribution industry. The meatpacking industry now owns feed lots with capacities of up to 50,000 head of steers. These are slaughtered as the market demands. Frozen foods industries own their own farms. Poultry products processors supply, under tight contract, pullets, or chicks, feed, cases, medicine, inoculation, pickup service, culling service, and a strict timetable to control the arrival of their raw materials into their plants. Canneries own farms and grow much of their produce. Partial control over raw materials is an essential element in the profit pattern of any industry requiring fresh raw materials. By comparison, control over the 25 percent (average in the South) of the pulpwood requirements coming from company-owned woodlands is not up to quota. However, when market wood, 75 percent, varies, the company wood can be increased or decreased to guarantee 100 percent of the mill's daily requirements. Otherwise, temporary shutdowns and lower pulp yields could readily rob a paper company of profits and with no profits we soon have no mill in operation.

Alabama's paper mills have no desire to reach a position where they can supply all of their wood needs. In The Forest Is the Future, by Jonathan Daniels, the author states that Alabama's largest mill, with perhaps the most extensive holdings, requires nearly $14 million worth of wood a year. Eighty-five percent of this money goes to nearby farmers and small woodlot owners. Therefore, only approximately 15 percent of their wood requirements come from their own lands. Another mill owns no timber land. It leases some of the lands in its vicinity. Still another mill purchased only sufficient acreage to guarantee their prospective creditors that they would be able to obtain a constant supply of raw materials. This specification was set up by the creditors, not by the mill.

In studying pros and cons of pulp industry land ownership, we must also stop and think about the contributions these mills make to the economy. The Southern Pulpwood Conservation Association states that pulpwood purchasers in Alabama amounted to $43,748,000 last year. These mills paid an average hourly rate of $2.12 to mill employees. This amounted to nearly $33 million last year. In addition, over $3 million went to wages of woodland employees. They paid $13½ million in freight charges alone and gave away nearly 9 million pine seedlings. They brought six new supporting industries into the State just by being here. These supporting industries in themselves are not small, but are industries such as chemical plants, wet felt plants and Fourdrinier wire plants.

In an analysis of our changing land use we must realize that trees are not causing the reduction in cropland acreage. Our higher crop yields on fewer acres are resulting in more acres in trees. Surpluses produced on closely controlled acreage underline this concept.

The return of croplands to woods will doubtless continue for some time, but at a reducing rate. As the percentage of submarginal cropland shrinks, fewer acres will be allowed to revert to trees. Our total crop production on fewer acres will doubtless increase when surpluses are gone and the demand increases.

Trees will not replace row crops as a source of income to the farmer. They will become increasingly important as a supplement to his row-crop income and may even become a larger percent of the farmer's income dollar. In individual cases, large farmers on relatively poor soil may obtain the major part of their income from trees. But Alabama's total bales, bushels, or pounds produced annually will not be reduced by trees. Jobs in factories, old age, various government programs and similar factors may reduce the man-hours spent tilling the soil and help continue the process of concentrating efforts on the best land.

With nearly 33 million acres of land under consideration, it is difficult to see much change, percentagewise, in the ownership pattern. Large acreages are usually exchanged by large industries—small acreages by farmers and other individuals. Percentagewise, few acres of cropland are tied up irrevocably by wood-using industries.

Of far greater importance to our economy than statistics on cropland reduction is the realization on the part of our landowners

that Dr. Charles Herty was right many years ago when he stated, "Forestation for profit is the best basis for the reforestation and for the protection of forests of the South. Teach the southern landowners that there is profit in trees and they will grow trees as they grow cotton."

Six Americans in Prague Win Medals, Hands, and Hearts

EXTENSION OF REMARKS
OF
HON. DONALD L. JACKSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 22, 1958

Mr. JACKSON. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include the following article from TAM, the archers' magazine:

SIX AMERICANS IN PRAGUE WIN MEDALS, HANDS, AND HEARTS

(By Betty F. Schmidt)

It would, perhaps, be wiser to wait until we have rested and regained some of our lost weight before writing this—and yet, with our impressions so very vivid now and our emotions still deeply stirred, this story should be told.

We six members of the NAA team who shot in the 18th world championship matches in Prague, Czechoslovakia, will be eternally grateful to all of you who made our trip possible. We, in turn, shot our hearts out to make you all proud of us, and to justify the warm friendship extended to us by the people of Czechoslovakia. The tons of luggage with which we staggered home were not our real reward; our trophies were twofold—the choking lump in our throats as our national anthem was played as we received our medals, and the sight of tears streaming down the faces of all who watched the ceremony. Men and women, alike, crying unashamedly, as we six, proudly, yet humbly, received the medals—and cheers—we had won.

We did our weeping—actually and figuratively—in the privacy of our rooms. Privacy? Who are we trying to fool? Informed sources advised us that every room in our hotel had a microphone in it. We didn't learn of this until almost the day we left—and we had been entertaining visitors in our rooms all the time. We were told that Prague was ours—but just try to go somewhere by yourself. You were never alone—even shopping. Talk to a group over a glass of wine in the cafe—and the omnipresent men, reading newspapers, moved in right to your shoulder and stayed there until you left, be it midnight or 4 a. m. You learned real fast to shift the discussion to shooting technique or tackle: our friends would tip us off by smoothly changing the subject.

Some of our experiences were hilariously funny. We had no knowledge of the Czech language, people by the thousands paid to come to the stadium to watch us shoot—and an announcer kept up a running fire of enthusiastic announcements for the benefit of the spectators. You have no idea of how confusing it is to have a loudspeaker blare a jumble of words, to hear interspersed "Amerikana Meinhartova," followed by another jumble; then a shout "Bravo, Meinhartova," at which point the stadium would jump with thunderous shouts of approval and applause. Poor Meinhartova (or Clarkova, or Schmidtova, or American Smathers, Fries, or Chessman). They might have been calling us all kinds of names and we would not have known. To be on the safe side, we'd smile at the crowds, or laugh when they did, which seemed to work pretty well.

Some of our experiences were heartrending. To have a voice come out of a dense crowd seeking autographs (yes, we were like Hollywood personalities), saying, "Bravo, Americans," and then have a warm hand of some unknown person press a small gift into your hand with an agonizing handshake. Our tackle boxes are loaded with those little remembrances. Or to be suddenly embraced in the middle of a crowd, and have a broken, whispered, "Please win—all of you"—it was more than we could take sometimes.

Some of our experiences were frustrating. We had the best this little country could offer in the way of food and accommodation—and yet we couldn't eat. Day after day, as hungry as archers can get, we'd send our plates back untouched: Poor food, poorly prepared, its shortcomings dimly disguised with pounds of mayonnaise. We'd feel guilty, yet our stomachs would rebel. Most of us lost weight.

There were times when we were highly annoyed and embarrassed. The Czech newspapers were full of this tournament, which was a big event there, and the newspapers had our pictures and stories of the Americans on every page. Schmidtova even had a streetcar conductor know who she was when returning from church in the wee small hours, and ask for her autograph on the picture he was carrying. The British Ambassador made a ceremonial visit to the stadium to visit and greet his countrymen, and advise them on things they should know. The French Ambassador did the same. And where was even a clerk from the American Embassy? We surely can't tell you—and there were a couple of times when we could have used him—but good. Like the time when, in front of 4,000 spectators, the Russian observer came up and asked to be photographed with the American women's team. Split-second decision to be made, with no knowledge of what the people's reaction would be to either answer. So we bowed, smiled, and posed, and refused his offer of money for one of our arrows; we gave it to him, Plastifletch and all. So let them copy it; we'll still have better shooters.

There were times when we were highly elated. Europeans shoot, rain or shine, and they dress for it, boots, waterproof suits, and all. So, as we should have expected, the third day was a miserable one, with rain and high wind and cold. We got out on the field, in our whites, and huddled in our raincoats—with saran wrap fastened around our feet to protect them—to be told that the other shooters figured they had us at that point. They knew we were unaccustomed to this sort of condition. So, we planted our feet a little wider, literally kept our powder dry, and let fly—and gained even more on the opposition than in dry weather. Soaked through, and miserably cold, our interpreter brought us hot coffee and lots of cognac—and it didn't hurt our shooting one bit.

There were many times when all six of us would have loved to start a real old-fashioned riot. We would very politely be called liars—and there was nothing we could do about it. Czech and other satellite newsmen would interview us: dozens of them talked to us at various times. One of their main questions was: how often we trained, and who selected our coaches and trainers. When we told them that archery was a family sport in America, and that we shoot when we felt like it, for fun, they'd smile, shake their heads, and say—more or less—Oh, come on, now—who're you kidding? Or, in a very snide manner, we'd be asked, "How come America suddenly fields 2 complete teams just at the time they have 6 people who can walk off with this tournament?" We'd try to describe our elimination tournament, and tell them that the N. A. A. never had the money before to send six people—that it was all done via voluntary donations. They simply wouldn't believe us: thought it was all propaganda. They had made up their minds that we were professionals, and we were hard put to it to dissuade them of the idea. Or we were asked why we were not planning to go on to Moscow to the Youth Festival—to which the Soviet Union had invited us, with most expenses paid—and we answered "Not enough money." They would not believe we weren't loaded with cash. They should have seen our wallets at Idlewild Airport on our return.

We were strictly nonconformist in several respects, but it caused amazement rather than caustic comment. The Americans were the focal point of the tournament held in a nation of sports-loving people. Therefore, hordes of journalists descended on us for interviews at every conceivable opportunity—mostly on the shooting line. We were told that no other team would interrupt their shooting to such an extent, but we instinctively felt that we were there not only to shoot—so we posed, demonstrated and gave interviews whenever asked. It didn't seem to bother our shooting.

There were times when our eyes would hunger for a spot of color, other than the Red flags and bunting left from the Russian visitation. Everything is drab and dingy and sad looking: our total impression was one of sombre, miserable sadness. As a group, the people do not look happy, they look depressed and cautious. Particularly the very old and the very young. The unutterable sadness almost killed us—the first thing we noticed on our return to Switzerland was the fact that people were smiling.

We had a time of rest, relaxation, and pure unadulterated fun; that was the 4-day interim between leaving Prague and leaving Europe for home. We found it difficult to relax, and even more difficult to avoid a feeling of guilt that we—lucky Americans that we were—had only a short visit behind what to us was really an Iron Curtain and would then board giant luxurious airliners to return freely to what we knew and loved.

It is difficult to make a good job of giving you our impressions: one searches for words to describe nebulous impressions, and the words are not adequate to describe our deep emotions at what we so briefly saw—and felt. None of us are skilled in diplomatic observations; we're just 6 Americans who went to do a job and feel that we actually performed 2 jobs; we won the tournament, and we won hundreds of new friends. We worked harder at making friends than we did at shooting and are not sorry.

We th ank you all again for what will be one of the most memorable experiences in our lives.

The Financing of Small Business—Long-Term and Equity Capital

EXTENSION OF REMARKS
OF
HON. WILLIAM S. HILL
OF COLORADO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 22, 1958

Mr. HILL. Mr. Speaker, the Republican members of the House Select Committee on Small Business yesterday introduced legislation amending the Small Business Act to provide long-term loans for small business in increased amounts and to provide an additional method to help small business secure equity capital. My bill is H. R. 12026. The other Republican members of this committee and

their bill numbers are: Hon. R. WALTER RIEHLMAN, of New York, H. R. 12027; Hon. HORACE SEELY-BROWN, JR., of Connecticut, H. R. 12028; Hon. WILLIAM M. MCCULLOCH, of Ohio, H. R. 12029; Hon. TIMOTHY P. SHEEHAN, of Illinois, H. R. 12030; and Hon. ARCH A. MOORE, of West Virginia, H. R. 12031.

There is almost complete agreement that a practical way must be found to increase the availability of credit and risk capital to our small-business concerns. This does not mean for any particular endeavor, but it means for small-business concerns whether they are engaged in manufacturing, processing, wholesaling, retailing, or the service industries. The question is by what means or methods may the Federal Government properly assist in solving the financing problems of small business. There have been many approaches to the problem as is evidenced by the number of bills which have been introduced on this subject. Each bill has its good points; the question is which points outweigh others in making a final decision which the Congress will enact into law.

Many of us believe that the best approach is by amending existing legislation. The Small Business Administration, through its nationwide organization, is equipped to carry out the will of Congress when legislation is enacted for the financing of small business. At the present time it would seem that once a sound program has been decided upon, getting it into effective use at the earliest possible moment would be of the utmost importance.

STATE COOPERATION AND PARTICIPATION

The central core of our proposal is to have the Federal and State Governments working together in encouraging private capital to assist and finally take over the job of providing long-term loans and equity capital for the small-business sector of our economy. We propose that each State, Territory, and Commonwealth, 51 in all, establish under State law a development, investment, and credit corporation. It is contemplated that each State development, investment, and credit corporation would operate under a State charter and would in turn be chartered by the Small Business Administration. Both long-term loans and equity capital would be provided through the State development, investment, and credit corporation. At the same time, none of the present duties of the Small Business Administration would be diminished. In fact, the responsibilities of the Small Business Administration would be materially increased.

INCREASE IN THE AMOUNT AND TERM OF SMALL-BUSINESS LOANS

We feel in making these proposals that it is important to the success of any plan to provide financing to small business that the term of the loans be of sufficient length and the loans be in sufficient amount to encourage the several State governments to cooperate and participate to the limit. Therefore, we propose that the maximum amount or regular small-business loans be increased from $250,000 to $500,000 and that the maximum maturity be extended from 10 to 15 years.

On the equity-capital side, the Federal Government is permitted to supply on a matching basis a maximum amount of $5 million. This is the total which may be outstanding at any one time for each of the State development, investment, and credit corporations.

HELPING SMALL BUSINESS WITHIN A STATE

Our bill provides that under no circumstances can any of the money borrowed or invested be utilized to relocate a business concern. We believe this to be very important because the whole intent and purpose is to build up small business within the State and in localities within the State. We feel that if a concern desires to relocate, it should not be at the expense of the State or the Federal Government, but that the money should be otherwise provided.

EXPLANATION

The Republican members of the House Select Committee on Small Business believe that the best features of its bill are reflected through its simplicity; through the fact that a new agency does not need to be established; and through the fact that the Federal Government will be supplementing rather than replacing private financial institutions. In fact, the whole proposal contemplates private capital taking over this job as soon as is practicable. A short explanation and the bill follows:

SECTION-BY-SECTION SUMMARY OF THE SMALL BUSINESS INVESTMENT AND DEVELOPMENT ACT

The first section provides that the act may be cited as the Small Business Investment and Development Act.

Section 2 sets forth the finding of Congress that the continuing growth and development of small business is essential to a sound national economy, but that such growth and development is impeded by the inability of small-business concerns (because of various factors, of which the principal ones are specifically stated) to obtain equity capital. It is therefore declared to be the policy of Congress and the purpose of the act to promote the sound development of small business by providing a source of such capital.

Section 3 adds a new subsection (c) to section 207 of the Small Business Act of 1953.

Paragraph (1) of the new subsection (c) authorizes the Small Business Administration to purchase investment securities issued by State development investment and credit corporations and having specified rates of interest and maturities. The administration could not hold investment securities of any such corporation in an amount exceeding $5 million at any one time and purchases of such securities by the Administration would have to be matched by other purchasers of such corporation's securities.

Paragraph (2) provides that the Administration shall not purchase investment securities from a corporation unless, first, the corporation will use the proceeds exclusively to assist small-business concerns of stated types in its State and will not use any of such proceeds to finance the relocation of existing concerns; second, the corporation, in furnishing such assistance, will meet the conditions and standards set forth in the act and those prescribed by the Administration, and third, the corporation, in furnishing such assistance, will use funds obtained from other sources in an amount at least equal to the funds obtained from the Administration.

Paragraph (3) provides that only one corporation per State can participate in the program of assistance, and requires any such corporation to have been chartered by the State for substantially the same purposes as the purpose of the act and to meet minimum standards and criteria prescribed by the Administration.

Paragraph (4) authorizes the Administration to obtain the funds needed to carry out the program by issuing notes and obligations in an aggregate amount not exceeding $255 million and selling such notes and obligations to the Secretary of the Treasury. The proceeds of such notes and obligations would be used to establish the special revolving funds which would be used to purchase investment securities under the program.

Paragraph (5) allows any State development investment and credit corporation or its shareholders to repurchase any of its investment securities purchased by the Administration.

Paragraph (6) directs the Administration to impose reasonable service charges in connection with its purchase of investment securities; and such charges would constitute a reserve fund for the payment of any losses under the program.

Paragraph (7) provides that assistance under the program would not reduce or otherwise affect any similar assistance being furnished under State or local programs.

Paragraph (8) provides that the Administration's claims for repayment on investment securities which it purchases from a corporation shall not be subordinated to any other claims against such corporation.

Paragraph (9) contains definitions of the terms "State development investment and credit corporation," "investment securities," and "State".

Section 4 authorizes the Administration to make grants to State agencies, State development investment and credit corporations, and schools, for studies, research, counselling, and information concerning small business. Such grants would be limited to one—not exceeding $40,000—per State, and $2 million annually in the aggregate.

Section 5 replaces the present administrator of the Small Business Administration with a 5-man Small Business Board appointed by the President by and with the advice and consent of the Senate from among individuals truly representative of small business and thoroughly experienced in small-business operations. Each member of the Board would serve for a 5-year term, and would receive a salary of $20,000 plus travel and subsistence expenses. The functions, powers, and duties of the Administration and the Board would be exercised by an Executive Director subject to the Board's direction and supervision.

Section 6 increases the maximum amount of a regular small-business loan

under the Small Business Act of 1953 from $250,000 to $500,000, with a corresponding increase—subject to a ceiling of $5 million—in the maximum amount of a loan to a corporation formed and capitalized by small-business concerns. It also increases the maximum maturity of a regular small-business loan from 10 to 15 years.

Section 7 permits the securities of a State development investment and credit corporation or a small-business concern to be exempted from the provisions—principally those requiring registration—of the Securities Act of 1933 and the Trust Indenture Act of 1939 if the Securities and Exchange Commission finds that enforcement of such provisions with respect to such securities is not necessary in the public interest and for the protection of investors.

Section 8 repeals section 13b of the Federal Reserve Act and provides that future repayments of loans made under that section, as well as amounts available for such loans but not yet used, shall be covered into the Treasury as miscellaneous receipts.

A bill to amend the Small Business Act of 1953 to provide a source of equity and long-term loan capital for small-business concerns in the United States, and for other purposes

Be it enacted, etc., That this act may be cited as the "Small Business Investment and Development Act."

SEC. 2. The Congress hereby finds that the continuing growth and development of small business is essential to a sound national economy, but that this growth and development is being impeded by the inability of small-business concerns to obtain sufficient amounts of equity capital. The Congress further finds that this situation is a result of many factors, chief among which are (1) the possession by the small-business concerns of insufficient ownership capital, with too much reliance on borrowed funds, at the time when they are established; (2) the existing narrow market for small-business securities, resulting in excessive costs for small-business security issues; (3) wide fluctuations in small-business profits over periods of time, deterring outside investment in small-business concerns and causing investors to prefer security issues of large and established businesses; and (4) inadequate retained earnings resulting from the current tax rates. It is, therefore, declared to be the policy of the Congress and the purpose of this act to promote the sound development of small business in the United States by providing small-business concerns with a more adequate source of equity and long-term loan capital.

SEC. 3. Section 207 of the Small Business Act of 1953 is amended by adding at the end thereof the following new subsection:

"(c) (1) The Administration is empowered to purchase investment securities issued by State development investment and credit corporations which have been chartered under paragraph (3) and meet the conditions set forth in paragraph (2). The Administration shall not purchase investment securities of any such corporation in an amount exceeding the amount of the securities of such corporation which are held by other purchasers; and in no event shall the Administration at any one time hold investment securities of any one such corporation purchased under this paragraph in an amount exceeding $5 million. Investment securities purchased by the Administration under this paragraph shall bear interest at a rate not less than the rate of interest paid by the Administration on funds obtained from the Secretary of the Treasury under paragraph (4) plus one-fourth of 1 percent per annum, and shall have maturity dates of 20 years or less.

"(2) The Administration shall not purchase the investment securities of any corporation under paragraph (1) unless it has determined—

"(A) that the corporation will use the proceeds thereof exclusively to provide equity capital or make loans to small-business concerns within the State where it is located;

"(B) that the proceeds thereof will not be used in whole or in part to finance the relocation of existing business concerns or their affiliates or subsidiaries;

"(C) the character and field of operations of the small-business concerns to which assistance will be furnished by the corporation with the proceeds thereof;

"(D) that any loan made by the corporation with the proceeds thereof will have a maturity not exceeding 15 years and will be subject to such other terms and conditions as the Administration may deem necessary or appropriate;

"(E) that, so long as the Administration holds any of the investment securities of the corporation, the governing body of such corporation will include such representatives of the Federal Government (including the Administration), State, and local governments, and other groups having an interest in small-business development as the Administration may deem appropriate;

"(F) that the corporation, in furnishing equity capital or making loans to small-business concerns, will use funds obtained from other sources in an amount at least equal to the funds obtained through the sale of its investment securities to the Administration under this subsection; and

"(G) that the corporation will comply with such other conditions and meet such other standards as the Administration may prescribe to carry out this subsection.

"(3) The Administration shall grant to not more than one State development investment and credit corporation (either existing on the date of the enactment of this subsection or hereafter organized) in each State a charter authorizing such corporation to participate in the program of assistance to small business established by this subsection. Such charter shall be granted to any corporation only after the Administration has determined that it has been chartered by the State in which it is located for purposes substantially similar to the purpose of the Small Business Investment and Development Act, and that it meets such other minimum standards and criteria as the Administration may deem appropriate to carry out this subsection; and any charter issued to a corporation by the Administration under this paragraph shall constitute formal recognition of such corporation's exclusive right in its State to participate in the program of assistance to small business established by this subsection.

"(4) To obtain funds for the purchase of investment securities of State development investment and credit corporations under paragraph (1), the Administration may issue and have outstanding at any one time notes and obligations for purchase by the Secretary of the Treasury in an amount not exceeding $255 million. Such obligations shall be in such forms and denominations, and be subject to such terms and conditions, as may be prescribed by the Administration with the approval of the Secretary of the Treasury. Such notes or other obligations shall bear interest at a rate determined by the Secretary of the Treasury, taking into consideration the current average rate on outstanding marketable obligations of the United States of comparable maturities as of the last day of the month preceding the issuance of such notes or other obligations. The Secretary of the Treasury is authorized and directed to purchase any notes and obligations of the Administration issued under this paragraph, and for such purpose is authorized to use as a public debt transaction the proceeds from the sale of any securities issued under the Second Liberty Bond Act, as amended; and the purposes for which securities may be issued under such act, as amended, and extended to include any purchases of such notes and obligations. The Secretary of the Treasury may at any time sell any of the notes and obligations acquired by him under this paragraph. All redemptions, purchases, and sales by the Secretary of the Treasury of such notes and obligations shall be treated as public debt transactions of the United States. Funds obtained under this paragraph and any proceeds therefrom shall constitute a revolving fund which may be used by the Administration in the exercise of its functions under paragraph (1).

"(5) Any State development investment and credit corporation whose investment securities are purchased by the Administration under paragraph (1), or any shareholder or shareholders of such corporation, may at any time, under regulations prescribed by the Administration, repurchase any or all of the securities so purchased.

"(6) The Administration shall fix and impose reasonable service charges in connection with the purchase and handling of investment securities under paragraph (1), and the charges so imposed shall be placed in a special reserve fund in the Treasury and used from time to time as needed to reimburse the Administration for any losses resulting from the purchase and handling of such securities.

"(7) The assistance furnished small-business concerns under the program established by this subsection shall not affect, and shall be in addition to, any State or local programs established to provide assistance for such concerns.

"(8) In purchasing the investment securities of any corporation under paragraph (1), the Administration shall impose such requirements as may be necessary to insure that its claim for repayment with respect to such securities will not be subordinated to any other claim for the repayment of funds owed by such corporation.

"(9) As used in this subsection:

"(A) the term 'State development investment and credit corporation' means an enterprise which is incorporated under the law of any State and one of the primary purposes of which is promoting and assisting the growth and development of small-business concerns within such State as a means of assisting, developing, and expanding its economy;

"(B) the term 'investment securities' means any obligations evidencing the indebtedness of a State development investment and credit corporation in the form of bonds, notes, or debentures, or in such other form as may be prescribed by regulations of the Administration; and

"(C) the term 'State' means the 48 States, the Territories of Alaska and Hawaii, and the Commonwealth of Puerto Rico."

SEC. 4. Section 207 (b) of the Small Business Act of 1953 is amended (1) by striking out "and" at the end of paragraph (4), (2) by striking out the period at the end of paragraph (5) and inserting in lieu thereof "; and", and (3) by adding at the end thereof the following new paragraph:

"(6) to make grants to any State government or agency thereof, to any State development investment and credit corporation (as defined in subsection (c) (8) (A)), or to any land-grant college or university or any other college or school of business, engineering, commerce, or agriculture, for studies, research, and counseling concerning the management, financing, and opera-

tion of small-business concerns, and for the dissemination of technical and statistical information needed in order to carry out paragraph (4) by coordinating such information with existing information facilities within the State and making such information available to State and local agencies. Only one such grant shall be made within any one State in any 1 year, and no such grant shall exceed $40,000 in the aggregate. Not to exceed $2 million annually shall be made available for the purposes of this paragraph from the amounts provided for the purposes enumerated in this subsection from the revolving fund established by section 204 (b)."

SEC. 5. (a) Section 204 (c) of the Small Business Act of 1953 is amended to read as follows:

"(c) (1) The management of the Administration shall be vested in a Small Business Board (hereinafter referred to as the Board), which shall consist of five members appointed by the President, by and with the advice and consent of the Senate, from among individuals who are truly representative of small-business interests and thoroughly experienced in matters affecting small-business operations. No more than three of the members of the Board at any time shall be members of the same political party.

"(2) Each member of the Board shall be appointed for a term of 5 years; except that (A) of the members first appointed, 1 shall be appointed for a term of 1 year, 1 for a term of 2 years, 1 for a term of 3 years, 1 for a term of 4 years, and 1 for a term of 5 years, as designated by the President at the time of appointment, and (B) any member appointed to fill a vacancy shall be appointed only for the unexpired portion of his predecessor's term.

"(3) Each member of the Board shall receive basic compensation at an annual rate of $20,000.

"(4) Each member of the Board, in addition to receiving compensation as provided in paragraph (3), shall be reimbursed for necessary travel, subsistence, and other expenses actually incurred in the discharge of his duties as such member.

"(5) No member of the Board shall engage in any other business, vocation, or employment while he is serving as a member of the Board.

"(6) The Board shall annually elect a chairman and a vice chairman from among its members.

"(7) Three members of the Board shall constitute a quorum for the transaction of business."

(b) Section 204 (d) of such act is amended by striking out "Administrator" and inserting in lieu thereof "chairman of the Small Business Board."

(c) Section 204 (f) of such act is amended by striking out "Administrator" and inserting in lieu thereof "Board."

(d) Section 204 of such act is further amended by adding at the end thereof the following new subsection:

"(g) (1) The Board shall appoint an executive director, who shall serve at the pleasure of the Board and shall, subject to its supervision and direction, be responsible for the execution of the functions of the administration. Except as otherwise specifically provided in this act or as otherwise directed by the Board, all of the functions, powers, and duties vested in the administration and the Board shall be exercised and performed by the executive director and may be exercised and performed by him through such officers, employees, or other personnel of the administration as he may designate.

"(2) The executive director shall receive compensation fixed by the Board at an annual rate of basic compensation not exceeding $17,500; and he shall in addition be reimbursed for necessary traveling and subsistences expenses, or paid a per diem allowance in lieu thereof within the limitations prescribed by law, while away from his official station upon official business.

"(3) The executive director shall comply with all orders and directions which he receives from the Board; but as to all third persons his acts shall be presumed to be in compliance with the orders and directions of the Board."

(e) Section 205 (a) of such act is amended by striking out "Administrator" each place it appears and inserting in lieu thereof "Board."

(f) Section 205 (b) of such act is amended—

(1) by striking out "Administrator" wherever it appears and inserting in lieu thereof "Board";

(2) by striking out "him" wherever it appears and inserting in lieu thereof "it";

(3) by striking out "his" wherever it appears and inserting in lieu thereof "its"; and

(4) by striking out "he" wherever it appears and inserting in lieu thereof "it."

(g) The first sentence of section 205 (c) of such act is amended by striikng out "he" and "Administrator" and inserting in lieu thereof "it" and "Board", respectively.

(h) Section 206 (b) of such act is amended by striking out "Administrator" wherever it appears and inserting in lieu thereof "Board".

(i) The Administrator of the Small Business Administration, provided for under the Small Business Act of 1953 as in effect immediately prior to the enactment of this act, shall continue in office until the members of the Small Business Board (established by section 204 (c) of such act as amended by this section) have been appointed and qualified. Nothing in this act or the amendments made by this act shall be construed as requiring or preventing the appointment of such Administrator as a member of such Board.

SEC. 6. (a) (1) Section 207 (a) (2) of the Small Business Act of 1953 is amended by striking out "$250,000" the first two places it appears and inserting in lieu thereof "$500,000".

(2) Section 207 (a) (2) of such act is further amended by striking out "$250,000 multiplied by the number of separate small businesses which have formed and capitalized a corporation as hereinbefore provided for in this section" and inserting in lieu thereof "$500,000 multiplied by the number of separate small businesses which have formed and capitalized a corporation as hereinbefore provided for in this section, but in no case more than $5 million."

(b) Section 207 (a) (2) of such act is further amended by striking out "10 years" each place it appears and inserting in lieu thereof "15 years".

SEC. 7. Securities issued by State development investment and credit corporations (as defined in section 207 (c) (9) (A) of the Small Business Act of 1953) or by small-business concerns (as defined under section 203 of that act) may be exempted by the Securities and Exchange Commission from any of the provisions of the Securities Act of 1933 or the Trust Indenture Act of 1939, or issued under special regulations, if the Commission finds, having due regard for the purposes of the Small Business Act of 1953, that the enforcement of such provisions with respect to such securities is not necessary in the public interest and for the protection of investors.

SEC. 8. Effective 1 year after the date of the enactment of this act, section 13b of the Federal Reserve Act (12 U. S. C., sec. 352a) is repealed; but such repeal shall not affect the power of any Federal Reserve bank to carry out, or protect its interest under, any agreement theretofore made or transaction entered into in carrying on operations under that section. Within 60 days after the date of the enactment of this act, each Federal Reserve bank shall pay to the United States the aggregate amount which the Secretary of the Treasury has heretofore paid to such bank under the provisions of section 13b of the Federal Reserve Act; and such payment shall constitute a full discharge of any obligation or liability of the Federal Reserve bank to the United States or to the Secretary of the Treasury arising out of subsection (e) of such section 13b or out of any agreement thereunder. The amounts repaid to the United States pursuant to this section and any remaining balance of the funds set aside in the Treasury for payments under section 13b of the Federal Reserve Act shall be covered into the Treasury as miscellaneous receipts.

Another Attack From the North

EXTENSION OF REMARKS
OF
HON. WATKINS M. ABBITT
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 22, 1958

Mr. ABBITT. Mr. Speaker, as I have stated before on the floor of this House, the Farmville Herald, a biweekly newspaper published at Farmville, Va., is one of the outstanding papers of America. It has an equally outstanding editorial staff and brings forthright to the public the burning issues and problems of our time. The paper is dedicated to the preservation of the rights of our people, the sovereignty of our States and the saving of our republican form of government in America. I only wish that every county and city in America had such a paper so that our people would fully understand what is taking place in this country and what is happening to the rights and privileges of our people.

On Friday, April 18, 1958, there was published in this paper a very forceful and timely editorial entitled "Another Attack From the North." The editorial shows very pointedly how the people of the South are being misrepresented in other sections of the country. Realizing the importance of the facts being put truthfully before our people, I desire to include with my remarks the editorial which is as follows:

ANOTHER ATTACK FROM THE NORTH

The churches and church people are under attack by those who seek integration of the races. Virginia is the immediate point of attack. Prince Edward County in particular. Court actions center in Virginia. Divide and conquer is the strategy being employed. Synchronized are legal moves and propaganda moves. The latter is being fomented largely through the churches.

The NAACP target for 1963 outlines the plans. Legal procedures are planned to force (1) equality of job opportunities, through FEPC laws, State and Federal; (2) integrated housing; (3) increased Negro registration and voting; (4) integrated education; (5) integrated traveling; (6) integrated public accommodations, such as hotels, restaurants, bars, movie houses, barberships, etc.; (7) integrated hospitals and health services; (8) change of Senate rule 22, to prevent filibustering.

Reaching the end of legal procedures the target for 1963 has this to say about voluntary associations:

"There remains a vast area in which racial discrimination is free from such (legal) restraints * * * our concepts of democracy and brotherhood are challenged * * * The churches cannot be called to account in the courts * * * NAACP through its church division and its branches, will continue to confront the churches with moral contradiction * * * will provide educational materials to other voluntary organizations."

National publications and national church organizations are being used to effect the latter purpose.

The Christian Century, published in Chicago, and now the current issue of Esquire parrot the NAACP line to "confront the churches with moral contradiction."

An article in Esquire written by Dr. Wesley Shrader, former pastor of First Baptist Church in Lynchburg, now a theology professor at Yale Divinity School, takes Prince Edward County to task because private citizens plan to save schools for at least half of its citizens. Public schools now continue at the sufferance of the NAACP.

"The lowest and perhaps the most embarrassing level in church relations has been reached * * * in Prince Edward County, Va., writes Dr. Shrader. "Here the various churches of the major denominations * * * have become conspirators in the fantastic plan of destroying the public-school system in that county."

Dr. Shrader also attacks the majority of ministers (in the South). He says:

"The race issue has created (in the South) three distinct classes of ministers. The first class of ministers interprets compulsory segregation not only as the correct social custom, but as being blessed by the Christian faith * * * such men comprise a small and ineffectual group. * * * The second class of ministers also represents a small minority. These men who believe that segregation violates human dignity as well as the spirit of Christ, and who believing this, have proclaimed it from their pulpits * * *. The third class of ministers, and by far the largest, includes those who hate segregation in every form and who believe it to be directly opposed to the will of God and the spirit of Christ, but who, instead of openly defying the practice, have decided for the time being to remain quiet and compromise with existing conditions * * * Occasionally they will open up to one person in an effort to make a convert. They also work quietly in small groups with children and young people, teaching them what the application of the love of Christ means. They work on the assumption that much ground can be gained by slowly and carefully working with young people."

We quote these paragraphs to show our people what is being published in the northern press. This is not the first time that the people of this county and the South have been misrepresented and maligned in the national press, nor will it be the last time. We decry Dr. Shrader's charge that the majority of ministers (in the South) practice intrigue and sutlety. If true, it points up the need to return to the fundamental teaching and preaching of Christianity instead of sociology.

Good Guys and Bad Guys

EXTENSION OF REMARKS
OF
HON. CHARLES A. VANIK
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 22, 1958

Mr. VANIK. Mr. Speaker, I want to take this opportunity to invite the attention of my colleagues to a very splendid article entitled "Good Guys and Bad Guys," which appeared in the Review and Outlook section of the Wall Street Journal of today.

This succinct and simply stated analysis of our current economic dilemma is deserving of attention and careful study on the part of every Member of this body.

GOOD GUYS AND BAD GUYS

The last TV western we glanced at, like all the others, divided its cast into good guys and bad guys. This simple black-and-white way of looking at the world is not particularly convincing, even when applied to the once-wild West; one can imagine that if it were applied to the intricate interactions of modern American business the results would be outrageous. But no one would do that.

Or wouldn't they?

The United States oil industry is in trouble—its prices weak, its sales slow. And we hear some bad guys are doing it in, the fellows who import foreign oil. The same is heard about other industries with foreign competition.

Now this foreign oil is not really so foreign; it is produced mostly by American companies who have invested American capital and employ American technicians abroad; nevertheless the conviction that the importers are bad guys is so strong today that it is national policy to submit them to "voluntary" controls. And the clamor is great for sterner action.

The script-writers who grind out the TV serials would appreciate the merit of this. It does not confuse the audience.

It just happens, however, that economics tends in real life to be more complicated than that. A news article in this newspaper the other day elaborately documented the fact that much of the damage to the United States oil market has actually been caused by booming natural gas sales. By some calculations, gas has had more impact than oil imports.

Oddly enough, the people who produce the gas are the same ones who produce the oil, though you don't hear much about that. So blameless is gas, in the minds of the public and of officialdom, that hardly anyone has even noticed that some natural gas, too, is imported—from Canada and Mexico.

In politics, natural gas must be cut out of the script of the oil drama. But in real life it exists; if one were to look at the United State petroleum industry through eyes of economic realism, what would one see? He would see an industry, segments of which encourage what are in effect legalized cartels operated by State governmental agencies to curtail production in an attempt to keep prices high, among other reasons. In the most important producing State, the Texas Railroad Commission this month and next is permitting oil wells to fulfill their function only 8 days out of each month. Meanwhile, the competing gas supplies are subject to no restraint on output beyond commonsense conservationist practices. It hardly is surprising that United States oil producers are losing customers.

But it is not surprising, either, that many should blame it all on imports. There's nothing new in such psychology. When cottons and woolens got in trouble it was the cheap foreign import which was to blame; not the rise of synthetic fibers. When hand-fashioned glassware suffered it was the competitive import which was guilty; not the machine-made domestic product. When bicycle makers retreated before imports few stopped to reflect that it was the efficiency of the United States auto industry in supplying adult transportation which had kept domestic bikemakers from achieving the mass-production of their European competitors.

Certainly an American industry can be hurt by foreign competition, especially if it is inflexible. But the clamor about imports often obscures more potent sources of competition at home. The good-guy-bad-guy complex goes far to explain such political successes as protectionism achieves in America. But it is so distantly removed from the whole truth that it can, in the end, be self-defeating.

American capitalism has attained an age at which it ought to know that in the long run no industry and no company can insulate itself from competition; safety lies nowhere except in competing efficiently. And competition is not static—it is a swirling riptide which certainly must include international trade.

It would be interesting to watch what might happen if all these domestic industries were thrown open to the normal operations of free enterprise. Some surprising things might well happen—such as the stimulation of old and the springing up of new industries.

And we suspect such competition would offer certain benefits to the United States consumer—not such a bad guy himself.

State's Industrial Expansion Biggest in Entire Nation

EXTENSION OF REMARKS
OF
HON. RALPH HARVEY
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 22, 1958

Mr. HARVEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the March issue of Indiana Business and Industry:

STATE'S INDUSTRIAL EXPANSION BIGGEST IN ENTIRE NATION

For the 6th consecutive year, Indiana leads the Nation in per capita industrial expansion, it was announced February 24 by Lt. Gov. Crawford F. Parker, ex officio commissioner of commerce and industry.

"Contracts for industrial construction in Indiana in 1957 totaled $245,773,000 in more than 200 major new industries and plant expansions," Mr. Parker stated in the following progress report:

"For the years 1956 and 1957, Indiana's per capita industrial expansion was $208 per person.

"Ohio, with more than two times Indiana's population had a per capita expansion of $101 in these 2 years. Texas had $87, Illinois $56, Michigan $27, and New York $18.

"In 1957 Indiana's total industrial contracts were more than those of Michigan and New York combined. These are two of the largest industrial States in the Union.

"Increased plant capacity means more payrolls. And more payrolls mean more jobs for everybody. When these plants are built, their operation will be virtually continuous.

"It is fair to say that Indiana's debt-free status and our right-to-work law are two of the most important fatcors in bringing more and more payrolls to Hoosierland, whereas States without these features are declining in their relative importance to us.

"The industrial growth which Indiana is experiencing has been amazing, even to the specialists in national development work. They attribute Indiana's continuing strong position to its fiscal situation, the right-to-work emancipation law, our strategic geographical location in the midst of supply

and markets, and the large number of healthy and ambitious communities throughout the entire State geared to invite and support industrial expansion."

The Real Reason for the Economic Situation

EXTENSION OF REMARKS
OF
HON. MERWIN COAD
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 22, 1958

Mr. COAD. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I should like to present a letter which I recently received from Mr. Carl H. Wilken, economic analyst, who presents some very meaningful facts which we should consider during these days of recession. Mr. Wilken has the experience of many years of study behind him on this subject and he is known to many Members of the Congress. Mr. Wilken's letter follows:

APRIL 15, 1958.

Hon. MERWIN COAD,
House Office Building,
Washington, D. C.

DEAR CONGRESSMAN: I have been watching with a great deal of interest the many proposals which are being advanced to cure the current depression. I am using the word "depression" due to the fact that at the present time the economy of the United States is losing $80 billion of national income. Such a huge loss is more than a recession. The facts proving this loss will be set forth later in my letter.

The real reason for the depression, namely, the relatively low farm price structure and the price of other raw materials, is not being discussed. The 35 rural States, primarily dependent upon the production of raw materials for their income and ability to buy factory goods are being underpaid approximately $50 billion, as compared to their normal ratio to national income and payrolls which existed in the 25-year period 1929–53. This income balance can be clearly ascertained with the use of the 5-year period 1946–50.

The economy has been operating at a loss ever since 1951 when farm prices were permitted to drop below the 1946–50 parity. During 1951–53 the loss of earned income was offset by adding an average of $39 billion to the total debt, public and private.

In 1954 as the rate of debt expansion slowed up our economy started to recede toward the base of earned income from our raw material production. This recession was halted by expanding the total debt an average of $48.7 billion per year in 1955 and 1956. In 1957, when the debt expansion dropped back to approximately $30.5 billion, not sufficient to offset the loss of earned income from new wealth production our economy receded to the present point.

Further debt expansion will not solve the problem. It will merely postpone and aggravate the serious dislocation between the incomes of rural communities and industrial areas.

Since 1946–50 (third quarter of 1957) our total payroll was expanded from $136.5 billion to $257 billion. (Economic Indicator published by the Joint Economic Committee.) This was an increase of 88.3 percent and therefore the recession could not have been due to low wages which normally represent 65 percent of the national income.

The debt expansion for installment credit and other forms of capital expenditures for new plants and equipment, homes, etc., approximated $270 billion the highest rate in any 7 year period in our economic history. Therefore, the one reason and the only one is the failure to maintain raw material prices at parity thus protecting the earned income of the 35 rural States and the Nation as a whole.

Our economy at the present time has the labor force and factory equipment to produce 160 percent of 1947–49 as 100. This production at current price levels would turn out $413 billion of national income.

Instead of 160 percent of 1947–49 production, the production index for March was 128 percent. This production times the present price level on an annual basis would create a national income of $330 billion. It might be of interest to note that our production index in July 1953 had reached 137 or 7 percent more than our production in March 1958.

The difference between our potential of $413 billion and the actual rate of output and income in March 1958 of approximately $330 billion represents a loss of $83 billion in operating the economy of the United States.

It is indeed very doubtful that enough funds can be borrowed to create the market which is needed to provide full employment of our labor and facilities. Even if it were possible, such a step would not solve the basic problem of income balance between rural areas and industrial America, a dislocation directly traceable to raw material prices which are approximately 70 percent of 1946–50 parity.

The intelligent use of about $3 billion could restore the price of raw materials to parity and restore the markets which are being lost in rural America and which are needed to consume our production. Very little legislation would be required.

I would like to have you discuss this with the chairman of the committee of the House Banking and Currency Committee. The committee can have the benefit of 20 years of research work devoted to analyzing the record of our economy over the past 50 years. I am willing to give the committee my views if they desire them. I am not a lobbyist nor do I have the backing of any large organization. I can, however, analyze the record on a factual basis to prove what I have pointed out in this letter.

In closing, I would like to point out that in this loss of $80 billion of national income we are losing approximately $18 billion of tax revenue for the Federal Government which could be used to provide tax reduction on a sound basis. Without restoration of parity for raw materials, tax reduction will merely force an addition to the national debt without solving the depression.

Sincerely,

CARL H. WILKEN,
Analyst.

President's Veto of River and Harbor Bill Approved

EXTENSION OF REMARKS
OF
HON. RUSSELL V. MACK
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Monday, April 21, 1958

Mr. MACK of Washington. Mr. Speaker, among many newspapers which editorially have approved President Eisenhower's veto of the omnibus river and harbor-flood control bill is the Deseret News, of Salt Lake City, Utah.

The Deseret News calls the bill a pork barrel one and says the veto was right.

The editorial of the Deseret News follows:

VETO THE HIGHWAY BILL

President Eisenhower made his second courageous and wise veto of the year yesterday—and now has one more to go.

He started, as will be remembered, by vetoing the farm price-support freeze bill. Apparently, despite a good deal of political noise, any attempt to override that veto has been forgotten.

Yesterday, he vetoed a $1.7 billion rivers and harbors authorization bill. This will win him a few more political enemies; the pork-barrel appropriations represented in this bill have considerable political power. But the veto was right. Any project that has not been thoroughly researched and approved by the agency concerned, and been worked into the Government's total economic picture by the Bureau of the Budget—and this bill was full of such projects—has no business being approved by Congress.

We trust, now, that Congress will lose no time putting the justifiable, approved projects back into a new bill and getting it before the two Houses for approval.

The Recession and the Family Farm

EXTENSION OF REMARKS
OF
HON. COYA KNUTSON
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 22, 1958

Mrs. KNUTSON. Mr. Speaker, since it is becoming increasingly difficult to pry information—even the most simple information—from the reluctant administration leaders, I am more than ever placed in the position of the late Will Rogers, who said, "All I know is what I read in the papers."

The lead story in the Washington (D. C.) Post of April 8, 1958, has this to say:

Unemployment rose 25,000 in March to 5,198,000—the highest jobless total in 14½ years. * * *

The 25,000 increase in unemployment, compared to an increase in February of almost 700,000 over January, indicated the rate of the economic slump may be slowing.

Twenty-five thousand does not seem to be, at first glance, a world-shaking advance in unemployment.

But it would be a world-shaking advance in unemployment if one of these 25,000 happened to be you.

In thumbing through the April 11, 1958, issue of U. S. News & World Report I came across 2 timely, but seemingly unrelated items.

On page 23, I read:

"Unemployment" in the recent recession is tending to center in younger workers. "Among jobless" 1 out of 4 is age 24 or younger. These often are young heads of families, in debt for a car, furniture, maybe a house, and with 1 or 2 young children. The squeeze on these jobless is severe.

"The reason" why younger workers are hit hard? Often it's seniority rules. Union contracts usually call for the last worker hired to be the first laid off, and for the last laid off to be the first rehired.

"The younger worker" tends to be left out in the cold. Yet that younger worker usu-

ally is least able to stand unemployment. His children are growing, not grown; his debts are at the peak, not paid off. It is the younger worker who tends to be the biggest customer of business, and he is being hurt.

The words which are quoted in the above quotation were quoted by U. S. News & World Report editors; not by me.

There is no percentage figure in this article about the actors in this American tragedy of 1957 who come from family farms. We are well supplied with economic statistics. We have plenty of census statistics. But with all of our scientific advances it has been impossible to represent living human beings by lifeless calculations.

The best I can do is, as briefly as I can, to bring you a picture in words.

Gus Hanson does not exist. I have literally picked his name from a hat. Yet Gus Hanson is a symbol, an archtype. What is happening to him is happening to scores of thousands of young Americans, born and raised on a family farm.

Gus graduated from high school. Like so many of his contemporaries, he did his hitch in the armed services. After his tour of duty in the Army was completed, he came home. It didn't take Gus long to find out how things stacked up. There wasn't anything for him at home. The way things were going, the farm could barely support Mom and Dad and the two younger children still in school. So Gus took off for the city. He was hard working and ambitious. He got a job. He met a girl—the girl. They were married. Their first baby was born. A second was on the way.

Then, without warning, Gus found a pink slip in his pay envelop. There were a few extra dollars instead of the usual 2-week notice.

I want to know what will happen to Gus Hanson's family. I want to know what will happen to Gus Hanson's brothers and sisters, his mother and father. I want to know what will happen to America's Gus Hansons.

Why do I want to know this?

Another article in the U. S. News & World Report of April 11, 1958, has the answer.

On page 50, I read:

Russian farmers do not, cannot, own the land they farm. * * * There is little incentive to spur the peasants to more efficient work or greater production.

It was the land-owning peasant who stood in the way of those trying to communize Russia 40 years ago. Millions of peasants were liquidated before the Communists could fasten their yoke on the Soviet people. And, today, the Soviet farmer is still a foe of communism—a source of constant fear to the rulers of the Kremlin.

I want to know what will happen to America's Gus Hansons because the family farm is, at one and the same time, the backbone of American financial stability and the first line of defense against communism. Gus Hanson deserves a future. He is our Nation's insurance against whatever comes tomorrow. No institution in the United States—our farms, our fields, our mines, our industries, our commerce—is as valuable to the United States as our Gus Hansons.

All this talk about "conquering outer space" is just jibberish if Congress and the administration do nothing about conquering the vast inner space in the hearts of young Americans—from the family farm, or whatever their origin—who have lost their jobs.

Let us get busy on our Gus Hansons.

Return of Alien Enemy Assets

EXTENSION OF REMARKS
OF
HON. LEO W. O'BRIEN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 22, 1958

Mr. O'BRIEN of New York. Mr. Speaker, Hyman Bravin of New York City, commander, Department of New York, Jewish War Veterans of the United States of America, on March 22, 1958, voiced strong opposition to any return to former enemy alien owners of external assets vested by this country of its Allies during World War II.

Speaking in terms of dollars and cents, the New York State commander said that any form of a return to former owners could in effect give the present German taxpayer a $428,500,000-tax benefit at the exepense of the American taxpayer.

The United States vested about a half billion dollars of farmer enemy assets in World War II of which some $450 million was from Germany. The New York State commander pointed out that pleas have ben made to this country by the German Federal Republic to return such assets because of "hardship cases in Germany."

This comes from a country—

Commander Bravin said—

that enjoys the foremost economy of any nation in Europe.

Legislation providing for the return of these assets to Germany is now pending before the United States Congress—

Commander Bravin pointed out—

at the same time, the German Federal Republic has published its budget for this year providing for a tax reduction of $428,500,000.

If this were postponed for 1 year the German Government could make payment to all Germans whose property was vested by the United States Government during World War II and such payment would be in accordance with the terms of the Bonn Convention agreement.

But if the German Federal Republic follows through with its tax reduction and then obtains a general return of the vested assets through an act of the United States Congress, the net effect would be to give the German taxpayer a $428,500,000 tax benefit at the expense of the American taxpayer.

A general return—

He said—

would in effect result in the United States paying for both sides of World War II.

The Honorable LEO W. O'BRIEN, Member of the House of Representatives from the 30th District here at Albany and who is being honored here tonight, is one of our strongest supporters in the Congress in opposition to return of the assets. In that regard he has the distinction of being the author of the original bill to amend section 9 (a) of the Trading With the Enemy Act which he first introduced in the 83d Congress, the 84th, and again in this session of the 85th Congress. Congressman O'BRIEN's legislative measure would amend that section of the act to permit General Aniline & Film, here in our State, to be sold to American interests immediately at public auction and the proceeds placed in the Treasury of the United States.

Bravin pointed out that in the Bonn Convention agreement of 1952, and in the Paris protocol of 1954, between the German Federal Republic and the United States, Britain and France, Germany agreed not to object to the vesting by the allies of the external assets of Germany for the purpose of reparation, and at the same time agreed to compensate its own nationals for their losses in World War II.

Just what would our allies think of us if we broke the Paris and Bonn agreements?

The Jewish War Veterans of the United States of America has repeatedly gone on record opposing return of this so-called alien property and as our national commander, Benjamin H. Chasin, recently said, the Jewish War Veterans of the United States of America will use every resource at its command to inform Members of Congress that any attempt to return these alien enemy property assets will be vehemently opposed by every member of the organization—

He said.

Rensselaer is the location of one of the manufacturing operations of the dyestuff and chemical division of General Aniline & Film Corp. which is the largest of the alien property assets held by this Government since 1942 and which has an estimated value now of $100 million. The plant there is the oldest dyestuff manufacturer in the United States. The company's other divisions, Ansco and Ozalid, have their main manufacturing operations at Binghamton and Johnson City, N. Y.

The Free Trade Bill

EXTENSION OF REMARKS
OF
HON. JAMES B. UTT
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 22, 1958

Mr. UTT. Mr. Speaker, under leave to extend my remarks, I would like to insert the following letter from Mr. Harrison Doyle, of Vista, Calif.:

VISTA, CALIF., *March 30, 1958.*

Hon. JAMES UTT,
Representative, House Office Building, Washington, D. C.

DEAR MR. UTT: Many of us here in Vista are extremely fearful that the free trade bill, which comes up for renewal in June, will be railroaded through by its vociferous adherents, without safeguards written into it to protect the Nation's vital defense industries. It is in view of these aspects that this letter is written. I would like your comment it before I fashion it for publication.

Most Americans are unaware that there is something far more sinister behind the free trade bill, and that is, the terrific buildup

by Russia of her steel, iron, ferro-alloys, aluminum, manganese, and other strategic mineral and oil potentials—all within her own borders or behind the Iron Curtain. It is her wherewithal to wage a long and possibly victorious war, while our strategic industries atrophy because of indiscriminate imports.

She can wage this war in two ways: She can flood the world's mineral markets with her aluminum, steel, gold, ferro-alloys, and manganese ores (she has already wrecked the Canadian aluminum and ferro-alloy market in Britain), further depressing world prices, or she can arm herself with cheap minerals, and wage a decades-long cold war. Along with this, she has some 500 submarines with which to put a stop to overseas shipments of strategic minerals to the United States, and hamstring our vital industries.

Against this, we Americans are listening to a barrage of do-good-for-the-world thinking, with our complacent heads buried like ostriches in the glittering sands of an internationalistic fool's paradise. In our apathy we are letting our country become almost totally dependent upon cheap foreign imports of the strategic materials with which a country defends itself. Under free trade thinking, without tremendous stockpiles, we cannot fight a long war.

Today, we have a smattering of those stockpiles; on a few, a 3-years supply at best including manganese and chrome. Ninety-five percent of the manganese we use today is imported from foreign sources, some of them Communist controlled. Forty percent of it comes from the Port of Goa, in Portuguese India, through the Suez Canal. An average of 50 percent or more of all our strategic minerals comes from outside our country. It stands to reason that in times of future emergency, without a tremendous stockpile, Russia's 500 submarines will cut this supply off—our steel mills will shut down, and we are dead.

The Germans were aware of this weak link in our economy, that is, our almost total dependence on imports of vital manganese and other strategic materials: that it was the life to our steel mills and heavy industries, and the Germans built their submarine fleet mainly to pick off these mineral and oil cargoes. They kept on building submarines, and those submarines got a great part of our cargo ships. They missed knocking us out of the Second World War by an eyelash—and that war lasted 4 years.

To make steel and win wars, you need prodigious amounts of iron, manganese, and very substantial amounts of such critical items as tungsten, chrome, mica, quartz crystals, mercury, tin, nickel, aluminum, columbian-tantalum, beryl, zirconium, uranium, rubber, asbestos, and many other strategic materials including lenses, jewelled movements in missiles, and above all, the technical knowledge to produce all these and a thousand others.

Manganese is by far the most important, because of the enormous amounts needed. It not only hardens and toughens iron, to make steel, but because of the millions of tons needed each year, it is the only material which will economically harden, deoxidize, and desulphurize the steel. Without manganese in vast quantities, you just do not have steel except in limited quantities made with high priced alloys.

We solved the rubber problem by building synthetic plants. We know how that is done, and can quickly begin making rubber again; we can solve the manganese and chrome problems in only one way—by exploration and development of our known vast areas of low grade ores; by building processing mills within our own continental borders, and stockpiling ample quantities—at least a ten years supply. Make the climate right, and our mining companies will process manganese and chrome here instead of in South America, Indian, and Africa.

At one time during the early part of the Second World War, the steel mills of this country had less than thirty days supply of vital manganese, without which we could not have won the war. We managed to muddle through at a terrific cost, barely scraping out enough of the mineral in pea and walnut sizes, with which, with a little help from our good neighbors to the north and south, to get by.

We lost 1,800 shiploads of manganese in the Carribean Sea alone, to less than one hundred German submarines. We lost other ore carrying ships off South Africa, and in the Pacific, too. Few loads of manganese and chrome got through. It was root hog, or die.

Khrushchev, like Hitler, knows this Achilles Heel in our defenses, and today five times the number of Russian submarines that the Germans had, roam the open seas, and Russian war strategy is largely based on the long war concept. Those 500 Russian submarines, some armed with atomic-headed missiles which can be launched from below the surface, are not there to blast our cities, but to hamstring our steel and industrial capacity, our critical industries, and consequently, our war capacity.

America (with Canada and Mexico) has lots of all the strategic minerals such as chrome, nickel, manganese, tungsten, mercury, etc. The United States has tremendous deposits of low-grade chrome and manganese. But with our high wage standards, these minerals can be acquired so much more cheaply in times of peace from foreign sources than we can obtain them here from our own deposits. Here, miners get $20 or more pay day, while in some foreign countries less than $2. Taxpayers' moneys today are financing American—and other mining corporations all over the globe—the products of which in time of war will be useless to us—they simply will not be available.

Regardless as to how cheap foreign minerals are to acquire, we must at all hazard keep our mines and mills here ready to produce adequately at the first shot. And we must have stockpiles large enough to tide us over until we can produce here at home, enough to make us absolutely self-sufficient in time of war.

Due to cheap foreign imports already a great many of the strategic mineral mines are full of water. It will take a year to pump out and retimber some of them. Mills are rusted, or have been sold for salvage. All that is left of the great Mother Lode of California is a few rotting timbers surrounded by pear orchards. Congress failed to carry out its obligation to the tungsten miners under Public Law 733—the money going to Korea instead, and most of our tungsten comes from there now. To show how slowly remedies work: a Senate committee has been formed to investigate this, to come up with an answer next December.

The chrome stockpile is closing. Manganese hasn't far to go. Lead, zinc, copper, crying loudly for help. Supplies far less than we will surely need in time of stress. Far less than will get us by while our mines are being dewatered, and capital raised to get them in production again. It takes time to build a mill from scratch. Or to work out processes for the differing kinds of ores in the same area. Today, because of the cheap foreign imports, the banks of America—or the SBA either—won't touch a domestic mining loan with a 10-foot pole.

Some of our leaders are aware of the problem. Many are not. There is a suspicion that a powerful block of left wingers, for want of a better name—are aware of the problem, but want it that way. Some of our leaders base their thinking on a short—days long—hydrogen war. Stockpiles are set for 3 years. What we should all understand, is that barring a terrible accident, any coming war will be a long drawn out peripheral affair, and not a short fission or fusion affair. The presence of those 500 Russian submarines off shore should give us a hint of their thinking.

The Russians want us intact. They perfectly well know that to drop a hydrogen bomb on or launch a guided missile from a submarine upon one of our cities, or to attack our mainland, will mean instant and disastrous retaliation upon their homeland. They are as much afraid of a hydrogen war as we are. They want a long war and a resulting stalemate—a stalemate which they think, and may rightly think, will work for them.

So, consequently, they intend to use the weapon they have used so well in the past, the long-sustained cold war. Bleed us to death economically, by cutting off our overseas strategic supplies while the one-world freetraders, for a few pieces of silver, get in their licks here. And by waging a series of brushfires around the world while we exhaust ourselves trying vainly to raise the living standards of the underprivileged of the backward nations of all the world.

The name for it will be Operation Hamstring.

There is no basis or justification whatever for argument as to whether any coming war will be a short or long one. Good generals prepare for any eventuality. They do not gamble with the death of a nation. They will prepare for either a 10-day war or a 10-year war.

The American citizen today is beset with a barrage of free-trade propaganda. It comes from TV, newspapers, magazines, radio. The leftwing crowd of one-worlders are definitely calling the shots. The administration is wholeheartedly behind it. They should be, for it means more power for the executive branch, and less for Congress.

But Congress can call the shots on this one, as it should, under the Constitution: Safeguards should be written into it, including protection to our defense industries, especially for all strategic minerals and materials, so that all war-critical industries will be functioning and at the ready at all times. And this is going to take a bit of doing, separating them from the purely economic.

Stockpiles of minerals are nondeteriorating; they will increase in value with the years. There should be a 10-year supply of every strategic and critical mineral or material put away in a safe place in the interior. And import duties added to every strategic item, to enable American labor and know-how to compete, and keep competing. Only that will give us time to adjust in time of emergency.

We have no quarrel with giving away dollars to foreigners for their copper, lead, zinc, tungsten, tin, beryl, mica, manganese, or, for that matter, their little cars, cameras, binoculars, watch movements, tuna, plywoods, carpets, dishware, and a thousand other things. But, when free trade is carried so far that it destroys our capacity to defend ourselves nationally, it may be laying the foundation to get a number on our collars, or our throats cut in a losing war.

This is the thing that is hidden away in that bill, and which few see or understand.

Very truly yours,

HARRISON DOYLE.

The National Guard

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 22, 1958

Mr. DINGELL. Mr. Speaker, pursuant to permission granted, I am inserting into the RECORD the following letter which I received from the National Guard Association of the United States:

NATIONAL GUARD ASSOCIATION
OF THE UNITED STATES,
Washington, D. C., April 18, 1958.

The Honorable JOHN D. DINGELL, Jr.,
House Office Building,
Washington, D. C.

DEAR CONGRESSMAN DINGELL: On Monday, March 3, the Department of the Army announced plans for the reorganization of the Army National Guard and the Army Reserve. It is our understanding that you have received a communication from the Department, setting forth the general objectives to be attained by such a reorganization.

The Army states that it desired to modernize its Reserve components in light of changing concepts of warfare and the development of new weapons systems. This statement infers that the present organization of the Reserve components is archaic and antiquated. It might better have been stated that (1) the structure of the National Guard units is precisely as directed by the Regular Army and follows the same organizational tables as the Regular Army; and (2) that it is only recently that the active professional Army has been reorganized to cope with the changing concepts of warfare and now desires its Reserve components to reflect that organization.

The National Guard is in hearty accord with any reorganization that will increase its capability to perform its historic role as a first-line defense force of this Nation. Ever since the establishment of the post-World War II troop basis, the units of the guard have undergone a series of modifications, conversions, and redesignations at the request of the Army. We point this out to illustrate that such a procedure is not new to the National Guard, and to show that the National Guard today is organized exactly as the Army previously has prescribed and requested. It has been hinted that the States and Territories oppose the reorganization of the National Guard. Nothing could be further from the truth. The fact is that the guard is highly desirous of being molded in the identical pattern of the Regular Army and has, for many months, been agitating for that authority.

The Army proposed reorganization plan contains two separate and distinct features, both of which are highly detrimental to the security of this country. They are:

1. A 1959 budgetary program to reduce the Army National Guard by 40,000 officers and men from an existing strength of 400,000 voluntarily participating citizen-soldiers to 360,000;

2. A staff inspired directive to eliminate six existing Army National Guard divisions and several hundred of additional non-divisional units, aggregating—

(a) in excess of 1,800 organized and federally recognized units; or

(b) approximately 34 percent of the existing organized units of the Army National Guard.

It should be clearly understood that these are independent plans, bearing no direct relationship to each other.

Under the guise of modernization, the Nation is being told that we are to attain greater strength and combat capability by destroying our existing units—the men and organizations which constitute our shield of survival now.

It has been stated by those in authority that the Army National Guard is the largest, best-trained, best-equipped, and best-housed of the Reserve components of the Army. Why, then, does the Army propose to eliminate these units and troops?

In the interest of efficiency, economy, and security, any reorganization of the Reserve components should be accomplished with due consideration to the strength, capability, equipment, and facilities of existing units. It is neither logical nor economical to write off, in these times of international tension, a large segment of our reserve military strength—particularly that portion which gives body to the term "balanced forces."

Recent investigation by Subcommittee No. 1 of the Armed Services Committee of the House exposed the weaknesses and inconsistencies of the Army plan.

The States and Territories have recommended that they be authorized to reorganize, convert, and redesignate their existing units to those required to support the active Army upon mobilization, and thereafter to mutually determine with the Army units and facilities which may no longer be required in the defense of the country. This appears to be a logical and reasonable approach to the problem and one which is certainly in the best interests of the United States.

We trust that you will accept this communication in the cooperative and explanatory spirit in which it is forwarded to you as a matter of information concerning the security of our Nation.

Sincerely yours,
WILLIAM H. HARRISON, Jr.,
Major General, AGC, Massachusetts
National Guard, President.

Distribution Formula for Federal Aid for Fisheries and Game

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 22, 1958

Mr. McCORMACK. Mr. Speaker, under permission to extend my remarks, I include resolutions recently adopted by the General Court of Massachusetts memorializing the Congress of the United States to change the distribution formula for Federal aid for fisheries and game so as not to discriminate against large populations and limited land areas:

Resolutions memorializing the Congress of the United States to change the distribution formula for Federal aid for fisheries and game so as not to discriminate against large populations and limited land areas

Whereas His Excellency, the Governor, in his annual message to the General Court on January 1, 1958, stated: "The present Federal formula for the distribution of Federal aid for fisheries and game discriminates against States with large populations and limited land areas. Massachusetts is one State so affected. This discrimination should be corrected"; and

Whereas the operation of the present formula is unfair to the 300,000 citizens in Massachusetts holding fish and game licenses: Therefore be it

Resolved, That the General Court of Massachusetts respectfully urges the Congress of the United States to enact legislation amending Federal aid in the Wildlife Restoration Act, Public Law 415, of the 75th Congress, and Federal aid in the Fish Restoration and Management Projects Act, Public Law 681, of the 81st Congress, by revising the distribution formulas to 60 percent on the basis of population and 40 percent on the basis of area; and be it further

Resolved, That copies of these resolutions be sent forthwith by the Secretary of the Commonwealth to the presiding officer of each branch of Congress, and to the Members thereof from this Commonwealth.

House of representatives, adopted, March 31, 1958.

LAWRENCE R. GROVE, *Clerk.*

Senate, adopted in concurrence, April 2, 1958.

IRVING N. HAYDEN, *Clerk.*

Attest:

EDWARD J. CRONIN,
Secretary of the Commonwealth.

A Timely Editorial From the Schulenburg (Tex.) Sticker

EXTENSION OF REMARKS
OF
HON. CLARK W. THOMPSON
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 22, 1958

Mr. THOMPSON of Texas. Mr. Speaker, in my congressional district there is a community called Schulenburg, located in Fayette County. It is an agricultural community. The people are descended from the finest kind of stock, many of them Americans from far back into colonial times, others from Germany and still others from Czechoslovakia. The latter 2 groups were particularly aware of the impact of the launching of the Russian sputnik last fall. Their fathers and their grandfathers could remember life in the old country with its constant threat of aggressor nations and its predominantly military character. Many of them had come to America to escape these very things and to them the sputnik was a far more real threat than it may have been to those of us who do not have such close ties with the old country.

The weekly newspaper in Schulenburg is called the Sticker. It is published by Mrs. Florence Bosl who maintains unusually close touch with the people whom she serves. Her reaction to the concern of her subscribers is reflected in a first-page editorial published in her issue of December 6, 1957. Incidentally this is the first time in the 64 years of the Sticker's life that the front page has been used for editorial purposes. The sentiments expressed are so fine that they bear reading by all the people of our country. With this in mind, I submit the text herewith and I recommend that every Member of Congress read it with care:

[From the Schulenburg Sticker, Fayette County, Tex., December 6, 1957]

Fellow Americans are we putting first things first?

Schulenburg is a community very much like many thousands of other communities in a country we proudly call, our United States. We are a people with faith in God, love for our families and friends, deep trust in our fellow men, respect for our laws, and courage to hold up our ideals for all the world to see.

What can harm a nation built on such a solid rock of basic values? Nothing unless—and here we pause and repeat—nothing unless we let ourselves lose sight of these basic values.

Bluntly, we will face the facts:

Russia is not stupid. She put her satellite in outer space to frighten us. She did not, and still does not, know how to bring it down. A top American scientist, Dr. Leslie A. Chambers made this statement to your Sticker editor in an exclusive interview in Fort Worth on November 23:

"We will put a satellite into outer space and bring it down. Our instruments will record the impressions made in outer space. Russia planned a clever stunt, one to create mass hysteria among Americans. If she succeeds, it will be because we let a satellite cloud our practical, down-to-earth reasoning."

Russia reasoned that a frightened United States would curtail normal living, become pessimistic, stop routine activities, in short, would go into a depression. She saw a way to scare us into business panic. Could she hear us talk hard times, a nation with abundant food, warm clothes, sacred houses of worship, good schools, and endless list of blessings, she would laugh to her communistic gods with glee.

She wants us to look with distrust at our Government. She wants us to criticize our leaders. She wants us to fight over internal issues. Yes, she even wants a small town like Schulenburg to quit trying to build a better community. In short, Russia wants most of all for us to become a dis-United States.

These are our basic values, hold them close to your heart: Faith in God, love for mankind, courage for today, hope for a peaceful tomorrow.

These are America's most valuable allies.

Tax Relief for Small Business

EXTENSION OF REMARKS

OF

HON. FRANK IKARD

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 22, 1958

Mr. IKARD. Mr. Speaker, under leave to extend my remarks, I include in the RECORD a recent release by George J. Burger, vice president, of the National Federation of Independent Business, with regard to tax relief for small business:

It is our belief when Members of Congress return from the Easter recess they will have heard from the grassroots. "When is the promised tax relief for small business going to take place?" said George J. Burger, vice president, National Federation of Independent Business.

He continued: "Small business is well aware of the pledges made to them in the presidential campaigns of 1952 and 1956 by both political parties. Small business is well aware that the overall financial position of our economy then was in a healthier state than now, but, notwithstanding, such pledges were made to small business and they must be fulfilled, or," he continued, "are these pledges merely forgotten mouthings?"

A justifiable demand for tax relief for small business is exemplified in a recent communication from a small business institution—typical of the run-of-the-mill problems—where they state:

"We are a copartnership employing 50 to 60 people. We purchased the business 12 years ago. What we bought was outmoded equipment which has all been replaced. To make payments on the equipment and pay income taxes has kept our working capital at a very low figure. Working capital has been our big problem.

"That machinery we purchased 8 to 10 years ago is going to have to be replaced. The replacement cost averages better than two times more than the original cost. We have not been able to accumulate adequate capital but, to stay in this competitive business, we must do something."

Burger concludes: "Congressional action—making good on these pledges of tax relief for small business—could result in stimulating our domestic economy through 4 million or more small businesses making capital investments for improvements, inventory, etc., and added employment which, in turn, could result in the spiral in our domestic economy heading toward an even keel, and the responsibility now rests with the Congress to act immediately on needed tax relief for small business."

Address by Hon. John W. McCormack at 30th Anniversary Banquet of Northeastern Region of the National Conference of Christians and Jews

EXTENSION OF REMARKS

OF

HON. PETER W. RODINO, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 22, 1958

Mr. RODINO. Mr. Speaker, on April 1, 1958, the northeastern region of the National Conference of Christians and Jews, Inc., held its 30th anniversary banquet, at which our friend and colleague from Massachusetts [Mr. MCCORMACK] was honored for his distinguished service in the field of human relations.

I am pleased to include in my extension the remarks made on that occasion by Majority Leader MCCORMACK.

Mr. MCCORMACK's remarks follow:

To be present as we are this evening, to meet and hear the principal speaker, Dr. Frank Graham, educator, statesman, diplomat, gentleman, and one of the greatest Americans of this challenging period, is an honor and treat in itself.

To be the recipient, as I am, of your great organization's award of this year is an additional honor, which Mrs. McCormack and I appreciate and will always treasure.

The fact that your organization without regard to religion, race or color, and dedicated to promote justice, amity, understanding, and cooperation, feels that I merit this award brings a feeling of happiness to me that I find difficult to express in words. For Mrs. McCormack and myself I express our sincere thanks. And I am proud to say that the guidance and protection of Mrs. McCormack has been my constant inspiration.

While I am the recipient of this award and honor tonight, there is in it a transcendent significance far more profound than any glory that may accrue to me personally. It is the deeper implications of the purposes and objectives of your organization—its spiritual origin and beneficial results, and the atmosphere of nobility of mind created by those present that impresses and dominates my mind.

For brotherhood is at the very heart of the issues that divide the world.

If my life's work had been different and this award were given me for inventing and launching an American earth satellite that would recognize America as the leader in this field of research and technology, important as that would be, I would not treasure it as much as I do the honor I have just received. For is it not true that in the age in which we live, brotherhood must be equated with survival?

Coexistence, as advocated by international communism, is a subzero atmosphere.

It is an expediency to deceive, to subvert, to dominate, with resultant enslavement, persecution, imprisonment, and even death and martyrdom.

It is the nearest communism and the Kremlin can come in implementing its dishonest interpretation of peace.

For the alleged brotherhood preached for temporary purposes by the Communist world is based on hatred. And brotherhood cannot result where hatred exists, whether in the minds of peoples, or in the minds of individuals.

Brushing aside the honeyed by insincere utterances of the Communist world, what they are really saying is that we are to get along with them, under their terms and conditions, until the time has come, as Khrushchev says, when they will bury us.

For we live in a world where the Communist regime does not want to understand the rest of the world.

For those with the origin of hate are men who fear to be men, and prefer to be robots.

On the international level the problem with brotherhood is that just as it takes 2 or more to make a fight, so it takes 2 or more to make for brotherhood.

To Lenin, Stalin, Hitler, now Khrushchev, brotherhood lacks the note, the stomp, and the brutishness of the dictator and master, and was and is synonymous with decay, social and otherwise.

But if history has proven anything, it is that what they stood and now stand for, was compounded with fear, of the unconscious arrogance of an inferiority complex, and of a disturbed sense of insecurity.

For a moral voidness or a vacuum exists in their lives.

And history shows what happened to Hitler. And while the form was different, in substance, nazism was the same as communism.

And Stalin lies in his Moscow mausoleum denigrated as a military phoney, blackened as a coward, a murderer, and a maniac by the very accomplices and his group of world killers who now rule in his place.

And if they are wise they will take recourse to history and govern themselves accordingly.

For the forces of hate, hatred of God and neighbor, cannot overcome and defeat the forces of love, love of God and love of neighbor.

Such forces might temporarily gain an advantage—they might win battles in a cold or hot war, but where the forces of hate try to defeat those of love—they cannot win the war.

One of the great weaknesses of the Communist world is lack of faith, lack of understanding, lack of brotherhood, of the hate of its dictators.

And if our foreign policy is positive—and takes this into consideration—we can effectively capitalize the same.

For the desire for liberty—which is directly connected with faith and brotherhood, may be temporarily suppressed by a dictator—but never destroyed. For the inherent desire for liberty comes from God, Himself. And what God bestows, man cannot destroy.

Brotherhood is something that has to be fought for with reservoirs of human energy, patience, and wisdom, beyond anything imaginable by a mind charged with aggression and brutality, and a mind charged with hatred and greed.

Brotherhood exacts the noblest manifestation of the human spirit. It is enjoined in the old and new testaments of love of God and love of neighbor. For love of God and neighbor, with brotherhood as the immediate result, is the rock upon which Judeo-Christianity stands.

"And thou shalt love thy neighbor as thyself."

Without confining myself to our country, it is, however, imperative that America be strong militarily and in our material resources and productive capacity.

We must utilize our brains and facilities, which we have, on a high decision making level, with the authority to carry out such decisions, so that even for a short period of time the Soviet Union may not have a decided advantage over us, when they can attack our targets and we cannot attack their targets.

For if that day should arrive they will probably offer us terms which if accepted would be capitulation on our part, and if we failed to accept, in my firm opinion, they would carry out a surprise attack.

With our avowed policy of nonaggression, which I do not completely agree with, it is imperative that our country always be in a position where we can, if attacked, retaliate and so so effectively and decisively.

For while the Communists hate and deny God, and as a result idealism does not exist in their minds, they cannot deny that the law of self-preservation applies to them as well as to others.

And if we keep strong militarily always having the power to retaliate, that power might be a deterrent to attack, and as time passes, out of evil might come good. But we cannot rely on that. While we can hope for the best, we must be prepared for the worst.

And the spirit of brotherhood must be strengthened, intensified, and broadened, not only here but abroad.

For brotherhood brushes aside misunderstanding—it brings about unity.

For we of America are not a race. We are a people, of all races, colors, and creeds. The areas of agreement are so wide there should be no bigots amongst us.

For lower than the lowest animal that roams the woods; meaner than the meanest animal, and more cruel than the cruelest animal is a human being who hates another, and particularly because of a difference of race, color, or creed.

For the animal does not know better. But the human being is gifted and endowed by God with a mind, with the power to think and reason, to resolve his or her reason into a will, and to exercize that will for good or for evil.

The advancement of brotherhood, in deeds as well as words, means a unified and strengthened America, better able to meet the challenge of today.

For the undeniable fact is that spiritual strength is necessary to ultimate victory.

And while we must be strong in this period of strain in things material, we must above all be strong spiritually. For spiritual strength is the reserve strength that could be the difference between victory and defeat.

And in your dedication to brotherhood and understanding your organization is playing an important part in the real strength of a nation, in this case our beloved country, its spiritual strength and unifying results.

It is with a spirit of humbleness that I accept the award you have conferred upon me, an award which Mrs. McCormack and I shall always treasure.

And in a broader sense, I am representing tonight men and women everywhere of good will.

City's Water Study Timely

EXTENSION OF REMARKS
OF
HON. J. CARLTON LOSER
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 22, 1958

Mr. LOSER. Mr. Speaker, under leave to extend my remarks in the RECORD and following up my extension of remarks on yesterday, I want to include an editorial which recently appeared in The Nashville Tennessean entitled, "City's Water Study Timely."

Water storage is becoming more and more necessary, and the additional water facilities which would be afforded by the construction of the Stewarts Ferry—Percy Priest—Dam would be most helpful in justifying this project from a cost standpoint.

I hope all of my colleagues will take time to read this very excellent editorial:

CITY'S WATER STUDY TIMELY

Nashville's request that Stewart's Ferry Dam be constructed on Stones River to afford the metropolitan area added water supply facilities could be helpful in justifying that important project from a cost standpoint.

But until the basic law for computing cost ratios on such projects is changed, Nashville's need unfortunately may not be counted unless the city stands ready to reimburse the Federal Government a sizable sum of money.

Water storage, a necessity in a Nation quickly coming to face water shortages, cannot be considered as a factor for justifying such projects as Stewart's Ferry under the present law unless a benefiting community is willing to pay for that part of the project.

An amendment to the basic law to include water shortage as a cost factor has been offered twice, but each time the legislation sent to President Eisenhower has been vetoed.

Actually, Stewart's Ferry project was not in the bill which the President vetoed since it has already been authorized, although it has not been justified costwise. But the water storage amendment was. When Mr. Eisenhower vetoed the bill this important amendment went down with the entire bill.

At this point, it is difficult to tell whether Congress will override the presidential veto. If it does, the water storage section of the bill is safe and advocates of Stewart's Ferry will have gained a major point. If the veto stands, however, it should be incumbent upon Congress promptly to rewrite the bill and get it into committee.

It is not known with certainty whether the President favors the water storage proposal but sooner or later, because of a growing water shortage, storage is going to be considered a cost factor on the asset side of the ledger.

When that time comes, it will be well that the Nashville water engineering study is already on hand, but the first job is getting approval by both Congress and the President of a bill which allows consideration of water storage.

On Hiring the Handicapped

EXTENSION OF REMARKS
OF
HON. LESTER R. JOHNSON
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Monday, April 21, 1958

Mr. JOHNSON. Mr. Speaker, it is my unusual privilege to call your attention to an essay by a Granton, Wis., high school youth who had done some excellent work on this question of hiring the handicapped. Wayne S. Gardner, Route 1, Granton, is scheduled to receive a second-place award from the hands of President Dwight D. Eisenhower on May 8 for his excellent work in writing, How Hiring the Handicapped Helps You and Me.

Certainly it is going to be a high spot in the young life of this Wisconsin student to be honored by his President for putting into words some worthwhile thoughts on this subject. On behalf of his fellow residents of Wisconsin's ninth district I want to congratulate him and his English instructor, Mrs. Olivia Ruchaber.

While May 8 will represent a brief pinnacle of success in this young man's life it is also comforting to know this generation of high school students has young men capable of applying John Donne to modern life so precisely and who show such an astute grasp upon the importance of the individual.

He writes:

One of the greatest weapons in the cold war is the way this country bases its importance on the individual. Our Asian-African neighbors are weighing the attributes of a society that has a religion that recognizes the individual against a godless religion that debases mankind and enslaves the individual.

I am pleased to recommend to your attention this prize-winning essay:

HOW HIRING THE HANDICAPPED HELPS YOU AND ME

"No man is an iland, intire of it selfe; every man is a peece of the continent, a part of the maine: if a clod bee washed away by the sea, Europe is the lesse, as well as if a promontorie were, as well as if a mannor of thy friends or of thine owne were; any mans death diminishes me, because I am involved in mankinde: and therefore never send to know for whom the bell tolls; It tolls for thee."—JOHN DONNE.

This view of humanity expressed by John Donne in the 16th century very well explains the purpose of this essay; how hiring the handicapped helps you and me. Living in a society based on the importance of the individual, as we do here in America, it concerns each of us to see that everyone has his God-given right to prove his merits. It is well to remember that all of us, although, perhaps not physically, are handicapped in one way or another. However, we are not deprived, because of our incapacities, of our rights of success in this world. We are still free to seek opportunity, free to face life's

challenges, free to face the world proudly with the security and satisfaction of having a good job. It is only when each person is considered on the basis of his abilities; not rejected because of his disabilities, that we can live to fulfill the heritage of our Nation. It is then that "every man is a peece of the continent, a part of the maine."

Hiring the handicapped helps you and me because it is helping the handicapped person. Giving the disabled worker employment in the proper place is healthy because it focuses attention on capacities, not incapacities. Pensions, aid, pity are all poor substitutes for a productive life. I. R. Freelander, the president of Come Play Products, tells how their first employee was a deaf mute from a State hospital, suffering from alcoholism. Given employment, he became foreman over three people within a year. Later he was released completely from the hospital and became subforeman over 12 people. Given a chance, he became a well-adjusted and productive member of society. He, like the "clod," could have been washed away by despair and we would be the losers. Think how this example could be multiplied by hundreds of rehabilitated handicapped workers.

Just as "a promontorie is the lesse when a clod bee washed away" so also is the employer the loser when the handicapped are not hired. According to employers who have hired partially disabled workers, they not only do work equal to their able-bodied friends, but in many cases do a superior job. This proves that being physically handicapped doesn't make one job handicapped. In many cases where people have lost a limb or sense, they have developed other senses to an above normal degree as in the case of Helen Keller. By using these people in jobs where they can use these well-developed senses, industry and trade can benefit from a maximum of skills. Maj. A. P. Seversky in his article, I Owe My Career To Losing a Leg, tells how he developed both mental and physical powers because of his handicap (he lost his leg in an airplane crash at the age of 21). He later learned to fly again and organized the Seversky Aircraft Corp., now known as the Republic Aviation Corp.

Hiring the handicapped helps the community. A community which hires the handicapped finds it to be good business because it takes names off the relief rolls and places them on the tax rolls. A physically disabled person without work often becomes despondent and is a more likely candidate for a mental institution. Aside from the added burden each such patient throws on the well members of society, there is also the very human urge you and I have to prevent such things from happening. "Any mans death diminishes me, because I am involved in mankinde".

By giving the handicapped his rightful place in society the Nation as a whole is enriched. "No man is an Iland, entire of itselfe; every man is a peece of the Continent." Recent events in the world picture, sputnik, muttnik, show the need for us to conserve rather than waste any talent. Proper placement means the right man for the right job. The greatest harvest will be reaped only when we use the talents of all. We need a highly productive society to insure our democratic way of life. Statistics show that the handicapped worker has a higher production rate and a lower accident rate than the normal man working beside him. Hiring the handicapped helps the military potential because it builds the labor force of our country. "If a clod be washed away by the sea, Europe is the lesse as well as if a mannor of thy friends or of thine owne were".

One of the greatest weapons in the cold war is the way this country bases its importance on the individual. Our Asian-African neighbors are weighing the attributes of a society that has a religion that recognizes the individual against a Godless religion that debases mankind and enslaves the individual.

Dr. Howard Rusk tells how when he returned from a United Nations mission into Poland to set up a program for amputees, he felt it had been most successful because the Polish Minister of Labor had told him it had been a good mission, not only because they had learned much to help them with their amputees, but more than that, they had learned that people in America had problems in common with people in Poland.

Thus we find that hiring the handicapped helps you and me because by giving him his rightful place in society we find it builds the handicapped, serves as an asset to the employer, enriches the community, helps to build our country, breaks wider the crack in the Iron Curtain, makes us worthy of our American heritage because you, because I, because all of us are involved in mankind.

High Tariffs Would Bring Disaster to Whole World

EXTENSION OF REMARKS
OF
HON. WALTER NORBLAD
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 22, 1958

Mr. NORBLAD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an editorial written by Mr. Max Schafer in the Seaside Signal on the subject of Reciprocal Trade Versus High Tariffs:

HIGH TARIFFS WOULD BRING DISASTER TO WHOLE WORLD

When there is unemployment in the country there is an almost irresistible demand for high tariffs. That is as true today as it was in 1929 and 1930. It is to be hoped that we learned our lesson from those days and that the good sense of the American people will strike down any attempt on the part of vested interests for higher tariffs. Nothing but disaster would result from them.

To reivew a little history, the high-tariff advocates used the growing unemployment of 1929, which resulted from an inflationary spiral somewhat similar to that which has caused the present recession, to force the Hawley-Smoot tariff on the world. The result was worldwide retaliation and the virtual disappearance of trade between nations. We lost more than any other country because we have always sold to others more than we have bought from them.

The disastrous results of the Hawley-Smoot tariff were fantastic. First, of course, a recession which needed only a slight price adjustment to cure itself, became a depression, with 15 million unemployed at its peak. But that was just the beginning. The worldwide depression which followed the disruption of trade wa the direct cause of the Second World War, and out that war came the opportunity for the Communists to gain control of nearly half of the population of the world. We are still paying the piper in the cost of the cold war.

To increase tariffs at this time could be even more disastrous. For instance Japan is the principal target of the high-tariff people, in spite of the fact that Japan buys far more from the United States than she sells to us. To cut off her imports, which provide her with the money to buy the products of American labor and capital, would force her into the arms of Russia, and if we lose Japan as an ally we have lost the eastern Pacific, as all of the Far East would follow her into the Russian orbit.

If we force Europe out of our market, in spite of the fact that Europe buys more from us that she sells us, we will force all of Europe into an economic, if not a political alliance with Russia. We will destroy the system of alliances which we have so carefully, and at such expense, built up during the past 10 years. We will have isolated ourselves politically and economically, and we will have put these nations in a position in which they must look to Russia for their trade and welfare.

But that is far from all. We would, with high tariffs, turn the present mild recession into the same sort of a depression we experienced during the thrities. Several million Americans depend on foreign trade for their livelihood. Deprive them of that livelihood—and high tariffs would do just that—and we would have a growing depression which would eventually bring disaster to the whole world. Those who believe they would become beneficiaries of the tariffs would suffer along with everyone else.

The best thing that can be done today would be the renewal of the reciprocal trade agreement law sought by President Eisenhower. And the sooner the better. That is our best chance for increased employment in the future.

Education Is a Problem of the School and of the Home

EXTENSION OF REMARKS
OF
HON. W. R. POAGE
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 22, 1958

Mr. POAGE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Rosebud News, Rosebud, Falls County, Tex., of April 18, 1958:

EDUCATION IS A PROBLEM OF THE SCHOOL AND OF THE HOME

A year ago, if someone had asked you what Nation had the best system of education, no doubt you would have answered that we do, that the United States system is superior to all others.

But that was before sputnik, and before muttnik. It is popular today to answer that Russia has the best system of education if that question comes up for discussion. It is popular, but is it true?

Some searching questions have been asked about our system of education during the past few months. They are the questions that should have been asked years ago. They are questions that should be continually asked as the best thinkers ponder and think and try to come up with something that is an improvement over old methods, or now and then, something new.

More classrooms and more teachers is not the answer. It is probable that more classrooms are needed, and it is for sure that more teachers are needed in many places. But these can be had for a cash price, and we have the cash.

But cash alone is not enough. We have been stressing dollar values too much. A dollar mark cannot properly nor adequately price a child's future, nor a teacher's worth.

And teachers alone are not enough. Dollars can hire more teachers, but all the teachers in the world, yes all the good, fine, excellent teachers of sound, and tested, and approved methods, are not enough.

HOME IS FIRST SCHOOL

Some of the great values are taught only at home. Parents are the first teachers for

every child. The older children are the first teachers of the younger ones. Every observant grandparent watches with interest and satisfaction as he sees the younger do exactly what the older child does. This is a part of education. It is more difficult to observe that the child often does exactly what his parent does, because the parent is so often gone. Gone to work, to play, to party, to shop, to cook, to clean house, to visit neighbors, or to do something else with more or with lesser value as something to be taught to your very own pupils.

It is in the home that children first get their idea of what is right and what is wrong, what to laugh about, what to cry about. The ethics of the parents become the ethics of the children. This is the broad base of education, and it is the education that children get first.

This area, this time of life when the child is young and in his formative period, is the time and the place where success or failure; respect for excellence, respect for duly constituted authority, the desire for survival, or the inspiration for triumph is gained. It is during this time that good students are born. It is during this time that juvenile delinquents are born. Parents cannot escape the responsibility for either. Neither is a gift of God. Both are the result of what goes into the life and spirit of the youth from his first teachers, the persons he knows and learns from when he begins to learn.

A DUAL PROBLEM

Borrowing two statements from one of America's eminent educators we remember: "In school, the teachers can do a very great deal to teach our children that their own ideas are good and worth having and expressing, even in the face of disagreement."

"At home—it is in the home that children first learn what to want and respect, what is important, what trivial, what worthy to be admired, these are the roots of education."

"The imperative today, in my judgment, is that we reassert—so that every person in this country is not left in any doubt about it—every man and woman, every politician, yes, every teacher and every child—our conviction that the children's needs have first priority over all other civilian wants."

DISCIPLINE IS EDUCATION

A part of education is the discipline and the rigors by which it is gained. There ought to be a fuller realization that there is more to success than making money. There are achievements that have a greater value than dollars. To achieve is to accomplish something by overcoming difficulties by the use of skill, by perseverance. Athletic contests in schools help teach players that they must train, must strain, must persevere in order to be good enough to make the team.

The sudden surge toward scientific studies in America has been spurred on by events that have occurred lately in the space world. Such cause is temporary in its nature. When we have outdistanced our adversaries in achievements in the world of outer space there will be a tendency to let things slide again, slide back to the place where we again value everything in dollars instead of truer values.

EDUCATION IS POWER

Back in the days when chautauquas came to town I once heard a lecturer speak on the subject of power. He proved, among other things, that to have money was to have power, but in the climax he said and proved that education is power.

SOME DEFINITIONS

A synonym for education is discipline.

Education is the process of nourishing or physically rearing a child; the impartation or acquisition of knowledge, skill, or discipline of character. Training suggests exercise or practice to gain skill and endurance, facility; discipline, severe and systematic with a view to the right conduct, or prompt and effective action at the right time.

It is something that requires a continuing stimulus, not a temporary one. It starts in the home. It is continued in the public schools. It is furthered in the colleges. It is put to work and it is useful as long as we live. It is desirable for a full and complete life. It is not the answer to all the questions and all the problems, but it will help you cope with them. Right education is helpful to the individual mentally, physically, and morally. A man's education does not stop when he is awarded a diploma. It is just beginning, in a new school, the school of experience. It is an arduous task, but in the end it may not only help us to survive but also to triumph over the difficulties that beset us.

"Nature Irresistibly Wills That Right Shall at Last Prevail," Wrote Immanuel Kant of Königsberg—The Case for the German Expellees With Special Emphasis on the Sudeten German Issue

EXTENSION OF REMARKS
OF
HON. B. CARROLL REECE
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 22, 1958

Mr. REECE of Tennessee. Mr. Speaker, today is the anniversary of the birth of one of the world's greatest thinkers, the German philosopher, Immanuel Kent. Born on April 22, 1724, at Königsberg in Prussia, he studied, taught, and at the age of 80 died there, seldom leaving his hometown and never venturing beyond the confines of his home province. Yet, to this very day, his thoughts have stirred the minds of people all over the world so much so that in the wake of World War II a new crop of reprints and republications of, and reedited commentaries on, his famous essay, On Eternal Peace, has appeared.

During Kant's lifetime his friends used to gather at his birthday to do him honor and a curious custom grew up: To address so wise a friend on his birthday was a task that required preparation. Therefore, the birthday cake, which the well-wishers brought, contained a bean. Whoever drew the slice with the bean was the bean king and entrusted to prepare—next year's birthday speech. After Kant died, in 1804, his friends, forming a self-perpetuating group, continued the custom of meeting on his birthday and choosing the bean king in Königsberg until April 1945, and since then in Göttingen.

To me, the city of Kant still is Königsberg. That the Communists and their parrots should now call it Kaliningrad, is a blasphemy on civilization to which the free world cannot, and should not, reconcile itself.

Immanuel Kant was a patient and tireless student of the political systems which he then knew. His watchful and penetrating mind observed the political developments of his time and he maintained an impartial and enlightened attitude toward all political questions. It was with great reluctance that in his 77th year he felt it necessary to abandon the long cherished project of writing on a System of Politics toward which his tract, On Eternal Peace, was to be but a first stage.

The small tract, On Eternal Peace, which Kant wrote at the time of Washington's second administration looks rather inconspicuous when compared with the weighty volumes that modern publishing mills are grinding out by the score. Nonetheless, it may be fitting and proper to quote from that tract a few lines which may well serve to guide those who earnestly search for a genuine solution to the world's problems. These are the words of Immanuel Kant:

Act so that thou canst will that thy maxim shall become a universal law.

Right must never be compromised to a line of policy, but policy always be subordinated to right. Woe to him who adopts a line of policy other than that which holds sacred the rule of justice.

A true policy, therefore, cannot advance a step without first paying homage to the moral law; and, although politics taken by itself is a difficult art, yet its union with morals removes it from the difficulties of art. For this combination of them cuts in two the knots which politics alone cannot untie whenever the two come into conflict with each other.

The rights of men must be held sacred, however great may be the sacrifice which the maintenance of them lays upon the governing power. We cannot divide right into halves, or devise a modified condition of right intermediate between justice and expediency. Rather must all politics bow the knee before the principle of right.

Nothing is more infuriating than an act of injustice. All other wrongs which we may suffer do not compare with it. No conclusion of peace shall be regarded as such, when it has been made with the mental reservation of conflict matter for a future war.

Mr. Speaker, perhaps few people in the world today are more firmly united in opposing communism than are the 16 million Germans expelled from the German provinces east of the Oder-Neisse line, the Sudetenland, and other parts of Europe. These sturdy people, outnumbering the total population of Sweden, Norway, and Denmark combined, experienced in 1945 the full impact of the Red invasion of their ancient homelands. Their expulsion to Western Germany resulted in the tragic death of more than 3 million of their number.

In the struggle against the Red octopus of Communist imperialism of the free peoples the Germans, because of their geographic location, play a notable role. No wonder that, when other plans miscarried, the Kremlin rulers launched the Polish Rapacki plan with the obvious intent to neutralize and immobilize West Germany. Removal from the society of free nations of the Germans surely remains to be a major policy objective of the Communists. It should not go unnoticed that this plan also wants to neutralize, that is to freeze, most of those parts of Europe which were eased into communism by the expulsion of the Germans, besides neutralizing West Germany where these expellees are now living.

There can be little doubt that the expulsion 13 years ago from their home-

lands, the German provinces east of the Oder-Neisse line, the Sudetenland, and other regions of central and east Europe, of a considerable part of the German people has greatly helped bringing about the communization of these areas of the European Continent. Mr. Speaker, the Kersten report—House Report No. 2684, 83d Congress, 2d session—of the Special House Committee on Communist Aggression, in 1954, has given an account of Czechoslovakia's communization. I like to add to this excellent report by pointing to the important part—perhaps hitherto not fully recognized in its true proportion—which the expulsion of the Sudeten Germans had in bringing about the communization of that country.

Among the 16 million German expellees, mentioned before, were 3.3 million Sudeten Germans, the latter group equal in size to the total population of either Eire or Norway. They were expelled in 1945 and 1946 from their ancient homeland by the Communist-led Czechoslovak Government of the so-called national front. About 300,000 of them died during the process of expulsion.

Mr. Speaker, I wish here to emphasize once more that the expulsions of all these Germans established a wrong. They constituted a flagrant violation of the rules of international law, of the laws of humanity, of the basic principles of international morality and, thus, actually served the cause of Communist imperialism.

Then, as you may recall, 10 years ago, an out and out Communist regime took over in Czechoslovakia. That sad event in February 1948, shocked the free peoples throughout the world. However, Communist control had already asserted itself in 1945, when the Sudetan Germans were expelled. What we witnessed in 1948 was merely the shrewd legalization of a system illegally foisted upon the people in 1945.

When speaking of the Sudetenland, I refer to the territory comprising the border regions of Bohemia and Moravia-Silesia, that is, the border regions of the western part of present-day Czechoslovakia. In 1921, 3.2 million Sudeten Germans and 6.8 million Czechs were living in Bohemia and Moravia-Silesia while, in 1935, the figures showed 3.3 million Sudeten Germans and 7.4 million Czechs.

As a political entity, a state, Czechoslovakia does not antedate the year of 1918 when Bohemia and Moravia-Silesia with its Czech and German population were combined with Slovakia, the latter comprising 2.3 million Slovaks and 692,000 Magyars, and with Carpathian Ruthenia inhabited by 549,000 Ruthenians. Nevertheless, Czechs and Germans have been living side by side in those first-named regions for nearly a thousand years. About one-third of the Czechs today have German family names while a great many Sudeten Germans have Czech names.

HISTORICAL SURVEY: (1) EARLY HISTORY

In order to get a clear picture of the whole case it will be helpful to start with a historical survey showing the background of Bohemia and Moravia-Silesia. Germanic tribes, namely the Marcomani, Quadii and Langobardi inhabited, exclusively, these provinces between the 1st and 6th centuries after Christ. It was not until the sixth century that Czech Slavic tribes came in from the east and settled in the interior area of these provinces among the remnants of the Germanic tribes most of whom had left. The border region, the later Sudetenland, was mainly primeval forest, sparsely inhabited and not settled by the Czechs. The sixth century then saw the invasion of Europe by the Asiatic Huns and Avars. The Slavs were liberated from the rule of the Avars with the help of a German chieftain, Samo, who later became their first duke.

In 845 A. D. 14 chieftains of Czech tribes came to Regensburg, Germany, and accepted the Christian faith. Since these early beginnings, Czech-German relations have been distinctly friendly, perhaps interrupted for only a brief period by the Hussite wars, those religious quarrels in the 15th century. Bohemian dukes intermarried with German princely families. Bohemia itself became a fief of the German empire or, stating the full title, the Holy Roman Empire of German Nation. Bohemian dukes, since 1198 kings, received their title from the German emperor; but they themselves were electors of the empire choosing at the death of an emperor the successor to the crown.

From the 12th century on, Bohemian dukes and lords began to welcome to Bohemia and Moravia German settlers who cleared the primeval forest of the sparsely inhabited border region, cultivating the new soil and developing the area that later became known as Sudetenland. Other Germans were welcomed to other parts of Bohemia and Moravia where they founded towns and, at an early date, began mining activities. Most towns in Bohemia and Moravia-Silesia have a German background. The Germans brought with them the great municipal codes of Magdeburg and Nuremberg; they cultivated crafts and trades. In 973, the first German bishopric was established in Prague and in the 14th century, during the reign of the German emperor, Charles IV, was raised to an archbishopric. Charles IV was, at the same time, king of Bohemia. He resided in Prague, spoke German as well as Czech, and was acclaimed by both peoples "father of the country." In 1348 Charles IV established at Prague the first university in Central Europe and decreed it to be a study center for scholars of all nations of his realm.

HISTORICAL SURVEY: (2) DURING THE CENTURIES OF THE HAPSBURG DYNASTY

When in 1526 a Hapsburg prince succeeded to the Bohemian throne, Bohemia and Moravia-Silesia became part of the Hapsburg domain, but continued to be an integral part of the Holy Roman Empire of German Nation until its end in 1806. The Hapsburg dynasty reigned there for nearly four centuries. In the early years of the 17th century, the German emperor, then Rudolf II of Hapsburg, again resided at Prague in the Hradschin castle. In 1649, however, the Imperial Court was moved to Vienna and the latter, owing to its more central location, then became the residence of the emperors.

Individual nations within the Hapsburg realm enjoyed considerable prosperity in trade and commerce and there was much intermarriage among the various peoples. Though both languages, Czech and German, were used in Bohemia and Moravia-Silesia, Emperor Josef II decreed in 1784 that German be the official language in his domain which, at that time, included Belgium and Italy. It provoked opposition and was not long upheld; from 1790 on, German and Czech continued to be used side by side in Bohemia and Moravia-Silesia. By a ruling, in 1880, of the then Austrian Minister of Education, Julius von Stremayr, it was expressly stated that both tongues were the official languages in that area. This was reaffirmed by Count Kasimir Badeni, the Austrian Prime Minister in the late 1890's.

From the beginning of Austrian constitutionalism in 1860 to the end of the Dual Monarchy in 1918, the Czechs were represented in the imperial parliament at Vienna by their own deputies and were free to use their own language, build their own schools and establish other institutions of learning. Besides, in the provincial legislatures of Bohemia and Moravia-Silesia the Czechs had a majority and often outvoted the Sudeten Germans. At Prague in the governor's office, which at that time may have been more important than the ministry of interior at Vienna, Czechs held many influential positions. Provincial administration of schools, agriculture, and welfare was properly apportioned to both nationalities.

However, the 18th and 19th centuries had seen the rise in Europe of nationalism. Johann Gottfried Herder, born in 1744 in Mohrungen, East Prussia, became the great philosopher propounding his ideal of an enlightened humanitarian nationalism. Oddly he found the most ardent disciples among Slavic intellectuals. His ideas served as a guiding light for Czech nationalism which, thoroughly roused in 1848, then took a Pan-Slavic direction. This was manifestly evident in 1849 during the first Pan-Slavic Congress at Prague when the Russian anarchist, Mikhail Bakunin, as if in anticipation of what was to happen there a century later, played a leading role. Into the concept of the national state the Czechs introduced a dangerous element of their own. They began to mistake the Bohemian kingship for a Czech national kingship and the Bohemians for Czechs, claiming the country altogether for themselves and regarding Sudeten Germans as a minority of aliens.

In 1867, the Austrian empire was reorganized into the Dual Monarchy of Austria-Hungary and the Magyars thereby obtained a status equal to the Germans. People of Slavic nationalities then tried to have this arrangement widened into a triple monarchy by establishing under the Hapsburg crown an autonomous state of Bohemia. Because of Hungarian opposition the plan failed. Czech refusal to guarantee as a precondition to the Sudeten Germans the right of self-administration contributed to the failure.

HISTORICAL SURVEY: (3) THE FIRST CZECHOSLOVAK REPUBLIC

Led by T. G. Masaryk and Eduard Beneš, Czech politicians saw in World War I the opportunity for their people to secede from the Hapsburg empire and set up an independent republic. Promising the Slovaks full autonomy, Masaryk persuaded them to join the Czechs in forming one state when he concluded with the Slovak League of America the Pittsburgh Agreement of May 30, 1918. The new Czechoslovak Republic then came into being on October 28, 1918.

At that hour the Sudeten Germans, on their part, decided to establish the provinces of German-Bohemia and Sudetenland, and to associate these with the new Republic of Austria. Head of the provincial government at Prague was at the time Dr. Rudolf Lodgman von Auen. He is today the president of the National Union of Sudeten German Expellees and a co-chairman of the Sudeten German Council. Dr. von Lodgman had long urged a solution of the problem of Austria-Hungary on lines of federalism. He advocated freedom—his ancestors had fled England at the time of Elizabeth I in search of freedom—and he stood for the right to self-determination. But in spite of the fact that Austria-Hungary was ostensibly dismembered so as to realize that right, firmly proclaimed by our President Woodrow Wilson, it was squarely refused to the 3.2 million Sudeten Germans who were forced against their will to be part of the new Czechoslovak Republic.

To subdue the demands of the people, the Czechs even dispatched troops to the Sudetenland and when, in March 1919, there were public demonstrations the Czech military fired into the crowds causing many casualties. Leading the resistance movement in those days was Josef Seliger, chairman of the Sudeten German Social Democratic Party.

Headed by Dr. Beneš, the Czech delegation to the Paris Peace Conference did not shrink away from using such tricks as presenting maps showing a Sudeten German area falsely reduced. The deceit was later contradicted even by the official Czechoslovak census figure. In an oral statement to the Big Four, Beneš admitted that the Sudeten Germans, if given a free choice, would probably secede from the new republic. To compensate for denying them the right to self-determination Beneš, in a written memorandum to the peace conference, went on record in favor of a Swiss type of constitution for Czechoslovakia. It remained an empty promise.

Dr. von Lodgman and the Slovak spokesman, Msgr. Andrew Hlinka, as well as leaders of the Magyars in Czechoslovakia also managed to go to Paris to attend the Peace Conference. But they were kept in their hotels behind barbed wire and were not given a hearing.

THE PROPHETIC WARNING OF A TRUE AMERICAN

Today we recall that it was a man representing the United States who objected to the flagrant violation of the right to self-determination in the specific instance of the Sudeten Germans. Mr. Speaker, it gives me a sense of gratification to remind the Members of this House of that great citizen of our country and to quote his prophetic words. I refer to Prof. Archibald Cary Coolidge, the well-known Harvard historian. In December 1918, he was appointed by the Secretary of State to be political observer in Austria-Hungary, assigned to the American Commission to Negotiate Peace and instructed to head a field mission to the former dual monarchy. Professor Coolidge incidentally is a founder-member of the New York Council in Foreign Relations and served as first editor of its quarterly, Foreign Affairs.

Reporting to the Commission from Vienna on January 12, 1919, Dr. Coolidge wrote:

> The great argument on which the Germans of Austria and Bohemia rest their case is, as they are never tired of repeating, the principle of self-determination. * * * When after the cessation of hostilities the Czechs, instead of disarming, called their men to the colors and occupied the German parts of Bohemia, people in those regions were inclined to resist by force. The government of Vienna, however, forbade all such resistance, declaring that the matter could be settled only by the Peace Conference in Paris, and that the Germans of Austria and Bohemia should peaceably await its decision trusting to the justice of their case. * * * To tear away some three millions of Germans from their fellows and to unite them against their wills to a Czechish population of barely double their numbers would not only be a most flagrant violation of the principles which the Allies and especially the United States have proclaimed as their own and which have been accepted by Austria, but would utterly destroy any hope of a lasting peace. * * *
>
> A decision which shall place one-third of them under the heel of a foreign people who have already begun to take steps to denationalize them will mean and end to any hope of a permanent peace in this part of the world. Sooner or later the question must and will come up again, and in the meantime the Balkanization of the former territories of Austria will be a source of woe and peril, not only to the territories themselves but to the rest of the world. In the eyes of the German Austrians today the issue is a clear one between the new doctrine of self-determination from which so much is hoped and naked imperialism of the old discredited type.

Dr. A. C. Coolidge summed up his observations in a detailed memorandum of March 10, 1919, which he submitted to the Peace Commission. He dealt with the problem of nationalities and new boundaries in all parts of the former Hapsburg monarchy and set out stating:

> The opinions which I shall now venture to submit represent in many cases ideas of long standing confirmed or modified by unusual opportunities of observation in the last few months. I shall merely state my conclusions with but a few words of explanation, as it would take far too long to attempt anything like adequate treatment of the various questions. * * *
>
> To grant to the Czechoslovaks all the territory they demand would be not only an injustice to millions of people unwilling to come under Czech rule, but it would also be dangerous and perhaps fatal to the future of the new state. * * * The bloodshed on March 3 when Czech soldiers in several towns fired on German crowds * * * was shed in a manner that is not easily forgiven. * * * For the Bohemia of the future to contain within its limits great numbers of deeply discontented inhabitants * * * will be a perilous experiment and one which can hardly promise success in the long run. * * * I am aware that political and other considerations at the present time may make it impossible for our Commission to support all of the solutions I have advocated. Nevertheless, I am presenting them as those which seem to me best in themselves.

Three weeks later, on April 1, 1919, the Sudeten German question was taken up at a Peace Conference meeting discussing the report of the Czechoslovak Commission on the frontiers between Czechoslovakia and Germany. It was at this meeting when our Secretary of State, Mr. Lansing, objected to including into the Czechoslovak State large Sudeten German areas and declaring that—

> The American delegates objected to the whole method of drawing frontier lines on strategic principles.

And that—

> The fixing of frontier lines with a view to their military strength * * * was directly contrary to the whole spirit * * * of the policy of the United States as set forth in the declarations of President Wilson.

M. Laroche of the French delegation, upon being asked at this meeting whether the commission would approve of a plebiscite in the area, replied that a plebiscite could not be proposed without extending it to the remainder of the German Bohemians, which would reduce the Czechoslovak state to very slender proportions. Mr. Lansing thereupon plainly said that this was not a good reason to justify an injustice. However, the views of the French Foreign Minister prevailed, namely, to strengthen Czechoslovakia, which M. Pichon trusted "would remain an ally of France" as against Germany which, as far as the French Foreign Minister was concerned, still remained a country to be feared.

The clear analysis given of the situation in the reports of Archibald C. Coolidge and the correct attitude of Robert Lansing will remind us of the equally prophetic warning issued at about the same time by the South African statesman, Gen. Jan Smuts, and dealing with the injustice about to be done to the Germans in Prussia by turning over some of their homeland to the Poles:

> I think we are building a house of sand. * * * I shudder to think of its ultimate effect.

Mr. Speaker, these warnings should be remembered today by those who may tend to place again expediency above right and justice.

The United States, however, then began to withdraw from the scene of European political intrigues. The constitution of the Czechoslovak Republic was devised by a mostly Czech commission and not by a duly elected convention. Czech became the official language. The Sudeten Germans were not given a fair chance to participate. The facts of the undemocratic beginnings of Czechoslovakia should not be overlooked.

The Czech land reform law of 1919 allotted 2,025,400 acres of German property in the Sudetenland to proteges of the Czech political parties. Only 7 percent of the land taken from Sudeten German owners was given to Sudeten German farmers, while 93 percent was handed over to new Czech settlers. In addition, land property expropriated in

the central parts of Bohemia and Moravia-Silesia, that is, outside of the Sudetenland, amounting to another 3,818,064 acres and owned by Germans, was also handed over to the Czechs. In the Sudetenland proper, 31 percent of the entire land area was confiscated in 1919. The Czech colonists were settled and Czech schools were built with the aim to break up the German language area.

Although the Sudeten Germans represented about 30 percent of the total population of Bohemia and Moravia-Silesia, they made up only 10 percent of the employees of the general civil service, 13.1 percent of the postal service, 12.8 percent of the judicial administration service, 12.4 percent of the railway employees, and only 5.4 percent of the army officer corps. The police force was almost exclusively Czech. Administrative reforms in 1927 must also be regarded as discriminatory, though a smoothly working publicity machine was able to show the outside world the picture of what appeared to be a democracy.

In the 1920 parliamentary elections the Sudeten German parties won 74 out of the 300 available seats. Some of these parties, the so-called Activists, entered the government coalition and, since 1926, most political parties of the Sudeten Germans participated in the government coalition, thus showing their honest desire to cooperate. But they were unable to gain any ground toward reforms on federative lines. Even a late-in-the-day palliative assurance of more posts to be assigned to Sudeten German civil servants remained an empty promise.

Upon being nominated ministers in the Czechoslovak Government, two Sudeten German politicians, Mr. Spina, of the Farmers Party, and Mr. Mayr-Hartig, of the Christian Social Party, accepted the call, but declared that Sudeten German representation in the Prague government was not to be interpreted as a solution of the nationalities problem of Czechoslovakia. They then requested Czech agreement to basic reforms and recognition of minority rights by allowing to bring the issue before the League of Nations. Their efforts failed.

The worldwide economic crisis at the end of the 1920's imposed a heavy burden on the Sudeten Germans. Czech bankers and administrators gave preference to Czech enterprises. Out of 800,000 unemployed 500,000 were Sudeten Germans. Little wonder that they began looking more and more for support from abroad.

In 1935, the Sudeten German Party, a union of a number of political groups, polled 1,249,530 votes and thus emerged as the largest political party in all of Czechoslovakia, but was forced to remain in opposition. Early in 1937, several younger members of those German parties that participated in the government coalition made once more a concerted effort to convince the Czechs of the urgency of thoroughgoing reforms. Hans Schutz, of the Christian Social Party, sternly demanded equal rights, while Wenzel Jaksch, of the Social Democratic Party, bluntly asked whether or not there was still a place in the Czechoslovak Republic for genuine Sudeten German partnership. Incidentally, both men are today distinguished members of the German Bundestag, the former also a cochairman of the Sudeten German Council. Though these parties, until 1935, had held about 75 percent of the Sudeten German share of seats in the Prague Parliament, the Benes government refused to make any concession.

Now the British became increasingly concerned about this situation in Czechoslovakia. In the growing crisis of 1938 Lord Runciman was chosen to head a mission of mediation and, after a close study on the ground, he reported:

> It is hard to be ruled by an alien race. * * * In the last elections in 1935 the Sudeten German Party polled more votes than any other single party. * * * But they can always be outvoted; and consequently some of them feel that constitutional action is useless for them. * * * Even as late as the time of my mission, I could find no readiness on the part of the Czechoslovak Government to remedy (the complaints) on anything like an adequate scale. * * * Just as it is essential for the international position of Switzerland that her policy should be entirely neutral, so an analogous policy is necessary for Czechoslovakia—not only for her own future existence but for the peace of Europe.

However, Czechoslovakia refused to admit its multinational status and did not strive for a position of neutrality. In spite of its vulnerability because of the large percentage of citizens of non-Czech nationality it allowed itself to be used as a political pawn, and since the treaty in 1935 with the Soviet Union, increasingly as a pawn in the hands of the Kremlin, thereby causing its own gradual disintegration. The case was correctly diagnosed in the Kersten report—page 18:

> Fateful for the people was the fact that they were misinformed by many fellow traveling intellectuals, by means of newspapers, books, and through all mediums of communication as to the real nature of communism, cleverly described for years even prior to World War II as undergoing an evolution toward a democratic humanitarian ideology.

The Kersten report correctly also points to the Slovaks as being thoroughly dissatisfied. The Prague government treated them in much the same way as the Sudeten Germans. About half of Czechoslovakia's total population was tired of being bossed by the 7.4 million Czechs. No wonder that the foundation of the republic began to crumble, when the Anglo-French démarche of September 21, 1938, demanded the cession to Germany of the Sudeten region. It was soon followed by demands of Poland and Hungary for the cession of areas inhabited by their conationals, 131,000 Poles and 692,000 Magyars, and finally by the declaration of independence of the 2.3 million Slovaks who sought recognition as a nation.

From the beginning the Czechs had been showing a lack of realism, a lack of willingness to plan, in good time, for constitutional reforms. If in the years after 1918 a Swiss solution had earnestly been sought, events might well have taken a different course. The word "Munich" has since been linked in our mind with a short-sighted, dangerous policy vis-à-vis an aggressive dictator. Surely the right to self-determination should not be exercised by employing violence which would only bring about new injustice. Nevertheless, the right to self-determination is today recognized as a canon of international law. A brief glance at the map of Asia and Africa will suffice to convince everybody of its potency and potentiality, of its full meaning in the realities of present-day world affairs.

As to Munich, it should be remembered that neither the Czechs nor the Sudeten Germans were partners to that agreement. It was made by the four European big powers. When Hitler, in 1939, under a flimsy pretext occupied the central area of Bohemia and Moravia-Silesia he openly violated the right to an independent national life of the Czech people just as the Czechs, two decades before, had violated that same right of the Sudeten Germans. Thereafter, the Sudetenland was separated by state boundaries from the rest of Czechoslovakia.

To charge the Sudeten Germans with treason against the Czechoslovak Republic is beside the point, when the charge is made by the Czechs who themselves set the example. In opposing Austria-Hungary, Masaryk, Beneš, and their adherents had solicited during World War I the support of foreign governments and had organized thousands of Czech deserters from the Austrian Army to join Czech legions on the side of the Allies. It was hard to make Sudeten Germans later believe that as to their own case "sauce for the goose was not to be sauce for the gander." The expulsion of the Sudeten Germans cannot be based on treason allegedly committed by them against the Czechoslovak Republic nor upon the charge of association with Hitler's policy of suppressing the Czechs.

SUDETEN GERMAN CONTRIBUTIONS TO WESTERN CIVILIZATION

Before going into the events leading up to the expulsion it seems appropriate to refer to some of the contributions which Sudeten Germans have made to western civilization. These contributions are truly a part of the history of Bohemia and Moravia-Silesia and remain to this day an integral part of the picture of this area. It started, as we have seen, with the first traders and settlers, the founders of towns in the early Middle Ages. They brought Christianity and the culture of the West, the chivalry of medieval knighthood, the great legal codes of Magdeburg and Nuremberg, the sciences taught in schools. When the Hussite era temporarily interrupted this wholesome German influence it resulted in the decline of municipalities, of the liberties of its citizens and it brought about the rise of an oligarchic rule and a system of peasant bondage. During the 16th and 17th centuries Czechs and Sudeten Germans, united under the royal banner of Bohemia, fought side by side in defending European Christianity against

the Mohammedan Turks. It was in Prague where the new High German language was developed, the same in which Martin Luther wrote his translation of the Bible.

Present Communist rulers of Czechoslovakia publish quite an amount of propaganda material to have tourists visit the beautiful cities of Bohemia and Moravia. Yet they as well as their fellow travelers in the West painstakingly omit to mention how much of all this is principally the accomplishment of the same Sudeten Germans whose descendants they have cruelly expelled. They try to nationalize, ex post facto, the history of the land and where; in 1787 at Prague, Mozart's opera, Don Giovanni, was first performed; where, in 1823 at Marienbad, Goethe wrote his Marienbader Elegie; and where, in 1844 at Karlsbad and Marienbad, Richard Wagner composed Thannhäuser.

Here are some more of the facts: During the reign of Charles IV, Peter Parler built the famous St. Vitus Cathedral and gave to Prague an individuality of its own when he also built the Town Hall, the Charles Bridge and the castle of Karlstein. Many other fine Gothic buildings were erected by Germans. The picturesqueness of Bohemian cities which we find so charming owes much to the Baroque period. The list of artists and architects of that time includes: A. Leithner, Christoph and Ignaz Dientzenhofer, Santin Aichel, Ignaz Bayer, Peter Brandel, Reiner Mathias Braun, Hartmann Balthasar Neumann, F. Dietz, Fischer von Erlach, Lukas von Hildebrandt, Anton Zimmer, J. M. Lassler, Ferdinand Max and Johann Brokoff—all of them German; Franz M. Kanka, Jakob Blazejovsky and Karel Skreta were Czech; in addition there was 1 French and 6 Italian architects. Castles, churches, monasteries, and town houses in all of Bohemia and Moravia bear evidence that Sudeten Germans cannot now, ex post facto, be separated even from those parts of the country which were inhabited by the Czechs.

Natives of the Sudetenland who made their mark in history include: Albrecht von Wallenstein, who led the Imperial armies in the Thirty-Years War; Prince Schwarzenberg, the Austrian statesman of the Napoleonic era; Count Radetzky, the Austrian field marshal; Hans Kudlich, known for his part in the struggle to liberate the peasant from bondage; Gregor Mendel, founder of modern genetics and author of the Mendelian law; writers like Karl Postl, known in this country by his pen name of Charles Sealsfield, Maria Ebner-Eschenbach, Berta von Suttner, and Adalbert Stifter; Alois Senefelder, who invented the stone press; Joseph Ressel, who invented the ship screw; Mathias Schoenerer and Franz Josef Gersten, who built the first railway in Bohemia, and Anton von Gersten, who built the first railway in Russia; Johann Liebig and Johann Schicht, the industrialists, and Ferdinand Porsche, who constructed the Volkswagen; Johann Nepomuk and Clemens Maria Hofbauer, who were later canonized by the Catholic Church, and the late Cardinal Theodor Innitzer, of Vienna; the recent Austrian Presidents Karl Renner and Theodor Koerner as well as Adolf Schaerf, who occupies this high office now. We might add that the parents of the composer Franz Schubert came from the Sudetenland and that Archbishop Aloysius Muench, of Fargo, N. Dak., the papal nuntius in Germany, is of Sudeten German descent.

The following figures will illustrate the extent to which Sudeten Germans constituted an integral part of Czechoslovakia's economy. Their share of that country's various industries was as follows: Raw materials, 70 percent; coal mines, 66 percent; lignite mining, 80 percent; iron and steel foundries, 70 percent; sugar refineries, 58 percent; textile machinery factories, 80 percent; electrotechnical industry, 70 percent; porcelain and chinaware, 90 percent; glassworks, 80 percent; wool industry, 75 percent; textiles, 89 percent; silk factories, 100 percent; artificial silk, 80 percent; fringe and gimp industry, 100 percent; paper, 80 percent; chemicals, 70 percent; fertilizers, 60 percent; musical instruments, 90 percent.

In addition, Sudeten German farming and timberland property amounted to 11,095 square miles. Their property holdings had an estimated total value of $19.5 billion. This figure does not include the Sudeten German share of Czechoslovak state property, natural resources, art collections, libraries, the value of Sudeten German international firms. Numerous products, such as some of the beer—Pilsener and Budweiser are German, not Czech names—and the Gablonz glassware and custom jewelry industry, carrying the imprint "Made in Czechoslovakia" were distinctly Sudeten German. Then there is the good will of people seeking the cures in world-famous health resorts like Karlsbad, Marienbad, Franzensbad, St. Joachimsthal, and Teplitz-Schönau. Also, not included, is the value of the recently developed uranium mines of Joachimsthal. Incidentally, students of history will recall that our own dollar, by way of abbreviation, derived its name from the Joachimsthaler Gulden, a coin minted from silver that was mined near this town.

The Potsdam decisions, by removing what a diobolic Communist propaganda had portrayed as a troublesome minority and thereby furthering the establishment in that area of a Communist regime, actually cut Bohemia's links to the West reaching back over nine centuries and thus pushed that country into the lap of the Kremlin rulers. What has been through hundreds of years a vital part of Central Europe is now serving as an advance base of Soviet imperialism.

POLITICS DURING WORLD WAR II

Dr. Beneš unfortunately seems to have blamed the Sudeten Germans for his own shortcomings and considered them instrumental in his downfall in 1938. His mind was beclouded by Germanophobia. He did not seek a just and fair solution in his dealings with those Sudeten German politicians who were, like he himself, exiled by the Nazi regime and living in London during World War II. I refer to Wenzel Jaksch and Richard Reitzner, both of whom now are members of the German Bundestag.

According to his "Mémoires"—"Paměti"—published in Prague in 1947, this is what Beneš at a reception in London on January 7, 1942, told Wenzel Jaksch in an effort to have him agree to deportation from Czechoslovakia of all Sudeten Germans, excepting a limited number of anti-Fascists:

> During the social revolution which will certainly occur we shall have to rid our country of all the German bourgeoisie, the pan German intelligentsia and those workers who have turned Fascist. This would be the final solution and, so far as we are concerned, the only possible solution which we would be able to implement, namely combining our social revolution with the national revolution.
>
> I added to Jaksch and his friends: We must have the courage to speak about this openly; and especially you Social Democrats should have the courage to do so. This plan even contains an element of Marxism and Marxist dialectics in the revolutionary process which must inevitably accompany the changes in the social structure of the nation as an outcome of this great and worldwide catastrophe. After the First World War * * * I foretold that the German nationalist bourgeoisie in our country would some time in the future attempt a counter-revolution and that there would be no peace between us until this bourgeoisie was subjected to a similar revolution to that which the Czechs had gone through in past centures. Now, after the Second World War, this revolution is inevitable; and the entire nationalities problem in our country will be radically solved at the same time.

It is only fair to say that some Czech opposition was voiced against these plans, notably from army Gen. Lev Prchala.

It is rather unfortunate that Beneš apparently had no scruples as to how he would gain his end. For instance, in a conference on May 12, 1943, with President Roosevelt he asserted that the Russians were willing to agree to the transfer of the Sudeten Germans. Then, 17 days later, on May 29, Dr. Hubert Ripka explained to Mr. Bogomolov, the Soviet Ambassador in London, that the Americans had already agreed to the transfer, and that in these circumstances the Czechoslovak Government in Exile expected the Soviets to consent. On June 6, Ripka telephoned Beneš, who was at the time in the United States, that Soviet Russia had just agreed to the transfer—the same agreement which Beneš had used as a lever in his conference with President Roosevelt on May 12, 1943.

The Soviets were the first allies granting to the Czech Government in Exile de jure recognition. Against the advice of western statesmen Beneš went to Moscow and in 1943 signed a new treaty with the Soviet Government. Eager to show his ability of playing an important role in the arena of world politics he may have thought of himself as a man who would build the great bridge between the West and the East. As seen in retrospect, however, he seems to have been prior to the Tehran Conference more than perhaps any other person active in strengthening Roosevelt's ill-conceived

trust in Stalin. In this way, I regret to say, he certainly proved to be a valuable tool of the Kremlin.

Toward the end of World War II, Beneš returned to Prague by way of Moscow, accompanying the Red army, as it advanced from the east into Czechoslavakia, and himself being accompanied by a Czech Government group led by a Communist, Zdenek Fierlinger, who is today the President of the Czechoslovak Republic. At Košice in eastern Slovakia Beneš and his colleagues proclaimed on April 5, 1945, the so-called Košice program according to which the country for the time being was to be ruled by presidential decrees. The program was signed by: Zdenek Fierlinger, Josef David, Klement Gottwald, Viliam Široky—today the Prime Minister, Dr. Jan Šrámek, Jan Ursiny, Jan Masaryk—son of the first President of Czechoslovakia—Ludvik Svoboda, Dr. Hubert Ripka, Václav Nosek, Dr. Vavro Srobar, Dr. Zdenek Nejedlý, Dr. Jaroslav Stránský, Václav Kopecký, Bohumil Laušman, Julius Duriš, Dr. Jan Pietor, Antonin Hasal, Frantisek Hála, Dr. Jan Soltezs, Dr. Adolf Procházká, Václav Majer, Dr. Vladimir Clementis, Dr. Mikulaš Ferjencik, and Jan Lichner.

Czechoslovakia was now restored within the pre-Munich boundaries, except for Carpathian Ruthenia which the Soviets had seized and incorporated into the Soviet Ukraine, and which the new Czechoslovak Government then ceded to the Soviet Union. The Slovaks were once more subjected to Czech domination. The new government announced the formation of a so-called National Front, supposedly a coalition of the Communist Party and three parties willing to collaborate with them, that is, Social Democrats, National Socialists, and People's Party. All Czech political parties of the center and the right side were declared illegal, among them the National Democrats, the Artisans, and the Republican Agrarians, the latter being the biggest political party in pre-war Czechoslovakia. Their leaders and functionaries were jailed. All Slovak parties were likewise outlawed and, instead, new leftist parties such as the so-called Slovak Democratic Party and other puppet groups were artificially created. In this way, political parties were abolished which, before World War II had long represented the large majority of the non-Communist Czech and Slovak peoplies. In addition to these millions of Czechs and Slovaks all Sudeten Germans and Magyars were disfranchised. Only by applying this method of outlawing political opponents—exactly copying Hitler's procedure in Berlin in 1933—and of exploiting the prejudice of their willing collaborators, did the Communists succeed in 1946 to show up as the largest political party.

Now free elections, freedom of speech and press were abolished. Kangaroo courts, called people's courts were established in order to liquidate the opponents of Communism. So-called National Committees, fashioned after the Russian local "Soviets," were set up to take over the work of administrative offices. The economy was nationalized. While Benes himself assumed the office of President, Communists were appointed to key positions at all levels and, from the beginning, were in control of police, army and the state propaganda machine.

The non-Communist ministers collaborated at every turn and supported the Communist line. Since some of these people later escaped to the West it may be of interest to mention, in addition to those who signed the Košice program, some of the prominent politicians of the era of the so-called National Front: Dr. Peter Zenkl—Vice Premier, Dr. Jozef Lettrich—leader of the Red puppet Slovak Democratic Party who, after the 1946 elections when the Slovaks had failed to vote for the Communists, signed the agreement abolishing Slovakia's autonomy, Dr. Jan Papánek, Dr. Juraj Slavik, and František Němec—who represented as ambassadors abroad the Red regime of Prague, Ferdinand Peroutka—a Socialist journalist, and Milos Vanek—one of the original bosses of the Czechoslovak Communist Party.

As the previously mentioned Kersten report—page 17—stated:

> It should be pointed out that the Communist advance in Czechoslovakia was greatly facilitated by the behavior of the non-Communist parties and their leaders. The signing of the Soviet-Czechoslovak Agreement of December 12, 1943, and especially the proclamation of the Kosice program of April 5, 1945, opened the door for an unreconstructed drive on the part of the Communists to seize full power in the country.

We know, however, that the so-called National Front represented merely a minority of the people. The last free election in Czechoslovakia returned a parliament of 300 deputies. Only 118 of them were of parties that later adhered to the so-called National Front. On the other hand, 107 deputies were of those Czech and Slovak parties that were declared illegal in 1945, while 75 deputies were of Sudeten German and Magyar parties.

THE REIGN OF TERROR—EXPULSION AND DECREES

A reign of terror began with the arrival of the Soviet Red army and the regime which was to become the government of the so-called National Front. One of the first administrative measures provided for the hasty construction of concentration camps into which tens of thousands of Sudeten Germans were driven. The late R. R. Stokes, a former British minister, has given a vivid description of conditions in those camps which he himself had visited. Beneš' inciting words, "Annihilate the Germans where you find them," broadcast from Košice, led to a wave of cruel murder. The bloody Sunday at Aussig in July 1945, the massacres in Saaz, Brüx and Landskron, the death march of Brünn are only some of those outrages for which the Czechoslovak government of that time will be held fully responsible.

The Sudeten Germans were outlawed. Before being expropriated their homes were open for pillage either under the pretext of a raid for hidden weapons or merely by groups of police guards or plain Czech plunderers. In some towns orders were issued that homes of Germans must not be locked. Strict curfew was imposed on them. They were forced to wear white badges so as to make them conspicuous. They were forbidden to use public conveyances and the sidewalks, visit restaurants, write letters, change places of residence. They were restricted for buying groceries and shopping in stores to certain hours of the day, and special ration cards discriminating against them were issued. Schools and kindergartens were closed to their children. Adult Germans were called up and transported to the interior of Bohemia to provide forced labor on farms, in mines, and industry, at first without pay, later at low wages that were seldom paid. Still worse was the treatment in prisons, where overcrowded cells, brutalities and disease, in addition to insufficient rations, increased the death toll.

Article XIII of the Potsdam Protocol outlined the procedure for what was then called the transfer of the German population from Poland, Czechoslovakia, and Hungary. We know now that the Communists, by means of the expulsion, pursued the following objectives:

First. By eliminating the German element from the area, they wished to hasten the communization of those countries.

Second. In the depopulated regions, they wanted to introduce collective farms and state industrial enterprises fashioned after Russian Soviet examples before proceeding with those schemes on a general scale.

Third. The confiscated property was also to be used for bribery purposes, since destroying the sense of honesty turns people into more pliable tools of immoral communism.

Fourth. By inciting violence and acts of cruelty against the Germans, the Communists and their collaborators hoped to build up hatred between the Germans and these Slavic peoples so as to make the latter wholly dependent on the alliance with Communist Russia.

Fifth. The German expellees were to create social disorder and to be a hotbed of communism in overcrowded West Germany.

As to the expulsion of the Sudeten Germans, it may safely be said that this was not a spontaneous reaction of the Czech people against the German occupation of their country, but an act planned by Czech politicians in exile and carried out by the government of the so-called National Front with all possible haste before the large majority of the Czech people would have second thoughts about it. Presidential decrees were supposed to give the proceedings a cloak of legality. Quotations from some of these decrees will point toward the responsibility of the government of this so-called National Front.

First. Constitutional decree of the President of the Republic of August 2, 1945:

ARTICLE 1

1. Czechoslovak citizens of German or Magyar nationality who acquired German or Magyar citizenship under the regulations of

the foreign occupational forces shall have lost their Czechoslovak citizenship by so doing.

2. The other Czechoslovak citizens of German or Magyar nationality shall lose their Czechoslovak citizenship on the day when this decree will come into force.

Signed by Beneš, Fierlinger, Masaryk, Nosek, Svoboda.

Second. Decree of the President of the Republic of October 25, 1945:

Any immovable and movable property shall be confiscated without any compensation to the benefit of the Czechoslovak Republic * * * which is * * * owned:

1. By German or Magyar legal persons; or

2. By natural persons of German or Magyar nationality.

Signed by the signers of the Košice program.

Third. Decree of the President of the Republic of January 21, 1946:

ARTICLE 1

1. With immediate effect and without compensation and for the purpose of the land reform such land property shall be confiscated as is owned by—

(a) all persons of German or Magyar nationality without regard to their citizenship.

Signed by Beneš, Fierlinger, Nosek, Dr. Srobar, Dr. Stránsky, Duris, Majer.

Fourth. Law of May 8, 1946, passed by the provisional National Assembly:

ARTICLE 1

Any act committed between September 30, 1938, and October 28, 1945, the object of which was to aid the struggle for liberty of the Czechs and Slovaks, or which represented due reprisals for actions of the occupation forces and their accomplices, is not illegal, even when such actions may otherwise be punishable by law.

Signed by Beneš, Fierlinger, Drtina, Svoboda.

The last mentioned parliamentary act, which I have added to the decrees, provided for a general amnesty for all crimes committed against Germans, Magyars, and anti-Communist Czechs and Slovaks and thus gave ex post facto a semblance of legality to the law of the jungle.

Though Czechoslovakia was practically controlled by the communists since 1945, the process of communization was completed when on February 25, 1948, the President of the Republic, Dr. Beneš, accepted the resignation of 12 non-Communist ministers of the Cabinet and appointed a new out and out Communist Cabinet, headed by Klement Gottwald, who had been the prime minister since 1946 and merely continued in office. Thus the process of communization was completed in an apparently legal way. In the National Assembly both Communists and non-Communists, 230 out of 300 deputies, voted for the new government on March 10, 1948. Beneš remained President of the Republic. The whole tragedy shows a striking similarity to Hitler's taking over in Germany 15 years earlier with old Hindenburg continuing in the presidency.

EXPULSION WAS A VIOLATION OF INTERNATIONAL LAW

The expulsion of the Sudeten Germans from the homes which they had inhabited for a thousand years violated the principle of the right to self-determination of peoples. We should remember that this right was solemnly proclaimed by our own President Woodrow Wilson, who in his Mount Vernon address of July 4, 1918, declared:

The settlement of every question, whether of territory, of sovereignty, of economic arrangement or political relationship, must be upon the basis of the free acceptance of that settlement by the peoples immediately concerned.

It is well known that this Government has taken a prominent part in establishing this principle and in the development toward incorporating it in the law of nations. The expulsion of the Germans stands in direct contradiction to this great principle. I can here refer to a previous speech of mine in this House on May 16, 1957, wherein I have tried to show this Government's policy on the pertinent questions as it was clearly evolved during the last 4 decades to a point which should leave little room for doubt.

I might add that this Government was also strenuously opposed to arbitrary displacement of persons during both World Wars. We protested against the transfer during World War I of Belgian workers and condemned, as a grave violation of international law, the displacement during World War II of Poles and other peoples within the then Nazi orbit. We asserted the right to resettle in their home countries, of all displaced persons. As to our own fellow citizens of Japanese descent, temporarily displaced after Pearl Harbor from their homes near the Pacific Ocean, we reaffirmed by an act of Congress the right to their homes. Let me also point out that article 9 of the United Nations Human Rights Declaration of December 10, 1948, regards arbitrary expulsion as contrary to international law and states that "no one shall be subject to arbitrary exile."

Also relevant, it would seem to me, is the Convention on Genocide of December 11, 1946, which declares to be a crime, under international law, (a) killing members of a national, ethnic, racial, or religious group; (b) causing serious bodily or mental harm to members of the group; (c) deliberately inflicting on the group conditions of life calculated to bring about its physical destruction in whole or in part. About 300,000 Sudeten Germans, that is, a considerable part of their total number, did not survive the removal from their ancient homeland, a fact which proves that they were victims of this crime.

Let me finally quote from the draft code, prepared in accordance with the resolution of November 21, 1947, of the United Nations General Assembly, to define "offenses against the peace and security of mankind" that would be "crimes under international law, for which the responsible individuals shall be punished." Article 2, paragraph 11, lists:

Inhuman acts such as murder, extermination, enslavement, deportation, or persecutions, committed against any civilian population on social, political, racial, religious, or cultural grounds by the authorities of a state or by private individuals acting at the instigation or with the toleration of such authorities.

This adequately covers the expulsion of the Germans from Sudetenland as well as those from the German provinces east of the Oder-Neisse line, and from other parts of Eastern Europe, and proves it to be—let me here repeat the words of article 1 of the penal draft code—among the "crimes under international law, for which the responsible individuals shall be punished."

I may remind this House of the fact that the offenses against the peace and security of mankind were drawn up by a commission of legal experts upon the direction of the United Nations General Assembly to formulate the principles of international law recognized in the charter of the Nuremberg tribunal and in the judgment of the tribunal. The above-cited articles cannot be dismissed as mere suppositions and theories or as a mental exercise in hypotheses. Their contents have been confirmed by the series of death sentences pronounced on the war criminals, sentences which speak the grim language of fiat justitia. Justice does not know a double standard. Justice is indivisible. It is, in the words we read on the face of our Supreme Court Building, "Equal justice under the law."

VOICES RAISED AGAINST THE EXPULSION

Many courageous persons have raised their voice against the expulsion of the Sudeten Germans. Even at the heyday of the so-called National Front regime, Roszevac, a Catholic paper in Olmütz, dared to protest on October 31, 1945, against cruelties in internment camps and the rape of Sudeten Germen women; and in another newspaper, Obzory, Dr. Helena Kozeluhova, a journalist, objected to the cruelties of the expulsion. Of course, such voices were quickly suppressed and Dr. Kozeluhova, for instance, was forbidden to write another line—curiously by men who themselves are now in exile and professing to be anti-Communist.

Czechs and Slovaks of the political parties that were suppressed by the Communists undoubtedly disapproved of the expulsion. Many of them opposed it while in exile, among them Dr. Josef Cerny, a leader of the Agrarian Party and former Czechoslovak Minister; the Christian Democrats Josef Kalvoda and Simeon Ghelfand; Karel F. Stekr, the Artisan Party functionary and secretary general of the Union of Czechoslovak Industrialists in Exile; the former deputies, Dr. Bohdan Chudoba, Dr. Michael Zibrin and others of the National Democratic as well as other parties.

In 1945, the Czech National Committee in London under its chairman, Gen. Lev Prchala, issued a declaration denouncing the expulsion and condemning all acts of the so-called National Front regime as illegal and not binding upon the Czech people. A stand against the expulsion was also taken by most Slovak exiles such as the Slovak Liberation Committee, the Slovak National Council Abroad, the National Committee for the Liberation of Slovakia, and by that large organization of Americans of Slovak descent which, in 1918, signed the Pittsburgh agreement creating the Czechoslovak Republic.

In a speech before the National Conference of Americans of Slovak Descent at Washington, D. C., on May 24, 1954, which was attended by 5 Members of the Senate and 26 Members of this House, the president of the Slovak League of America, Philip A. Hrobak, declared:

The Slovaks do not want, nor do they request, the Czechs to represent them in any field of human endeavor, whether cultural, political, or spiritual. And, of course, the Slovaks do not want to be credited with the criminal acts committed by the Communist-dominated National Front government of Dr. Eduard Benes and Clement Gottwald. The Slovak nation has nothing to do with the criminal expulsion of Germans and Magyars from Czechoslovakia, nor with the brutal persecution and suppression of religion and of all anti-Communist opposition in that hapless country (Cf., CONGRESSIONAL RECORD, June 2, 1954; Mr. MUMMA, of Pennsylvania.)

The preparatory committee of the Ecumenical Council of Churches asked on February 23, 1946, for a review of the policy which expelled the Germans, and called article XIII of the Potsdam Agreement a challenge of the Christian conscience.

On November 6, 1946, the Catholic Bishops of America at their annual convention in Washington, D. C., declared:

By agreement among the victors millions of Germans, who for centuries have lived in Eastern Europe, are being forced from their homes, without resources, into the heart of Germany. * * * We boast of our democracy, but in this transplantation of peoples we have, perhaps unwittingly, allowed ourselves to be influenced by the herd theory of heartless totalitarian political philosophy.

Pope Pius XII, in his letter of March 1, 1948, to the German Catholic bishops expressed his wish that the expulsions be renounced.

POSITION TAKEN BY THE GERMAN FEDERAL GOVERNMENT

What, then, is the position taken by the German Federal Government with regard to the Sudeten German expulsion? With all votes except those of the Communist deputies, the German Bundestag on July 14, 1950, adopted the following resolution:

Subsequent to the abandonment of the territories east of the Oder-Neisse line, the fictitious government of the Russian occupied zone of Germany signed the Prague agreement on June 23, 1950, in which the illegal and inhuman expulsion of the Sudeten and Carpathian Germans is acknowledged as irrevocable, just, and final. On this occasion the German Bundestag declares once more that this fictitious government is not authorized, politically or morally, to speak for the whole German people or nation, not to sign any agreements whatsoever.

The Prague agreement is incompatible with the inalienable right of man to a homeland. Therefore, the German Bundestag solemnly protests against the abandonment of the right to a homeland for those Germans of Czechoslovakia, now under the protection of the German Federal Republic, and confirms the invalidity of the Prague agreement.

On the other hand, the German Bundestag appreciates the rejection by the High Commissioner of the Prague agreement. Moreover, it earnestly urges all free nations to work toward a peaceful solution in the true spirit of the Atlantic Charter which guarantees to the Germans, too, the natural rights of man.

The executive branch of the German Federal Government has also repeatedly stated its policy on the pertinent question of the expellees. Germany recognizes the boundaries of 1937. However, it also stands for the right of other expellees to return to their respective countries. Chancellor Konrad Adenauer has made this clear in various messages to Sudeten German expellees. On Palm Sunday of 1955, Dr. Adenauer declared:

General human rights must, in the opinion of the Federal Government, also include the right to a homeland.

Foreign Minister Heinrich von Brentano, speaking for the German Federal Government, declared in the Bundestag on June 28, 1956:

The right to their homeland and to self-determination is the inalienable prerequisite for settling the fate of men and peoples living in exile or in bondage.

The Under Secretary of the German Foreign Office, Dr. Walter Hallstein, stated on September 28, 1956:

When furthering on an international level the right to a homeland on the basis of the right to self-determination, the Federal Government relies principally on the provisions of the Atlantic Charter of August 12, 1941, the Charter of the United Nations of July 26, 1945, the General Declaration of Human Rights of December 10, 1948, and the European Convention for Protection of Human Rights and Basic Freedoms of November 4, 1950, with its supplementary protocol of March 26, 1953, all of which have been formulated in the spirit of the above mentioned principle.

In a statement before the Bundestag in October, 1956, Under Secretary Hallstein added:

The Federal Government will at every suitable occasion point out to the nations concerned and to the world that the eleven million expellees now living in the Federal Republic, have never waived the claim to regain their homelands in justice, peace and freedom. Moreover, the Federal Government will call attention to the fact that this position is shared by the whole of the German nation.

ACTIVITIES OF, AND POSITION TAKEN BY, SUDETEN GERMAN EXPELLEES

Let us now take a look at the expelled Sudeten Germans. Where are they today? What is their life and work in the country where they have found a refuge? What are their political activities? What, in particular, is their position with regard to their Czech neighbors? Are they perhaps planning a bloody revenge for the long suffering they have had to endure?

There are Sudeten German expellees today in the Soviet-occupied zone of Germany, in Austria, Great Britain, Sweden, the Argentine, Brazil, and the United States. But the great majority of them, more than 2 million, are living in West Germany. They have used their skill and industry in building up for themselves a new life in the West. They reopened markets which they had supplied at the time when their products bore the imprint "made in Czechoslovakia." They created new industrial enterprise and even built new towns, such as Neu-Gablonz in West Germany, thereby notably contributing to that country's present-day economy. Quite a few, however, particularly farmers, are still compelled to a dismal existence in West German refugee camps. Generally speaking, despite their tragic fate they went to work in a free and competitive economy and show no sign of turning toward communism.

To the contrary, because of their past experience with the Communists they are contributing to an understanding of the danger to free institutions by creeping and cryptic Communist subversion. Recognition in this respect should be given to Dr. Walter Becher, member of the Bavarian Legislature and who is also secretary general of the Sudeten German Council, an organization of Sudeten German members of West German legislative bodies functioning under the joint chairmanship of the venerable Dr. Rudolf Lodgman von Auen and two distinguished members of the Bundestag, Hans Schütz and Richard Reitzner. Their principal organization, however, is the National Union—Landsmannschaft—of Sudeten German Expellees, also headed by Dr. von Lodgman jointly with Dr. Hans Christoph Seebohm. The latter is Federal Minister of Transportation and as such a member of Chancellor Adenauer's cabinet. Sudeten Germans are taking an active part in the political life of West Germany and are serving in important posts in the legislative and executive branches on the federal as well as state—Land—level.

While the Sudeten Germans have stood up for the right to return to their ancient homeland, they have expressly renounced any thought of vengeance on the Czech people. They have given solemn notice of their firm stand on these two points. As early as 1949, a number of Sudeten German politicians including Dr. Walter Becher, Dr. Emil Franzel, Hans Schütz, Richard Reitzner, Wenzel Jaksch, Dr. Hermann Goetz, and Dr. Walter Zawadil had signed in Eichstätt, West Germany, a declaration stating:

The nations behind the Iron Curtain should be aware of the fact that the restoration of their own rights and their freedom is inseparably bound up with the recognition and realization of the right to their homelands of all expellees. In making this publicly known we do not wish to indict, collectively, the Czech and Polish nations. Sudeten Germans do not seek vengeance, but ask for justice. Though the overall recognition of right would require that legal measures be taken against criminal acts, we emphatically do not desire that fear of a collective revenge should impede the deliverance from Communist shackles of these unfortunate nations. We shall use the whole weight of influence with our own ethnic group as well as with other expellees to insure that the struggle for a return to our and their homelands will be part of the overall effort toward a Christian and humane rebirth of Europe.

Then on August 5, 1950, the chosen representatives of all German expellees, including the Sudeten Germans, signed at Stuttgart, West Germany, a solemn declaration which has become known as the Charter of the Expellees, and which is already being recognized as a great

human document. I should like to quote from it these passages:

We • • • renounce all thought of revenge and retaliation. This is a solemn and sacred resolution, in memory of the infinite suffering of mankind, particularly during the past decade. • • • To separate a man from his native land by force is to kill his soul. We have suffered and experienced this fate. We feel qualified, therefore, to demand that the right to the native land be recognized and that it be realized as one of the basic human rights, granted to man by the grace of God.

The expellees then publicly declared that they will support every endeavor toward a united Europe in which the peoples may live in freedom from fear and coercion. They called upon all nations and men of good will to join them in this great undertaking. Since then, the German expellees have persistently followed the policy to which their representatives had set hand and seal at Stuttgart in 1950. Rejecting Communist and neutralist temptations as well as appeals to narrow nationalism, they are, today, perhaps the most dedicated adherents of a united Europe.

But the Sudeten Germans did not rest their case with a solemn declaration of faith. They took practical steps toward an agreement, on the basis of mutual respect and a genuine search for a real solution, with their Czech and Slovak neighbors, now also in exile. In 1950, the Sudeten German Council concluded an agreement in London with the Czech National Committee, headed by Army General Lev Prchala. The agreement recognizes the right to self-determination of both nations, Czechs and Sudeten Germans.

Since then, satisfactory meetings were had, and encouraging steps taken toward cooperation, with leading members of the Republican Agrarian Party, largest political party in prewar Czechoslovakia; the Artisan Party; the Czechoslovak Industrialist Union in Exile; the Christian Democratic Movement in Exile; the National Democratic Party; and even with politicians, now in exile, who defected from the so-called National Front; leaders of the Slovak Liberation Committee; the Sovak National Council Abroad; the National Committee for the Liberation of Slovakia; and the Slovak League of America. Slovaks today are resolved that, unlike 1918, they shall not again compromise on the question of national independence. Their independence day is March 14, the day in 1939 when the Slovak Republic was established.

At a meeting held at Herrenchiemsee, West Germany, from May 24 to 26, 1956, Sudeten German members of the Bundestag declared in another statement that they will seek to realize the right to self-determination within the frame of a federated Europe and side by side with the Czech people.

Dr. Walter Becher recently submitted to me a statement from which I quote the following Sudeten German program:

The Sudeten Germans believe that for a future settlement of the problems of a free Central Europe certain basic principles of justice should be accepted as prerequisite. Accordingly they wish to advance the following aims which, in their belief, will guarantee freedom and justice to all nations of former Czechoslovakia: (1) Restoration of the status that existed prior to the Nazi and Communist interventions, including the restitution to Czechs, Slovaks, Hungarians, Carpathian Ruthenians, and Sudeten Germans of property; the return to their homeland of those who have been expelled; restoration of freedom of speech, press, and elections, of an independent judiciary, of private property; in short, full political and economic freedom; (2) the unrestricted exercise for all nations of former Czechoslovakia of the right to self-determination.

It is hoped that aims such as these would tend to unify the nations of former Czechoslovakia and, moreover, inspire other captive peoples and their exiles in the common task of overcoming the forces of communism. Since the Communist doctrine aims to eradicate any thought of property rights, the captive peoples in the Soviet-dominated countries develop a general attitude of apathy and indifference toward their places of work, collectivized farms or state enterprises. The return of the German expellees and the restoration to them of their properties may therefore prove to be less difficult than is sometimes anticipated.

SUGGESTING A REALISTIC APPROACH TOWARD A SOLUTION

In closing, I should like to revert to the tenor of an earlier speech, made in this House on May 16, 1957, on the subject of the expellees from the German provinces east of the Oder-Neisse Rivers. The general line of thought which I had then developed may be equally relevant to the case before us today.

A realistic policy for Central as well as East Central Europe, that is, concerning Czechoslovakia and the Sudeten Germans, as well as concerning Poland, the Germans of East Prussia, and the other German provinces east of the Oder-Neisse Rivers can only be a policy that is both just and moral. It must be firmly based upon historical truth and the rule of international law. To assume that any government can ever develop a successful policy on the shaky structure of a wrong, and on perpetuating that wrong, is an illusion and, let me emphasize it with all solemnity, a dangerous illusion.

Moreover, a realistic policy for Central and East Central Europe must perforce take into consideration the magnitude of the Communist threat. It cannot but take an uncompromising stand against that threat. No one will deny that communism is an evil. To compromise with evil betrays weakness which is, at the same time, dangerous; for it encourages the forces of evil and allows them to become more firmly entrenched. A moral policy, refusing to compromise with evil, is thus the most realistic policy.

The case for the East Prussians, Pomeranians, Silesians, and others from the German provinces east of the Oder-Neisse line, and the case for the Sudeten Germans from Czechoslovakia show, in some respects, common features; but they also show, in other respects, differences that should be clearly understood and pointed out to the people concerned so that the issues will not be confused by minds that are perhaps not given to legal thinking.

The East Prussians and other Germans from the German provinces east of the Oder-Neisse line have been illegally expelled from an area which, by international agreement, has been certified as part of the Soviet-occupied zone of Germany. Their expulsion from this part of Germany is a criminal act in utter defiance of the rules of international law. Moreover, the purported annexation by the Soviet Union and Communist Poland of part of this Soviet-occupied zone of Germany is a flagrant violation of international law and is, therefore, null and void. So long as the German expellees from east of the Oder-Neisse line, and in fact, all Germans with the German Federal Government speaking on their behalf, do not renounce their inalienable right this area is part of Germany and will continue to be part of Germany, regardless of the jabbering to the contrary of a few muddle-headed individuals. Incidentally, students of linguistics may know that the verb jabber is also a German colloquialism of the East Prussians. It may have been introduced there by the English dissenters who found in East Prussia refuge from religious intolerance.

As to the Sudeten Germans, they also have been expelled from an area to which their ancestors had come, not as aggressors but as sturdy pioneers, eight centuries ago, and which they also have developed by their own skill and industry, by peaceful and patient labor to a high state of civilization. This fact cannot be disputed. Though the area was in pre-Hitler days part of the Czechoslovak Republic, the expulsion from their ancient homes of the Sudeten Germans was, as I have shown, a flagrant violation of the right to self-determination and, in its execution, a crime under international law. The Sudeten Germans continue, therefore, to have a valid legal title to their homes of which they were illegally deprived.

Mr. Speaker, it is my considered opinion that the German expellees should be encouraged to stand firm upon their right. It is in the best tradition of American foreign policy to denounce the wrong and to uphold the right. Moreover, wavering would be tantamount to further tightening the stranglehold on the captive peoples by the Kremlin and would thus actually support Soviet imperialism.

Just as the Soviets dangled before the dizzy eyes of the Poles the enticing bait of the German provinces east of the Oder-Neisse line, so the Czechs were being dazzled by Kremlin stooges with the rich spoils in the Sudetenland. To the same degree that the Poles accepted the German provinces, and the Czechs accepted the Sudeten properties out of the bloody hands of Stalin, they both permitted themselves to be chained to Moscow. This has been the fateful and deadly but logical result. Both Czechs and Poles who think of keeping these spoils must continue to lean on Soviet Russian backing and thus render themselves subservient to the Kremlin.

Would the present regimes in Warsaw, and possibly also in Prague, like to assure the free world of a new trend

toward what some people in the West wishfully call independent communism? Very well, then they should unmistakably renounce any claim on an area, respectively, on properties to which they have neither legal nor moral title. Nothing less will and can convince the free world of their sincerity. Holding on to these spoils can only serve the purposes of the Kremlin and must logically subject them to a never-ending game of extortion. Mr. Speaker, I suggest that the executive branch of this Government, in administering our foreign-aid program, keep this fact firmly in mind.

In proposing this realistic approach I am, as I believe all of us are, aware of the fact that this Nation of ours is the hope of the free world and of the captive peoples longing to be free. We should, therefore, never think of suggesting a solution which would jeopardize the principles of right and justice. Instead, we should insist with firmness and perseverance that a status conforming with international law be restored. This will provide the only realistic basis upon which to develop good German-Czech and good German-Polish relations and promote a climate conducive to the growth of a united Europe.

Mr. Speaker, today being the birthday anniversary of Immanuel Kant it may be fitting to end my remarks with yet another quotation from his essay, On Eternal Peace. Recalling to our mind the very memory of this, one of the world's greatest thinkers should make us feel uncomfortable in knowing that his home is now ravaged by the Communists, and it should make us resolve to insist that this wrong cannot last forever. As stated by Immanuel Kant:

> Moral evil has this quality inseparable from its nature that, in carrying out its purposes, it is antagonistic and destructive to itself, especially in relation to such others as are also under its sway; and hence it must give place to the moral principle of goodness, although the progress to this may be slow. * * *
>
> For the moral principle in man is never extinguished, and his reason, pragmatically trained to realize the ideas of right according to this principle, grows without ceasing through its constantly advancing culture, while the guilt of such transgressions also comes more clearly into light. * * *
>
> It may then be said that nature irresistibly wills that right shall at last obtain the supremacy.

Uncle Sam's Great Land Giveaway

EXTENSION OF REMARKS
OF

HON. WAYNE N. ASPINALL

OF COLORADO

IN THE HOUSE OF REPRESENTATIVES

Monday, April 21, 1958

Mr. ASPINALL. Mr. Speaker, under leave to extend my remarks, I should like to place in the RECORD a letter addressed to the editor of Man's Illustrated magazine. The letter was written by Edward Woozley, Director of the Bureau of Land Management. Mr. Woozley's letter is in response to an article which appeared in the May 1958 issue, entitled "Uncle Sam's Great Land Giveaway."

The newspaper article contained errors concerning policies established by the Congress for the wise use of our public lands and natural resources. Articles such as the one discussed by Mr. Woozley seek to subvert, knowingly or not, the basic principles of our public lands policies. These lands are managed by the Federal Government in the interest of the entire Nation—rather than for their exploitation by a few. Public lands are just that—they belong to the public and are to be used in the best interests of the public.

When a publication encourages the public to seek desirable sites solely for vacation retreats or a weekend paradise, it becomes a party to encouraging disregard for Federal law. The publication of this type of article reflects a complete lack of regard for principles. It is shoddy journalism.

Our public lands belong to the public and I for one shall do whatever I can to make sure they are handled for the benefit of the public. The public land laws have been tightened before because of disregard for the law. If is becomes necessary to tighten them still further I feel sure that will be accomplished.

Mr. Woozley's letter follows:

FROM A LETTER TO THE EDITOR OF MAN'S ILLUSTRATED MAGAZINE FROM THE DIRECTOR, BUREAU OF LAND MANAGEMENT, UNITED STATES DEPARTMENT OF THE INTERIOR, WASHINGTON D. C., APRIL 4, 1958

In the May 1958 issue of Man's Illustrated you published an article, "Uncle Sam's Great Land Giveaway," by Stuart James. Though it is not our general practice to comment on articles published by private individuals and firms, this article is such a flagrant collection of misinformation and distortion that I am compelled to write you. As I am sure you would not intentionally publish articles deliberately designed to mislead the public, I am confident you will welcome these remarks. From the large number of people who have written us about this article, it is obvious that many people have been badly misinformed by it. We are, of course, obligated to tell these people the facts.

First, I should tell you that articles such as this—which propose to inform the public of ways to obtain free land from the Federal Government—are not new. All of them follow much the same pattern. The Bureau of Land Management welcomes writers and publishers who work to inform the public about their rights and privileges under the public land laws. However, we cannot condone articles which so clearly seek to distort and subvert the intent of law.

The fundamental idea behind this article—that Uncle Sam gives away land—is false. There are no free lands available from the Federal Government—not for any purpose. The author's own statement that it is necessary to perform $100 assessment work per year on mining claims refutes this notion. The minimum costs of obtaining fee simple ownership to a mining claim include (1) $500 in improvement work, plus (2) a $10 filing fee, plus (3) either $2.50 (placer claim) or $5 (lode claim) per acre, plus (4) other expenses varying from $100 to $1,500 per claim. These are minimum amounts and do not include larger investments in mining equipment and operations which miners may make.

There are also several other major issues raised by this article on which I must comment.

It is illegal for anyone to stake a mining claim on public lands of the United States for the sole and deliberate purpose of acquiring lands for a summer home or "weekend paradise." Mining claims may be staked on public lands only for the purpose of making an actual discovery of valuable minerals. If the Government determined that the person who staked the claim had not made a valid discovery of valuable minerals the claim would be canceled and he would then stand to lose all improvements (cabins, buildings, fences, roads, and so forth) that he had placed upon his "weekend paradise." In addition, anyone who stakes or occupies a mining claim for the recreational purposes mentioned by the author of this article is violating the United States mining laws and would be subject to legal action for trespass, and payment for unauthorized use or occupancy of the land.

The "department of natural resources," to which the author refers on several occasions, does not exist. The United States mining laws are administered by the Bureau of Land Management in the United States Department of the Interior.

There is no such thing as "Federal mining land," as described by the author of this article. The United States mining laws apply to much of the vacant and unappropriated public domain lands and to certain areas within existing withdrawals and reservations. These lands are never described as "Federal mining land," since no such category of Federal land exists.

Though part of the author's information on the procedures for staking and holding a mining claim is correct, he has failed to explain that it is not legal for anyone to hold or patent a mining claim that is tacitly occupied for nonmining purposes. The prime requirement for holding a mining claim is that an actual discovery of valuable mineral must be made. The mere fact that someone else had earlier staked the same claim is not proof that the claim is now valid. In fact, if a former claim had been abandoned, there may be strong evidence to suggest that it did not contain valuable minerals. Legitimate miners are not likely to abandon valuable ore deposits. Furthermore, it would not be legally possible for anyone to obtain patent to a mining claim unless there had been an actual valid discovery of valuable mineral in such quantity and quality to justify a prudent man to go to the expense of developing a paying mine. In short, the purpose of the mining laws is to encourage and facilitate mining.

Contrary to the statements of the author of this article, the Bureau of Land Management cannot and will not issue patent to a mining claim simply on the grounds that assessment work has been done and the lands have been surveyed. At the time patent is aplied for the Bureau makes a thorough mineral examination of the claim. Patent is only issued if there is clear evidence of actual valid discovery of valuable mineral. Such proof can hardly exist on claims established for the sole purpose of acquiring a cabin or cottage site.

Though there are many other points which could be raised about this article, it should not be necessary to recite them here. The most disturbing point is that it encourages other people to deliberately violate the law by staking or occupying mining claims on public lands for nonmining purposes. To do so is illegal, and does material disservice to programs for the proper use and development of the Nation's public lands and resources.

Of course, it is possible for legitimate miners and prospectors to stake and hold mining claims on public lands. But to use the mining laws as a means of acquiring and occupying public lands for nonmining purposes is a gross prostitution of the intent of Congress and of Federal land management agencies who are working for the conservation, wise use, and development of public lands and resources.

People who want to obtain small tracts of public land for recreation and residential purposes have an opportunity to do so under a law known as the Small Tract Act. This law authorizes the Government to sell or lease small tracts of vacant public land up to five acres for residential, recreation, and business purposes. This law does not apply to reserved lands, such as national parks, national forests, and wildlife refuges. In recent years the Federal Government has leased or sold many such tracts to people who want to "get away from it all." This law is one of the means whereby people may do this; the mining laws are not.

The Small Tract Act was specifically designed to meet the needs of our Nation's growing population and furnish them a means for acquiring desirable sites for summer homes and other purposes. But these lands are not available everywhere and are not "free." Small tracts that are sold are generally sold through competitive bidding and cannot under any circumstance be sold at less than the appraised fair market value. Sometimes these lands are not expensive, but often they sell for many hundreds of dollars. In all cases, however, it is necessary for the Bureau of Land Management to classify the lands as best suited to that specific type of development. Many thousands of American citizens have acquired sites under the Small Tract Act. In all likelihood a citizen could obtain land under the Small Tract Act at less total expense than would be necessary to find and develop a mining claim.

I hope from this discussion you will understand the reasons for our concern about the content of this article. When people write us about acquiring "Federal mining land" as a "weekend paradise complete with trout stream" and so forth, we must reply to them with the same facts as are in this letter. I am sure that you will be pleased to have this information also.

Sincerely yours,

EDWARD WOOZLEY, *Director.*

"E" for Effort

EXTENSION OF REMARKS

OF

HON. AL ULLMAN

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 27, 1958

Mr. ULLMAN. Mr. Speaker, for a number of years the Harney Electric Cooperative, in Harney County, Oreg., has been waging a fight to secure a power source from the Bonneville Power Administration. The cooperative has been beset with a great many problems in this endeavor, not the least of which has been a quite obvious lack of enthusiasm on the part of the BPA.

When one remembers the importance of power in the development of a sparsely settled region it is not difficult to understand how important this fight is for the Harney County area. As I have pointed out in a number of letters to Dr. William Pearl, Administrator of the Bonneville Power Administration, I am most concerned over the continued failure of the BPA to approve the proposed powerline.

Recently an editorial was printed in the Daily Journal of Commerce, Portland, Oreg., concerning the excellent work being carried on by the Harney Electric Cooperative. I think it will be of interest to my colleagues and to all who are concerned over the failure of the president administration to provide low-cost power for rural America.

Under leave to extend my remarks I include the editorial as follows:

"E" FOR EFFORT

The Harney Electric Cooperative has made formal application to the Bonneville Power Administration for a powerline to be built from Redmond to Harney County.

A study has been completed by Robert Welty, consulting engineer, and the Harney Cooperative hopes this study will prove the feasibility of building the line.

The BPA can build the line only if it is proved to be justified. Yet one cannot help but feel sympathetic toward those persons in Harney County who have worked for many years in order to develop the high desert and marshlands which lie south of Burns.

This area south of Burns is surrounded by mountains or high hills and forms a pocket into which water drains, forming a reservoir. Most of the reservoir is underground, although at places it comes to the surface and forms marshes and lakes. Considerable work has been done to provide power into that area so that electricity can be used to pump water from deep wells tapping this underground reservoir, and use that water for irrigation.

Power, that ingredient which the Pacific Northwest relies upon so heavily, presents the problem. At present the co-op buys power from the Idaho Power Co. for about 9.6 mills per kilowatt, which makes irrigation very costly. In order to develop the basin it is felt Bonneville power, which would cost about 3.5 mills, must be obtained. To get this power the co-op must turn to the West.

Efforts to provide irrigation to develop this high basin have met with many difficulties. There have been doubts cast as to the value of the land, even with water. However, residents in Harney County do not share those doubts. They envision Harney County as a productive, green basin if power can be obtained at a cost which makes pumping feasible. Thus far they have made a determined effort to develop the area, and it is an effort which shows no sign of diminishing in spite of the difficulties encountered.

Oroville Mercury Questions Profits of Sacramento Municipal Utility District

EXTENSION OF REMARKS

OF

HON. HUBERT B. SCUDDER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 22, 1958

Mr. SCUDDER. Mr. Speaker, in a concise editorial of February 22 entitled "City Making Money Wants More From United States," the Oroville Mercury takes a look at the annual report of the Sacramento Municipal Utility District. SMUD's net revenues last year came to $4,748,000, by no means a peanut sum of money.

Yet, as the Mercury notes:

These are the people who are willing to see the Trinity powerplant operated by the Government at a loss if only Sacramento can be assured of ample cheap power.

For as the recent hearings on Trinity partnership legislation revealed, Federal Trinity power would cost the Government at least 7.3 mills per kilowatt-hour to produce, and the bulk of this power would be sold to SMUD at 4 mills. The Government would stand to lose millions under this kind of arrangement, millions which taxpayers throughout the country would have to make up.

As the Oroville Mercury adds in another Trinity partnership editorial of February 19:

Now no one can blame Sacramento for making a big try to get that cheap power, if it can, at the cost of the rest of us. But no one can blame us if we resist Sacramento's effort.

Another major group resisting the preference customer claims at Trinity is the California Farm Bureau, representing the largest group of organized farmers. Naturally, the farmer wants the Government to get maximum revenues from Trinity power to cut down his water costs. And traditionally, revenues from hydroelectric power have been used to help defray the expense of getting the water to our farmers. The partnership plan will bring in over $320 million in direct public benefits—$320 million in surplus revenues over any all-Federal operation. Nor does this include the $60 million in capital savings to the Government through private building of Trinity powerplants. Which power arrangement is really working for the farmer and water user?

Under leave to extend my remarks, I include in the RECORD the Oroville Mercury editorial of February 22, referred to above:

[From the Oroville (Calif.) Mercury of February 22, 1958]

CITY MAKING MONEY WANTS MORE FROM UNITED STATES

Now comes the annual report of the Sacramento Municipal Utility District (SMUD) with the word that during the past year it had a net revenue (profit) of $4,748,000. That was a little larger than in 1956 when it was $4,461,232.

These are the people who are willing to see the Trinity powerplant operated by the Government at a loss if only Sacramento can be assured of ample cheap power. On the other side are the farmers who want the powerplant operated efficiently by private enterprise with the assurance that the Government will receive many millions from it that can be used to reduce the price of irrigation water.

There is no mandate on the Government that it shall keep Sacramento in cheap power. The $4 million cushion annually should be sufficient assurance that the people of the capital city will not suffer deprivation.

Oakland Tribune Calls for Action on Trinity Partnership

EXTENSION OF REMARKS

OF

HON. CHARLES S. GUBSER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 27, 1958

Mr. GUBSER. Mr. Speaker, we are pleased with the House action authorizing emergency funds for the Trinity

River project. The supplementary $10 million will assure continued progress on the Trinity Dam construction, which came so close to complete shutdown when project operating funds were running out.

Our quick move on this appropriation bill was prudent. Let us hope the same good sense is shown in the earliest possible enactment of the Trinity partnership legislation. As the Oakland Tribune states in an editorial of February 27, Trinity River Funds:

The next thing the House could do that makes sense would be to override those who are trying permanently to block the plan to let private enterprise share a large measure of the cost of the power features (through partnership).

In the original legislation of 1937 authorizing the Central Valley project, Congress specifically acknowledged that the generation and sale of electric energy was to be a "means of financially aiding and assisting such undertakings." Through partnership, power would more than pay its way at Trinity. An all-Federal power operation would seriously undermine our reclamation goals. One hundred and forty-five million dollars in extra tax payments to Federal, State, and local governments; $175,524,000 in surplus revenues for Trinity; $60 million in capital savings to the Federal Government—the all-Federal power supporters would have us scrap these funds and savings for their own uneconomic venture. Yet how would they justify this fund sacrifice when California faces a $12-billion water plan and other costly Central Valley additions?

It does not take an economics specialist to figure out which plan for the development of Trinity power brings the most benefits for the greatest number of people. And in a period when we are compelled to think economy on local, State, and Federal levels, it would be interesting to see how our Appropriations Committees would handle the partnership case.

At this point I request that excerpts from the Oakland Tribune's February 27 editorial be included herewith in the RECORD:

TRINITY RIVER FUNDS

The House of Representatives must have been in a rare mood when it overrode its own Appropriations Committeee and voted funds which permit operations on the Trinity River project to continue. It is not often that committee recommendations are upset. But that was the case this time.

Although the dispute over whether private enterprise and the Government will be allowed to go into a partnership in development af the hydroelectric phase of the Trinity project is still not settled, it is good news. Construction of the main feature will go on without delay and without having to depend upon allocation of funds from other projects as decreed by the committee.

As it now stands, new funds are on the way and that means uninterrupted operations.

The next thing the House could do that makes sense would be to override those who are trying permanently to block the plan to let private enterprise share a large measure of the cost of the power features. They want the taxpayer to carry the whole load by squeezing out interests which would not only shoulder some of the building cost but which would be paying taxes of its own later.

The Pacific Gas & Electric Co. stands ready to meet almost all of the demands raised by the opposition with respect to future reappraisals of its contributions. The administration is prepared to go ahead with its share. But the forces of bureaucracy and public spending stand in the way. Congress is going to have to make a decision before long. We hope it is one in favor of private enterprise against raids on the Public Treasury.

American Farm Bureau Federation Fights for Partnership at Trinity

EXTENSION OF REMARKS
OF
HON. HUBERT B. SCUDDER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 22, 1958

Mr. SCUDDER. Mr. Speaker, the Oroville Mercury's lead editorial of February 18 is most appropriately titled "Is Trinity for the Farmer or Sacramento?" One begins to wonder, as we listen to the all-Federal power supporters attack the Trinity partnership legislation, and champion all-Federal development of Trinity—a plan which would bring superficially cheap electric rates to a few "preference" customers, principally the city of Sacramento.

In recent testimony before House Interior Committee, Mr. Louis A. Rozzoni, president of the California Farm Bureau Federation, stated:

We believe that the benefits from joint development to farmers as water users in California and as taxpayers throughout the Nation far outweigh the subsidy that would be enjoyed chiefly by the residents of one city in California.

Mr. Rozzoni adds:

The interest of water users is to obtain from Trinity the maximum contribution to the Central Valley project that the marketability of the power will warrant, and that this objective will be furthered by private development.

These opinions come from an organization that is 100 percent dependent on a sufficient water supply. Of all groups, the California Farm Bureau ought to know which plan for Trinity power development is best for the farmers and reclamation. To listen to the all-Federal power advocates, one would almost forget that the real purpose of the whole Trinity River project is to bring more water to thirsty acres in the Central Valley. Water, not power is California's problem. We have all the power we want. What we are in desperate need for is a better distribution of our total water supply. The maximum in water distribution and reclamation benefits would accrue from adoption of Trinity partnership.

And what would an all-Federal power arrangement provide? Nothing but bargain power rates for a few preference clients serving less than 7 percent of the northern California population. As the Oroville Mercury notes in its February 18 editorial:

Something the representatives of the farmers did not bring out is that a few city people in their demand for Government-subsidized, cheap power appear to be chiseling in on a project primarily designed for the farmers. Obviously, if Congress refuses to accept the partnership plan it not only will be turning down this opportunity for cheaper water in a semiarid State, but will be asking farmers to help pay for the power features at Trinity at a project loss.

I wish to call to the attention of my colleagues the full analysis of this question "Is Trinity for the farmer or Sacramento?" Under leave to extend my remarks in the RECORD, I include this editorial from the Oroville Mercury:

[From the Oroville (Calif.) Mercury of February 18, 1958]

IS TRINITY FOR THE FARMER OR SACRAMENTO?

When a hearing is held as far away as Washington, D. C., naturally the service via the press wires is inadequate. Thus we are just beginning to get some of the Trinity testimony that the wires didn't carry, but that is as important as the more headline-earning factors that made up the stories promptly received.

No one will deny that the attitude of the farmers—the water users—is of commanding importance in the matter of the Trinity project. The project is being built primarily to provide water for reclamation and irrigation purposes. The power of the project is secondary, naturally and according to law. Yet the testimony given by the farmers was ignored by the wire services, as far as we can ascertain.

Through the Western Water News, of which an Oroville man, Bert Smith, is editor, we learn that the American Farm Bureau Federation played an important part in the hearing. A statement was presented by A. L. Anderson of Colorado, and Louis A. Rozzoni, both directors of the AFBF, in which the farmers were rather convincing in their claim that the partnership plan favored by the Federal Department of Interior, would be best for the farmers. (Rozzoni also is president of the California Farm Bureau Federation.)

Electric power that resulted from the Trinity job was to be used, according to the Federal statute, "as a means of financially aiding and assisting" irrigation and other objectives of the project. They went on to demonstrate that under the plan offered by the Pacific Gas & Electric Co. its purchase of the falling water for $4,600,000 per year would be equal to more than $5 per acre-foot for the water used in power generation.

They pointed out that this water is not consumed in the generating process, but remains available for irrigation purposes, and that Central Valley project power is sold to farmers way down in the San Joaquin Valley for only $3.50 per acre-foot. Thus the Government gets $1.50 more per acre-foot at the powerhouse from the power company than it sells it after transporting it several hundred miles.

This looks like a good deal to practical farmers as, indeed, it is.

Their statement calls attention to the fact, as stated by Interior Secretary Seaton, that Trinity power facilities, if built by the Federal Government, would "require substantial assistance from other project revenues in order to meet repayment requirements." The farm bureau asked the question: "Why should the users of water on the various units of the Central Valley project be required to pay or help to pay for the Federal Trinity powerplants? We believe this would defeat the purpose as declared by Congress."

The statement reviewed the benefits of the partnership plan: taxpayments by the company of $83 million to the Federal Government, $62.6 million to State and local governments, and said that considering these

and the increased revenue to the project, joint development of power "would provide additional total revenues of $310 million."

It added that under certain assumptions "the preference customers, most of whom are located in one city (Sacramento) would be required to pay more for electric power" and added that the benefit to the majority "far outweighs the subsidy that would be enjoyed chiefly by the residents of one city in California."

So there we have the opinion of the people for whom the Bureau of Reclamation, as its name indicates, is building the Trinity project. It would be ridiculous to build a project for one main purpose then let a side purpose govern the policy.

Something the representatives of the farmers did not bring out is that city people in their demand for Government-subsidized, cheap power appear to be chiseling in on a project primarily designed for the farmers. If the Government can get $5 per acre-foot at the powerhouse, it certainly can, in time, reduce the cost of water for irrigation. Obviously, if Congress refuses to accept the partnership plan it not only will be turning down this opportunity for cheaper water in a semi-arid state, but will, as the farmers say, be asking the farmers to help pay for the power features at Trinity, for it will be subsidizing power to Sacramento at a project loss—a loss to be financed by the irrigation features of the project.

Law Day, U. S. A.: Emphasizing the Supremacy of Law in the United States of America—A Speech Given by Charles S. Rhyne, President of the American Bar Association at the Atlanta, Ga., Regional Meeting of the American Bar Association, February 20, 1958

EXTENSION OF REMARKS

OF

HON. CLYDE DOYLE

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 17, 1958

Mr. DOYLE. Mr. Speaker, by reason of unanimous consent heretofore granted me so to do, I am pleased to present the text of what appears clearly to be a very timely discussion by the very distinguished president of the American Bar Association on an always pertinent subject: to wit, the place of law in the structure of constitutional government in the United States of America.

Therefore, Mr. Rhyne's discussion, as appearing in the American Bar Journal for April 1958, volume 44, page 313, in which he announces and discusses "Law Day, U. S. A.," will be of interest and recognized as of importance to all who read it.

President Charles S. Rhyne is a resident and active member of the Washington, D. C., bar. I know he enjoys personal acquaintance with many Members of both the Senate and the House of Representatives. As result of his leadership of the American Bar Association in the matter of the proclamation by the President of the United States recommending to the American people that May 1, 1958 be observed as "Law Day, U. S. A.," another timely occasion is offered to strengthen the sinews of our constitutional government.

LAW DAY, U. S. A., EMPHASIZING THE SUPREMACY OF LAW

(By Charles S. Rhyne, president of the American Bar Association)

President Eisenhower has proclaimed May 1, 1958, as Law Day, U. S. A. This official proclamation is a call for action in recognition of the law and what it has meant to our country and imposes a duty and responsibility upon lawyers to apprise the people of America of the great privilege it is to live under the rule of law. We must do our part on Law Day, U. S. A., to bring home to our people the tremendously important role of the law in our daily lives as well as the increasingly important role that law must play in relations between nations.

Because of our daily contacts with our Nation's legal structure and our ceaseless battle to insure equal justice to all of its inhabitants, we lawyers are perhaps a little more appreciative of our life under the rule of law than the average man. But lawyers and laymen alike should pause and recognize the tremendous contribution which law has made to our way of life, both as a promoter of our progress and as an insurer of the rights which made that progress possible.

The selection of May 1 as Law Day, U. S. A. has great significance. May 1 is also the day on which international communism celebrates its past victories and looks forward to its future conquests. There could be no better date for us to recall the basic moral and philosophical principles upon which our society is based, and to contrast them with the cynical, immoral, and atheistic philosophy which underlies the international Communist conspiracy.

In the context of current history we are going through an inventorying process as we gird ourselves to fight the Communist menace, which operates by economic, psychological, and subversive means as well as by threat of armed force. It seems well that we tie to our strengths and shore up our weaknesses. In any such inventory one must concede that the idea of individual freedom under law is the great ideal we offer to the world. Respect for and adherence to law is ingrained in all Americans. So it has been since the birth of our Nation. While the average individual is not learned in the law, there is an intense sense of justice which burns within him. There is an almost instantaneous adverse reaction to any unlawful or illegal action. We believe in, and we live under, the law. We are a lawful people.

It seems well therefore that we pause to pay tribute to the law and what it has meant to us. The space age has brought a need for new concepts as new frontiers and new horizons have been opened to the human race. But there is also a need to reaffirm old traditional concepts whose validity and fundamental importance cannot be shaken by any scientific or technological achievement. The rule of law is such an unshakeable concept.

Among all the contending ideas which have fought for the minds of men since the dawn of history, the concept of individual human freedom has been outstanding. On this concept, which embodies the natural law, which was the heart and core of Magna Carta, which is the spirit and guiding light of our Bill of Rights, we can build with every confidence that it is a foundation not of sand but of everlasting rock.

Individual freedom and justice, under law, is the great principle that distinguishes our form of government and our way of life from the Communist system. It is the keystone of our moral leadership in the world. This unique national observance of Law Day, U. S. A., affords a dramatic opportunity for the American people to reaffirm their dedication to the rule of law and to demonstrate to the world that their faith in it is unshakeable.

As our Declaration of Independence affirms, the true purpose of government is the protection of the fundamental rights of man. Any denial of this purpose necessarily results in absolutism. Dean Roscoe Pound has said that the strongest bulwark of any nation against absolutism is the law. But, as totalitarianism has illustrated, this bulwark is real only when the concept of the law includes also the concept of natural rights. It is by the denial of this basic principle that totalitarianism is able within the framework of so-called law to subvert the primary purpose of the law. Basically, the true advantage of the rule of law in a democracy is the affirmation of the dignity and individuality of the human being. It is the affirmation of the purpose of the state to protect and safeguard this dignity. It is the recognition that the state exists for man, and not man for the state. Only within such a philosophy can a government of law and not of men be assured. Without such a philosophy, government by rule of law becomes impossible, and arbitrary rule must necessarily be substituted for it.

From its inception to the present zenith of its power, ours has been a government of law rather than of men. Colonial and frontier courts applied as law that innate wisdom of the centuries which had come down to them through the crystallized public opinion of what is fair as recorded by Aristotle, and Montesquieu, and Coke. And while our whole system of law was bottomed firmly upon the great principles and precedents of the English common law, we also created law of our own fitted to the needs of the New World. A good example of this is the famous jury charge of Judge Andrew Jackson, who presided over thousands of trials in the frontier country of western North Carolina and the new State of Tennessee. He instructed juries to "Do what is right between these parties. That is what the law always means."

Law is the intangible force that makes freedom and progress possible. It is law that brings order into the affairs of men—that enables them to lift their sights above mere survival, to accumulate possessions, to develop the arts, to pursue knowledge, and to enjoy life among their fellows. Law gives the individual security that they could obtain in no other way; it protects the family and other groups organized for the advancement of common interests; it permits the growth of great cities and the development of vast enterprises. In other words, it is the cement that holds our free society together.

And what is law?

Definitions by great men down through history have been many:

Samuel Johnson called the law "the last result of human wisdom acting upon human experience for the benefit of the public."

Cicero said: "Law is the highest reason, implanted in nature, which prescribes those things which ought to be done and forbids the contrary."

Grotius said: "Law is a rule of moral action obliging to do that which is right."

Blackstone's definition of law is probably the one most quoted in law schools. He said: "Law is a rule of civil conduct prescribed by the supreme power in a state, commanding what is right and prohibiting what is wrong."

Charles Evans Hughes said:

"The fundamental conception which we especially cherish as our heritage is the right to law itself, not as the edict of arbitarary power but as the law of a free people spring-

ing from custom, responsive to their sense of justice, modified and enlarged by their full will to meet conscious needs and restrained by authority which is itself subject to law—the law of the land."

We tend to regard too narrowly and too shallowly the law and its functions and purposes. When we regard the law as a servant of our free enterprise system, we see the truth, but only part of the truth. When we see the law as the great resolver of differences, when we see the law as the one viable substitute for brute force in human society, when we see the law as the guardian of our rights and the protector of our freedoms, we see clearly, but always in part only. The law is all these things and more.

Law is in a sense codified history; but not merely this. It is also medicine, accounting, engineering, and science—for all professions in the ultimate depend upon law as the basic foundation for their existence and operation and service. They are licensed, protected, and governed by law.

Law is made up of the accumulated wisdom of the people, plus the power to pass decisive judgment in accordance with that wisdom, plus the various procedures, formulas, and facilities involved in legal process. But the power to pass decisive judgment is not law in and of itself, any more than legal forms and formulas and all the panoply of process, taken alone, are law. Nor is the accumulated wisdom of the people law without the power to pass decisive judgment and all the machinery necessary for handling particular cases. But when these three—wisdom, power, and machinery—are combined, when the power of government is used to apply the accumulated wisdom of the people to individual cases through a system of legal machinery which is available to every individual, then we have a true rule of law.

One of our most priceless blessings as citizens of the United States of America is our rich heritage of ordered freedom under law.

Our Nation was created and nourished on due process of law. The liberties found in our Bill of Rights are the essence of America.

Law reigns supreme in our Nation at the municipal level, the State level, and the National level, and is the one common thread which runs through the wide variety of mechanisms used by local, State, and Federal governments to achieve governmental objectives. From the adoption of the Constitution down to the present day, law has been the cement which has held together our complicated local, State, and Federal governmental structure. Supremacy of the law is the concept which has controlled at all levels of government. In every instance the aim is to put law above the whims of man. We as a people believe in, and have lived by, William Pitt's famous saying, "Where law ends, tyranny begins."

Civil law aims at orderly and peaceful adjustment of all reasonable claims. Criminal law aims at protection of the public, punishment of the offender, and deterrence of commission or repetition of the offense.

Law is concomitant with good government.

We need to make the distinction between a government under law and a government under laws. This is important. You cannot have a government without laws, for even the spoken whim of an absolute monarch is a law for his subjects. Government under law means much more than just having laws. Government under law connotes stability, permanence, almost timelessness. Government under law connotes rightness, righteousness, in the sense of conformity with the natural law, and justice. Law connotes order and certainty.

In a government under law, it is recognized that basic individual rights are only formulated by laws, but do not depend for their existence upon such laws. In a government under law, there is no arbitrary power to punish any man except for a distinct breach of the law established in an ordinary legal manner before the courts. And in a government under law, every man is equal before the bar of justice, without any distinction based on class, whether of race, or creed, or wealth, or color, or any other.

Equal protection of the law is a cornerstone of our governmental system. Equal justice under law to the poor and to the rich, to the weak and powerful alike.

Law is rooted in justice. Justice is both its foundation and its objective.

We speak of our ideal as a government of law and not of men; but we cannot have a system of functioning law without men. It takes men—wise men and trained men—to preserve the accumulated wisdom of the people, to understand it and to apply it to particular cases. It takes men—dedicated men, selfless men—to exercise properly the power of decisive judgment. It takes men—skilled men, diligent men—to operate smoothly the machinery which we call legal process. All these are among the functions of lawyers. Here is the justification for the legal profession. The greatness of our Nation is due to the liberty under law that exists here—a liberty which lawyers have created and fought to maintain all through our history. We lawyers can be proud that our profession has lived up to its duties and responsibilities.

Government under law is impossible without lawyers. Every new invention or scientific discovery, every new business practice, every new activity in which the Government itself engages, poses new problems which lawyers must solve. In both form and content, almost all the institutions of government are the work of lawyers. But lawyers are seldom fully appreciated, and the extent of our national need for lawyers is neither felt nor recognized except in times of great stress or emergency, when the services of lawyers become priceless and indispensable.

Time was when development of the law by a slow evolutionary process was sufficient to keep it abreast of normal political, scientific and industrial transformation. But today, if the evolution of the law is too slow to keep pace with racing scientific and military technology of our space age, we shall almost surely face disaster. The hope of civilization is establishment of the rule of law on an international basis to govern relations between nations, not only on the planet earth but in outer space as well, before some unwise application of force sends the four horsemen of war, pestilence, famine and death on what may be their last ride across the face of the earth. The struggle for a world ruled by law must go on with increased intensity. We must prove that the genius of man in the field of science and technology has not so far outstripped his inventiveness in the sphere of human relations as to make catastrophe inevitable. If man can conquer space he can also solve the need for legal machinery to insure universal use of space for peaceful purposes only. With the Kremlin now only 30 seconds via missile from Washington, the absolute necessity of such machinery requires no further emphasis.

Self-government by law is an inherent right of free people.

The Pilgrims who came to Plymouth Rock and our first permanent settlers at Jamestown sought escape from the arbitrary power of an English king who ruled without the law's restraining influence. These ancestors of modern-day Americans carried in their minds a dream of reestablishing the individual liberty under law which King John had promised more than 300 years previous when he affixed his seal to Magna Carta at Runnymede.

Today, after 350 years, the greatest strength of America lies in this concept of individual liberty under law. Other systems of government have produced great scientists, great musicians, and other outstanding achievements. But no system has produced the individual freedom which exists in America. And the reason for this achievement is that our system is founded upon and governed by the rule of law.

The more one reads and studies history the more he becomes impressed with the amazing wisdom of the draftsmen of our Constitution. One explanation for their wisdom may be that they were more experienced than we in the abuses of governmental power. They lived in times of monarchy, feudalism, military dictatorship, colonialism, revolution and, yes, even anarchy. They were able to create our Constitution, which provides all the powers necessary to govern and yet leaves the basic reservoir of power in the hands of the governed. Our Government is one of checks and balances. The three branches of Government, and the checks which each of these branches has on the others, constitute our best insurance that the absolute power necessary to form a tyranny will never vest in any one branch.

Our Constitution—the greatest statement of the basic wisdom of the centuries ever put together for the government of man—was not created out of thin air. Its draftsmen drew upon the great lawgivers of all centuries. They used those principles which the test of experience had proved. That is why it has endured and met the new and novel needs of each new generation.

Supremacy of the law, which transferred sovereignty from ruler to the ruled, has guaranteed our individual freedom. Law Day, U. S. A. must underscore and emphasize in the mind of every American this concept of legal supremacy—not the supremacy of law over ruler, alone, but the supremacy of law over force in a world which through space conquest has become too dangerous to live in without law replacing weapons as the ultimate decision mechanism to resolve disputes between nations.

There are only two alternatives to law, and they are on the one hand, terror—on the other, chaos. In a society without rules there would be no freedoms, no property rights, no protection for the weak, no basis for commerce or business or industry. Under a tyranny which knew as rules only the current whims of the tyrant, black terror would stalk and lurk, thrive and grow. The only possible counter to force would be force, and freedom and justice would have no place. The foundation and matrix of our free society, the protection of individual security, the basis for our accumulation of personal possessions, our development of our talents, our pursuit of knowledge, and our right to enjoy life, are the law.

We tend to take too much for granted the great principles which underlie our system of government. We have a legal system which, in spite of the size of our country and the necessary complexities of its organization, assures for the average citizen more vigorous protection for life and person, more widespread justice, more equality under law, more effective protection for individual rights, more evenly distributed economic opportunity, more security in person and property, and greater personal freedom, than any other system yet developed in all the history of mankind. What more meaningful proof is there that life under the rule of laws assures the best existence yet devised by man?

In this era when dictators have supplanted law with force in captive nation after captive nation, preservation of the ideals of individual human rights and equal justice under law will require much of us who now enjoy it. We shall have to love liberty as passionately, cling to our ideas as stubbornly, respect law as deeply, and place our

faith in divine guidance just as firmly as did our inspired pioneer forefathers who founded a Nation in freedom.

It is upon leadership that our future depends. And leadership of the mind is all-important in this era of dramatic change and progress. Leadership in instilling in our own people such an appreciation of what life under the rule of law means that they will help us lawyers in selling the rule of law to the peoples of the whole world as mankind's best hope for survival in the space age. Our offer of leadership to the world must be more than bigger and better weapons or missiles—we must tell the people of the whole world that we who glorify the rule of law at home will step out on the path of progress and lead toward a "law-ful" and peaceful existence for the world community, and for the unknown and unexplored frontiers of space as well.

Let us pledge each other, here and now, to rededicate ourselves to our most solemn responsibility, the responsibility of preserving and passing on to the generations which will follow us as citizens of the United States of America the heritage of individual human freedom and equal justice under law which has been ours and which rightfully must be theirs. And let us pledge ourselves to meet the challenge to the rule of law which our shrunken world and the space age encompass. Such a rededication and such a pledge must be the meaning to the legal profession of Law Day, U. S. A.

Let us be ever aware that the seat of the law is a throne of purest justice and her crowning glory is a wreath of truth. In the words of Daniel Webster: "The law: it has honored us, may we honor it."

Revolt on Automobile Row

EXTENSION OF REMARKS
OF
HON. HENRY ALDOUS DIXON
OF UTAH
IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 22, 1958

Mr. DIXON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following cleverly written satire which may be overdramatized, but it has considerable value. This was reprinted in the Deseret News from the Virginia City Territorial Enterprise once edited by Mark Twain:

REVOLT ON AUTOMOBILE ROW

Alarm and despondency, to use a fine old British phrase, are the dominant characteristics today in Detroit and other centers of the automobile industry.

Sales are way off; gloom prevails and even the gauleiters of the United Auto Workers have paused in their business of pillaging their slave membership to tell President Eisenhower that there are nearly a million cars unsold in the warehouses.

Most of the viewers with alarm attribute this to an incapacity on the part of the auto buying public to purchase new cars.

There is, however, good reason to believe this simply is not the case. The sales of big cars for family use are indeed in lamentable decline. The sales of small cars, both American and foreign made, and the more expensive foreign cars as well, are booming.

Ramblers are in bonanza. Jaguars, MGs, and other sports cars are rolling in chips.

Rolls Royce last year sold more cars than ever before in the United States. Mercedes Benz, another luxury car in a quiet good taste is doing fine.

It's only the block long explosions of chromium vulgarity with enough appliances to be driven by a quadruple amputee that are lagging. Americans have taken a powder on useless monstrosities of battleship dimensions and are, for once, combining taste and prudence in their automobile purchases.

Detroit is loud in its protestations that huge cars of 360 horsepower ornamented like a calliope and with an acre or 2 of space for the family are what carbuyers want.

When were American car buyers ever in any way consulted about their preferences?

Was there ever a poll on the use of chromium by the square yard and 6 tail lamps where 1 would do?

Was there ever a popular mandate commanding wrap-around windscreens, automatic gear shift and motor activated windows? Detroit has always unloaded as much junk as the traffic would bear with no least or slightest consultation of what car buyers wanted, and that is still the philosophy of the major manufacturers.

Meanwhile, the revolt is on. Americans are buying strictly nonfamily cars by the hundreds of thousands in a determined effort to be well shut of the wife and kiddies for a few hours now and then.

In the face of 40-cent gasoline they are not as intent as they once were on owning a private replica of the Queen Elizabeth.

Cars without a smidge of chromium are in requisition, and phony spare tire assemblies are strictly for the hot-rod trade.

When the designers at Detroit return to turning out the beautiful, useful and characteristic cars they outshopped 30 years ago and content themselves with 1 set of headlights where now there are 5, there will be no limit to the market potential.

In the interim Americans will continue to pay premium prices and import taxes on foreign cars simply to avoid riding in the circus wagons that have been the Detroit obsession.

The United Nations: Challenge of a New Age

EXTENSION OF REMARKS
OF
HON. CHESTER E. MERROW
OF NEW HAMPSHIRE
IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 22, 1958

Mr. MERROW. Mr. Speaker, on the 24th of March the Honorable Francis O. Wilcox, Assistant Secretary of State for International Organization Affairs visited New Hampshire. While in the State he spoke at a joint Kiwanis-Rotary-Lions-Jaycees luncheon in Concord, N. H., participated with me in a radio broadcast, and appeared on television.

On Monday evening, March 24, he addressed the New Hampshire Council on World Affairs at the Carpenter Hotel in Manchester, N. H. Secretary Wilcox is one of our ablest public officials. His presentations in New Hampshire were masterful and eloquent. His speeches while in the Granite State were some of the ablest I have heard on the United Nations and related problems.

Under leave to extend my remarks in the RECORD, I include therein excerpts from the address which Assistant Secretary of State Wilcox delivered to the New Hampshire Council on World Affairs in Manchester.

THE UNITED NATIONS: CHALLENGES OF A NEW AGE

(Address by the Honorable Francis O. Wilcox, Assistant Secretary of State for International Organization Affairs, before the New Hampshire Council on World Affairs at the Carpenter Hotel, Manchester, N. H., Monday, March 24, 1958)

THE NEW AGE

Today, we live in a world which is in every sense on the threshold of a new age—the space age. It is an era which holds implications and challenges for man far greater than those of the 15th and 16th century age of discovery and exploratiton. We all recognize today what a significant age that was although very few people at the time were aware of it.

In sharp contrast, millions of people throughout the world today are keenly aware of the fact that we are on the eve of a new age in history. This was particularly evident to me during a trip abroad from which I have just returned. Everywhere I traveled—to the Near East, southeast Asia, and elsewhere in the Far East—people appeared to recognize that recent scientific and technological advancements of the new age demand, to use the words of President Eisenhower, that a way be found "by which the miraculous inventiveness of man shall not be dedicated to his death but consecrated to his life."

I would like to discuss with you some of the major challenges which confront both the United States and the United Nations in this new era. There is no doubt that the United Nations today is man's best hope for meeting many of these challenges. The United States regards the United Nations as a cornerstone in its development of a sound and imaginative foreign policy to cope with the impact of these challenges.

TECHNOLOGICAL CHALLENGES

In the technological field, man is on the verge of conquering outer space. At this moment, as you know, three artificial satellies—sputnik, Explorer, and Vanguard—are circling the earth. Men put them there. These, together with the ICBM, and other missiles are only the beginning of a new era of scientific and technological advances which until recently have been relegated to the realm of the Sunday supplements and comic books. Developments in the field of outer space will inevitably shrink the universe of which we here on earth are but an infinitesimal part. The mysteries of other planets will gradually be unfolded.

In addition, man soon will become the master of matter and energy. Research on the atom already has opened up new limitless vistas in many areas of human endeavor. Progress in atomic energy will affect almost every facet of our daily lives—the power which runs our factories, the wares which they produce, the homes we live in, even the food we eat. A promising start is underway in the international development and control of this fabulous resource through the establishment of the International Atomic Energy Agency.

These technological and scientific developments serve to reemphasize the increasing interdependence of man, his institutions and his international organizations. They bring into sharper relief than ever before the absolute necessity for a common international approach to meet common problems.

POLITICAL CHALLENGES

This new age, along with its technological and scientific developments, has produced equally far-reaching political challenges. They are not as apparent nor as sectacular, but they are certainly as real and as urgent.

Unfortunately, we are accustomed to thinking of the world as being divided into power blocs. As a result we have tended to

overlook a fact of vital importance. While it is true that the wold is divided into power blocs, militarily, it is at the same time developing politically into a multinational society with new challenges and new problems which demand the same common approach by the nations of the world as do those in the scientific and technological field.

These challenges stem from the steadily increasing number of newly independent countries; they consist of the many new issues which arise from conflicting aspirations of these nations. We have only to look around us to see daily evidence of the disputes associated with the crumbling of ancient empires and the vigorous nationalism and intense anticolonialism of newly emerging states. Nor is the new nationalism the only seed bed for new issues in the political field.

In many new nations the population in one generation has been undergoing almost overnight a social and economic transformation which required centuries in Western Europe. Africa is a case in point. In this vast territory peoples are eagerly seeking recognition of their national identities. You can be certain that what happens in Africa in the next decade will influence profoundly the future course of events of this world in which we live.

THE SOVIET CHALLENGE

Finally, there is an even more formidable challenge of constant and increasing concern to all free men. I refer, of course, to the increased power of the Soviet Union as it crosses the threshold of the new age.

This new Soviet power confronts us with many far-reaching problems. Sputniks I and II have provided a striking demonstration of the Soviet Union's capabilities in the scientific and technological fields. But these capabilities, according to our best scientific information, have been accompanied by the development of certain types of missiles, notably the ICBM. The Soviets have given top priority to training more scientists and more engineers in their schools and universities. Their efforts in this respect, when compared with our own, are a source of serious concern. Certainly our own free democratic society is far better equipped to explore scientific truth and thus provide the necessary capabilities for the advancement of mankind. Yet the Soviet Union—dictatorship that it is—has demonstrated to the world that it can mobilize both its manpower and resources for the education of highly qualified scientists and engineers and encourage their scientific and technological achievements, although it may be at the expense of a broad education for all the people.

The Soviets are posing a serious challenge on still another front through the misuse for imperialistic purposes of their rapidly growing economy. In four decades, and at great sacrifice to the material well-being of its people, the Soviet Union has developed an industrial base that is second only to that of the United States. And today, it is still expanding. * * *

Now, of course, the Soviet Union is fully aware of the aspirations of newly developing nations for economic and social progress. With this in mind it has utilized its economic strength and has embarked on a campaign of economic penetration and political subversion of these countries particularly in the Near East and Asia. In the past 2½ years, according to Department of State estimates, the Sino-Soviet bloc has committed the equivalent of $1,900,000,000 in economic and military assistance to these new states. Energetic efforts by the Communist bloc to negotiate trade and payments agreements have more than doubled its trade with these countries since 1954. * * *

This Communist economic offensive has made American trade and assistance programs more important than ever before. The Mutual Security and Trade Agreements Acts which President Eisenhower called the iron imperatives of peace, and which are now under study by Congress, provide potent weapons in meeting this new economic threat.

I know that some of our people vigorously attack our foreign aid program. They have condemned it as a giveaway program and they have deplored the fact that we continue, over a period of years, to send our aid abroad.

This is to seriously miscalculate the nature of the challenge we face. We must never underestimate the determination of the Soviet Union to convert the uncommitted nations to the Communist system. Without an adequate foreign aid program we would be faced with an impossible task in our attempt to help keep the free world free.

My point is that the Soviet Union is moving into the new age aggressively on all fronts. Backed with enhanced power, it has injected into its foreign policy, on the one hand a new demanding and threatening tone, and on the other hand, blandishments of good will and peaceful intent. This requires bold initiative on our part as well as swift countermoves. Otherwise, the free world will be faced with the grim prospect of a very serious reversal in the balance of power.

THE U. N. AND TECHNOLOGICAL CHALLENGES

The implications of man's ultimate mastery of the atom and conquest of outer space are awesome in magnitude. There is no doubt the United Nations provides the most effective instrument to insure that these conquests will be devoted to peaceful purposes. The peaceful uses of outer space must be assured, and its use for military purposes must be prevented. Immediate exploratory work is necessary to establish the competence of the United Nations in this field.

Secretary of the State Dulles, in advocating that outer space should be dedicated to peace, has said that "* * * there is an opportunity here which is almost staggering in its possible implications—its implications if we do it, and its tragic implications if we do not do it."

In this connection, you will recall our efforts which began over a decade ago to insure the peaceful uses of atomic energy when we had a monopoly on atomic weapons. As early as 1946, when the atomic age was in its infancy, the United States took the unprecedented step of offering to relinquish that monopoly and vest it in an international authority with complete control over the manufacture and use of dangerous atomic-energy materials. As you know, the Soviets turned that offer down. Consequently, it is now impossible, owing to the passage of time and the refinement of scientific techniques, to account for past production of fissionable materials. Thus, a great humanitarian opportunity slipped by. The world cannot afford to let a mistake like that happen again.

Once again, we have made a new proposal, this time relating to cooperation in the use of outer space. President Eisenhower in his lettter of January 12 to Soviet Premier Bulganin stated the United States position when he declared: "Should not outer space be dedicated to the peaceful uses of mankind and denied to the purposes of war? That is my proposal." Once again the choice lies with the Soviets.

It is my firm conviction that, given assurance of peaceful uses of outer-space development, the possibilities for the advancement of mankind are enormous. It is, of course, impossible at present, to assess the full impact on our lives of the exploration and exploitation of outer space. But there are a number of significant possibilities which already are becoming apparent and, in fact, in certain instances are predicted as certainties by our scientists.

We are told, for example, that artificial satellites, reporting back to earth, will enable us to study the mysteries of the universe for the first time unimpeded by the distortions of the earth's atmosphere. New knowledge of the behavior of the sun and of radiations which interfere with radio communications will be acquired. This will mean eventual improvements in means of communication, with satellites being used as radio relay points. For the first time reliable radio communication, unhampered by disturbances in the atmosphere and ionosphere, may be possible between the most distant points on earth. A worldwide system of television will be feasible. Navigational and air-safety aids beyond anything now conceived will become realities. Weather forecasting will be immeasurably improved through the study of cloud patterns on a planetary scale. Even weather control through the use of space platforms may be a possibility.

We are also told that the impact of new knowledge gained from studies conducted from such vantage points may have a revolutionary effect on medicine, nutrition, agriculture, food preservation, and other fields intimately connected with man's welfare.

These are but a few of the breathtaking prospects which this age may open up. Do they not represent a prize worth attaining—for all mankind? This prize is within the reach of man, provided international agreement can be achieved on the peaceful exploitation of outer space as proposed by the President and Secretary Dulles. The question now is how best to achieve such agreement. Naturally, a prime requisite is Soviet willingness to cooperate.

* * * * *

Unfortunately sovereign states cannot always be counted upon to do the logical thing. It would seem logical, however, to try to agree upon certain fundamentals now while our activities in outer space are just beginning. Once the great powers have moved further into outer space their positions may become hardened, and it may be far more difficult to secure agreement. We can see the danger ahead; now is the time to avert it.

One thing we will need to do is to develop some simple rules of conduct for the use of outer space. We have such rules for the use of the high seas and for the air space above us.

But the creation of rules for the use of outer space is a far more complex matter. One has only to consider the terrific speed by which a satellite circles about the earth passing over many countries in its flight. What rights do the states launching such missiles have to use outer space? And what rights, if any, do the states have over which the satellites pass? Is it feasible to claim jurisdiction over space that never stands still over any nation? One has only to raise these questions to realize their complexity.

It would be tragic indeed if outer space were used in such a way as to intensify the arms race and magnify even further the danger that could come to mankind from the uncontrolled use of missiles and nuclear weapons in outer space.

Achievement of the possibilities inherent in the conquering of outer space would have a tremendous effect on the relations between nations. The scientific and material advantages would benefit all mankind. The demonstration of good faith and good will provided by cooperation on both sides of the Iron Curtain would materially assist in the relaxation of tensions which now grip the world.

THE CHALLENGE OF DISARMAMENT

In this connection, one logically thinks of the problem of disarmament. The quest for agreement on this most complex of man's problems becomes increasingly a race be-

tween time and catastrophe—and time may be running out. The United States record in this quest is one of earnest endeavor. The record spreads over more than a decade and has been punctuated by such United States initiatives as the offer we made in 1946 to internationalize atomic energy, and President Eisenhower's "Open Skies" proposal made at the Geneva Summit Conference in 1955. This same record consists of months, in fact years, of patient negotiation in the United Nations to arrive at some reasonable accommodation which will provide an effective system of limitation and control of all types of armaments, conventional as well as nuclear.

* * * * *

The Soviet Union has sought to make considerable propaganda of its easy slogan of "ban the bomb." We, however, are not interested in slogans. We seek an effective disarmament program. To us this means control, and control means inspection. To us, the manufacture of nuclear weapons—not merely the cessation of nuclear tests—is the heart of the problem.

However, in spite of Soviet intransigence, we shall persist in concert with our NATO allies and other members of the United Nations, in our efforts to arrive at a reasonable solution which will give to man everywhere freedom from anxiety and an opportunity to pursue the arts of peace. We hope to persuade even the Soviets that this would be in their own interests as well. For that, in the last analysis, is what we seek—security for all.

The immediate problem is to get serious disarmament talks under way once again. This is our objective. With this in mind, the United States earlier this month, and after consultations with other United Nations members, suggested informally to the Soviet representatives at the United Nations steps which could lead to an early resumption of the discussions and also insure the continuing responsibility of the United Nations in this field.

We suggested to the U. S. S. R. that the enlarged Disarmament Commission hold discussions in line with the resolution adopted by an overwhelming majority of the Assembly in 1957. We believe that the Disarmament Commission should meet in spite of the Soviet Government's announced intention to boycott such a meeting.

In addition, the United States also proposed to the U. S. S. R. that, if the Disarmament Commission discussions were unproductive, a procedural meeting of the Security Council should be convened in order to insure a proper link between the United Nations and any disarmament negotiations which might be held later.

* * * * *

The opposition of the Soviet Union to the resumption of discussions in the Disarmament Commission, constitutes a continued defiance of the General Assembly's resolution. The U. S. S. R. in refusing to consider disarmament, even on a procedural basis, appears to no longer regard the United Nations as the responsible channel for dealing with the problem. We, for our part, are not willing to abandon the United Nations in its quest to find means to resume the disarmament talks.

THE SUMMIT MEETING

The Soviet Government ostensibly desires a heads of government meeting for a discussion of a number of pressing international issues including the disarmament question. I can assure you that the United States is ready to take part in such a meeting if advance preparations provide evidence that high-level talks would lead to agreement. The agreements we seek are those which would actually resolve issues, lessen international tensions, and respond to the hopes of men everywhere.

I do not need to point out that recent Soviet declarations relating to the disarmament problem are hardly calculated to attain these goals. However, I can assure you that the United States will continue its efforts by every reasonable means to bring about a resumption of serious disarmament discussions.

One can, of course, understand the basic reasons Soviet leaders are so attached to the idea of a summit meeting. Mr. Khrushchev, in particular, has persistently sought to identify himself with the world's quest for peace. A summit meeting would provide him with the most solemn and influential forum for him to repeat his pronouncements about world peace. Even if no agreement were reached this exercise would be of considerable value to the Soviet cause.

We and our allies, on our part, recognize the dangers as well as the possible advantages that might flow from holding a summit conference. We do not want such a meeting to increase tensions rather than reduce them. We do not want it to spread disillusionment and misunderstanding. We have made it unmistakably clear, therefore, that we would be willing to participate in a summit conference provided there is good evidence that fruitful results can be obtained.

It would seem to me that there are at least two prerequisites for such a meeting: First of all there must, of course, be some agreement upon the items to be discussed. Secondly, there should be sufficient exploration of these items in advance of the conference to indicate that positive results can be achieved.

THE UNITED NATIONS AND POLITICAL CHALLENGES

If it is true that the United Nations is essential in meeting the technological challenges of the new age, it is more vital than ever as a forum in which political challenges can be placed in their proper perspective and adjusted on the basis of reasonable compromise.

The society of nations, as I said earlier, is still characterized by the existence of sovereign, independent states—the principal new factor being that there are more of them. More than 20 new nations have achieved their sovereignty in the past decade. * * * Accordingly, the political problems arising from the conflicts of national interests of these new sovereign states have increased proportionately. The United Nations has played a fundamental role in dealing with these new issues.

Consider for example, how the United Nations has been dealing with the Tunisian crisis. Here is a really serious situation containing all the political characteristics of the new era in which we live—nationalism, anticolonialism, and Soviet imperialism seeking fertile ground to extend its harmful influence. Tensions were running extremely high. The incident which touched off the crisis occurred on February 8. The Security Council met on February 18. The conflict was channelized into the United Nations, and quiet and effective diplomacy persuaded Tunisia and France to accept the good offices of the United States and the United Kingdom to assist the parties to resume peaceful negotiations.

* * * * *

The vital role of the Security Council also was clearly demonstrated in the case of the Egyptian-Sudanese border dispute. While the elements of this issue were quite obscure and were different from those in the Tunisian crisis, the fact is that the Security Council dealt effectively with a dangerous situation threatening the peace in the area.

Here was a complicated border dispute which suddenly erupted between a newly sovereign nation and an old one. On January 29 Egypt requested that the Sudan Government hand over certain border territories. The Arab Union plebiscite was to take place on February 20 and the Sudan parliamentary elections were to take place on February 28. Acrimonious charges involving alleged troop movements and seizures were leveled from both sides. Tension rose. On February 20, the Sudanese representative at the United Nations lodged a complaint with the Secretary General. The Security Council met on February 21, only 24 hours later.

In the meantime, the Egyptian Government had indicated that it did not intend to conduct the plebiscite in the disputed area. Moreover, after a short debate in the Council, the Egyptian representative announced Egypt's willingness to negotiate with the Sudan in the spirit of article 33 after the Sudanese elections. Council action, therefore, had a moderating influence and peaceful conditions prevail at the moment.

These two recent issues demonstrate the versatility of the United Nations machinery in dealing quickly and effectively with the political stresses and strains inherent in the new age. In both instances passion gave way to moderation and potential violence to peaceful discussion. Opportunity for reasonable accommodation was afforded in the one case through use of good offices and in the other through negotiation between the parties themselves. The existence of the United Nations and its machinery had a significant influence on the situation. What is even more important is the fact that in both cases the Security Council still remains seized of the question and can bring further useful influence to bear, if need be, for peaceful settlement.

I am convinced that the versatility of the United Nations demonstrated in these two crises can be exploited further and the utility of the United Nations proportionately increased provided there is a willingness among its members to resort to its machinery instead of to the trust of force.

THE CHANGING ROLE OF THE UNITED NATIONS

If the machinery of the United Nations is to be fully utilized, we first must recognize that it has changed in responding to new political conditions. In this way we can better assess how it may be adapted to fulfill its purpose, namely "to save succeeding generations from the scourge of war."

As you may recall, the role of the United Nations, as originally envisaged, was enforcement of the peace. The Security Council was designed as the action arm of the United Nations for this purpose. However, the cleavages between the Soviet orbit and the free world over a 10-year period and an endless use of the veto by the U. S. S. R. seriously crippled the effectiveness of the Security Council. The Assembly gradually assumed greater importance in this field, particularly in view of its increased membership.

For example, it was the General Assembly which created the United Nations Emergency Force which has been so effective as an influence for peace in the Gaza strip and Sharm-el-Sheikh area. The charter wisely provided that the General Assembly could "discuss any questions or any matters within the scope of the present charter or relating to the powers and functions of any organs provided for in the present charter * * *." This has enabled the Assembly, backed up by its increased membership, to assume a role far more potent than that originally foreseen. This development is an example of the vitality and adaptability of the United Nations in responding to the changing political facts of life.

But the increased importance of the Assembly need not detract from the continued need to revitalize the Security Council. This prompted President Eisenhower in his letter of January 12 to Premier Bulganin to propose that "* * * we should make it the policy of our two governments at least not to use veto power to prevent the Security Council from proposing methods for the pacific settlement of disputes pursuant to chapter VI." By such action the United Nations would be strengthened and would become, as

the President suggested, "the effective instrument of peace and justice that was the original design."

In this connection, I might recall that the United States as early as 1948 submitted to the Interim Committee of the General Assembly concrete and detailed proposals designed to improve the functioning of the Security Council. Unfortunately, however, the Soviets were unwilling to consider any categories of questions on which they would agree not to use the veto. We hope that in the months ahead the Soviets will see the wisdom of strengthening the United Nations by agreeing to a restriction of the veto with respect to the peaceful settlement of disputes. The cause of world peace would profit immensely if the Soviet Union would permit the Security Council to play the effective role which the framers of the charter intended.

CONCLUDING COMMENTS

It is clear to me that the United Nations has served the interests of the United States and world peace. As an instrument of collective security, it repelled Communist aggression successfully in Korea. In the field of pacific settlement it has alleviated many disputes containing the seeds of war. It has provided us with a powerful forum to present our viewpoint and refute Soviet propaganda. It has channeled national aspirations toward independent or self-government through evolutionary processes. It has made modest but constructive attacks on the root causes of war—economic, social, and cultural—through the Economic and Social Council, the Human Rights Commission, and the specialized agencies and the technical assistance program.

It is equally clear that the United Nations has shown a remarkable capacity to adjust to rapidly changing political and economic conditions.

It has demonstrated that it is a flexible organization that can be adapted to the new age that is upon us. It is not too much to say that it can—with intelligent leadership—do a great deal to help give shape and order to the political landscape of this new era upon which we are entering.

But the United Nations is, after all, an organization of sovereign states. It can do no more than its member states are willing to have it do.

We must, therefore, look ahead with the wisdom and the imagination which the times require. We must give to the United Nations the vitality it needs to nurture and encourage peace in a world in which change is both frequent and profound.

In this respect we would do well to recall the words of Abraham Lincoln in another era of great challenge: "We shall nobly save or meanly lose the last best hope of earth."

The United Nations, with all its imperfections, remains the best hope of earth for the achievement of world peace. It is up to us, and the other members of the United Nations, to bring that hope to its full fruition.

Experiments by Teen-Age Rocketeers

EXTENSION OF REMARKS

OF

HON. FRANCIS E. DORN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 22, 1958

Mr. DORN. Mr. Speaker, this is the fourth and final in a series of articles by George Allen, which appeared in the New York World-Telegram on experiments by teen-age rocketeers. It was published on April 18, 1958.

FIRST ARMY'S PROJECT: GUIDED MISSILEMEN

(By George N. Allen)

Capt. Bertrand R. Brinley, in charge of the First Army's program for amateur rocketeers, is viewed by many of the stripling spacemen as the only adult who currently is offering to help them avoid blasting themselves and their neighbors off the planet.

CHANCE TO FIRE

Through his efforts, the First Army is the only organization that has concrete knowledge of the number of junior space scientists in the New York area, their activities and the danger they present to themselves and the rest of the population. Army questionnaires revealed that about 3,000 boys in this area are active rocketeers, with many regularly handling explosive fuels.

The Army's program, worked out by Captain Brinley, differs from those offered by the American Rocket Society in that it offers the serious, advanced boys a chance to fire their rockets. Other programs stick to theory and design. Many public and private agencies have condemned the handling of live rockets under any conditions.

Lt. Gen. B. M. Bryan, commanding general of the First Army, told this newspaper today that the exploratory phase of the program had ended with the acceptance of proposals submitted by Captain Brinley. The First Army, he said, is now moving ahead with some parts of the program. Other parts are still under study.

FIRST SYMPOSIUM

First item approved by General Bryan was distribution of an official army safety pamphlet written specifically for junior rocketeers. It will be mailed to them next week.

Captain Brinley also has scheduled the first official symposium for stripling spacemen at which they can exhibit their hardware and can question experts. It will be held at Charles Evans Hughes High School, 351 W. 18th St., on May 3, from 1 to 5 p. m. Featured will be scientists, engineers, safety and fuels experts, films, demonstrations and exhibits.

"There has been an easy assumption that the junior rocketeer is a new form of juvenile delinquent and that amateur rocketry is merely a sputnik-era fad," Captain Brinley told the World-Telegram and Sun. "This is not true. Amateur rocketry is a serious business. It is here to stay. Many of the young men engaged in it are seriously intent on pursuing careers in science and rerated technical fields.

"Many are building marvellously intricate professional caliber rockets and research instruments. They are semipros rather than amateurs. Programs that deal only in theory and the building of safe model rockets that are little more than toys have nothing to offer such boys."

AGAINST SUPPRESSION

Referring to the increasing number of tragic accidents caused by exploding rockets, Captain Brinley said:

"Strict enforcement of laws against explosives and fireworks is the least desirable approach in seeking an intelligent solution which will both ensure the public safety and preserve the enormous potential of scientific and technological skill which these boys have.

"Suppression of these boys," he added, "is certain to create a new group of juvenile delinquents that will include some of the most talented young people in America today. Even worse, it would tend to drive underground the serious-minded young scientist who, denied public approval and adequate facilities for his work, would seek to continue his experiments under darker and more dangerous circumstances. This would be tragic."

Main points of the combined military-industry school-community program worked out by Captain Brinley are:

Establishment of an organization that would provide supervision, safety information and advice by scientific, military, industrial, and education experts.

Requesting members to surrender the explosive fuels they now have.

Setting up launching sites away from metropolitan areas and static test areas in cities.

Starting a publication for the boys and setting up a library of technical and safety films.

Running a rocket-model contest and a launching contest.

Columbus Day: A Spiritual Symbol of the Americas

EXTENSION OF REMARKS

OF

HON. PETER W. RODINO, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 22, 1958

Mr. RODINO. Mr. Speaker, as the author of H. R. 387 which seeks to declare October 12 a legal holiday, I am pleased to submit the following report issued by the officers of the National Citizens Committee for Columbus Day for printing in the RECORD.

I want to commend the officers of this committee for the fine work which is being done in bringing to the attention of all Americans the significance of the discovery of the Western Hemisphere by Christopher Columbus, an Italian who sailed under the coffers of Spain, with a crew of Portuguese sailors.

The discovery of this hemisphere was certainly the result of international cooperation. Here was the Italian Columbus equipped with scientific knowledge, an abiding faith in God, and a serene confidence in his ability to penetrate the unknown. Here were the coffers of Spain willing to back him in this daring adventure. Here was the Portuguese sailors with the skills and courage to man the ships on uncharted seas.

The theme of this 1957 report is: Americans all. Regardless of nationality, race, culture, or religious belief, the people who live on the American Continent are bound together by their belief in the Fatherhood of God and the brotherhood of man. Furthermore, we in the Western Hemisphere believe in freedom of the spirit based on individual responsibility and mutual respect. We seem unable to get this idea across to other people. Perhaps this is because we have not given the kind of help which develops freedom and independence of spirit. Only through determined advancement of moral and spiritual values can we of this hemisphere prove to the world the value and effectiveness of our western system.

The American continent should be the symbol of a new way of life—of freedom—of opportunity—for people the world over. The Charter of the Organization of American States, the eldest, the strongest, and most influential

regional organization in the world, proclaims that the historic mission of America is to offer man a land of liberty.

It is therefore heartening to see the magnificent fashion in which people and organizations from all sections of the United States—North, South, East, and West—have rallied to the call to make Columbus Day an occasion for a spiritual rededication to the ideals of a free America based on the Fatherhood of God and the brotherhood of man.

Even more heartening is the committee's proposal to create a Columbus Foundation to sponsor scholarships for youngsters of ability and limited means. In this space and atomic age, talented young people need aid and encouragement if they are to face the future with the same bold daring, and same quiet courage, the same dauntless faith that brought Columbus across the seas nearly 500 years ago.

We of the Western Hemisphere have a leadership responsibility that transcends anything man has heretofore faced. We must meet that responsibility with the faith of Columbus and we must do our part to the end that the dream of a new path to the east, the west, the north, and south can become a reality.

It is now my pleasure to tell a few things about what the National Citizens Committee has done during the past year to dramatize this great historical date, October 12.

Under the leadership of the President of the United States, 40 State governors issued 1957 Columbus Day proclamations calling for observances on October 12 to create greater inter-American friendship and understanding under the theme: Americans All. In addition, a majority of these governors appointed State Columbus Day chairmen, to stimulate statewide observances and to coordinate the activities in the various communities.

It is particularly pleasing to me to report that my own State of New Jersey had a most outstanding statewide observance under the leadership of Governor Meyner and State Chairman Ovid J. Colalillo of Orange, N. J. Pennsylvania also had an outstanding State program under the leadership of Governor Leader and the State chairman, the Honorable Mary A. Varallo, State senator from Philadelphia.

In addition to this outstanding leadership given by the governors, hundreds of mayors of cities throughout the United States issued Columbus Day proclamations and appointed local chairmen and local committees to stimulate communitywide observances and advance the goal of increased inter-American understanding under the theme of Americans All.

Also noteworthy is the fact that these spectacular accomplishments were, attained by private citizens who joined forces to create good citizenship projects across the Nation. There was not 1 cent expended by the National Citizens Committee for Columbus Day for salaries or paid staff. All these skilled services were contributed and donated by the officers and executive committee as their contribution to better inter-American friendship and international understanding in general.

I am pleased to serve as an honorary sponsor of this program and to join with 70 distinguished colleagues in the Congress of the United States who sponsored the 1957 observance, in saying to the national committee: Well done. Keep up your good work.

The National Citizens Committee for Columbus Day plans to stimulate even more impressive observances throughout the land during 1958.

The committee plans a continued and expanded program of inter-American friendship and understanding through the establishment of a Columbus foundation to promote scholarship funds for able and gifted students.

Mr. SANTANGELO of New York, Mr. LIBONATI of Illinois, Mr. BOYLE of Illinois, Mr. O'HARA of Illinois, and Mr. DENT of Pennsylvania would like to join with me in congratulating the National Citizens Committee for Columbus Day for a splendid contribution to an improved inter-American understanding and in wishing the committee even greater success in 1958 and future years.

The report follows:

COLUMBUS DAY: A SPIRITUAL SYMBOL OF THE AMERICAS—THEME: AMERICANS ALL

(A report on the 1957 Columbus Day observances in the United States issued by the officers of the National Citizens Committee for Columbus Day, Washington, D. C.)

For 3 years, the National Citizens Committee for Columbus Day has sponsored a nationwide Columbus Day Observance. The first observance—1953—was a local District of Columbia affair. In 1955, 1956, and 1957, the national committee extended its activities to schools and colleges, organizations, churches, and State and community committees across the Nation.

Columbus Day activities have been carried on by public-spirited citizens, throughout the United States, with a two-fold purpose.

1. To commemorate October 12 as the day which the people in the 21 American Republics have in common.

2. To develop stronger bonds of brotherhood among the people of the Americas.

The response across the country has proved beyond a shadow of a doubt that the people of the United States want such a movement and will give it their enthusiastic support.

In 1958 the national committee therefore proposes to:

1. Stimulate even more impressive observances throughout the United States and to widen citizen participation.

2. Establish a Columbus Foundation to provide scholarship funds for able and gifted students.

1957 COLUMBUS DAY OFFICERS AND PLANNING COMMITTEE

The National Citizens Committee for Columbus Day is a voluntary, nonpartisan nonprofit citizens committee, giving their time and money without a paid staff. It is composed of business, political, civic, educational, and religious leaders who believe that it is essential to develop stronger bonds of friendship and understanding between the United States and the Latin American countries. Furthermore, they believe the way to do this is to interest United States citizens through such established channels as schools and colleges, national and community organizations.

The 1957 Columbus Day officers were:

National chairman: Mr. John I. Bott: Active member; World trade committee, Washington, D. C., Board of Trade; Christmas Pageant of Peace, Inc.; International Christian Leadership, Inc.; Religious Heritage of America, Inc.

Executive vice chairman: Mr. John T. O'Brien, public relations; recipient of numerous awards and commendations for public service and public relations programs.

Secretary-treasurer: Mr. Edward R. Carr, Washington home-builder, past president National Association of Home Builders and Washington Board of Trade, and president, Christmas Pageant of Peace, Washington, D. C.

Director of publicity: Dr. Alejandro Orfila, chief of public relations, organizations of American States, Pan American Union.

Community observances chairman: The Honorable Robert E. McLaughlin, president, Board of Commissioners, District of Columbia; member, United States Conference of Mayors and American Municipal Association.

Education committee cochairman: Sister Mary Janet, Catholic University of America, Washington, D. C., and Dr. John D. Ludington, United States Office of Education, Department of Health, Education, and Welfare.

Program committee cochairmen: Mr. Richard E. Kellogg: Active member: World trade committee, Washington, D. C., Board of Trade; Christmas Pageant of Peace, Inc.; Propeller Club; Mr. Barnee Breeskin: Public relations for Inter-Continental Hotels and Pan American World Air Ways. The 1957 Columbus Day Planning Committee was composed of citizens of the United States, Spain, Italy, and the 20 Latin American Republics.

These leaders planned and organized the 1957 Columbus Day observances. It was this committee which helped to distribute the 2,000 copies of the 1957 Columbus Day leaders' guide so ably prepared under the direction of Dr. John R. Ludington of the United States Office of Education and Sister Mary Janet, D. C. Catholic University of America.

Dr. Paul E. Smith distributed 750 guides through the International Relations Committee of the National Education Association. Msgr. Frederick G. Hochwalt distributed 600 to the Catholic schools. Dr. William E. Dunn of the American Council on Education sent materials to the 300-odd American-sponsored schools in the Latin American countries. The Latin American representatives carried the Columbus Day story to their ambassadors who in turn informed their governments of United States activities.

1957 COLUMBUS DAY BUSINESS SPONSORS

Contributions from the following industrialists enabled the National Citizens Committee to prepare and distribute the 1957 Columbus Day leaders' guide and Columbus Day poster to schools, colleges, organizations, State and community Columbus Day committees:

Edgar R. Baker, managing director, Time-Life International; H. W. Balgooyen, executive vice president, American and Foreign Power Co., Inc.; William W. Faw, president, Friendly Faw Hotels; Walter Harnischfeger, president, Harnischfeger Corp.; Carl N. Jacobs, president, Hardware Mutual Casualty Co.; Charles A. Meyer, vice president, Sears, Roebuck & Co.; W. M. Miller, vice president, Singer Sewing Machine Co.; John D. J. Moore, vice president, W. R. Grace & Co.; Howard M. Packard, executive vice president, S. C. Johnson & Sons, Inc.; Andrew B. Shea, president, Pan American-Grace Airways, Inc.; Malcolm C. Stewart, treasurer, The Gillette Co.; Arthur K. Watson, president, IBM World Trade Corporation; Wm. S. Youngman, Jr., director, The Starr Foundation.

HONORARY SPONSORS OF THE 1957 COLUMBUS DAY CELEBRATIONS

From the Congress of the United States came honorary sponsorship from Members

of the Senate and the House of Representatives. In spite of their heavy political duties, many of these eminent leaders gave direction and guidance to the Columbus Day programs and made Columbus Day addresses to their constituents.

From the United States Senate: The Honorable J. GLENN BEALL, Maryland; the Honorable STYLES BRIDGES, New Hampshire; the Honorable PRESCOTT BUSH, Connecticut; the Honorable FRANK CARLSON, Kansas; the Honorable DENNIS CHAVEZ, New Mexico; the Honorable JOSEPH S. CLARK, Pennsylvania; the Honorable RALPH E. FLANDERS, Vermont; the Honorable HUBERT H. HUMPHREY, Minnesota; the Honorable IRVING M. IVES, New York; the Honorable ESTES KEFAUVER, Tennessee; the Honorable JOHN F. KENNEDY, Massachusetts; the Honorable WILLIAM F. KNOWLAND, California; the Honorable THOMAS H. KUCHEL, California; the Honorable EDWARD MARTIN, Pennsylvania; the Honorable WAYNE MORSE, Oregon; the Honorable KARL E. MUNDT, South Dakota; the Honorable JOHN O. PASTORE, Rhode Island; the Honorable FREDERICK G. PAYNE, Maine; the Honorable CHARLES E. POTTER, Michigan; the Honorable A. WILLIS ROBERTSON, Virginia; the Honorable LEVERETT SALTONSTALL, Massachusetts; the Honorable H. ALEXANDER SMITH, New Jersey; the Honorable JOHN SPARKMAN, Alabama; the Honorable STUART SYMINGTON, Missouri; the Honorable EDWARD J. THYE, Minnesota; the Honorable ALEXANDER WILEY, Wisconsin; the Honorable JOHN J. WILLIAMS, Delaware; the Honorable MILTON R. YOUNG, North Dakota.

From the United States House of Representatives: The Honorable E. ROSS ADAIR, Indiana; the Honorable HUGH J. ADDONIZIO, New Jersey; the Honorable THOMAS LUDLOW ASHLEY, Ohio; the Honorable WILLIAM A. BARRETT, Pennsylvania; the Honorable ALVIN M. BENTLEY, Michigan; the Honorable EDWARD P. BOLAND, Massachusetts; the Honorable FRANK T. BOW, Ohio; the Honorable HAMER H. BUDGE, Idaho; the Honorable GORDON CANFIELD, New Jersey; the Honorable CHARLES E. CHAMBERLAIN, Michigan; the Honorable PAUL B. DAGUE, Pennsylvania; the Honorable JAMES J. DELANEY, New York; the Honorable JOE L. EVINS, Tennessee; the Honorable IVOR D. FENTON, Pennsylvania; the Honorable DANIEL J. FLOOD, Pennsylvania; the Honorable JAMES G. FULTON, Pennsylvania; the Honorable J. VAUGHN GARY, Virginia; the Honorable MARTHA W. GRIFFITHS, Michigan; the Honorable JAMES C. HEALEY, New York; the Honorable LESTER HOLTZMAN, New York; the Honorable DONALD L. JACKSON, California; the Honorable WALTER H. JUDD, Minnesota; the Honorable CARROLL D. KEARNS, Pennsylvania; the Honorable DON MAGNUSON, Washington; the Honorable GEORGE MAHON, Texas; the Honorable FRED MARSHALL, Minnesota; the Honorable JOSEPH W. MARTIN, JR., Massachusetts; the Honorable JOHN W. MCCORMACK, Massachusetts; the Honorable EDWARD T. MILLER, Maryland; the Honorable ALBERT P. MORANO, Connecticut; the Honorable THOMAS E. MORGAN, Pennsylvania; the Honorable ABRAHAM J. MULTER, New York; the Honorable HAROLD C. OSTERTAG, New York; the Honorable LOUIS C. RABAUT, Michigan; the Honorable HENRY S. REUSS, Wisconsin; the Honorable PETER W. RODINO, JR., New Jersey; the Honorable ALFRED D. SIEMINSKI, New Jersey; the Honorable HENRY O. TALLE, Iowa; the Honorable ALBERT THOMAS, Texas; the Honorable WILLIAM B. WIDNALL, New Jersey; the Honorable SIDNEY R. YATES, Illinois; the Honorable CLEMENT J. ZABLOCKI, Wisconsin.

The Honorable John C. Dreier, United States representative to the Organization of American States.

HONORARY RELIGIOUS SPONSORS

Rev. Edward L. R. Elson, S. T. D., LL. D., minister, the National Presbyterian Church, Washington, D. C.; the Most Rev. Philip M. Hannan, auxiliary bishop of the Archdiocese of Washington, D. C.; Rabbi David H. Panitz, Congregation Adas Israel, Washington, D. C.

These three distinguished clergymen represented the desire of their churches to help improve inter-American relations.

From the Latin American countries came splendid cooperation and honorary sponsorship from the Ambassadors to the United States and the Organization of American States.

The national committee is indebted to many officials of the Organization of American States for their splendid cooperation in helping to make the 1958 Columbus Day observances a success: Dr. José A. Mora, Secretary General; Dr. Alejandro Orfila, Chief of Public Relations and his assistant, Mr. Carl Migdail for their outstanding press, radio, and TV coverage; and Mr. Paul W. Murphy, Chief of Protocol, for his assistance in the national celebration.

In 1957, 40 governors and the District of Columbia Commissioners issued Columbus Day proclamations. Many appointed chairman for statewide observances.

EXAMPLES OF STATE COLUMBUS DAY CELEBRATIONS

The State of Pennsylvania

In Pennsylvania, Gov. George M. Leader appointed as Columbus Day State chairman the Honorable Mary A. Varallo, dean of the womem members of the Pennsylvania State House of Representatives. Representative Varallo attended the National Columbus Day celebration at the Pan American Union as the guest of the National Columbus Day Committee. Because of her excellent work, the national committee presents excerpts from chairman Varallo's report of Pennsylvania's Columbus Day activities:

"Spurred by the outstanding interest of our Governor, George M. Leader, as his Excellency issued his statewide proclamation urging the people of Pennsylvania to observe Columbus Day, my work began * * * to induce many more communities in the State to conduct celebrations.

"Every mayor in the State of Pennsylvania received a letter under the theme 'Americans All,' urging them to commemorate the discovery of the Western Hemisphere by issuing a Columbus Day proclamation, and enclosed therein a copy of the proclamation that was issued by our Governor.

"I followed this request to the mayors by enclosing the statement issued by our Governor, in connection with the statewide observance of Columbus Day, suggesting it as a sample, and asking them to urge the citizens in their respective communities to display the flag of our country during the Columbus Day observance at their homes and all public buildings, and so forth. In addition, to some of the more important communities, I furnished a Leader's guide.

"The details of these activities were given to every radio station, every TV station, and they responded wonderfully by repeatedly broadcasting the promotional material that was furnished them.

"Every newspaper publication, including all foreign newspapers, both large and small, received the promotional material and also cooperated 100 percent.

"It was most encouraging when replies came to me from mayors of many communities who declared that they would issue the proclamation and follow it with the statement.

"Under the enthusiastic leadership of our Governor, who placed at my disposal every facility or help that the State could offer, we in the State of Pennsylvania had one of the most publicized and most commemorative days ever celebrated, with activities that have remained most impressive upon the citizens throughout this great Commonwealth. Our Governor participated in all the activities of the day, being the principal speaker at the banquet held in the city of Philadelphia and the following day leading the greatest parade ever held in Pennsylvania lasting well over 3 hours with nearly 10,000 people participating in the line of march.

"Aside from the fact that our large cities have permanent Columbus Day committees, I was greatly inspired by the widespread acceptances that were received from so many mayors and burgesses who expressed their willingness to have something organized to honor the great discoverer."

The State of New Jersey

For 3 years, Mr. Ovid J. Colalillo of Orange, N. J., has served as State Columbus Day Chairman. Chairman Colalillo's splendid 1957 report shows the growth of the Columbus Day idea in New Jersey.

"Since assuming the position as State Chairman of Columbus Day celebrations for the State of New Jersey in 1955, I wish to report that I am especially pleased with the widespread cooperation I received throughout the State this year. Americans of Italian descent are naturally enthusiastic about these celebrations, but the reports I have received from various sections of the State, indicate this year that the theme, Americans All, is now felt and is rapidly becoming a reality.

"As in past years, I have received the wholehearted and unstinted cooperation of our Governor, the Honorable Robert B. Meyner. Governor Meyner accepted the post of honorary chairman and issued a State-wide proclamation, inviting all the people of the State to observe Columbus Day with appropriate ceremonies in their homes, houses of worship, and other suitable places. He also directed that the flag of the United States be displayed on all State buildings and requested school authorities and civic leaders to hold appropriate exercises for the commemoration of this day. The facilities of his office were given to me to assist in communicating with various leaders throughout the State and heads of interested organizations. In addition to this, Governor Meyner attended as many celebrations as was possible on Columbia Day.

"Because of the success achieved in past years, I again sent letters to the mayors of the several hundred cities, towns, and hamlets of the State of New Jersey, numbering about 566. Contained in said letter was a suggested plan for the observance of this day and an appeal to appoint municipal committees to arrange such programs and to have a municipal proclamation issued by the said mayors. We also placed at the disposal of the said mayors a sample proclamation for their use.

"In addition to the above, we communicated with many of the civic organizations of the State, namely the Knights of Columbus Council, Unico Clubs, Sons of Italy lodges, and various federations of Italian-American societies.

"As a result of the above program, I can report that Columbus Day in 1957 was more enthusiastically celebrated than in past years. The responses to our appeal were many and widespread. I can report that practically every large city in our State observed Columbus Day by having some form of activity, in addition to issuing a municipal proclamation. A percentage of the mayors reported to me that permanent Columbus Day committees were established.

"In many of the large cities, in addition to having parades, banquets, and speakers, programs were initiated in the school systems.

"I would like very much to publicly thank Governor Meyner, the several congressmen of the State and the many mayors and their committees for making this observance a successful one."

COLUMBUS DAY COMMUNITY OBSERVANCES

Columbus Day community observances were widely stimulated in 1957 through the

cooperation of the Honorable Robert E. McLaughlin, Chairman of the Board of Commissioners of the District of Columbia. Serving as chairman of the National Columbus Day's Committee on Community Observances, Commissioner McLaughlin worked with members of both the United States Conference of Mayors and the American Municipal Association.

Reports from mayors and State Columbus Day chairmen reveal participation by around 500 mayors, the majority of whom appointed community chairmen and had community observances.

Every State had mayor and community participation.

Mayors' Columbus Day proclamations urged churches, clubs, and schools to pay tribute to the importance of inter-American friendship while honoring the great discoverer, the hero of the American continent.

EXAMPLES OF COMMUNITY COLUMBUS DAY OBSERVANCES

The reports of community Columbus Day observances reveal the finest community-wide cooperation among religious groups, civic organizations, and business groups. Members of the Italian-American and Spanish-Americans communities gave excellent leadership to Columbus Day celebrations everywhere. Here are some examples of outstanding community Columbus Day observances:

Miami, Fla.

The Miami Citizens' Committee, Inter-American Observance, honoring Christopher Columbus was the outcome of the work of a great many civic leaders. The leader of the group from year to year has been Dr. J. M. DeGaetani, the Italian Consular representative in Miami.

In 1953 Miami unveiled in Bayfront Park a statue of Columbus executed by Count Vittoria de Colbertaldo. The statue stands on an ancient marble column, a gift from the Italian people, the first such relic released to a foreign nation. Dr. DeGaetani was greatly responsible for the erection of the monument, and it was he who negotiated with the Italian Government for the column.

On September 27, Mr. José Ferre was selected as general chairman. The late start was due to the illness of both last year's chairman, James R. Ranni, and Dr. DeGaetani.

Mr. Ferre's interest in the future of Columbus Day, and young people's part in this, led him to request the president of the Miami Junior Chamber of Commerce to assist in preparing the public program. Mr. Eddie Swan, assistant State attorney and jaycee president, arranged and M. C.'d the ceremonies at the Columbus statue. This celebration was covered by local newspaper and TV reporters. Approximately five hundred people witnessed the ceremony on October 12.

A cocktail party for the consular corps was held at Mr. Ferre's home on Thursday, October 10. The Governor of Florida, Leroy Collins, and the mayors of Miami and Miami Beach attended, in addition to the diplomatic representatives. Publishers and editors of several local papers were also present.

At the cocktail party, Miss Barbara Knight was introduced as the committee's Queen Isabella. Miss Knight was selected because of her interest in inter-American affairs, rather than as a beauty queen. Mr. Ferre and the general committee agreed that every attempt should be made to surround the title of Queen Isabella with dignity and respect rather than to capitalize on the cheesecake appeal of a pretty girl.

The speaker at the monument ceremonies was a well known local attorney, prominent in civic work, Mr. E. R. P. Brigham. Dr. J Wayne Reitz, president of the University of Florida, was the speaker at the dinner dance.

The annual racing regatta, famous in yachting circles, was chairmaned by Mr. Timothy J. Sullivan. The regatta is traditionally part of the Columbus Day activities and is international in scope as it draws participants from all over the Carribean area.

The overall intent of the committee this year was to perpetuate the memory of the spiritual significance of the great navigator.

In his Columbus Day proclamation, Miami Mayor Randall N. Christmas stressed the fact that the city of Miami is the Gateway of the Americas and its citizens are most conversant with the peoples of Latin American countries.

The Miami Herald, October 12, pointed out on its editorial page that "Florida will always carry the distinction of being the first territory settled in the United States as a direct result of Columbus sighting land on October 12, 1492."

Furthermore said the editorial: "Columbus Day might well serve as the occasion for renewed patriotic determination to lend our every effort—individually as well as nationally—to safeguard this heritage of ours, whose beginnings were started in the dawn of October 12, 1492, in the Bahamas."

Philadelphia, Pa.

Nearly 10,000 persons participated in Philadelphia's second annal Columbus Day parade. The parade, which began at 1:30 p. m., was led by Genevieve Bene, 18, of 2641 Snyder Avenue, who was chosen from 10 finalists by the Sons of Italy as queen of Columbus Day. In the line of march were the police and firemen's band, units of the Army, Navy, Air Force, and Marine Corps, scores of floats entered by service organizations and community groups, several string bands and bugle and drum corps, and a host of veterans' organizations, parochial school and city playground groups and Boy and Girl Scouts.

At the national shrine, further exercises to honor the discoverer of America was held. The speakers included Gov. George M. Leader, Mayor Richardson Dilworth, Council President James H. J. Tate and Judge Eugene V. Alessandroni, president of the Philadelphia Columbus Day Committee, who will soon receive the Medal of Merit from Italy's President Giovanni Gronchi.

Under the chairmanship of the Honorable Eugene Aliessandroni, judge of common pleas court in Philadelphia, a formidable celebration got underway, beginning with Friday, October 11.

October 11: Field sports for children of all ages.

October 12: At Columbus Square: 8 a. m., flag raising exercises; 9 a. m., bocce contest; afternoon card contest; 6 p. m., award of prizes.

10:30 a. m., an impressive motorcade left for exercises at the Columbus Monument in Fairmount Park; 7 p. m., banquet at the Bellevue Stratford Hotel; over 1,000 attended. Governor Leader was the principal speaker.

At Columbus Square: 7:30 p. m., band concert and fireworks.

October 13: 11 a. m., memorial mass at St. Rita Church (the Archdiocese participating); 1 p. m., parade with well over 10,000 marchers in line; 4:30 p. m., the parade concluded at the national shrine, Independence Hall, where exercises were held. The principal speakers were: His Excellency George M. Leader, Governor of Pennsylvania; Mayor Richardson Dilworth; Committee Chairman Judge Eugene V. Alessandroni; City Councilman Paul D'Ortona.

Many other preday activities were inaugurated; such as, offering valuable prizes for contests in essays in the schools; scholarships; sending out numerous speakers versed in the history of Columbus to school assemblies and many organizations requesting help.

Kansas City, Mo.

The Kansas City, Mo., Columbus Day celebration was headed by the distinguished surgeon, Dr. James A. DiRenna, who was appointed Columbus Day chairman by the Honorable H. Roe Bartle, mayor of Kansas City.

For the first time in the history of Kansas City, Columbus Day was celebrated by a program of great magnitude because a group of people were organized in the cause of really celebrating Columbus Day.

Starting with Kansas City's newly organized Italian Social Club, Dr. DiRenna brought in representatives from the civic, social, educational, business, and political life of Kansas City. Over 1,300 persons expressed their appreciation of Columbus at a dinner dance held at Hotel Muehlebach. Eddie Clark, program director of radio station WHB, acted as toastmaster and Boy Scout Troop 70 of Holy Rosary Catholic Church served as the color guard, posting the American and Italian flags.

The Honorable STUART SYMINGTON, United States Senator from Missouri, was the keynote speaker. Two Missouri Congressmen, the Honorable RICHARD BOLLING and the Honorable WILLIAM R. HULL, JR., were also honored guests. Dr. Roberto de Cardona, consular general for Italy in Missouri, presented the Order of Merit to the Honorable Fred G. Manusco from the Republic of Italy.

In his Columbus Day proclamation, Mayor H. Roe Bartle urged that the citizens of Kansas City make "these observances an occasion for the expression of the brotherhood and goodwill which the people of Kansas City hold for our neighbors in the Latin American countries."

Dr. DiRenna in a radio broadcast said: "We certainly hope that our Latin American neighbors will use their Columbus Day celebrations as an opportunity to strengthen their bonds with us in the United States."

Dr. DiRenna attended the national Columbus Day celebration held at the Pan American Union, on Friday evening, October 11, as the guest of the National Citizens Committee.

Oakland, Calif.

Under the leadership of Mr. Felix F. Chialvo, Columbus Day chairman, the city of Oakland and the County of Alameda enjoyed a 3-day celebration. The Italian-American Federation of the East Bay composed of 20 member organizations supported the efforts of Mr. Chialvo to make the 1957 Columbus Day celebrations the best in the 33 years of the federation's history.

On October 11, the coronation of the Columbus Day queen and court and the presentation of Puccini's opera, Madame Butterfly opened the 3-day celebration. These two events were open to the public without charge.

Miss Carmen Pago was selected as the festival queen and was crowned at 8 p. m. at the Oakland Auditorium Theater. Queen Carmen, senior at Berkeley's St. Joseph High School, plans to be a doctor.

Following the coronation, the audience of over 2,000 enjoyed listening to the opera Madame Butterfly with well-known artists taking the lead and music furnished by the cooperation of local No. 6 of the American Federation of Musicians, AFL–CIO, as a public service.

The grand ball and banquet held at the Leamington Hotel on October 12 was attended by 350 persons with State, county, and city officials as guests and Mr. Chialvo as master of ceremonies.

Highlight of this occasion was the presentation of citizenship awards—$100 Government bonds—to Ronald Foglia, 17, Oakland Technical High School senior; Joanne Raffaelli, 15, and Michaele Botella, 15, both students at Holy Name Central High School.

On October 13, Lake Meirith was the scene of the marathon, walkathon and bicycle races. A concluding and unusual feature of the 1957 celebration was to have been the pageant of the Landing of Columbus, at Jack

London Square. Inclement weather knocked out this feature, but it will be included in the 1958 pageant says Attorney Raymond Mellana, pageant chairman, who worked for 3 months to arrange this colorful affair.

District of Columbia

The Knights of Columbus, under the leadership of Mr. Carmine Garofalo and Mr. Henry G. Catucci sponsored two outstanding events in the District of Columbia. On October 12, the parade and wreath laying at the Columbus Monument were highlighted by addresses by the Spanish Ambassador, His Excellency Don José M. de Areilza and Dr. Vincenzo de Benedictis, counselor, of the Italian Embassy. Music was furnished by the United States Army Band and the Sea Chanters (U. S. Navy).

The Columbus Monument was cleaned, the fountains turned on, and the monument lighted for 3 nights through the courtesy of the National Capital Parks.

On the evening of October 13, the Knights held their Columbus Day banquet at the Mayflower Hotel with Mr. Gilbert A. Cuneo as toastmaster and Mr. William H. Collins as general chairman. The Most Reverend Philip M. Hannan, auxiliary bishop and chancellor, Archdiocese of Washington; Rt. Rev. Msgr. James A. Magner, procurator, Catholic University; Rt. Rev. Msgr. John K. Cartwright, rector, St. Matthews Cathedral; and Rt. Rev. Msgr. Edward H. Roach, rector, Shrine of the Blessed Sacrament, participated in the impressive ceremonies.

THE 1957 NATIONAL COLUMBUS DAY CELEBRATION PAN AMERICAN UNION—HALL OF THE AMERICAS

On Friday evening, October 11, the National Citizens Committee for Columbus Day held a reception, dinner, and dance in the Hall of the Americas, Pan American Union. The Pan American Union function was sponsored by Washington's leading industrialists, businessmen, civic, religious, and educational leaders interested in United States-Latin American relations. Around 350 attended this distinguished celebration.

Six prominent Americans received Columbus Day awards for their contributions to inter-American friendship and understanding.

Recipients of the 1957 Columbus Day citations were Gov. Luiz Munoz Marin of Puerto Rico; former president of Ecuador, Galo Plaza Lasso; John T. O'Rourke, editor of the Washington Daily News and now president of the Inter-American Press Association; Congressman JAMES GROVE FULTON, of Pittsburgh, Pa.; John W. White, author of "Argentina: The Life Story of a Nation" and "Our Good Neighbor Hurdle"; and industrialist L. A. Astley-Bell, president of the Shell Caribbean Petroleum Co.

Following are excerpts from the Columbus Day citations delivered by Dr. Jose A. Mora, Secretary General, Organization of American States:

1. Governor Marin: "Played a leading role in achieving for Puerto Rico a free, voluntary, association with the United States under a Commonwealth status."

"Munoz Marin has strengthened democracy in the Caribbean area and has pointed the way in which our free society can be made truly free and truly representative. He established a stable government, increased the standard of living of his people, provided health facilities, improved the health and well-being of the Puerto Ricans. He uprooted the Communist beachhead in the island and launched a constructive, industrialization program which got his country away from a one-crop dependence on sugar cane."

2. Galo Plaza: "In a geographic area characterized by deliberately incited civil disorder, Galo Plaza was the first Ecuadorian president in many years who served out his full term despite the fact that as president he lived as a servant of the people, not as their military master."

"As a football player in his own country and in the United States he early learned the principles of team play and of sportsmanship based on mutual respect; principles which he carried into his adult life and which were contributing factors to his success in advancing the cause of representative government in the Americas."

3. O'Rourke: "Has worked strenuously for more than a decade to make North Americans and North American newspapers more conscious of events in Latin America.

"Mr. O'Rourke's great contribution has been his unceasing struggle to widen and deepen the channels of communication among the nations of the Americas and thus create a setting in which representative government can grow and flourish. He has been and continues to be an implacable enemy of press control and thought control in the Americas."

4. Congressman FULTON: "Senior Republican on the Subcommittee for Foreign Economic Policy of the House Foreign Affairs Committee, he is a stalwart champion of a bipartisan good-neighbor policy.

"He is a strong advocate of expanded business activity by United States firms in Latin America with Government assistance.

"As an observer for the House Foreign Affairs Committee at the Rio economic conference in 1954. Congressman FULTON had the vision and the courage to recommend an expansion of the Export-Import Bank loan through a $1 billion revolving fund to implement the United States role of leadership in Latin American development."

5. White: "For 28 years he lived and traveled in Latin America as a close observer of its political life.

"He was one of the founders of the Inter-American Committee for Columbus Day in 1933 and of its successor, the National Citizens Committee for Columbus Day.

"In 25 years south of the Rio Grande he has learned to know the Latin Americans as they are. He has respected their culture and learned their language. He has learned to see through their eyes, which is the first step in being a good neighbor. In his excellent books, Argentina: The Life Story of a Nation, and Our Good Neighbor Hurdle, he has sought to bring home to his fellow countrymen in the United States some understanding of our responsibility as good neighbors to respect people who may be different from us rather than to shape them to our mold before we accept them."

6. Astley-Bell: "His contributions consist of efforts to strengthen the ties between the Americas through the medium of education. His organization is presently supervising the welfare of 75 Venezuelan students attending United States colleges on scholarships granted by the Shell Companies of Venezuela. These scholarships cover 4 years' living expenses and tuition. They are awarded annually to about 20 qualified students, who are free to choose their own school and course of study.

"Another investment in mutual understanding is made by the contribution of the Shell Cos. to the Inter-American Law Institute which annually provides the opportunity for promising Latin American lawyers to take a 1-year graduate course in American law at New York University. This specialized training develops mature individuals capable of assuming responsible positions in government or business."

Columbus Day citations in 1956 were awarded to Henry F. Holland, former United States Assistant Secretary of State for Inter-American Affairs; Dr. Jose A. Mora, Secretary General, Organization of American States; Msgr. Joaquin Salcedo, Secretary General of Accion Cultural Popular, of Bogotá, Colombia; Dr. Horacio Aguirre, editor of Diario Las Americas, Miami, Fla.; and the late Rudolf S. Hecht, onetime Chairman of the International Trade Mart of New Orleans.

The Honorable George D. Neilson, Chairman, Western Hemisphere committee of the world trade committee of the Washington, D. C., Board of Trade, was master of ceremonies for the national celebration. The Most Reverend Philip M. Hannan, auxiliary bishop of the archdiocese of Washington, D. C., and the Honorable Robert E. McLaughlin, President, Board of Commissioners of the District of Columbia, were other active participants.

The Defense of America: A Special Debate on the Reorganization of the Defense Department

EXTENSION OF REMARKS
OF
HON. F. EDWARD HÉBERT
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 22, 1958

Mr. HÉBERT. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following broadcast entitled "The Defense of America: A Special Debate on the Reorganization of the Defense Department," as broadcast over the CBS television network, April 20, 1958. Guests, the Honorable Leverett Saltonstall, United States Senator, Republican, of Massachusetts; the Honorable William C. Foster, Deputy Secretary of Defense, 1951–1953, member of the Advisory Committee to the Secretary of Defense To Study the Reorganization Plan, the Honorable F. Edward Hébert, United States House of Representatives, Democrat, of Louisiana; the Honorable John T. Koehler, Assistant Secretary of the Navy, 1949 to 1951. Moderator, George Herman, CBS News. Producer, Nancy Hanschman.

The broadcast follows:

Mr. HERMAN. I am George Herman. I am substituting for Eric Sevareid, who is unable to be here.

Gentlemen, President Eisenhower wants a major reorganization of the Defense Department involving the Army, the Navy, and the Air Force.

Do you agree, Senator SALTONSTALL?

Senator SALTONSTALL. I am sympathetic with his objectives.

Mr. HERMAN. Congressman HÉBERT?

Mr. HÉBERT. I am opposed to the President's proposal.

Mr. FOSTER. The plan demonstrates the President's leadership in the field in which he is preeminent.

Mr. HERMAN. Mr. Koehler?

Mr. KOEHLER. I am opposed to any proposal which results in merger of the armed services.

ANNOUNCER. From Washington, the CBS Television Network brings you The Defense of America: A Special Debate on the Reorganization of the Defense Department.

Participating in the debate are Senator LEVERETT SALTONSTALL, of Massachusetts, top Republican on the Senate Armed Services Committee; William C. Foster, former Deputy Secretary of Defense; Representative EDWARD HÉBERT, of Louisiana, one of the top Democrats on the House Armed Services Committee; and John T. Koehler, former Assistant Secretary of the Navy.

The moderator is George Herman, CBS News Washington Correspondent.

Mr. HERMAN. Gentlemen, I think you all know that President Eisenhower told Congress last January that he was going to give them his plans for defense reorganization before long, and on the 3d of April he sent Congress a message which proposed a much broader and deeper reorganization than anyone had apparently expected.

On April 16, he sent a draft of legislation to bring about that reorganization, and a bill was promptly introduced in Congress, and the following day he delivered a strong and dramatic appeal for support in a speech before a gathering of news editors here in Washington.

Secretary of Defense McElroy has also spoken in defense of the plan, which very strongly bears his own imprint.

With the Department of Defense under Mr. McElroy, which drew up the main points of the plan after conferring with past and present Chiefs of Staff and with the five-man committee of which Mr. Foster was a member, the President's legislative leaders will now have the main burden of carrying forward this plan in Congress, and in particular that means Senator SALTONSTALL.

So, Senator, would you start off by telling us what you feel about the President's reorganization plan?

Senator SALTONSTALL. Mr. Herman, I am glad to. First, let me say I am happy to be on this program with these 3 other gentlemen and yourself, because I have worked with all 4 of you, on Capitol Hill, on the subject, at one time or another.

Now, today what we all want is security and a great opportunity for peace in the world. What we need for our security is strong defense of a quick retaliatory effort, quick and very massive in the retaliatory effort. To get that quick retaliatory effort, we have got to have efficiency, and to be efficient we have got to today use as little money as we can, because of the tremendous expense that goes into our defensive effort.

Mr. HERMAN. And for that reason you plan to support the——

Senator SALTONSTALL. As I said, I am sympathetic with the objectives of the President. I think we have got to work out some of the details in the Congress that aren't perhaps entirely clear in his message or in the bill that he has submitted.

Mr. HERMAN. Thank you, Senator SALTONSTALL.

Congressman HÉBERT?

Mr. HÉBERT. Mr. Herman, I am surprised at Senator SALTONSTALL's statement, pleasantly so, because I can't be in disagreement with it.

Mr. HERMAN. Try.

Mr. HÉBERT. We aren't at all in disagreement on the objectives. We are all for mother and country and against sin, but the thing that strikes me most in the President's most recent proposition to reorganize the Department is the similarity of all previous reorganization attempts. I think it would be well to trace the history of these reorganization movements.

The original one began in 1947, at which time we had the original intent, and of course it was for efficiency and economy, the same words used today. At that time it was indicated that if we adopted the original Unification Act, everything would be solved and we would be on our way to efficiency and economy.

Admiral Forrest Sherman at that time then envisaged what the Defense Department would be, and his words were: there would be 1 Secretary, 4 deputies, 100 people, and a concentrated office, with a decentralization of power.

That Secretary and 4 deputies and 100 people has now grown to 33 individuals in the Department of Defense who can be called Mr. Secretary, and the hundred people have grown to 3,500 people.

Now, the next time: we also heard of the reorganization as soon as we got a new Secretary of Defense, Mr. Louis Johnson. He came to the Hill in 1949, I think it was.

He said, "We want efficiency and we want economy. Now, if you will just give us this added power, it is going to solve everything."

So he marched up the hill.

Then we had another Secretary of Defense come up, Mr. Charles Wilson, and he came to the Hill.

He said, "We want efficiency and we want economy. If you change this and give me more power, we are going to accomplish this and give us more Secretaries."

So we promptly gave him that.

And now, several years later, we have another new Secretary. He marched up the hill again and we hear again efficiency and economy.

Now, these statements I am making in general and I am quoting the individuals in general, but for the benefit of my friend, Senator SALTONSTALL, and Mr. Foster, I have the records stacked here and here which can be found the accurate quotes, and I am sure you will accept my paraphrasing.

But I think there is one thing I want to leave, before I go on now, and that is this: The President has said that the present law causes waste and ineffectiveness, but I wonder who wrote the present law, except the President himself. The Congress had absolutely nothing to do with it. They accepted a blank check from him, and we couldn't change a comma or a semicolon.

Mr. HERMAN. I just want to ask you as you conclude that statement, Mr. Hébert, whether by this you mean that you do not think we need further efficiency, and you do not propose to support the President's——

Mr. HÉBERT. We need further efficiency and economy, but we could do it with what we have in hand and could have done it under the first act.

Mr. HERMAN. Mr. Foster, I am sure you will have a reaction to that.

Mr. FOSTER. Well, I do. Of course, I think we all agree in the objectievs. I think we all accept the Congressman's paraphrase, although he may have conceivably taken it a little bit black where it was gray instead of white.

You are quite right. There have been each time over these years a hope that the latest plan would meet the change and conditions a little bit better, and I think we must all realize that conditions have substantially changed since 1947.

I think the onrush of technology, to use the President's phrase, has been something that none of us could have foreseen. I think the substantial progress which our major enemy has made none of us could have foreseen.

I think it is quite clear today that we need a more direct command channel between the President as Commander in Chief through his deputy, the Secretary of Defense, to the operating commands, which are the cutting edges of our defense, and I think that each of these plans to which you refer has actually made an improvement.

True we have never reached perfection; we never will. I am sure that this plan will require amendment sometime in the future. But I do believe that this does meet the major things which we have to do; namely, to clarify command channels, to put research and technology at a high level where it can be developed and be available to the Chiefs of Staff to meet the kind of conditions which we face from here in.

And while I agree perhaps it could have been done better each time, Mr. Congressman, it has improved down through the years, but I believe we need this to make it better and good enough to meet today's challenge.

Mr. HERMAN. Mr. Foster, you were 1 of the 5 men on the committee which advised Secretary McElroy on the building of this plan. Let me ask you this: Were the past plans considered as evolutionary steps? Was that built upon the past, the changes of the past plans?

Mr. FOSTER. This is cetainly evolutionary, and I would not say I was a member of the committee. I was 1 of the group of 5 consultants and we consulted, questioned, advised, in that sense, but the plan is the President's and the Secretary's, using, to the extent that he could, since he had not been there long, as you know, the experience which a number of us had had.

And you will recall the group, the three Chairman of the Joint Chiefs, Mr. Rockefeller who has been active in administrative recommendations through the whole Government, and myself, and I think that as a group of consultants we were very effective in challenging major suggestions, and I think that what has come out as evolutionary is not destructive to what has gone on in the past, but will be an improvement over it.

Mr. HERMAN. Mr. Koehler, you were in the Pentagon from 1949 to 1951, I believe, as an Assistant Secretary of the Navy. You were there during the last reorganization. How does this one strike you?

Mr. KOEHLER. Well, I wasn't there during the last reorganization. I was there during the first two. I wasn't there in 1953.

As Congressman HÉBERT has said, this is No. 4.

Now, I would like to take a slightly different tack from that taken by the other three gentlemen. I agree, of course, with the objectives, that we must have the most efficient and the most capable military forces that our circumstances and our finances permit. But in view of some disagreements at very high level, and being a lawyer, I think that I can best perform my part of this task this afternoon to the language of the proposals.

The Congress has consistently repulsed attempts (1) to merge our armed services; (2) to create a single Chief of Staff; and (3) to authorize someone other than Congress to prescribe the roles and missions of the services, which authority is vested solely in the Congress by article 1, section A, clauses 12, 13, and 14 of the Constitution.

The President has said as recently as last Thursday that the proposed changes will not result in merger, nor the creation of a general staff system, and that the bill does not undermine the constitutional power of the Congress in this respect.

On the other hand, Chairman VINSON, of the House Armed Services Committee, has reached the opposite conclusion on each of those three points. It goes without saying that both statements are entitled to highest consideration and the highest respect. I believe, therefore, that we should, to the extent possible, address ourselves to the language of the bill and in considering the language, consider just as carefully the language that would be deleted from the present legislation.

Mr. HERMAN. Gentlemen, in listening to all four of you, one thing strikes me right away. We all talk about whether we call it chains of command, whether we call it efficiency, whether it gets called as it was called in the previous reorganization, "more bang for a buck," we all talk about improving the status of our Armed Forces and we all talk about getting more firepower, more defense power for our dollar.

What I would like to ask of you at this point is how bad are things? How urgently do we need reorganization? Are things in a devil of a mess, and how quickly must we move on this? Senator SALTONSTALL.

Senator SALTONSTALL. I would just say this, Mr. Herman, and you bring up a very good point. Things aren't in a mess. Things are going forward well. They can go forward better. But we have always got to remember today is the speed of attack. To-

day or in a year or so the Russians presumably can send a missile over here that will come over in 30 minutes.

Now that is quite different from World War I or World War II or 1947, Mr. HÉBERT. It can come over very quickly. Therefore, we have got to organize our defense very quickly and very efficiently, and that has got to mean a quicker chain of command and a quicker action, and that action has got to be devastating if we are going to be secure, because if it is devastating we won't be attacked.

Mr. HÉBERT. Senator, show me one thing in the present law which the President himself wrote with a blank check which would prevent immediate action if we were attacked?

Senator SALTONSTALL. The one thing is the time that it takes to get a command, we will say, from the Secretary of Defense or from the Joint Chiefs of Staff down through to the command post for action.

Mr. HÉBERT. Where is that prevented in the present law?

Senator SALTONSTALL. There is nothing to prevent it.

Mr. HÉBERT. Of course there is not.

Senator SALTONSTALL. Except that the people that it has to go through. What we want to do is to have it go through as few people as possible, and yet keep a civilian head at the final command.

Mr. HÉBERT. I am thoroughly in accord, but I suggest there is not a thing in the present law that prevents immediate action. There is not one thing, and I would like to have it pointed out if there is one thing.

Keep in mind again, Senator, that the President himself in 1953—what has been so different from 1953 to 1958—the President himself wrote the present law under which they exist in the Defense Department, you will agree with me on that I am sure, because it was a reorganization act, not a statutory act, and the President wrote it and we couldn't change a comma. In this book back here which I won't have time to bring out, he says now is the time to perfect the Department, "and I am perfecting it now with this plan."

Mr. HERMAN. Congressman HÉBERT, before you come out with any more of your secret weapons from the table back there, let me ask you this:

Do you believe that things have not changed so radically from the production of missiles and from the shrinking of warning times, that things do not require a different frame now from the frame they required 5–10 years ago?

Mr. HÉBERT. No, sir. Our lack is lack of a decision or, if not lack of decision, of an immediate decision. The stumbling block in the Defense Department has been in the area of the Comptroller who controls the money in which Mr. Eisenhower is so interested. We could have put up a satellite a year and a half ago if the decision had been made in the Defense Department, and it was not made.

Mr. FOSTER. May I go back to this question of command, and the President's former reorganization act, because I think this is extremely important. It is true it was written as a reorganization plan, by the President when he first came in. Five years have passed. We do have a strong security setup in our Armed Forces, but in 5 years we have learned, as Senator SALTONSTALL said, that the command lines are not as clear as we would like to have them.

The executive agent process is not as effective under these terms and times which we are up against today. Then when that was written we thought in terms of a manned air force attacking us. This is a matter of hours. We had sufficient tactical warning. We could get our deterrent forces, our retaliatory forces in the air. Today, as Senator SALTONSTALL says, this is a matter of 30 minutes. In addition to that, in any passage of command down, the executive agent does introduce what have been determined to be unnecessary additional layers to go through.

Mr. HÉBERT. That is correct.

Mr. FOSTER. I remember in history, sir, and I appeared before you several times when I was there, you were very concerned about layers of command at that time. We were talking about cataloging, you will recall, and you felt there were too many. This is simply a movement toward the elimination of obstructive layers.

Mr. HÉBERT. I don't want to monopolize the time, Mr. Foster, but you injected something in there. I want to ask you a question.

You mentioned the cataloging situation. That was the one act that to unify and make uniform purchases, make a catalog with a single number, isn't that correct?

Mr. FOSTER. No; it didn't unify purchases.

Mr. HÉBERT. But it was direction for unification, wasn't it?

Mr. FOSTER. It was an attempt to get a common name for each and every item.

Mr. HÉBERT. And that is what is being done today at a savings of some $5 billion, I think, estimated by the Hoover Commission, isn't that correct?

Mr. FOSTER. This is correct, and you and I both worked toward this end.

Mr. HÉBERT. You did? Wait just one second please, sir. I have the record here in which you opposed that bill and said you had enough laws; that you didn't need any more laws. Now where do you stand today?

Mr. FOSTER. We would have done it without the law and we do not feel that the Congress in that kind of a thing should get in and do the executive actions which you, sir, as a legislator write the policies and the executive branch carries out.

Mr. HÉBERT. I have proved my point.

Mr. HERMAN. Between the legislator and the administrator here, I think a lawyer wanted to get a word in.

Mr. KOEHLER. I wanted to get back to the discussion that Senator SALTONSTALL started; namely, that because of technological improvements and the fact that the new world, the new look is so different, we must be able to act very very speedily.

I agree, but it strikes me as more than a happenstance that this desire for speed in reaction has come about very recently. Now the missile program is not new. The missile program is not a matter of the last 6 months. And it seems very interesting that during the years 1953 through 1957 the organization of the Department of Defense was deemed apply capable of taking care of technological improvements under the present Joint Chiefs of Staff.

But the Rockefeller report has come out within the last few months; and the Rockefeller report, which I think in my humble way is the basis of this proposal; is replete with very sweeping statements——

Mr. FOSTER. May I interrupt there, because it is not the basis of this proposal, Mr. Koehler.

Mr. KOEHLER. Shall I say was taken into consideration then in preparing——

Mr. FOSTER. It was along with the advice and counsel of dozens, twenties of other people, all of whom were also experienced and competent.

Mr. KOEHLER. I stand corrected. Shall I say it had a bearing on the subject. But the Rockefeller report—and I, of course, have not had access to other reports—is complete with sweeping conclusions and generalizations; and, so far as I am concerned, it is very much like a brief without citation of authority.

I do not feel that the present Joint Chiefs of Staff have failed to make proper position for the protection of this country in the event of some international disaster. It may be that their present system could be improved, because any system can be improved, but I am astonished that in a period of a few months a reorganization as sweeping as this is should be necessary, in view of what I consider to be the tremendous advances we have made in the last 10 years in unification.

Senator SALTONSTALL. May I, Mr. Koehler, go into one part of that, and that is this: The position of the Chairman of the Joint Chiefs of Staff.

We put in there our most experienced military man, a man with a hard personality and a man in whom the country has confidence.

We have had General Bradley, Admiral Radford, and now General Twining. Those are the three.

Now what we really in a way do is to downgrade him when we put him in there. We do not give him authority. Now that bothered me in 1947. It bothered me again in 1949, and I was on both those conference committees that worked out the technical language of those acts.

Now what the President is trying to do is not to downgrade the Chief of Staff, but to take advantage of his experience and to give him a true responsibility in working out our strategy, as I see it. And that is one very important part of this act. I do not think anybody will—well, I will not say anybody, but I do not think that that should be too much opposed.

Mr. HERMAN. Let me ask you four gentlemen this. At this point in our history, with the missile war apparently approaching the tilt, do you then think that we can respond to these future fast happening wars with our present setup, or some kind of a reorganization, whether it be a basic reorganization or a plan of this kind, or whether it would simply be a reorganization decided upon by the Chiefs of Staff, that some such reorganization is needed, or are we all right for a missile war now.

Mr. HÉBERT. I think the reorganization is needed in the other direction. Cut out all of these secretaries and all of these needless people. Let the Joint Chiefs of Staff have some authority right directly under the Secretary of Defense himself, and revert back to the original plan as it was drawn and as the testimony of General Eisenhower at that time and Forest Sherman, Bob Patterson, everybody that appeared said would settle it.

However, there is one thing, and Senator SALTONSTALL has put his finger on it. There is one thing that worries me greatly about this military thing, and that is a military man on horseback. That is the idea, of course, it has been thrown up as a screen, Senator.

I know they say even the President, and I may say here parenthetically something that I am deeply concerned about, and that is the language of the President in his speech the other day, as an example, before the national editors association in which he just tossed off with a wave of the hand and said of the people who criticized him: it was sheer nonsense. Does he mean to say that he can wave off a man like CARL VINSON, whom he undoubtedly was criticising, 44 years of experience in military affairs in this country? Every man who wears a star on the uniform today was a lieutenant when he came to Congress, and that includes General Eisenhower. Whom General Eisenhower calls Uncle CARL. Is that nonsense when he gives forth? I don't think so.

Senator SALTONSTALL. Mr. HÉBERT, we all have great respect for Uncle CARL. I have dealt with him across the table a good many times, and I know he is a man who has a great deal of knowledge on this subject. But that doesn't mean that the President necessarily was criticizing him.

What I think the President wants to do is to give a greater responsibility to the Joint Chiefs of Staff, and to give duties to the Chairman of the Joint Chiefs of Staff. The

Chairman, under this bill of the President's, isn't going to be a one man on horseback.

Mr. HÉBERT. Not at this time, but in the future.

Senator SALTONSTALL. Nor ever, I hope.

Mr. HÉBERT. You hope.

Senator SALTONSTALL. You are looking pessimistically at the future. I wouldn't agree with making him one man, but he has got the Joint Chiefs to work with. The Joint Chiefs are kept as operational heads, but at the same time they are allowed to delegate certain of their operational duties so as to have more time for strategic planning and for the overall operation. The Chairman of the Joint Chiefs of Staff is given certain managerial duties. He appoints the director. The director will be responsible to him, the Director of the Joint Staff Organization. And the Joint Staff Organization is built up to be the overall strategic command.

Mr. HÉBERT. And, mind you, this new bill or proposal of the President puts an unlimited number of people on the Joint Chiefs, where it was previously limited.

Mr. HERMAN. Let me go to the far end of the table now and ask first Mr. Foster——

Mr. FOSTER. As an engineer, may I get a word in with all these lawyers?

Mr. HÉBERT. I am not a lawyer.

Mr. FOSTER. I assumed you were a lawyer, but if not, I will get in anyway.

I would like to get back to Mr. Koehler's statement first about all this has developed in the last few months, and why didn't we know it before, since we have known about missiles for some time.

We have known about missiles for some time. They did not give evidence of becoming operational in the immediate future until the last several months. But there had been much study given to what we did about missiles over the last 4 or 5 years, and the military men who were concerned with this were those same three distinguished Chairmen of the Joint Chiefs that you speak of, General Eisenhower, and General Gruenther, each of whom believe at this point in history in order to meet these new threats that there should be a clarification of these lines of command in order to do it more rapidly.

Now, going to Mr. HÉBERT'S statement about CARL VINSON, I think everyone in the Defense Department, everyone in the military services, has great respect for his experience and his ability. But I think in this he has perhaps felt, as you say, that there could be the man on horseback, but I wonder if that is realistic.

May I just finish one sentence. The President is the Commander in Chief of the military forces by that same Constitution to which we refer. He is charged with that responsibility and he must discharge it. It is a terrific responsibility. He must have under him a man who can pass those commands as clearly and quickly through as it is possible to do it.

And I think that this setup does exactly that. There can be no man on horseback with our system of government, because, you know, every single military man is under the direction of a civilian, and every civilian is under the direction and under the control of you gentlemen as Congress who will appropriate, and there are numerous other groups and controls within the Government that make it impossible to ever achieve the man on horseback under this or any other similar democratic plan of organization.

Mr. HERMAN. I would like to hear the lawyers' reaction to that.

Mr. KOEHLER. I think it is just about my turn to say something. Bill, I clearly would have no way of passing any informed comment on the extent to which or the manner in which the chain of command over military operations should be clarified. I am a civilian. I just don't know. To the extent that it can be done properly, it should be done.

What concerns me, as I said before, is the necessity, the apparent necessity, of a sweeping reorganization of the entire Department of Defense. Now, I warned you originally that I was going to get to the law, and I think what is important is not only what is in the new proposal but what has been stricken out.

I now read the present law:

"Notwithstanding any other provisions of this act"—this is existing law—"the combatant functions assigned to the military services by section"—so and so and so and so—"shall not be transferred, reassigned, abolished or consolidated. Military personnel shall not be so detailed or assigned as to impair such combatant functions. The Secretary of Defense shall not direct the use and expenditure of funds of the Department of Defense in such manner as to affect the result prohibited by paragraphs 1 and 2."

And substituted therefor, the proposed law is a provision that the Secretary of Defense shall have authority to establish unified or specified commands and assign forces of the Army, the Navy, and the Air Force, to those commands.

When you add to that the provision that the requirement of law that the three Departments shall be separately administered is to be stricken out, and then when you add to that this provision, I mean by striking—this is in the present law which I am now about to read, and which is to be stricken:

"No provision of this act shall be so construed as to prevent a Secretary of a Military Department or a member of the Joint Chiefs of Staff from presenting to the Congress on his own initiative, after first so informing the Secretary of Defense, any recommendation related to the Department of Defense that he may deem proper."

So the Congress, gentlemen, is forbidden to receive the very information it should have in order that it may judge more capabilities of the service.

Senator SALTONSTALL. Mr. Koehler, would you yield there?

Mr. KOEHLER. Certainly. I am finished.

Senator SALTONSTALL. I don't think the unified command violates any question or involves any question of merger of forces. We did it in the war. We are doing it now.

Mr. KOEHLER. I couldn't agree with you more.

Senator SALTONSTALL. So far as individual members of the Defense Department coming up to the Congress, I personally do not believe that the Congress will change that provision. Now, the President himself has said——

Mr. KOEHLER. I am pleased to hear you say that.

Senator SALTONSTALL. The President himself has said that he did not feel that a man, when he is asked questions, or at least McElroy said that, and I think the President has said it, that when a man is asked questions he should answer truthfully. And we have had a great deal of experience in that in the last 18 months, in the so-called Symington preparedness committee and in the Johnson preparedness committee. We have had other freedom of discussion with a man holding up his hand and taking an oath and speaking truthfully. So I wouldn't worry about that.

Now, I think so far as the merging of the services are concerned, we can't connect that with unified command.

Mr. KOEHLER. No.

Senator SALTONSTALL. That is another problem that has got to be argued out by itself. And there again the President has said emphatically he did not wish to merge the services.

Mr. KOEHLER. I know that. The difficulty is, Senator, that I find it extremely difficult to square the language of the proposal as written. Now, when we come—section 2 is the declaration of intent of the statute, and section 2 says it shall be the intent of this legislation not to merge the armed services. Well and good.

Now, if we turn to the section of the statute which implements that section of intent, within the policy enunciated in section 2, that is the intent not to merge: "The Secretary of Defense shall take appropriate steps" and so forth "to provide for more effective" and so forth "eliminate duplication."

Now, "No function which has been or hereafter authorized by law to be performed by the Department of Defense or any officer or agency thereof shall be substantially transferred, reassigned, abolished or consolidated until 30 days after a report in regard to all pertinent details shall have been made by the Secretary of Defense to the Committees of the Armed Services of the Congress."

Now, he makes that report. He waits 30 days, and if Congress acts within the 30-day period, Congress can prevent the transfer of those functions. But if Congress does not act within the 30-day period, those functions are effective, as I read the law.

That seems to me that if he should do it during that period when Congress was in recess——

Senator SALTONSTALL. That has got to be clarified.

Mr. KOEHLER. I am reading the law as it is written.

Mr. HÉBERT. Senator, I am glad to hear you say that. I agree with what you said. I don't believe the Congress is going to buy this bill at all, and that is what we are discussing right now.

We are going to have some type of reorganization, but the question is, Are we going to take what the President has spoonfed us? and I don't think—I don't think the President's bill will get out of the Armed Services Committee of the House.

Mr. FOSTER. Mr. Congressman, you are entitled to your own opinion, and we will leave that go.

Senator SALTONSTALL. I think it will.

Mr. FOSTER. I would like to get back to the legal brief here, because it seems to me that this whole question of separate administration is one of the key things in this whole argument.

Mr. KOEHLER. I agree with you.

Mr. FOSTER. You set up a law and I am not a lawyer, but you set up a law in which you allegedly give direction, control and authority and the complete responsibility for the security of the United States to the Secretary of Defense.

Then you go down four lines and say, but you can't do this, you can't do that, and you can't do the other things.

You say he can come up and he can make these changes. He gives the Congress notice and if the Congress says "no," he may not do it.

It seems to me with the unification of sea, air, and land forces which we must have in order to fight the kind of battles and wars we have today, you have got to give equal authority to the man to whom you have given responsibility, and this set of proposals is so designed to give that authority to the man on whom you have placed this terrific responsibility.

Mr. KOEHLER. Bill, I couldn't agree more with everything you have said. My only argument was this: I am dealing with the legislation that has been submitted to the Congress. I am not doing anything else, but interpreting that legislation.

On the basis of this legislation, the President has said merger will not result. Chairman VINSON has said merger will result.

As I read this legislation, and I am not taking a position personally for or against

merger, as I read this legislation a future unknown Secretary of Defense will have the authority if he chooses to exercise it to merge the services.

Mr. FOSTER. Well, perhaps that is so. The writers of the Constitution did not know the future people who were going to operate under it.

I do not think you can write a piece of law, and you legislators can advise me on this, that is only for this particular man. I think this is good sound legislation to meet the difficult problems we have, and I think that unless we do this kind of thing, we may be too little, too late, and too slow.

Mr. HÉBERT. Mr. Foster, as I understood it, you complain now that the Secretary is responsible and then the authority is taken away from him.

Mr. FOSTER. That is correct.

Mr. HÉBERT. That is right. Now, in the bill which you subscribe to and which you like, if you will read the act in section 4, it gives the direction to the Secretary of the Navy, "the Chief of Operations shall exercise command and supervision over such of the forces of the Navy and the Marine Corps as the Secretary of the Navy determines."

That is an affirmative declaration that the Secretary and the Chief of Naval Operations has control, is that correct?

Mr. FOSTER. That is correct.

Mr. HÉBERT. Now we come to the "but": "Other than the forces assigned by the Secretary of Defense to unified or special commands."

Mr. FOSTER. That is correct.

Mr. HÉBERT. In other words, by the wave of his hand he could have Mr. Arleigh Burke up there with no forces under him at all.

Mr. FOSTER. That is correct.

Mr. HÉBERT. Why subscribe in one instance and complain in another?

Mr. FOSTER. Oh, no, this is not true at all. What we are saying is that in order to fight modern wars, you must have the ability to have in command forces as your cutting edge sea, land, and air forces.

Mr. HÉBERT. That is correct.

Mr. FOSTER. One assignment to a unified joint or specified command. The commander of that force by direction of the President through the Secretary of Defense and the Joint Chiefs of Staff is charged with the responsibility of operating that force.

Mr. HÉBERT. That is correct.

Mr. FOSTER. At that point the Chief of Naval Operations or the Secretary of the Navy does not have this command over those forces.

Mr. HÉBERT. Isn't that in existence today?

Mr. FOSTER. But he must support them. It is in existence today.

Mr. HÉBERT. Then why do you need another law before——

Mr. FOSTER. I thought you meant——

Mr. HÉBERT. Admiral Stump commands the Pacific and he commands everybody in the Pacific.

Mr. KOEHLER. Mr. Herman, could I swing to something else again?

Mr. HERMAN. I was going to suggest at this particular point we had been discussing particularly the provisions of the Secretary of Defense to handle forces.

Now, another major point arises at this time, and I think is unalterably connected with it, and that is ability to handle funds and to transfer them from one force to another and I haven't heard that discussed.

Mr. KOEHLER. Maybe I could lead off on that and really divert a little from that.

Mr. HERMAN. Very well, sir.

Mr. KOEHLER. I am a veteran of two Pentagon reorganizations, the 1947 one and the 1949 one.

I recall distinctly when the first plan went into effect in 1947. Secretary Forrestal, in whom there was no abler public servant that I ever knew, Secretary Forrestal took the position that the Department of Defense could work successfully only if it had a very few number of people in the Secretary of Defense's organization. Some say 50, some say 100. That is unimportant.

In the 1949 act, specification was made for 3 Assistant Secretaries of Defense, and later in the 1953 act, 6 more were added.

Now, it seems to me, although I wasn't too much subjected to the intervening layer of Assistant Secretaries of Defense, it seems to me that the appointment of every additional Assistant Secretary of Defense downgrades to a certain extent a service secretary, because he must be taking some of the secretary's functions, and also adds another burden to the already intolerable burden of the Secretary of Defense, because there is one more person who has to report to him.

Now, I believe that it would make very much sense if we are going to keep the services at all, to eliminate the greater part of that intervening layer.

Let the service secretaries relieve the Secretary of Defense of a tremendous burden administrative and otherwise, and let the Secretary of Defense devote more of his time to his fundamental job, which is working with the Joint Chiefs of Staff.

That is the heart of his job.

Mr. HERMAN. Go ahead, Senator SALTONSTALL.

Mr. FOSTER. I do want to get in on that one.

Senator SALTONSTALL. As one that was on that conference committee, and worked out this act and who worked very closely with Mr. Forrestal at that time, I know something of what he was thinking.

Now the words that were finally put in, as you will recall, are "authority" and "control."

Mr. KOEHLER. That is correct.

Senator SALTONSTALL. But the Department shall be separately administered.

Mr. KOEHLER. That is correct.

Senator SALTONSTALL. That was done to work out this compromise, if you will, that could carry through. That has been interpreted since that time to give the Secretary of Defense the authority over the services.

On the other hand, it is clear that they should be separately administered.

Mr. KOEHLER. That is correct.

Senator SALTONSTALL. One of the purposes of this act, as I understand it, at the present time, is to clarify that.

Mr. KOEHLER. One purpose is to wipe up separate administration.

Senator SALTONSTALL. The words "separately administered" are wiped out as such, but the various services are not merged. The Secretary of the Navy, for instance, will continue to——

Mr. KOEHLER. Senator, could I ask you just one question?

Senator SALTONSTALL. Certainly. I don't know if I can answer it, but I shall try.

Mr. KOEHLER. If the services cease to be administered separately, and if they are taken out of the chain of command, the service Secretaries, which may be proper, as Mr. Foster said, I am not qualified, what then is left of the individual services? Are they organizational entities at all?

Mr. FOSTER. Of course, they are, and there is absolutely no thought of eliminating the services as such.

The elimination of the separately administered is to give the Secretary of Defense the authority which he needs to truly direct and coordinate these groups, and this story of 100 people to do this job, I have heard that a good many times, and you know, Jack, as well as I, that Jim very rapidly changed his feeling about that way of running the Department.

Mr. HÉBERT. Just a moment. It is in here if you want to read it, Admiral Sherman——

Mr. FOSTER. I don't care whose testimony it was that is contrary to this.

Mr. HÉBERT. It was never sold to the Congress other than what he said. Mr. Forrestal never told the Congress anything different.

Mr. FOSTER. He never went back for a hundred in the reorganization at all, and I can assure you to run a business—and I think perhaps you gentlemen are overlooking the magnitude of this operation that has to be done by the Secretary of Defense. On this I can speak with some authority. I am not a lawyer, but on this one I can speak with some authority.

You are running a $40 billion or $50 billion business. You have $120 billion worth of plant and installations. You are complaining about seven vice presidents.

I think this is a very small number of vice presidents. I think the Office of the Secretary of Defense is one of the most efficient business operations that I know in terms of numbers, 1,500 civilians, 700 military people.

Mr. HERMAN. Let me get a question in here, please. I just want to say that as a former Deputy Secretary of Defense, yourself, perhaps you would want to comment on this question of how the Secretary of Defense's Office operates and also you might want to add at this point the question of the Deputy Secretary of Defense for Research.

Mr. FOSTER. His title will not be that, although he will be somewhat similar to that. Of course, research and technology is so obviously such a terrificly important part of our whole military activity now that unless we give to that the position of authority and prestige which it deserves, we may well be unable to attract the kind of real brains and real forward progress that we have to have in order to keep up in this terrific race.

I think that this plan, a Director of Defense Research and Engineer, provides that kind of authority. It gives to that man the prestige of authority in precedence, fifth in precedence behind the Secretary, the three Secretaries, and the Deputy Secretary. And it gives to him a control over, as well as an ability to advise, the Secretary of Defense on the highest research and technology level, and we need it. We must have it.

We have lost in this regard over these last few years. We know this, all of us. And unless we are able to give this kind of a job and get the kind of brains and support and direction that I believe can get through this device, we may really be in a desperate state.

Mr. HÉBERT. There is nothing in the law that prevents you from accomplishing everything you have said.

Mr. FOSTER. This I question.

Senator SALTONSTALL. Mr. HÉBERT, may I just say this. This I personally know. Take for instance today, the solid fuel as opposed to the liquid fuel in the propulsion of a missile.

Today there are three separate investigations going on in solid fuel, in each one of the services. Now this was brought to my attention by a man who is involved in it. He says there simply isn't manpower enough to do it. I just give you that as one example.

I dont think there will be much debate over this one centralization of research, do you?

Mr. HÉBERT. Senator, I think we could take a cue from that on the Hill, too, the overlapping investigations we have got.

Mr. HERMAN. Let me ask all four of you gentlemen to turn your attention to that question, the question of inefficiency, needless duplication of which so much has been made and also of the funds involved here.

Is there so much inefficiency and needless duplication now going on in the Pentagon?

Mr. HÉBERT. May I address myself to the money question? That is very interesting.

When the President first came out with this very revolutionary plan, the straw man was put up as the moneyman.

The Secretary of Defense would control all this money. He knew the Congress never

would buy anything like that. So he abandoned it and then in his statement he said he didn't really need that right now.

We will set that aside until a later date because he has the power now.

Whether he has the power now is debatable, but he exercised the power now because he is exercising a line item veto which the Congress has refused to give him by the conduct in the Comptroller's Office in the Department of Defense and in the Bureau of the Budget. And in the hearings of recent vintage by the House Armed Services Committee, when all of the services were there, every individual that testified, every Secretary, every general had one comment to make: that the reason for the tardiness and delay in our missile program and all hindrance rested in the Comptroller of the Defense Department and the Bureau of the Budget where the money is being controlled. So he has got it now and he says nothing about it, and that is where the delay is. This is—no, I won't use the word he used, "nonsense."

I think it is tragic that this matter has been placed out of focus and the word "nonsense" used, and every time the President speaks, he says, "I'm the man that knows. I'm the great military man."

Does the 44 years of Mr. VINSON, 22 years of Mr. BROOKS, the 22 years of Mr. ARENDS, the 22 years of Mr. KILDAY, 18 years of Mr. RIVERS mean anything—we are not children.

Mr. FOSTER. Administration or writing of the policy? I think that there is a good deal to be said for what really I believe was the President's thought on this, namely, to give some flexibility for transfers within the overall appropriations. You know, Mr. HÉBERT and Senator SALTONSTALL and Mr. Koehler, that the budgets are made up 3 years almost before they actually get to the point where they are being spent. With all the due wisdom that is accumulated in both the Congress and in the Department of Defense and in the Budget Bureau, it is impossible to foresee the changes that will take place in this rapidly changing world, and all that is being requested is, number one, that the budget be that of the overall Department of Defense, the overall plan of how to support, maintain and further these defense forces, and when the time comes to the actual expenditure, the right to move within line items and within the services some amount—Mr. McElroy said less than 10 percent.

Some other figure was mentioned as 5 percent. Say it is between 5 and 10 percent. I think that if you get the kind of problems we have today, this flexibility can save us a great deal of money, and will allow us to proceed with the new things that develop at the point the money is available.

Senator SALTONSTALL. We have a certain amount of flexibility today. The Defense Secretary in the last budget had, I think, $100 million which is a comparatively small amount of $40 billion that he had complete control over. He had also certain powers of transfer: As I remember it, not over 10 percent change in any one appropriation item, any one line item, and not over 5 percent could come from any other line item. Of course, that had to be within the services. That couldn't be shifted from one service to another.

Now we also have the power of transfer of funds for construction purposes. That has been done historically. And that comes down and goes through if it gets the approval of the Appropriations Committees in the House and in the Senate.

Now, how far Congress will go with allowing that transfer to be made between services is a problem that we have got to argue out and argue out very carefully.

Mr. HÉBERT. That is correct and that is the crux. Again, the Secretary has the power which the President is asking, but he wants just a little bit more, and I understand he is going to have $500 million in that emergency fund.

Mr. FOSTER. He does not have it as between services.

Mr. HÉBERT. I think he was more fearful——

Mr. FOSTER. He wants flexibility in order to meet changes.

Mr. KOEHLER. I think that problem is one that lends itself admirably to resolution between the Congress and the Department, as Senator SALTONSTALL has said.

Senator SALTONSTALL. You have been down there many times.

Mr. KOEHLER. Many times. I would like to get back to this question and I trust, Bill, you would bear with me on this one of the Assistant Secretaries of Defense versus the Secretaries in the military departments.

As I told you and as you know, my experience there terminated late in 1951. But even then, I found difficulty as an Assistant Secretary of the Navy in carrying out what to me where the orders assigned to me by the Secretary. I found a rather diffuse situation at the Assistant Secretary of Defense level because it seemed to me that there you didn't have authority running hand in hand with responsibility.

You had authority, but the responsibility was down the line. Now, I think today—and I think it is a very sad thing—I think today the Secretaries of the military departments are of much lower stature than they were 10 years ago, and without question, if this proposed bill becomes law, the Secretaries of the military departments, for my money, will not amount to very much at all.

I would like to reverse the trend so that the carrying out of the tremendous administrative functions of the Department of Defense could be done under the aegis of the service Secretaries rather than under the aegis of the Assistant Secretaries of Defense.

Mr. HERMAN. I'd like to take this away from the officials at this point and ask the Members of Congress, Congressman HÉBERT and Senator SALTONSTALL, how they feel on that particular argument?

Senator SALTONSTALL. Well, I think that the Secretaries of the various services should have a very substantial authority. Now, I think that in these days of quick decisions and quick actions and strong actions, there has got to be a greater centralization of authority.

Therefore, I would make it perfectly clear in the law that the authority is in the Secretary of Defense under the President through the Joint Chiefs of Staff for action in these unified commands, for instance, and then the details of how to carry out a lot of that business have got to be left and given to the secretaries of the services rather than assistant secretaries in the Defense Department.

Mr. FOSTER. If I may interrupt for 1 minute, it will just take a second, that the secretaries of the services will continue to have tremendously important delegated authority under the authority of the Secretary of Defense. They have got to support the whole military——

Mr. HERMAN. I think we have come to the point where we are running out of time and our agreements and disagreements are pretty well lined up, so I'd like to ask you to reflect back over your arguments here and offer you one last moment for rebuttal and restatement of your positions, starting as we started before with Senator SALTONSTALL.

How do you now feel that you should state your position?

Senator SALTONSTALL. Mr. Herman, I am very glad to have been on this discussion because I think it has been very helpful, I hope, to people who have listened and certainly to me who have taken part.

I reiterate what I said before. In these days of missiles and supersonic airplanes and all that goes with speed, we need speed of decision, we need speed of action. We are never going to be an attacker. We are going to be attacked. We may be attacked. We hope we won't be. We are more liable not to be attacked if any possible enemy knows that we have got a speedy retaliatory effort that is going to be a very destructive and devastating effort.

Now to accomplish that, we have got to, because of the speed of action, we have got to have more authority in one person, more authority most essentially in a civilian. That is the Secretary of Defense.

We have got to give him the strategic powers of the Joint Chiefs of Staff. If we do that, and that is all the President wants to do, we will be able to give that massive retaliatory effort.

Mr. HERMAN. Very well, Congressman HÉBERT.

Mr. HÉBERT. I think after listening to the discussion today that I am more convinced than ever that those of us who oppose this extraordinary bill of the President's are thinking along the right lines.

There has been nothing developed today that has indicated in any manner, shape or form, that this speed that is desirable of which Senator SALTONSTALL has just spoken could not be accomplished.

You can write all the laws in the world, but you can't change human nature, and if the Secretary of Defense is not a man of action and speed, the added power which could well be misplaced, will not help him one iota. I believe it most important that we do reorganize the Department, but organize it downward instead of upward by giving more central authority to fewer people and drawing a definite line so we will know exactly where we stand and keep each service in its true autonomy, its true identity. And I hope that we can get the proper testimony on the Hill and I was very interested in Senator SALTONSTALL talking about the people who appeared, but the echoes of names like Denfeld, Gavin, and Putt ring in my mind.

Mr. HERMAN. Could I ask you just in a very brief word whether you propose to start some kind of reorganization downward?

Mr. HÉBERT. Oh, yes. There is a bill before the committee, positively. We have that bill. We have no negative approach. Mr. VINSON has a bill in with Mr. KILDAY. That is the bill that I support.

Mr. HERMAN. Thank you. And Mr. Foster.

Mr. FOSTER. Well, I couldn't disagree more, of course, with the Congressman, and I think that it is a completely negative bill to which he refers. I am sure we are all aiming at the same objectives. We all want to have the most efficient, the most adaptable, the most decisive forces that we can get, and I think we have to ask ourselves these questions: Will this organization give us better coordination and direction of the Armed Forces? Will it give a better place in the scheme of things to research and technology? Will it make it possible for us to react more rapidly to the almost instantaneous attacks to which we may be subject? And will this in essence provide for us the kind of defense effort which will allow us to survive at a time in history when we are truly threatened with destruction almost overnight if the enemy makes that choice?

Mr. HERMAN. Mr. Koehler, will it?

Mr. FOSTER. I say it will.

Mr. KOEHLER. I would just like to say this: That this is the first conference of this type in which I have participated in which there has been so much light and so little heat on a subject that is bound to raise so many different points of view. I would like to revert to a few remarks I made in my opening statement.

And regardless of my personal views, I would like to say that it may well be, for reasons that Mr. Foster knows much better than I, that our national security requires fundamental changes in our present defense structure. If the President and the Congress so

determine and if those required changes include merger of the Armed Forces and the creation of a single Chief of Staff, that would, of course, be a definitive answer.

My concern, as I said earlier, lies not with the expressed intent of the proposed legislation, but with the conclusions I have drawn from a study of its language. We are a government of laws and not of men, and with that in mind, I am forced to conclude that this bill, if passed, would authorize some presently unknown and future Secretary of Defense to merge the armed services as we now know them and would also authorize, if not create, a command structure.

Mr. HERMAN. Mr. Koehler, I think we have just about run out of time. I want to thank all you gentlemen for joining with us today in this discussion of the defense of America.

The Grand Strategy of Freedom

EXTENSION OF REMARKS
OF
HON. BRUCE ALGER
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 22, 1958

Mr. ALGER. Mr. Speaker, the erroneous role of Government in spending huge sums of the taxpayers' money can one day spell the downfall of this great Nation, as I see it. While we have called our spending New Deal, Fair Deal, planned economy, war effort, general welfare, modern Republicanism, or other terms, it is akin to, if not fullblooded, socialism. And a rose by any other name is still a rose.

Big Federal spending as we now know it, is not traditional constitutional government, and it is not compatible with free enterprise. Something must go—either free enterprise and a free society or spendthrift government with huge taxes and debt. It is in this spirit of grave concern, therefore, that I present this excellent study by former Congressman Sam Pettingill, a Spotlight article distributed by the Committee for Constitutional Government.

Is freedom jeopardized by huge Government spending and taxes and Government business operations or is it not?

THE GRAND STRATEGY OF FREEDOM

(By the Honorable Samuel B. Pettengill, former Congressman from Indiana)

Socialism's secret weapon is money. Governments formerly gained power by the sword and swelled their coffers by conquest and tribute. That method is still used, but chiefly against foreigners. Modern governments obtain power over their own people in a more subtle fashion. They tax away the earnings of their people, and then dole some of it back to them in subsidies, gifts, grants-in-aid, and the award of huge government contracts. By this process they become the masters of men, and cease to be their servants. The historic relationship is reversed. Instead of government coming to the people for its support, the people come to the government for their support. Hitler put all groups in Germany in pawn to him via the money route. In the face of the granting or withholding of public money, opposition died away. People began to keep their mouths shut—businessmen first—but, finally, editors, educators, and ministers. He thus united both conservatives and radicals behind him. This is a very important point.

In this country, governors of States, mayors of cities and members of business organizations—chambers of commerce—including those most opposed to socialism in the abstract, become beggars at Washington for a return of some of the money collected from them in their own communities—less the political brokerage. As beggars, they fawn and smirk. Big government breeds little men. The great power of the purse, with which the representatives of the taxpayers once held the executive branch in check, is rapidly passing into the hands of a political Santa Claus.

Not one of the extensions of socialism could be put into effect without money. Cut off the money supply—and the power to borrow—and you stop them in their tracks. As Jefferson said, "We must make our selection between economy and liberty, or profusion and servitude."

Harry Hopkins gave the formula for socialism—tax, spend and elect. Yet because they fail to grasp the grand strategy of freedom, various groups exhaust themselves on scattered tactical skirmishes—good in themselves, but futile in the face of this overpowering flood of money.

Justice Holmes used to say, "We must strike for the jugular and let the rest go." I would urge no one to abandon the fight for his own group, but the No. 1 plank in all platforms must be the exact reverse of the Hopkins formula: "Reduce taxes and spending, especially at the Federal level. Keep government poor and remain free."

Make that the No. 1 plank in all platforms for freedom. The doctors can then fight socialized medicine; owners of real estate can fight public housing; others can fight Federal control of education; business can fight government competition; others can fight to relieve privately created wealth of some of the tax burden. With reduced Federal spending and sharply reduced taxes as the No. 1 plank of all groups, they can then fight with some chance of success. As it is, with each group fighting some single phase of socialism in which the others are not particularly interested, they are picked off like sitting ducks.

The Socialist planners lull the unthinking with the trick question, "What freedom have you lost?" That's easy to answer. It is my freedom to keep what I earn and spend it as I please. That's the vital distinction between European socialism and American individualism. "To have and to hold," written into millions of title deeds, tells the story of the individual incentives and rewards that have produced America's magnificent achievement.

A grand strategy for freedom is imperative. We must unite on one point, easily understood, which touches the pocketbook nerve of millions of voters. Intellectual arguments are not enough. You must appeal to the self-interest of millions. We must find the common denominator of mass resistance to socialism. The common denominator is the pocketbook. On that concept and that alone can we mobilize an army sufficient in numbers to wage successful war.

We must show millions of voters how they are being hurt—how their security for old age is melting away.

There are 78 million life insurance policyholders. As money becomes cheap, their security vanishes. A $10,000 policy paid up in 1940 has lost $4,800 or more in terms of what it will buy today.

A life insurance president has just told us of the disastrous effect of the cheap money policies of the past 20 years on life insurance security. The insurance companies are forced to earn less on their investments. Therefore, they must charge higher premiums for the same protection. Then when the policy is paid, the money received is taxed more, and buys less. To cover all these losses, a typical life insurance holder needs to take out 90 percent more insurance to provide the same purchasing power and protection as in 1939.

Most of the beneficiaries of life insurance are women. Tell them what taxes and debt and rotting money are doing to the security their husbands have worked so hard to provide. "Old age and want—thou ill-matched pair."

Then there are other millions who own Government bonds. A bond bought 10 years ago for $75 can be cashed today for $100. But the $100 will buy you less than the $60 did when you turned it over to the Government. And you are 10 years older.

Then you have 50 to 60 million people who have been compelled to buy what are called social security cards. Their hoped-for security melts away as dollars become cheap. To make up the loss, bills are in Congress to pay them more of these rotting dollars, adding to the tax burden to be carried by all industry, forcing prices still higher, and the music goes round and round.

The guaranties of Government are writ on water and carved in sand. Something for nothing is the moral cancer of a free society. Once begun, there is no stopping its deadly course except to find the lowest common denominator of the mass resistance of millions of voters—the pocketbook and the fear of poverty in old age. This is the grand strategy of freedom.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 1957).

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D. C., at cost thereof as determined by the Public Printer plus 50 percent: *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U. S. Code, title 44, sec. 72a, Supp. 2).

Appendix

Trend of Economic and Political Affairs in Non-Red World Stirs Rising Concern

EXTENSION OF REMARKS
OF
HON. LYNDON B. JOHNSON
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Wednesday, April 23, 1958

Mr. JOHNSON of Texas. Mr. President, I ask unanimous consent that there be printed in the Appendix of the RECORD an excellent article, by the distinguished correspondent for the New York Times, James Reston, summarizing some of the basic forces that are troubling the free world today.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the New York Times of April 23, 1958]

DECLINE IN THE WEST—TREND OF ECONOMIC AND POLITICAL AFFAIRS IN NON-RED WORLD STIRS RISING CONCERN

(By James Reston)

WASHINGTON, April 22.—The United States and the Soviet Union are dominating the news with their endless bickering, but the really important news is happening in other countries.

It is not the stalemate between the United States and the Soviet Union on summit talks that is worrying most diplomats here but the trend of economic and political affairs elsewhere in the non-Communist world. Among these disturbing developments are the following:

In the Western Hemisphere, economic troubles are plaguing not only the United States but other principal nations as well, from Canada, where 590,000 persons—about one-tenth of the labor force—are unemployed, to Chile, where the copper-marketing problem has become critical. Brazil, Colombia, and the other countries that rely primarily on coffee for their foreign exchange are also facing an economic crisis.

In Britain, the political trend is running with the Laborites, who have been increasingly critical of the United States policy toward the Soviet Union.

In France, the search goes on for the 26th Cabinet since World War II. The political instability is not only threatening France's position in North Africa but weakening the North Atlantic Treaty Organization's defense position in France itself.

In the Middle East, the situation is not without some promise. However, the rising force centers on the antiwestern policies of President Gamal Abdel Nasser of the United Arab Republic and the trend is toward Arab union under the domination of Nasserism.

In Southeast Asia, Communist influence is making steady progress in Indonesia. In India there is evidence of rising Communist influence and of disintegrating forces within Prime Minister Jawaharlal Nehru's Congress Party. Even the Pakistani Government has been threatening to break with the West and seek aid from the Communists.

In Nationalist China and South Korea, the Governments are merely waiting and hoping for the best. Japan, eager for new markets to maintain her rising population, is also feeling the increasing weight and influence of Communist China.

DIPLOMATS DISTURBED

These are the things that are disturbing thoughtful men here, even though these events are on the periphery of the main news.

Compared with the trend of events in Indonesia alone, the tiresome argument over the procedural steps to the summit and all the other issues over the reorganization of the Pentagon and the training flights of the United States Air Command seem to experienced diplomats to be of secondary importance.

Indonesia seems a long way from the United States, but it is very close to Australia. This is why Australian officials are spending so much time at the State Department these days.

Australia has 8 million people on a sparsely settled continent as large as the United States, and the thought of a possible Communist Indonesia of 80 million people close by naturally causes the greatest apprehension there.

It is only now that the repercussions of the United States recession are beginning to take effect overseas. Some regions have not yet been affected, even though United States imports fell off steeply in February.

BRITISH POSITION IMPROVED

For example, the British have made a remarkable financial recovery in the last year and their dollar reserve position is good. But elsewhere there is evidence of increasing economic difficulty.

This is particularly true in the countries of this hemisphere that depend on a single crop, the prices of which have fallen steadily. In Europe the fear of a prolonged United States recession is beginning to encourage great caution in capital investment. The Communists, of course, are proclaiming the economic instability of the capitalistic countries all over the world.

Particularly in Asia, they are asserting that the United States recession, and the United States trade and tariff policies are clear evidence of the dangers of relying on support from Washington.

And this, in turn, is why State Department officials, more than the officials of other departments, are tending to urge the President to take bolder measures to shore up the economy and fight the Trade Agreements Act through Congress.

The news is centering on summit talks and other procedural and organizational questions partly because so many of the questions outlined above are intractible, and partly because the Soviet leaders apparently want to keep attention on the summit conference.

NO MAJOR CONCESSIONS MADE

They are making no important concessions to get a summit meeting, apparently because they believe the economic and political difficulties in the non-Communist world are working to their advantage and forcing the West to seek agreement with the Soviet Union on disadvantageous terms.

Preoccupation with the summit, too, is keeping the western powers busy and diverting them from the few questions that might yield to concentrated action.

For example, there are some officials here who believe that it might be possible now to do business with President Nasser and even to detach him from Moscow. But Secretary of State Dulles has been devoting most of his time to questions thrown at him by Premier Nikita S. Khrushchev and finding little opportunity to concentrate on anything else.

It is, in short, a depressing picture. The news makes the cold war seem to be in stalemate, but the fact is that there are serious signs of slippage all over the non-Communist world.

Unemployed Men, Sacred Myths

EXTENSION OF REMARKS
OF
HON. JAMES E. MURRAY
OF MONTANA
IN THE SENATE OF THE UNITED STATES
Wednesday, April 23, 1958

Mr. MURRAY. Mr. President, the New York Post on April 4 carried an editorial about the sacred myth that there is an immutable economic law which decrees times of prosperity and times of depression, calling for implementation of the Full Employment Act of 1946.

I ask unanimous consent to have it printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

UNEMPLOYED MEN, SACRED MYTHS

Congress is about to disperse for a 10-day Easter holiday; the unemployed can wait. No broad, sweeping attack on the recession has come from either the White House or the Democratic leadership; despite much big Democratic talk, a highway appropriation is the only major move so far. It is palpably not enough. It is also depressing that roads should take such precedence over schools in both the legislative and the executive mind.

More serious, however, than the record of inertia is the evidence that a "wait-and-see" mood is beginning to paralyze both parties. The predicted upturn has not occurred but the downturn has allegedly been slowed; we are increasingly being told to let well enough alone until "economic law" reasserts itself. So say the sages.

By summer, fall or winter things may well right themselves; no man really knows. The profound question confronting the country is whether we must forever remain prey to the unpredictable cruelty of economic cycles. The question is a human one; in a world in which we are competing with the Communist mystique, it may also be an issue of democratic survival.

Let us face it; neither the New Deal nor the Fair Deal conquered the disease of unemployment. Enactment of the Full Employment Act in 1946 was the first formal proclamation of free society's total war on economic insecurity. But we have done little to implement that act.

Once again we hear talk of the inevitability of periodic decline; some men even whisper that unemployment produces its own compensations by stabilizing the labor market. Hungry men don't quibble about wages, it is said.

No matter what the ultimate course of this recession, democracy has to find better answers. "Economic law" is not divine law; the blight of unemployment is manmade; the solutions lie in men's hands. But we shall not find them until we are prepared to seek more original remedies than either party has so far proposed, and to recognize that, in an economy as vast and complicated as ours, large-scale Government planning is a continuous imperative.

The conservatives (of both parties) say Government must not do too much lest it make things worse. This is the doctrine of despair; it tells us we cannot truly regulate our affairs; it is like saying we must not try to control floods because anything we do will aggravate the gods. In economic affairs we are the victims of a mythology as pessimistic and irrational as the mumbo-jumbo by which the most primitive tribesmen lived and died.

Many Gold Star Mothers in Need

EXTENSION OF REMARKS
OF
HON. LYNDON B. JOHNSON
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Wednesday, April 23, 1958

Mr. JOHNSON of Texas. Mr. President, I have received from a Gold Star Mother living in Dallas, Tex., a copy of a resolution passed some 2½ years ago by the Dallas Chapter of Gold Star Mothers.

In sending me this resolution, the Dallas Gold Star Mother wrote me as follows:

I am making a request of you as a Gold Star Mother and friend to look into the matter of this resolution. I would like to request that this resolution be looked into by you with regard to the many Gold Star Mothers, of which I am one, that do not have any income besides insurance and compensation and that are still having to rent their homes. Many of these mothers have reached the age of 75 and I myself am 76.

At this high cost of living I am now barely able to get along on my present income. Would humbly appreciate anything that you might do in regard to this resolution.

Mr. President, I ask unanimous consent that the text of the resolution be printed in the Appendix of the RECORD.

There being no objection, the resolution was ordered to be printed in the RECORD, as follows:

RESOLUTION ADOPTED BY DALLAS CHAPTER, AMERICAN GOLD STAR MOTHERS

"Whereas many Gold Star Mothers (1) are widowed and have no income except the pension paid them by our Government for the loss of their child in the service of our country; (2) are unable to work by reason of age and condition of health; (3) have no other children who can help support them; (4) have living husbands who are unable to work by reason of age and condition of health, and who have no income except the pension paid them for the loss of their child in the service of our country; (5) who do not own their own homes and must rent their living quarters; (6) are often ill and must have medical services and at times must be hospitalized; and

"Whereas the pension now paid to Gold Star Mothers for the loss of their child, or children, in the service of our country, of $75 per month is greatly appreciated by the Gold Star Mothers, but is wholly inadequate to sustain them by reason of the high cost of rent, groceries, clothing, medical services, hospitalization, and all other necessities of life; and

"Whereas by reason thereof, many of such Gold Star Mothers are denied necessary medical care and attention, proper diet, and other necessities of life, and are in dire need and circumtances: Now, therefore, be it

"*Resolved*—

"1. That the pension to Gold Star Mothers, and all other mothers entitled to the same or similar pension, be increased to $100 per month.

"2. That copies of this resolution, accompanied by an appropriate letter, be sent to Hon. LYNDON JOHNSON and Hon. PRICE DANIEL, Senators from Texas, and to each Congressman from Texas, imploring and urging them to initiate and support legislation necessary to increase such pensions to $100 per month; and

"3. That a copy of this resolution, accompanied by an appropriate letter, be sent to the chairman of the Veterans' Affairs Committee of the House of Representatives."

We certify that the foregoing resolution was adopted by unanimous vote at our regularly stated meeting held in Dallas, Tex., on the 6th day of September 1955.

MRS. ROY V. SMITH,
President, Dallas Chapter.
MRS. L. E. CASEY,
Secretary, Dallas Chapter.

The Late Senator W. Kerr Scott

EXTENSION OF REMARKS
OF
HON. FRANK CHURCH
OF IDAHO
IN THE SENATE OF THE UNITED STATES
Wednesday, April 23, 1958

Mr. CHURCH. Mr. President, in due course the Senate will have the opportunity formally to pay tribute to the memory of our colleague, Kerr Scott. But I have been deeply moved by an editorial eulogy which was published last Friday in the Greensboro (N. C.) Daily News. The essence of the man as I had come to know and love him in my too brief acquaintance with him is, in this piece so well captured that I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Greensboro Daily News of Friday, April 18, 1958]

KERR SCOTT: ESSE QUAM VIDERI

Even after a heart attack hospitalized him last week, it was hard to visualize Kerr Scott stricken with anything. And it is harder yet to visualize him dead today at his beloved Hawfields Presbyterian Church in Alamance, where his meteoric career began in a major way a little more than 10 years ago.

The big, bushy-browed, tobacco-chewing farmer appeared on the Tar Heel political scene in 1948, as if summoned by some deep, inner folk need. He came, unpretentious and fixed in his views. The mud of Haw River still clung to his shoes. He came to prove again that North Carolina is suspicious of a sure thing.

Already in 1948 the Tar Heel political hierarchy had laid an apostolic hand on the successor to Gregg Cherry in the governorship. The arrangers had everything arranged. Then Kerr Scott strode into the fracas; he tossed Haw River witticisms left and right and nailed his major opponent, Charlie Johnson, to the cross of lazy money in the State's counting house.

TWO MEN OF INDEPENDENCE

Like another plucky man of Independence, Kerr Scott wrought a political revolution in 1948. He spoke of his victory as "the bottom layer overturning the top." But the secret of his success lay in something more than the red-neck stereotype of southern politics. His family background was above the level of the South's wool-hat tradition. It was part and parcel of that independent ruralism which sets North Carolina apart. It was chittlins and cornbread, but it was also light and enlightenment.

At times Kerr Scott seemed to hover dangerously near the edge of demagoguery—pitting class against class—but always an innate sense of the North Carolina spirit stayed his hand. With his stupendous political intuition, the Squire of Haw River combined a genuine understanding of the needs of a struggling agricultural State. He saw his regime as an instrument for redressing the balance between lawyers and farmers—between the moneyed interest and the boys at the head of the creek.

He used his 4-year regime to recharge the batteries of farmers in the mud, schoolchildren in double-shift classrooms and branchhead boys without electricity. He was blunt. He was candid. At a ceremony unveiling a new powerplant he threw a bolt of lightning at the power company. At an august dinner of businessmen he called their magazine We the People Against the People.

With that single-minded determination born in a man of action, Kerr Scott persuaded the general assembly and the people to spend $200 million for building rural roads. Some of his advisers told him it would never pass. But he knew North Carolina better than they did. As a county farm agent he had traveled the back roads for decades, observing agricultural conditions, formulating his program. When he reached the governor's office he knew what he intended to do, and he did it.

THE NEW FUSION

Ironically the fact that the State highway commission refused to pave the road by Scott's house inspired his gubernatorial career. He turned his crusade for roads into a kind of sermon for general uplift in North Carolina. He viewed it as a campaign for getting schoolchildren and rural church patrons out of the mud. The scholars, philosophers, and press agents suddenly saw his revolution as a plea for accessible isolation, for a Lewis Mumford-like dream of tension-free, dispersed living—1 foot in the soil, 1 foot in the factory. Scott's appeal began to transcend the purely hayseed and political gimmick level. It definitely moved into a genuine fusion of the intellectual and the rural when Scott casually announced the appointment of Frank Porter Graham to the United States Senate at a dinner meeting in Chapel Hill.

That appointment led to a fiery political campaign unmatched in decades. Scott's candidate could not keep the branchhead boys and the intellectuals in line. Faced by a second primary bitter in racial demagoguery and bombast Frank Graham went down to defeat at the hands of Willis Smith. Graham's defeat and the later rejection of Scott's candidate for governor, Hubert Olive, set a pattern. Kerr Scott could generate a huge following for himself; but he could not pass it along to his chosen successor. Thus Scott never built much of a political ma-

chine in North Carolina, despite fearful speculation of his enemies. He seemed to become undefeatable on his own—proved in his spirited 1954 campaign against Governor Umstead's appointee to the United States Senate, ALTON LENNON.

In the United States Senate Kerr Scott again confounded his critics. Many had expected a continuation of the unconventional antics which often marked his regime in the Governor's office. Scott again demonstrated his political wisdom. He was a quiet freshman, listening and learning. He assembled an astute staff and laid low. Little by little in the last 2 years he had begun to raise his voice in the august Romanesque Hall of the Senate. On every hand he was consolidating his position; his principal interests lay in the fields of agriculture and resource development.

THE SHADOW GROWS

How large will Kerr Scott's bulky cigar-attached figure loom in the history of North Carolina?

Like Harry Truman's his shadow grows larger every day. For Scott and Truman were alike: Their hearts were in the right place, and they were sound on many large and memorable issues; they were sometimes wrong, and petty, on small ones.

The span of years will see Scott's gubernatorial administration as a time of spirited moving forward. He recognized the predominantly rural problems of a predominantly rural State as no governor has in this century; he sought to combine rural, down-home living with modern industrial society in an interesting blueprint still applicable today. He made some poor appointments and some good ones, among the latter the first woman member of the North Carolina Superior Court and the first Negro to the State board of education. Scott's prediction that water is the largest unmet challenge will haunt North Carolina again and again in the future—just as the research triangle area learned recently when a nuclear-reactor project went to the shores of the Yadkin near Rockingham and not to the Raleigh-Durham area.

A COMMON MOTTO

Kerr Scott had a mind open to new ideas. He was a bulldozer, not a diplomat, a doer not a philosopher. He never plowed under false colors. He plugged for roads, schools, rural electricity, telephones—all tangible things the people of North Carolina understood. He said he would let in some fresh air and he did. If he is standing close by St. Peter this morning, we suspect he is advising him to rip out all that gold facade and repave it with black macadam.

When they bury Kerr Scott's body at Hawfields Church this afternoon, North Carolina will lose a unique political leader. He is a variation in the lawyer-governor tradition, proving the strength of North Carolina's independent spirit. He is as near a symbol of a plain-spoken State's motto—"To be rather than to seem"—as we have had in this century.

That was Kerr Scott's motto, too.

The Spirit of Patrick Henry

EXTENSION OF REMARKS

OF

HON. NORRIS COTTON

OF NEW HAMPSHIRE

IN THE SENATE OF THE UNITED STATES

Wednesday, April 23, 1958

Mr. COTTON. Mr. President, the people of the State of New Hampshire and the Members of the United States Senate recognize the ability of my colleague, the distinguished senior Senator from New Hampshire [Mr. BRIDGES]. The people of the State of New Hampshire, and particularly the women, as well as the Members of this body, also recognize the ability and talent of Mrs. Bridges. Her analytical mind and forthright utterances have made her a speaker in great demand among organizations in the State.

Mrs. Bridges recently delivered a speech before a luncheon of the Daughters of the American Revolution in Washington. The Manchester Union Leader for Monday, April 21, 1958, comments upon Mrs. Bridges' speech, and I ask unanimous consent that the editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE SPIRIT OF PATRICK HENRY

Mrs. Styles Bridges has not forgotten Patrick Henry's famous utterance: "I know not what course others may take; but as for me, give me liberty or give me death."

In a recent speech in Washington before the Daughters of the American Revolution Mrs. Bridges said: "For my part, I would rather die than be a slave to communism."

Mrs. Bridges was referring, with proper horror, to a number of people who have been saying recently that to avoid destruction by bombs the world might have to be conquered and controlled by the Communists for a time, possibly a few generations.

Just what being controlled by the Communists means can be best gathered from the recent testimony of the Commander in Chief of the United Nations Forces in the Far East, Adm. Felix Stump, who told the House Foreign Affairs subcommittee, in heavily censored testimony, that the Communists have murdered 18 million Chinese since taking control of China in 1949. Stump said the report is based on carefully evaluated information given by Europeans and Chinese who have been inside China during that period.

For Mrs. Bridges to say: "For my part, I would rather die than be a slave to communism" is not a mere empty thought. Death would indeed be preferred to Communist slavery because the Communists do not treat the conquered nations as we have treated Germany and Japan. They grind under their heel not only the body but the mind, the spirit, and the soul of the conquered.

Communism in control of the United States would stamp out everything from Christmas to Easter, to kindness to each other, all those things which distinguish life in the United States from the life of the brute in the jungle.

Congratulations to Mrs. Bridges for having the courage to speak out against appeasement.

Every American should turn against the appeasers and the cowards in our midst, whose whining words encourage our enemies.

Progress of the Russian Economy

EXTENSION OF REMARKS

OF

HON. JAMES E. MURRAY

OF MONTANA

IN THE SENATE OF THE UNITED STATES

Wednesday, April 23, 1958

Mr. MURRAY. Mr. President, many people around the world were amazed when Russia put the first satellite into outer space. We are uniformed about the progress of the Russians scientifically or there would have been no such surprise. Indeed, if the American people had known the situation their pressure on our laggard administration might have prevented this Russian cold war victory.

Today, the Russians are boasting that their economy is progressing while the United States economy declines. The ability of the Russians to make such boasts, with some degree of veracity, is one of the very serious aspects of the present economic decline. It is one of the reasons that at least some of us feel that it is a tragic mistake to temporize and delay about recovery measures. We do not want Russian economic "sputniks" to inflict another serious cold war defeat on us while the Eisenhower administration waits for the August, September or 1959 figures on unemployment.

In the interest of general information about how the Russians are capitalizing on our present economic situation, I ask unanimous consent to have printed in the RECORD excerpts from a recent editorial in the Russian newspaper, Pravda, entitled "Socialist Industry in New Upsurge."

There being no objection, the excerpts were ordered to be printed in the RECORD, as follows:

SOCIALIST INDUSTRY IN A NEW UPSURGE

The socialist industry of the U. S. S. R. is progressing along the path of a new powerful upsurge. This is shown eloquently by data of the report of the Central Statistical Administration of the U. S. S. R. Council of Ministers on results of fulfillment of the state plan of U. S. S. R. industry in the first quarter of 1958, published a few days ago.

Analysis of data on fulfillment of the state plan brings us to a number of important conclusions:

First. Our industry has been developing in the first quarter of 1958 at a rapid pace. Compared with the first quarter of 1957, industrial output increased 11 percent.

Second. Our heavy industry, which represents the basis of the entire national economy, of the growth of the well-being of the working people, and of the defense capacity of the country, has been developing successfully as before. Compared with the first quarter of 1957, the gross output of ferrous and nonferrous metallurgy represented 109 percent in the first quarter of 1958.

Third. Following heavy industry on the basis of the data, there is a rapid development of the light and food industries. Compared with the first quarter of 1957, the gross output of light industry in the first quarter of 1958 was 108 percent, and of the foodstuffs industry, also 108 percent. Considerable quantities of the following goods were produced in excess of plan: cotton, woolen, linen, and silk fabrics; artificial fibers; leather footwear; paper; sugar; canned foods; vegetable oil; macaroni goods; radio sets; soap; and other consumer goods.

Fourth. Ever more visible results are being achieved in fulfillment of the main task of socialist production—an increase in the productivity of labor. The plan for increasing labor productivity of industrial workers in the first quarter of 1958 was fulfilled 102 percent. Compared with the first quarter of 1957, labor productivity in industry increased 7 percent.

Fifth. The state plan is being fulfilled in the country as a whole and in all republics. All union republics have fulfilled the quarterly plan of gross output and output of the most important items. The industry of local Soviets has been developing successfully,

together with the industry of the Sovnarkhozes. Its first quarter plan was fulfilled 102 percent.

Such are the main results of development of our industry in the last few months. Such are the conclusions to be drawn from these results. The current year has been started well by Soviet builders. The plan of building and assembly work in the first quarter of 1958 was fulfilled 101 percent. Building organizations of the Sovnarkhozes fulfilled the plan 103 percent. The volume of building and assembly work in the country increased 11 percent compared with the first quarter of 1957.

The rapid growth of the industrial might of our country exerts an increasing influence on the development of socialist agriculture. This determines the rise of the material well-being of the Soviet people. The report of the Central Statistical Administration of the U. S. S. R. Council of Ministers on fulfillment of the state plan of retail goods turnover in the first quarter of 1958, published April 17, shows that the continuously growing requirements of the population are being met ever more fully in our country.

The powerful upsurge of the economy of the U. S. S. R., as of other socialist countries, is taking place at a moment when the economy of a number of capitalist countries has entered a period of progressing depression. Even the biggest representatives of imperialist circles and inveterate troubadours of capitalism cannot conceal that an economic recession has begun and is continuing to develop in the United States—the main country of capitalism. This recession leads to a destruction of the production forces and to the greatest calamities.

The greater is the pride felt for their socialist country, for its successes, by the Soviet people, who were the first to pave the way to socialism.

Texas Electric Cooperative Calls for Adequate REA Funds

EXTENSION OF REMARKS
OF
HON. LYNDON B. JOHNSON
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Wednesday, April 23, 1958

Mr. JOHNSON of Texas. Mr. President, I ask unanimous consent that a resolution calling for adequate funds at present interest rates for the rural electrification program, as passed by directors of the Jackson Electric Cooperative, Edna, Tex., be printed in the Appendix of the RECORD.

This Texas cooperative serves rural consumers in Jackson, Matagorda, Calhoun, Brazoria, and Lavaca Counties.

There being no objection, the resolution was ordered to be printed in the RECORD, as follows:

RESOLUTION OF JACKSON ELECTRIC COOPERATIVE, INC., AT BOARD OF DIRECTORS MEETING, APRIL 15, 1958

Whereas the continued progress and service of the rural electric cooperatives is contingent upon the availability of sufficient funds at present interest rates being made available each year by the Congress; and

Whereas it has been determined that $350 million will be required for rural electrification and $9,500,000 for administrative expenses in order to carry on an effective program: Now, therefore, be it

Resolved, That we, the board of directors of the Jackson Electric Cooperative, Inc., representing more than 5,000 members in Jackson, Matagorda, Calhoun, Brazoria, and Lavaca Counties, Tex., respectfully request the Congress to consider and act favorably on this resolution.

Respectfully submitted.

JACKSON ELECTRIC COOPERATIVE, INC.,
E. S. YOAS, *President*.

Attest:

W. M. SELLS,
Secretary.

Address by John S. Gleason, National Commander of the American Legion, Before South Carolina Legionnaires

EXTENSION OF REMARKS
OF
HON. STROM THURMOND
OF SOUTH CAROLINA
IN THE SENATE OF THE UNITED STATES
Wednesday, April 23, 1958

Mr. THURMOND. Mr. President, on March 29 the Honorable John S. Gleason, Jr., national commander of the American Legion, came to my State to address the spring rally of South Carolina Legionnaires at Columbia.

He took the occasion to speak on the subject of national defense. He delivered an able and extremely illuminating address.

The American Legion, one of our finest veterans' organizations, has always been vitally interested in our military posture. At a time like this, when we are faced with the immense and complex problems of molding our military organization to fit changing concepts of strategy, it is not surprising that the national commander of the American Legion speaks with the authority and background knowledge that was displayed in his address at Columbia.

I ask unanimous consent that this able address be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

AN ADDRESS BY JOHN S. GLEASON, JR., NATIONAL COMMANDER, THE AMERICAN LEGION, AT DEPARTMENT OF SOUTH CAROLINA SPRING RALLY, COLUMBIA, S. C., MARCH 29, 1958

It is a real pleasure and a privilege being with you South Carolina Legionnaires and auxiliary members tonight. I am grateful for the opportunity you have given me to participate in this great spring rally.

For the American Legion here in the Palmetto State, spring is really busting out all over. Your enthusiasm for our organization and your dedication to our programs of service for God and country have been overwhelmingly in evidence at this rally. I am confident that this interest and effort will be continued and will carry you to new heights of service and membership this year.

At a meeting of this kind it is necessary and proper that you should examine carefully each of our major programs to insure that needy and disabled veterans in this State are receiving all of the help which the American Legion Department of South Carolina can give them to make certain that no child wants for food, clothes, shelter, medical care, or the other necessities which you can provide, to know that the young citizens of this great State are benefiting from such positive, constructive Americanism programs of the American Legion as Boys' State, junior baseball, oratorical contests, Boy Scouts, and other citizenship training activities.

We must, I submit, look carefully at each of these programs and determine that they will always be carried out as effectively, extensively, and vigorously as possible. But beyond this, the American Legion, here in South Carolina and in every State, must continue to lead the fight for adequate national security.

All of the hard-won benefits for America's veterans, their dependents and survivors, all of the worthwhile programs for our Nation's needy children, and all of our efforts to build better citizens and better communities in America will be lost if we do not win the fight for our Nation's security and survival.

I feel confident that the subject of national security is especially meaningful to you South Carolina legionnaires. This State is rich in military heritage and history. Within your borders are a number of our Nation's most important military, naval, and air installations. Just a few miles from where we are meeting tonight lies Fort Jackson. Shaw Air Force Base, the great Charleston Navy Yard, the Citadel, these and other names tell of South Carolina's intimate identification with the military security of America. Throughout your State active military installations and historic battlefields such as Cowpens and Sumter serve to emphasize the vital role which the citizens of South Carolina have played in winning our independence and keeping us a free nation under God.

Now fate has once again thrust upon you the opportunity for leadership in the field of national security.

When an Air Force jet bomber accidentally hurled a loaded but untriggered A-bomb into a farm yard outside Florence, S. C., a few days ago, there was ample opportunity for anger, fear, and a public outcry against arming our planes with these bombs on stateside flights.

In London, 3,000 miles away, there was instant and widespread editorial alarm. Even Russia was upset. But here in South Carolina, among the citizens most directly concerned, there was calm. In fact, to quote one news account: "interest (here) seemed to center more on the technical workings of the bomb, as revealed by the explosions of a TNT trigger device and on the built-in safety precautions."

Your reaction is truly commendable. More than that, it should serve as an inspiration and example to all of our citizens, in every State.

We have to accept the possibility of infrequent accidents as part of the price of national security. We have to realize that, despite the most extensive and effective safety precautions possible, an untriggered A-bomb can drop accidentally from a plane, cannon shells can be fired accidentally over populated areas. And even in a cold war the soldiers, sailors, airmen, and marines of our Armed Forces literally must risk their lives at times in our defense.

Their task will be made easier, their service more effective and their sacrifice more meaningful with public understanding and support.

It is up to organizations like the American Legion to create this essential climate of public understanding. It is up to us to instill in our fellow-citizens an awareness and appreciation of the sacrifices we must make, the inconveniences we must accept and the rare dangers we must face in the peacetime defense of our country.

Beyond this, the American Legion, here in South Carolina and in every State, must

voice the concern of those citizens, veteran, and nonveteran alike, who believe with us that America is not now prepared to counter Russia's massive military might in a so-called limited or conventional war.

There are many sincere Americans who believe that it is unrealistic to concern ourselves with the problem of fighting a conventional war when our security and survival depend primarily on missiles and control of interplanetary space. The American Legion realizes the imperative need for America to win the race for space. But we submit that we cannot afford to concentrate all of our efforts, all of our resources and all of our time and talent on missiles and other weapons of the space age.

In the first place, the era of pushbutton warfare, if it ever arrives, is still years away. Second, we must recognize the possibility of a nuclear-missile stalemate, a condition in which the retaliatory capabilities of both the United States and Russia are so complete that missiles and nuclear weapons of vast destructive power and range will not be used.

If this seems like wishful thinking, just remember for a moment that neither side used gas in World War II because of the retaliatory capability which both possessed.

Thus we are confronted immediately with the need to maintain and increase the strength of our existing Armed Forces to counter Russia's vast and growing superiority in the area of conventional military power. And we face the distinct possibility of a missile-nuclear stalemate in the event of a future war.

And what is our Government's reaction? Cut back the strength of the Regular Army, reduce the existing or authorized strength of the National Guard and Reserve forces, maintain presently inadequate production schedules for jet bombers, submarines, and other vitally needed weapons of today.

The American Legion is confident that the Congress will not approve a proposed reduction of 1 division and 30,000 men in the strength of the Army in the next fiscal year. We believe that such informed and dedicated statesmen as your own distinguished Senator, STROM THURMOND, will agree with the American Legion and with the House Armed Services Committee that the National Guard should not be cut back from 404,000 to 360,000 men in the next fiscal year. We know that his own extensive experience and brilliant service in the Reserve forces of the Army will make Senator THURMOND an effective ally and leader in our fight to prevent the reduction of the Army Reserve from 300,000 to 270,000 men in the next fiscal year.

The American Legion is not fighting for obsolete concepts. We are not seeking to maintain an archaic kind of military force. We are seeking only to give America a measure of security in an area in which we are now so vulnerable and so weak compared to Russia.

I am not exaggerating. Here are the facts. By the end of this June, the Army's strength will be down to 870,000 men in only 14 divisions and 6 regimental combat teams. The strength of the Red Army alone, not counting Red China or any of the other Communist satellite countries, is estimated at approximately 2½ million men, organized into some 175 divisions, of which 105 are infantry, 45 are mechanized, 20 are armored and 6 are airborne.

Further, the Soviet Army today has a completely new postwar arsenal of weapons, in being, in the hands of trained troops, capable of fighting either a nuclear or nonnuclear war, big or small, in any kind of climate or terrain.

In other words, the situation we face today is simply this. The Russian Army, with its 175 active divisions and an estimated 300 divisions in reserve can match us in a global war, but we can't match Russia in another conventional, limited war such as Korea.

On balance, we still enjoy naval superiority over Russia. But hidden under the sea is a force that threatens not only the strength and fighting effectiveness of our Navy but America's lifeline as well. Right now Russia could surface off the Charleston Navy Yard a submarine fleet many times greater than that with which Hitler started World War II and still have ample submarine strength to deploy to other waters.

Hitler began World War II with only 57 submarines. And he came closer than many of us will ever realize to winning his gamble for control of the seas.

Today Russia has approximately 600 submarines in its fleet and, according to reliable estimates, is adding 3 submarines every 2 weeks to this strength.

We don't have to be Navy veterans to understand the importance of control of the ocean highways which link 85 percent of the world's land masses. These highways must be kept open in time of war to insure the safe delivery to our shores of the many strategic raw materials which we must import from abroad. Further, without control of the sea all of the overseas bases which we have built up over the years at such great expense and effort will be lost to us.

If we lose control of the seas we will be cut off from those raw materials needed for our defense industries. And we will be cut off from our allies and left standing alone with our backs to the wall as Russia chooses the time and place for a final, all-out assault on America, freedom's last bastion of defense.

These are the frightening realities which compel the American Legion's constant and continuing effort to build up the strength of our Army and Reserve Forces, to insure the Navy's ability to maintain control of the seas, and to maintain at maximum strength and efficiency America's greatest retaliatory and deterrent force, the United States Air Force and its Strategic Air Command.

With the interest and dedication of such Legionnaires as you members of the great department of South Carolina, the American Legion can and will win the fight for complete national security.

We will forge that shield of defense needed to keep us free now and in the years ahead as we seek to conquer space, to reach other planets, and to attain lasting peace.

Thank you for the privilege of being with you tonight.

South Gate, Calif., Kiwanis Club Holds Noon Meeting Poll on Knowledge of Club Members as to Who Their Elected Public Officials Are, and Other Related Public Matters

---

EXTENSION OF REMARKS

OF

HON. CLYDE DOYLE

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 17, 1958

Mr. DOYLE. Mr. Speaker, by reason of unanimous consent heretofore granted me so to do, I am pleased to advise you of a very significant educational program by the South Gate, Calif., Kiwanis Club, it being one of the Kiwanis Clubs in the great 23d district which I represent this my 12th year in this Congress.

In speaking with Mr. Paul S. Chance, a prominent educator in California, and a member of said South Gate Kiwanis Club, and chairman of their committee in this matter, he explained to me that the reason he and his committee had developed these questions to submit to all of the 89 members of the club at a club meeting was that it was recognized as of strategic and utmost importance that all Kiwanis Club members in the 23d Congressional District know the answers to said questions.

Therefore, Mr. Speaker, following are the questions and the answers thereto as written on the ballot by the club members present at their luncheon meeting. This educational program dealing with their own congressional district, their State assembly districts, and their own State senators, and their own United States Senators, and their own supervisorial districts, and other important items as set forth in the 24 questions is certainly worth adaptation and copying by any club of American citizens. I do not have the percentagewise of these successful answers.

Mr. Speaker, I am sure you and all the other Members of this Congress join me in congratulating the South Gate, Calif., Kiwanis Club on this very worthy educational program. Of the 89 members present, I am informed by the chairman that 51 of the members present turned in their ballots and thus participated in the objective work of the educational committee of said club.

The questionnaire follows:

SOUTH GATE KIWANIS CLUB, SOUTH GATE, CALIF., 23D CONGRESSIONAL DISTRICT

1. The Governor of California is (Goodwin J. Knight).

2. California's 23d Congressional District has nearly 100,000 (200,000), 300,000, 400,000 registered voters.

3. California Congressional District 23 has a population of about 325,000, 425,000 (575,000), 625,000.

4. Los Angeles County has how many State assemblymen? (31.)

5. Los Angeles County has how many United States Congressmen? (12.) (In the House of Representatives.)

6. Mayor of city of South Gate is (Earl Hutchinson).

7. The present United States Congressman from 23d District is (CLYDE DOYLE).

8. The 23d Congressional District comprises how many assembly districts (3), 52, 55, 69.

9. Number of Members in United States House of Representatives (435).

10. Number of United States Senators in United States Senate (96).

11. United States Senators from California are (1, THOMAS KUCHEL; 2, WILLIAM F. KNOWLAND).

12. Number of California Representatives in United States Congress (30).

13. Number of California State senators (40).

14. How many California States assemblymen? (80.)

15. Number of members of county board of supervisors (5).

16. Veterans' Day is (November 11).

17. Flag Day is (June 14).

18. Los Angeles first supervisorial district has (.3 million), 2.3 million, 3.3 million population,

19. The four congressional actions are (bill, joint resolution, concurrent resolution, simple resolution).

Identify the source:

20. "In the name of God, Amen. We, whose names are underwritten." (Mayflower Compact.)

21. "Article 1. The stile of this Confederacy shall be * * * 'The United States of America.'" (Articles of Confederation.)

22. "We hold these truths to be self-evident: that all men are created equal." (Declaration of Independence.)

23. "* * * with a firm reliance on the Protection of Divine Providence we mutually pledge" (Declaration of Independence.)

24. "Done in convention by unanimous consent of the states present the seventeenth day of September." (United States Constitution.)

Fifty-one members turned in papers. There were 89 present.

Statement by Former President Harry S. Truman, Before the House Committee on Banking and Currency, April 14, 1958

EXTENSION OF REMARKS
OF

HON. ESTES KEFAUVER

OF TENNESSEE

IN THE SENATE OF THE UNITED STATES

Wednesday, April 23, 1958

Mr. KEFAUVER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD former President Truman's statement before the House committee when he appeared to give his views on the present economic recession and the means of reversing it. We are all indebted to him for the contribution he made to our thinking on the matter.

I was particularly interested in one part of his testimony in which he referred to the causes of the current inflation. He observed that, contrary to inflationary periods in the recent past when demand greatly exceeded the available goods and services, this recession is characterized by high and rising prices at the same time that there are unused plant capacities and increased unemployment.

His observations further buttress my own conviction that much of the credit for the present inflationary spiral can be laid at the feet of those who administer the prices of some of our most vital commodities.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT BY HARRY S. TRUMAN, BEFORE THE HOUSE COMMITTEE ON BANKING AND CURRENCY, APRIL 14, 1958

Mr. Chairman and members of the committee, it is an honor for me to have an opportunity to appear before this committee.

I am especially delighted, Mr. Chairman, to see that you are here working with the same diligence and vigor that you have shown through the years in behalf of our country and its people. You are doing a great job just as you have always done.

I appreciate very much this opportunity to tell you my views about some of the problems before the country. I don't know why you would be interested in the views of a retired Missouri farmer on these subjects, but since you were good enough to invite me to come, I am glad to express them.

I understand that these hearings relate to a number of bills pending before this committe and also to the general problem of economic distress and unemployment. I shall refer specifically to some of these bills later in my statement, but I wish to speak about the general economic problem.

First, I wish to say that I think the present recession is very serious. It is serious not only in terms of hardship and suffering for millions of our people who are unemployed, it is even more serious because it weakens our ability to meet the dangers and challenges which threaten us from abroad.

I know that in spite of our present difficulties, this is still the strongest Nation in the world, with the greatest productive power and the highest standard of living. However, we cannot ignore the fact that Russia is catching up with us very rapidly. Her economy has been growing at an annual rate of about 7 percent during recent years and is continuing to grow at an even faster rate. At the same time, the growth of our own economy during the past few years has averaged less than one-third the Russian rate, and for more than a year now we have been actually shrinking and not growing at all. It is almost impossible to overemphasize the great danger in this situation.

Secondly, we ought not to underestimate the nature of the job that must be done or the magnitude of the measures that will be required to do it. It is necessary not only that we stop the recession, but we must also restores the growth of our economy. This is necessary not only to meet the needs of a growing population, but also to meet the needs for greater and greater economic strength which is a stark necessity for continued national survival in the competitive situation that exists in the world today.

I think the root of the difficulty is that we have departed from the philosophy of maximum employment, production and purchasing power set forth in the Employment Act of 1946. In place of this philosophy, there seems to be some strange notion abroad in the land that prosperity today would be dangerous for tomorrow, a strange notion that if we had full employment and full production that somehow this would cause an explosion that would blow the economy apart and end up in a depression that would curl your hair. I do not understand this. I do not see why our economy cannot grow and continue to grow, and without inflation. I see no need for periodic downturns when people are put through the wringer, and I see no reason why our plans and policies ought not to be directed toward a constantly expanding economy and toward the prevention of recessions altogether. We might not be altogether successful in preventing economic downturns, but at least we can make that our goal and not try to brush recessions aside by pretending that they are a good thing.

During my administration we were not entirely successful in dealing with this problem, and we had an economic recession in 1949. But there are several reasons why I will not go into this in detail now. In the first place, that recession in 1949 was nowhere near as prolonged, as deep and as serious as the one we are in now. I do not need to attempt to prove this because practically every business analyst and expert has been telling us over and over again that we are now in by far the most serious and dangerous economic recession since World War II.

In the second place, the economic recession of 1949 did not have back of it a number of years of rising economic difficulties, such as we have had since 1953, and consequently the powerful sources of strength within the economy which enabled us to have a sharp upturn well before the Korean war are not present now. For example, American agriculture in 1949, at the base of our economy, had not been weakened as it has been weakened now.

In the third place, and most important of all, we should be dealing with serious economic problems and not with politics, and there is nothing that we can do now to change what happened a decade ago, but we have great responsibilities to deal with the current situation. If the critics of how things happened in 1949 learned any constructive lesson which they now want to apply, I am ready to go along with them 100 percent. My own view is that the one thing we learned was that perhaps we should have acted in this 1949 recession even more vigorously than we did, and this is doubly true now in view of the whole international situation.

Due to population growth, our labor force expands by more than 1 percent a year. Under favorable conditions, our productivity or output per man-hour, grows by more than 3 percent a year. Therefore, our total national product needs to expand by about 4½ percent a year in order for the economy to stay healthy. Otherwise, we will have rising unemployment and idle productive facilities. From 1947 to 1953, the rate of growth for our economy as a whole was slightly more than 4½ percent a year. In the years from 1953 to 1957, the rate of growth declined to 2.3 percent. In the last year of this period, the rate of growth was only 1 percent. During the past year, the total output of the economy has actually declined about 6 percent. All of these figures are adjusted for price changes. Thus, over the past 5 years as a whole our economy has been moving consistently and increasingly away from maximum employment and maximum production.

One of the most distressing features of this, of course, is the increase in unemployment. Not only are millions of men and women out of work, but millions are working part time. They are only partially employed. This partial unemployment is just as much a loss to the country as full time unemployment. Figuring the full time equivalent of this partial unemployment, and adding it to existing full time unemployment, the true level of unemployment has risen from about 2.8 million in 1953 to over 6 million at the present time. For these people and their families, this is a real depression.

You know the difference between a recession and a depression is that if your neighbor loses his job, that is a recession; if you lose your job, that's a depression.

This growth in unemployment has meant, in the years 1953 through 1957, about 8½ million man-years of unemployment in excess of the minimum frictional amount we would have had in a full employment economy. This tremendous waste of manpower has been accompanied by a tremendous waste of machines and other productive facilities. The steel industry, for example is now operating about 50 percent of capacity. Many other industries are in almost as bad shape.

This tremendous waste of manpower and productive facilities which represents failures to achieve maximum production and maximum employment has meant, during the years 1953 through 1957, a loss of more than $55 billion in wages and salaries, a loss of almost $25 billion in farm income, a loss of more than $12 billion in corporate profits, and a loss of some $5 billion in unincorporated business and professional income. It is harder to measure what it has cost us in lost ground in the struggle to maintain freedom in the world, but surely that loss is tragic beyond words.

Basically, the growing failure to utilize manpower and other productive resources springs from insufficient demand to call forth maximum production and maximum employment. Demand is of three main kinds: First, the demand represented by private purchases of consumers; second, the

demand represented by private investment for business purposes; and, third, the demand represented by public expenditures for goods and services. The total of these three types of demand represents, generally speaking, the actual level of total production.

During these recent years, private and public consumption expenditures have lagged behind private investment for business purposes. This is the chief explanation for the vast unused plant capacities of today. To regain our economic health, it will be necessary to restore the balance in our economy by achieving an increase in the combined expenditures for public and private consumption in proportion to the levels achieved in recent years for private investment.

I do not think it is true that the deficiency in private consumption is due to the reluctance of consumers to spend available income. I think instead that it is due to a shortage of funds and bad distribution. What the average American consumer actually lacks is not confidence but income after taxes. During the whole period since 1953, the growth in consumer income after taxes has been even slower than the inadequate growth rate of private consumer expenditures. This has been increasingly the case in the latter part of the period. Between the second and third quarters of 1957, for example, consumer expenditures increased at an average annual rate of 2.4 percent, while consumer income after taxes was going down at an annual rate of 0.5 percent. In the following quarter, both consumer income after taxes and consumer expenditures were down at an annual rate of about 3 percent. We cannot go on forever with consumers borrowing too much because their incomes are too low.

Since the current recession is the outgrowth of a train of events which has been gathering momentum for the past 5 years, it has deeper roots and is more serious than previous recessions since World War II. This means that the measures required to reverse the downward trend are more substantial than those needed to reverse earlier recessions since World War II. Even more important, the corrective measures should not confine themselves merely to arresting the absolute decline in production and employment. Instead, they should be designed to restore maximum employment and maximum production as rapidly as feasible.

To put the measures needed in proper perspective, we must first grasp the magnitude of the task. It is sometimes hard for us older people to adjust our thinking to keep pace with the march of events. It is hard for us to comprehend the magnitude of the sums of money involved in the operation of our national economy, but we simply must make the necessary adjustments in our thinking. We must look at things as they are today and not as they were in 1900 or, for that matter, as they were in 1945 or 1950.

The restoration of our economy is a man-sized job, and this is certainly a case where it would be a mistake to send a boy to do a man's job.

In order to make reasonable progress toward maximum production and employment, we should lift the total national product for the calendar year 1959 to about $40 billion above the level for 1957, and for a satisfactory rate of sustained economic growth, we will need to continue to add about $20 billion a year to our total national production. Increases in economic activity of this magnitude will not be achieved by feeble or fainthearted measures, or by simply waiting for nature to take its course.

I wish to commend the Congress for the actions it has already taken to combat the recession. These actions have been substantial and important. They certainly were moves in the right direction, and I know that additional steps are planned.

These actions by the Congress are all the more notable and praiseworthy because of the conspicuous lack of encouragement they have received from other quarters. But I hope you will not be discouraged or become weary of well doing.

In my judgment, the measures already taken are only the beginning of what is necessary and wise. I believe that bold and vigorous action is necessary; and in considering this matter, I would never forget for a moment that the Russians are looking over our shoulders with an economy—their economy, that is—which is growing at a rate of 7 to 10 percent a year, while ours is standing still.

I am not in favor of inflation, and I will have more to say about that later. However, I would not sit in the midst of a pool of economic stagnation while the Russians are overhauling us because of some fear—whether it be real or fanciful—of inflation somewhere down the road in the future.

The first major weapon now available for use by the Federal Government toward arresting the depression and restoring our economy is an expansion of public outlays. I believe that public expenditures should be increased to the extent required to fulfill necessary and vital public programs. This is not merely for the purpose of increasing current economic activity. It is in the first instance a matter of providing an adequate national defense and meeting other national needs. Secondly, the expansion of Federal outlays and the adoption of the programs which go with them will be a means of assuring economic growth in future years.

The Congress has already authorized some increased Federal expenditures, as in the case of the housing and highway bills, and I approve of these measures. I think there should be additional increases in some other lines, which I shall mention. We should plan these increased public outlays for a long period of time, in accordance with the growing needs of the economy. This would be a wise thing to do, because in recent years we have been starving the economy by holding up or blocking public expenditures for domestic needs. We have been holding back on such things as dams and schools and buildings that we need, and this has been bad for the Nation.

I think, therefore, that we should plan our public outlays not just for the next fiscal year, but for the next 5 years. This will show that we mean business about an expanding economy, and assure a rate of public spending that can be counted on.

I would suggest increases somewhat along the following lines:

1. In the area of national defense, increase outlays for fiscal 1959 by about $3 billion above the level originally proposed in the President's budget, and plan to increase them by another $5 billion or more annually by fiscal 1964. These amounts are in accord with the recommendations made in recent studies by competent experts. If they don't give us an adequate national defense, then they should be increased.

2. In the overseas field, increase outlays for technical assistance and economic development from the $972 million recommended by the President to $1.5 billion in fiscal 1959, and plan to increase them to $2.5 billion by 1964. I think this is essential if we are to keep ahead of the Russians in the area of foreign economic development.

3. In the area of the domestic economy and its needs, I would make increases totaling about $1.7 billion for the fiscal year 1959. The bulk of this expansion would be for education, public health, and public assistance.

In succeeding years, I would keep enlarging the spending in the domestic area, so that by fiscal 1964 we would be spending a total of around $12 billion for education, health and public assistance, a total of about $2.5 billion for natural resources development, and a total of $2.2 billion for housing, including low rent housing, aid for middle income housing, and urban redevelopment.

These increases for fiscal 1959 and for later years would be consistent with a resumption of our normal rate of economic growth. By 1964, if we progress as we should, our total national output should be about $600 billion, instead of the $434 billion of 1957, and a Federal budget much larger than the one for 1959 would still be a smaller fraction of our total production.

You may note that I say nothing about increases in agricultural outlays by the Federal Government. This is not because the farmer needs no help. Indeed, he has suffered longer from this recession than anyone else. However, I believe that the current rate of expenditures for the agricultural program would be sufficient if the program were properly administered. The farmers' income could be increased without additional Government expenditures.

With these programs in mind, the next question is what ought to be done about taxes. I am strongly in favor of a long-range tax program designed to balance the Federal budget, but we all know that we do not have that now. Despite the President's claims that his fiscal 1959 budget is going to show a surplus of $466 million, practically every informed expert expects a deficit estimated at between $4 and $8 billion. So we do not have any prospect of a balanced Federal budget if things are left as they are.

This prospective deficit in the Federal budget is due in large part to the current recession. And the recession in turn is primarily due to the inability of consumers to buy the products which our factories and farms can turn out. Our present tax structure has serious inequities which contribute to this lack of consumer purchasing power. Therefore, the same tax policies which can help to improve the tax structure can also help to cure the economic recession and bring us more quickly to a balanced budget.

The first element in this improvement in the tax structure is to take the special privilege benefits out of the tax laws and use the added revenues to put more spending power immediately into the hands of average American families who do not now have enough spending power. The obvious and quickest way to do this is to revise the tax structure so as to reduce by about $5 billion the amount of taxes imposed on middle- and low-income families. There are various detailed ways of doing this which would reach an equitable result. However, the Congress should be careful not to pass out tax benefits to investors and well-to-do people who, if they are suffering at all, are suffering only because average American families do not have enough purchasing power. This adjustment in the tax structure by helping to restore maximum employment and production can help to lift our total national production, which is our tax base, to a level $40 billion higher in calendar year 1959 than in calendar year 1957. This is the surest and safest way toward a balanced Federal budget.

We can lighten the tax burdens on the low-income groups in this way without running the danger of a large temporary drop in revenue. The reduction for low-income groups should be accompanied by tax changes which will increase revenues from other sectors of the economy and help to balance the budget. Most important is to close up the most glaring tax loopholes. This should bring in about $2 billion more in tax revenues.

We can increase tax revenues by another $1 billion or so by getting rid of some of the inequitable benefits to privileged groups in the tax reductions of 1954.

In addition, by reversing the high interest policies which have already added about $1.2 billion to the Federal budget annually in the form of carrying charges on the national debt, and which will be adding $2 billion

shortly if new financing continues under this high interest policy, we can save about another $2 billion a year which is now being wasted from the viewpoint of the Federal budget and which is doing almost irreparable damage to our whole economy.

These measures, in combination, would transfer $5 billion of purchasing power to places where it belongs both on considerations of equity and because that is where it would do the most good for the economy.

There are other measures which should be taken to meet the problems of the recession. One of the most important of these is to extend Federal aid to the State unemployment insurance systems to lengthen the period for the payment of insurance benefits. Also, as a long-range measure, unemployment insurance coverage should be extended and Federal standards should be established to bring about a greater degree of uniformity in the various laws.

I also hope very much that the Congress at this session will increase social-security benefits. This is needed on social grounds; we can afford it economically, and certainly it is one of the most desirable methods of expanding purchasing power.

I want to say a bit more on the whole subject of inflation. My record as an opponent of inflation is perfectly clear. If the measures which I proposed to combat inflation during the war and reconversion years of my Presidency had been adopted, we would have had far less inflation. There was never a year in my 8 years of the Presidency when I did not propose a more effective and complete anti-inflationary program than in fact was adopted.

I want to use what influence I may still have to help protect the American people from the ravages of inflation to the greatest possible extent.

But in order to do this we need to understand the causes of the recent inflation. This recent inflation has been entirely different from that which occurred during wartime, when total demand exceeded the total productive capabilities. It is entirely different from the inflation which occurred during periods of reconversion when pent-up savings and backlogs of demand caused spending to exceed our total productive capabilities. This recent inflation, unlike any other that we can recall, occurred during 1956 and 1957 at a time when our economic growth rate was too low rather than too high, and when we were already witnessing unused plant capacities and rising unemployment. Still more striking, this inflation has continued even in the face of the economic recession.

This new kind of inflation, therefore, has not been due to too much employment or too much production or too rapid an economic growth. Indeed, there is strong evidence that this new inflation, sometimes called administered price inflation, has been due to the pressure of some strong groups to make up for an inadequate level of production and sales by raising their prices excessively. How else can we explain the striking price increases in some of our key industries even when they are operating at 70 percent or less of capacity?

We have not solved entirely the problem of how to deal with this new kind of inflation. But there is certainly every reason to know that we cannot deal with it by the surrender of prosperity and the acceptance of recessions which could lead to depressions. In fact, the evidence strongly suggests that the restoration of maximum employment and production and purchasing power would in itself tend to remove many of the causes which have been responsible for the recent price inflation. If we find other causes of price inflation even after this first vital remedial action is taken, we may have to devise still additional remedies.

But most of all, it is nonsense to argue—as so many seem to be doing now—that we dare not take the steps necessary because to do so would be inflationary. To say that is to contend that we must be cursed with either inflation or recession. I reject that conclusion as defeatism of the worst order.

Now, Mr. Chairman, I would like to speak particularly in support of some of the bills pending before this committee which I understand are included within the scope of this hearing. These bills fit into the pattern of the actions which should be taken to strengthen our economy.

First, there is the community facilities bill which will make available a $2 billion loan fund for loans to the States and local communities for needed public works projects such as roads and streets, water works, sewer systems, hospitals and the like. Loans of the type provided by this bill will serve the twofold purpose of creating badly needed public facilities and also creating jobs and incomes to help restore our economy and keep it healthy. I hope the bill will be favorably considered.

Next, I wish to refer to the area redevelopment bill, the purpose of which is to help create new jobs in areas of chronic unemployment. Legislation for this purpose was reported out by this committee 2 years ago. It passed the Senate in that same year, but was not taken up on the floor of the House because of the rush in the final days before adjournment. Legislation for this purpose has been endorsed in the platforms of both major political parties and has been recommended by the present administration. It was badly needed even before the current recession became so severe. Now it is needed even worse.

This legislation might possibly be combined with the community facilities bill as there is some similarity in the purposes of the two. However, special provisions ought to be made for the chronically depressed areas because they have distinct problems which require special treatment. Remember this: Depression in any part of our economy tends to depress the rest of it; and correcting the trouble spots where the worst problems exist will improve conditions everywhere.

Finally, I understand that you have before you legislation to provide additional equity capital for small business. This is most important. The tight money policy and other restrictive fiscal policies of recent years have not been particularly hard on the big corporations. However, they have made it much harder for small-business concerns to get money. The small concerns were having a hard time in 1950 when I recommended legislation for this purpose. They are having a harder time now and the legislation is needed even more than it was in 1950. I hope that you will give it your blessing.

Mr. Chairman and members of the committee, that concludes my statement, and I wish to thank you very much.

Need for Increased Appropriations for Work on Public Lands

EXTENSION OF REMARKS
OF
HON. JAMES E. MURRAY
OF MONTANA
IN THE SENATE OF THE UNITED STATES
Wednesday, April 23, 1958

Mr. MURRAY. Mr. President, as chairman of the Senate Committee on Interior and Insular Affairs I am concerned by administration proposals to curtail drastically expenditures for needed work in our parks and forests and certain other public lands. It is my sincere hope that Congress will appropriate sufficient money for fulfillment of the mission 66 program, for adequate fire protection on our public lands and for reforestation.

In his testimony before the Senate Appropriations Committee Mr. Stewart M. Brandborg, Assistant Conservation Director of the National Wildlife Federation, states the case for these increased appropriations.

I would call particular attention to his point that millions of acres of timber and game range were destroyed in Alaska last year, because of the inadequacy of fire control measures.

Some of the richest timber and wildlife areas on the continent are among the 225 million acres of Federal land in Alaska under jurisdiction of the Bureau of Land Management. Yet the understaffed BLM personnel had less than 100 men—and insufficient modern equipment—to spot and fight fires. One hundred men to fight fires on 225 million acres means that each fire fighter—pilot, radio technician, or guard—had more than 2 million acres to protect from fire. In national and State forests here in the United States frequently more than 100 men are assigned to the job which 1 fire fighter tries to do in Alaska.

This policy of saving pennies on fire prevention is costing dollars in fire losses. Last summer, as Mr. Brandborg points out, uncontrolled forest fires swept over 5 million acres of Alaskan forest and tundra, an area as large as the whole State of Massachusetts, destroying timber, game range and waterfowl habitat.

I wish to add, parenthetically, that if the Congress would finally grant Alaska the statehood it deserves there would be additional voices here in the Senate and in the House of Representatives suggesting, as I am now, that Congress appropriate an additional $1 million for the BLM's Alaskan fire protection program.

Mr. President, I ask unanimous consent to print Mr. Brandborg's testimony in the Appendix of the RECORD.

There being no objection, the testimony was ordered to be printed in the RECORD, as follows:

STATEMENT BY STEWART M. BRANDBORG, ASSISTANT CONSERVATION DIRECTOR, NATIONAL WILDLIFE FEDERATION, BEFORE THE DEPARTMENT OF THE INTERIOR AND RELATED AGENCIES SUBCOMMITTEE OF THE SENATE APPROPRIATIONS COMMITTEE, APRIL 7, 1958

Mr. Chairman, I am Stewart M. Brandborg, assistant conservation director of the National Wildlife Federation.

The National Wildlife Federation is a private, nonprofit conservation organization, representing a membership of State affiliate groups which are composed of local conservation sportsmen, and other civic clubs. The federation and its members are broadly concerned with the protection of our outdoor recreational resources, particularly those scenic and natural places where people can still enjoy some of the refreshment that is found in living in the out of doors. We are dedicated through our policies to the conservation of fish and wildlife as well as our basic soil, water, timber, and mineral resources.

We feel that the protection of our lands and their many uses which serve man's needs are as vital to our Nation as are our pro-

grams of national defense and security. It is these lands that have produced the wealth that makes possible the growth of our Nation and people. Our soils have given us the foods and fibers that have made us the greatest national producer of farm and forest crops. Our mineral and water resources have made possible an unequaled growth of our industries. In many ways we have demonstrated man's control over his environment, but we still have not come to realize our total dependence upon these life-giving resources. We are in the process of killing the goose that lays the golden egg.

Many of us have associated the wasteful depletion of our natural resources with the periods of exploration and settlement of our country. And while much irreparable damage was done to our lands during this period when frontiers were pushed westward, it has not been until the present century that we have demonstrated our full potential for changing the landscape and completely ravaging a large and vital part of those resources which have contributed so much to the abundance of our living.

Our State and Federal conservation agencies have made remarkable progress in carrying out needed research and in developing long-range programs for managing our forests, wildlife, farmlands, and waters; they have given us many fine standards for measuring our successes and shortcomings in learning to live with the land in such a way as not to destroy its future productiveness. They have shown us the methods to care for our resources; if we will practice them wherever we are putting land to work.

BUREAU OF LAND MANAGEMENT

Mr. Chairman, I would like today to discuss a phase of public land management which is in critical need of review by this committee. This problem has been brought to our attention by our affiliate in the Territory of Alaska, the Alaska Sportsmen's Council. It involves over 225 million acres of Federal land in the Territory of Alaska which is under the jurisdiction of the Bureau of Land Management. Included in this vast holding are some of the richest timber and wildlife areas remaining on the North American Continent. These represent the last, but very large, remnant of our American frontier.

I would like to call your attention to the mistreatment that we are giving this vast, undeveloped public estate. In many respects it is not dissimilar to the abuse that our forest and farm lands suffered at the hands of our grandfathers when our country was first settled. But they had an excuse—they didn't know any better. They lacked know-how to care for our lands so that they could continue to meet the needs of the people. We cannot use the same excuse today.

Last summer uncontrolled forest fires swept over 5 million acres of Alaskan forest and tundra. That's more land than there is in the whole State of Massachusetts. Timber and game ranges were scorched and ravaged. The ranges of huge herds of big game and flocks of waterfowl were destroyed.

At a time when publicity and public education experts have focused so much public attention on the serious threat of uncontrolled forest fires and the public has responded by becoming more careful in handling fires in forested areas, we are inclined to ask how such shocking losses can be permitted. The answer lies in the study of the money, manpower, equipment, and facilities which are available for this job.

Last summer the Alaskan field force of the Bureau of Land Management experienced the worst fire season in history. A crew of less than 100 men was charged with the protection of 225 million acres of forest and tundra lands. This means that each man—if pilots, radio technicians, temporary and seasonal fire guards are included—had over 2 million acres to protect from fire. This is an area larger than most of our National parks and National and State forests where sizable crews, sometimes numbering more than the entire 100-man fire staff of BLM in Alaska, are assigned to fire-protection work.

The airplanes and other equipment that the fire fighters in the Bureau are using are obsolete and unsafe. Much of it is Army surplus from World War II.

Under pressure of extreme fire-hazard conditions, such as were experienced last summer, both men and equipment are taxed to the limit. Human lives are subject to serious hazards under conditions which drive men and dilapidated aircraft beyond their limitations. And for what? With such overwhelming odds, it is totally impossible for the small crews, even with emergency fire-fighting funds and help from cooperating agencies, to control more than a small part of the hundreds of fires that burned last summer. Many of them were not even visited.

Alaska is a big and inaccessible country. Lightning causes most of the bad fires in inaccessible interior areas where airplanes and helicopters provide the only practical means of access. The fire-protection job calls for fully staffed, well-equipped planes and helicopter crews that can get to the fires while they are small and before they require large investments of time and money to be brought under control. Emergency fire funds, which are made available to the Bureau after the fires are started, do not provide for staffing with trained forestry personnel who can come into action before fire fighting becomes a crash operation.

To do an adequate job, the BLM needs a regular yearly appropriation of $600,000 for its Alaskan fire-protection program. In addition to this, there is a critical need for an additional $1 million for equipment—helicopters, smoke-jumping gear, airplanes, raidos, pumps, trucks, and adequate buildings and guard stations. It is urged that this reequipping job be initiated with an appropriation of $500,000 for the next year.

In Alaska today we are sacrificing valuable resources to forest fires just as we did 50 years ago here in the United States. The main difference is that today, with our swelling populations, we can see that within a few years we will place heavy demands upon these lands. Yet we have done nothing to stop this waste.

RANGE MANAGEMENT ON LANDS ADMINISTERED BY THE BLM

Bureau range managers and technicians work to conserve water and other resources in the management of western rangelands so as to provide food and cover for wildlife and forage for livestock. Because the public range is an integral part of many livestock operations in the West, the management of Federal grazing areas is an important element in the national production of meat, wool, and leather. With nearly 9 million head of cattle, sheep, and horses receiving at least one-third of their annual requirement for forage from public ranges, the stability of the western livestock industry is, to a large extent, dependent upon these lands.

More than a million big-game animals, which are enjoyed by hunters and other outdoor enthusiasts, live on these grazing lands during at least part of each year. Many upland animals—sage grouse, prairie chickens, rabbits, coyotes, as well as migratory waterfowl—make heavy use of these western ranges, the area of which, exclusive of Alaska, is approximately 178 million acres. Practically all of them lie in the 11 Western States.

One of the greatest handicaps to the production of BLM rangelands is the constant shortage of personnel to manage these. Right now, there is about one trained conservationist for every half-million acres under the Agency's administration. No private landowner would ever consider operating under such a manpower shortage. The public cannot expect the Bureau to take better care of the lands it manages unless more generous appropriations allow for increased staffing with trained conservationists. An increase of $750,000 is recommended for 1959 to begin a program of personnel expansion for this purpose.

BLM FORESTRY PROGRAMS

BLM administers more than 161 million acres of forest and woodlands in the continental United States and Alaska, all outside of the national forests. Two and one-half million acres of these are the so-called Oregon and California grant lands in Oregon. This places about 46 million acres of commercial forest lands and 115 million acres on noncommercial woodlands under Bureau jurisdiction.

A program of sustained yield forest management maintains a reasonable balance between the volume of tree cutting and tree growth to insure a continuing supply of forest products. Sale of mature timber; scientific cutting and protection against fire, disease, and insects; reforestation and construction of access roads are all part of the Bureau of Land Management's timber management program.

Here again, as in the case of the BLM range management program, appropriations for the sustained yield forest program are so limited that severe shortages of personnel and equipment hamper the work that can be done. Fire is taking a heavy toll of BLM-administered forest lands.

RECEIPTS AND EXPENDITURES

Obligations incurred for BLM operations and all phases of management and administration during fiscal year 1957 amounted to almost $24 million. Over the 15-year period from 1943 to 1957 receipts from BLM-administered lands ranged from $10 million to $239 million. During the same 15 years the annual appropriations for management of these lands averaged $9.4 million and never exceeded $24 million. This demonstrates that we are putting but a small amount into these public lands compared to the rich benefits we take from them. The question now is whether they can continue to produce at this level if we are unwilling to invest more in their care.

We urge, Mr. Chairman, that the committee give the appropriation for the Bureau of Land Management program its careful consideration. We feel confident that once you become aware of the sacrifices to these public lands which result from fund shortages, the committee will take the necessary steps to remedy needless waste.

The National Wildlife Federation wishes to make additional recommendations pertaining to funds for conservation agencies and programs in H. R. 10746.

UNITED STATES FISH AND WILDLIFE SERVICE

We respectfully urge this subcommittee, the full Senate Committee on Appropriations, and the Congress to increase the direct appropriations for the Fish and Wildlife Service to a level not less than that provided for fiscal year 1958.

The reorganized Fish and Wildlife Service has additional responsibilities given it by the Congress and its programs must expand if the resources entrusted to its care are to be conserved and properly managed in this day of expanding human populations and increased demands upon those resources.

We are hopeful that the problem of securing funds for stepping up the acquisition of wetlands in order to assure the future of waterfowl resources and the great sport of wildfowling will be in large measure solved by enactment in this session of Congress of legislation increasing the duck stamp to $3 and allocating the receipts therefrom for wetlands acquisition.

NATIONAL PARK SERVICE

As proposed in the Federal budget, the House of Representatives approved a drastic

cut in 1959 funds for the mission 66 program in the national parks. The cut recommended by the Budget Bureau was justified, at least in part, on the basis of Park Service construction moneys held in budgetary reserve during the current year. It is our understanding the administration has now ordered release of these funds and a speedup of construction projects in the parks as a step in combating the business recession.

Completely apart from the Nation's business or economic needs, however, mission 66 must go forward on schedule if the national parks and monuments are to be rehabilitated, protected, and made ready for future public-use demands.

Therefore, we urge 1959 appropriations for the Park Service items of construction and acquisition, and for construction of parkways, roads, and trails, at least equal to the amounts voted by Congress last year for fiscal year 1958.

UNITED STATES FOREST SERVICE

Operation Outdoors is the same kind of program in the national forests as mission 66 in the national parks. The need and the urgency are at least as great. Therefore, we urge that the Forest Service item for recreational areas and public-use facilities, budgeted and approved by the House at $8,020,000, be increased to $10 million for the next fiscal year.

We have long worked for and urged an increase in the totally inadequate Forest Service item for wildlife habitat management and improvements. This figure is now set at $510,000. It is our understanding, however, that the Department of Agriculture intends soon to present to Congress part II of Operation Outdoors, proposing therein an expanded program of wildlife improvements on the national forests and in cooperation with the States. We hope this new program may be favorably considered in a supplementary appropriation bill.

We urge restoration of the cut made by the House of the Clarke-McNary program of cooperation with the States in tree planting. The House voted only $258,000 for this item compared to $1,308,000 last year. We also recommend continuation of the program of assistance to the States in tree planting as authorized in the Agricultural Act of 1956. We also recommend the restoration of the $300,000 budgeted for acquisition of lands within Superior National Forest.

We thank you, Mr. Chairman, for this opportunity of presenting our views.

Justice Frankfurter Lectures the Court

EXTENSION OF REMARKS

OF

HON. STROM THURMOND

OF SOUTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Wednesday, April 23, 1958

Mr. THURMOND. Mr. President, on April 18 there appeared in the Greenville News of Greenville, S. C., an editorial entitled "Justice Frankfurter Lectures the Court," in which attention was called to a recent dissenting opinion by Justice Frankfurter. Justices Burton, Clark, and Harlan joined in this dissent, in which the Court was warned that it must be on guard against encroaching beyond its proper bounds and into the areas of Government which the Constitution reserved for Congress, the executive branch, and the States.

I ask unanimous consent that this enlightening editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

JUSTICE FRANKFURTER LECTURES THE COURT

There have been increasing signs during the past year and more that the position of the South with respect to the anti-segregation decision handed down by the United States Supreme Court in 1954 is being better understood.

Feeling about segregation itself probably delayed and may now be inhibiting expressions of such sentiment, but it exists nonetheless.

Among laymen in other regions, now themselves more and more beset by racial problems, there is arising sympathy for the South in its refusal to integrate. National publications, and even some liberal writers, are beginning to understand what southern leaders mean when they say that integration is impractical now and in the foreseeable future.

More important ,however, is the growing realization among men learned in the law that the Supreme Court went outside the law and the evidence in ruling as it did on the school cases; that it undertook to rewrite the Constitution; that it sought to make national policy; that it seriously invaded the powers, functions and duties of both the legislative and executive branches of the Federal, State, and local governments.

Able lawyers and judges are beginning to speak out. In a series of university lectures, since incorporated in a book, Judge Learned Hand, one of the most distinguished and brilliant of the Federal judges, criticized the Supreme Court on much the same grounds. Judge Hand sees grave danger in the Court's attempting to legislate and to establish public policy by reading into the law meanings it was not intended to have when it was written.

In a recent Supreme Court case, Justice Frankfurter filed a dissent which came closer than any judicial pronouncement since 1954 to stating the case of the South against the school decision.

On March 31, a majority of 5 of the 9 members of the Court, led by Chief Justice Warren, held that the trial court was wrong in revoking the citizenship of a soldier who was convicted of desertion. Desertion is punishable by death in wartime, but Warren held that taking the man's citizenship was cruel and unusual punishment, which is forbidden by the Constitution.

By way of background, that provision was written into the Constitution to prevent such ancient and barbarous forms of punishment as the cutting off of an ear, hand, or finger, or subjecting the convict to vicious degradation, torture, or fear.

As is his wont, Mr. Warren, and those who agreed with him, went far beyond the accepted interpretations of the law to give it new meaning; in so doing they struck down an act of Congress.

Justice Frankfurter said this:

"All power is, in Madison's phrase, 'of an encroaching nature.' Judicial power is not immune against this human weakness. It also must be on guard against encroaching beyond its proper bounds, and not the less so since the only restraint upon it is self-restraint.

"Rigorous observance of the difference between limits of power and wise exercise of power—between questions of authority and questions of prudence—requires the most alert appreciation of this decisive but subtle relationship of two concepts that too easily coalesce. No less does it require a disciplined will to adhere to the difference. It is not easy to stand aloof and allow want of wisdom to prevail, to disregard one's own strongly held view of what is wise in the conduct of affairs. But it is not the business of this Court to pronounce policy. It must observe a fastidious regard for limitations on its own power, and this precludes the Court's giving effect to its own notions of what is wise or politic. That self-restraint is of the essence in the observance of the judicial oath, for the Constitution has not authorized the judges to sit in judgment on the wisdom of what Congress and the executive branch do."

Justices Burton, Clark, and Harlan joined in this expression. This was almost as amazing as the fact that the 1954 decision was unanimous, 1 of the few times in many years that all 9 justices have concurred in a single opinion.

It may be significant, for the men of the Court are intelligent enough to perceive that in that decision they violated every principle enunciated in Frankfurter's dissent.

The Court did, indeed, abandon self-restraint. It did pronounce policy in a matter which should have been left to Congress and the State legislatures. It did write into the law their own notions of what is wise or politic, and it did sit in judgment on the wisdom of what the Congress and the States agreed to in adopting the 14th amendment and in passing the 2 civil rights acts, 1 preceding it and the other following it.

It is, of course, too much to hope that the Court may one day reverse itself; but it may be that, at least, qualms of conscience within the Court over the trend it has established will lead to its modification of the 1954 decision and the 1955 decrees in disposing of later cases, of which there are bound to be many.

Testimonial of Confidence in Secretary of Agriculture Benson

EXTENSION OF REMARKS

OF

HON. HENRY DWORSHAK

OF IDAHO

IN THE SENATE OF THE UNITED STATES

Wednesday, April 23, 1958

Mr. DWORSHAK. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a brief testimonial to Secretary of Agriculture Ezra Taft Benson from the residents of Franklin County, Idaho, his birthplace.

Mr. Benson visited Franklin County April 9, and addressed a gathering of Farm Bureau and county area residents at the Preston High School. His talk was courageous and thought provoking, an outline of the problems which agriculture must face, and a progress report on what has been done.

After this meeting, the following statement was spontaneously written and signed by farmers, city officials, businessmen—a cross-section of the people of Franklin County, Idaho.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

OUR PLEDGE OF CONFIDENCE

Realizing that the strength of a nation lies in the quality of the individual citizens and the ability of the citizens to work together to solve the problems of a democracy, we hereby resolve that our distinguished United States Secretary of Agriculture, Ezra Taft Benson, a native son, an experienced farmer, a student of the science of agriculture, an astute business man, a sympathetic friend to all men, and a Christian gentleman, be given a vote of confidence by the people of Franklin County, Idaho.

We express our faith in him as a leader working with the agricultural groups of the Nation to develop a program for agriculture

that will be fair to all people and especially beneficial to the farmers of the Nation. We pledge our full support in solving the agricultural problems of our Nation.

Frank J. Gilbert, Franklin County Farm Bureau, county president; Demar Merrill, Preston Chamber of Commerce; William W. Poole, Franklin County commissioner; O. Shenim Webb, mayor, Preston City; Charles M. Crabtree, Lions Club; A. Lee Bugginnst, Preston Kiwanis; Homer E. Johnson, Preston Rotary Club; Phenoi H. Edgley, board of education; W. H. Simmons, superintendent of schools; K. H. Brimhall, superintendent of schools; Woodrow Rasmussen; Kermit Shumway, first vice president; Von O. Noyes, second vice president; Ralph Esplin, county organization; Burnell H. Baird, county director; J. Barlow Gilbert, first vice local; Morris H. Poole, chairman Whitney local; Dean R. Bingham, county director; Rodney N. Jenser, chairman Mink Creek local; Floyd E. Erickson, vice chairman; Harold Baird, vice chairman; Don E. Dalley, insurance special agent.

Preston Rotary: Ralph Miller, Harley Greerees, A. N. Vendell, Philip L. Wist, Clifford Warr, Royce F. Fuhromian, E. P. Runyhan, A. Gordon Merrill, Richard W. Hendricks, Daniel Roberts, Homer E. Skown, W. S. Giddec, W. Paul Merrill, G. Mahone, David E. Davis, A. L. Bambrough, Lloyd J. Hogge, Angus Condie, W. P. Shompsay, Wayne S. Esme, E. L. Cox, Keith P. Larson.

Lion's Club: Charles M. Crabtree, president; Max L. Ninten, first vice president; Nat Edwards, Jr., second vice president; George S. Price, third vice president; Robert N. Aroch, secretary-treasurer; Glen Petterborg; Don Greave; R. B. Gibson; Maut Hammond; Glen Olemman; Palmer; Wayne Brown, tail twister.

Farm Bureau: Lois Nielsen, chairman; Margaret Nelson, chairman; Carol B. Gilbert; A. Carlson Singer; Raymond R. Hobbs, chairman, Weston service; Elmo C. Petersen, Farm Bureau insurance agent; Mrs. Vera Atkinson, county director; Mrs. Beatrice Hyde, local chairman; Mrs. Mabel Rawlings, first vice local; Mrs. Ada Bailey, first vice local; Mrs. Pearl Jessop, director; Ethel S. Mockil, local chairman; Mrs. Elmyra Baird, county first vice chairman; Mrs. Verla Baird, second vice chairman, local; Mrs. Virginia Jensen, local chairman; Mrs. Margaret Woodward, local chairman, Franklin; Mrs. Nephi B. Chase, secretary; Marion H. Bennett, first vice chairman of Preston community; Marvin D. Greggensen, second vice chairman, local; Ruth P. Smith, chairman, local; Mrs. Jessie Erickson, vice chairman, Mink Creek; Russell A. Koller; Heber M. Jorgensen; Clyde Nielsen, first vice chairman, Weston Linrose; Orsen Nelson, vice chairman; Boyd Woodward; Matilda B. Gilbert; Leon Torsgren, county chairman; Percy W. Larsen; Horace Hawkes, district chairman; Stanton M. Hawkes, county director; C. Wallace Chatterton, vice chairman; E. Aiken Larson, chairman, Preston local.

Preston Chamber of Commerce: Demar Merrill, president; Ralph Millar, vice president; Fraser, board member; Royce F. Fuhrimian, board member; Robert N. Arode, board member; Richard W. Hendricks, board member; Starks W. Smedley, board member; Rulon Dunn, secretary-manager.

Preston Kiwanis Club: A. Lee Bergquist, president; O. Keith Nielsen, secretary; M. R. Millward, vice president; A. B. Condie; A. C. Honson; W. Burton; Elmo C. Petersen; Roy A. Ware; Guy Stenberg; Sturton W. Smedley; Rulon A. Dunn; J. A. Kjar; Danal C. Moser; L. W. Longhurst; J. L. McKnight.

Franklin ASC County committee and office personnel: Von R. Atkinson, Hesy A. Seckstead, Eldon B. Bingham, Eldon R. Johnston, Klis H. Davis, Retta Scott, Therrall L. Campbell, Cleo Hulet, Doris K. Carter.

Franklin County fur farmers, Franklin Village: Dennis C. Lowe, fur farmer, mayor; Harley C. Lowe, fur farmer, councilman; Orgell L. Bennett, fur farmer, councilman; J. Hoyt Whitehead, fur farmer, fur club president; W. Reed Jamison, fur farmer, fur club secretary; Victor L. Dunkley, fur farmer; Joseph D. Morrison, farmer and fur farmer; Lester D. Lowe, Franklin, Idaho, fur farmer; William L. Hobbs, fur farmer; Fern W. McFarland, fur farmer; Floyd C. Robinson, fur farmer; Harold S. Bradford, fur farmer; Adell M. Viehweg, housewife; Hilda Hensen, housewife.

The Board of County Commissioners of Franklin County, State of Idaho: William W. Poole, chairman; Roy C. Andreasen, commissioner; Albert E. Moser, commissioner; C. L. Swenson, clerk.

Educational Project of League of United Latin American Citizens

EXTENSION OF REMARKS
OF
HON. RALPH W. YARBOROUGH
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Wednesday, April 23, 1958

Mr. YARBOROUGH. Mr. President, council No. 132 of the League of United Latin American Citizens in El Paso, Tex., is engaged in a worthy project which deserves the support and encouragement of all Americans.

The El Paso Council of the Lulacs' Citizenship Committee has established classes in American citizenship for immigrants from Mexico.

The League of United Latin American Citizens is an organization which, throughout its history, has held dear the principles of Americanism and has labored to insure equality of opportunity for all citizens. The Lulacs realize that with freedom goes responsibility. And they are constantly striving to establish projects which will give to the people the understanding of American history and government which they need in order to be better American citizens. The work of Lulac Council 132 in El Paso, Tex., is an example of the splendid job that Lulac councils are doing throughout the State of Texas and the country.

Recently the El Paso Herald-Post printed a study by one of its very able reporters, Trini Acosta, which tells of the splendid efforts of Lulac Council 132 in El Paso. The El Paso Herald-Post, under the leadership of its vigorous and independent editor, Ed Pooley, is an outstanding Texas newspaper.

I think there is no doubt that it is the most fearlessly edited newspaper in a major city in Texas. I do not know of a more fearless editorial column in any newspaper in any major city in America than that of the El Paso Herald-Post, edited by Ed Pooley.

I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Immigrants Study Three R's of United States Citizenship," published in the April 16, 1958, edition of the El Paso Herald-Post.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

IMMIGRANTS STUDY THREE R'S OF UNITED STATES CITIZENSHIP

(By Trini Acosta)

"Quien es el presidente de los Estados Unidos?" "Que son las leyes del estado?" "Que son los derechos civiles?"

This is a sample of what you hear in citizenship classes sponsored by the League of United Latin American Citizens Council No. 132. (The questions translated into English are: "Who is the President of the United States?" "What are the State laws?" "What are civil rights?"

In each class there is an earnest group of immigrants, most over 50 years old, and some who have been in the United States for most of their lives, who are learning how to become American citizens.

What does it mean to be a citizen of the United States?

Many persons, perhaps, take it for granted. But what about the thousands of immigrants who are learning or want to learn the privileges and duties of American citizenship?

QUESTION ANSWERED

This question is now being answered by people who have received their United States citizenship. Most of these immigrants do not speak English. Yet, they work hard to become American citizens. And are they proud?" Just ask any person who has recently received his citizenship.

Mrs. Maria Rodriguez came here from Mexico City when she was a young girl. She is now 72 years old. She left for San Francisco 8 years ago and came back when she heard of the classes Lulac Council No. 132 was conducting. She decided not to return to San Francisco until she had received citizenship.

Now she can return to San Francisco and proudly show her papers to her sons. She also has three daughters.

"My boys are very proud of being in the service," Mrs. Rodrigues said. "I kind of feel an obligation to become a citizen. I could never learn English and now that I was able to take my tests in Spanish, I just had to become a citizen. I didn't want to be the only noncitizen in the family."

GET PAPERS TOGETHER

Mr. and Mrs. Francisco Gutierrez, of 7364 Bassett Loop, received their citizenship papers together. Mrs. Gutierrez is 61 and Mr. Gutierrez is 67. Both are from the State of Chihuahua and have been here for 26 years.

"The Lulacs are doing a wonderful thing in helping people who don't speak English to take their naturalization tests in Spanish," Mrs. Gutierrez said.

Under the Walter-McCarran Act, immigrants over 56 years old, who speak no English, can take citizenship examinations in their native tongues if they fulfill all the requirements.

Generally, an alien who arrived in the United States on or after June 30, 1906, may not file a petition for naturalization until a record has been found that he was lawfully admitted for permanent residence. An applicant who alleges entry into the United States prior to June 30, 1906, and is able to establish that fact by satisfactory evidence may file a petition for naturalization even though a record of his entry cannot be found.

BOTH LANGUAGES

Classes are conducted in both English and Spanish.

One of the Lulac's instructors, Francisco Sandoval, encourages people in his class to learn English. "I teach them both in English and Spanish," he said. "I teach in English hoping they will pick up the language and I teach in Spanish to be sure they learn the essentials of the American form of gov-

ernment, on which they will be tested when they apply for naturalization."

Citizenship classes are conducted every Tuesday, Wednesday, Thursday and Saturday from 7 to 9 p. m.

Tuesday's classes are at the San Juan Civic Center at 400 North Glenwood Drive. Leopoldo Calanche and Alfonso Perez divide their classes in to 2 groups, 1 English and 1 Spanish. This class was started 2 months ago.

On Wednesday classes are held at the El Paso Boys Club at 801 South Florence. Frank Ortega and Cecilio Duarte are the instructors.

On Thursday classes are held at the Sherman Hall at 431 Jaffe Street. Francisco Sandoval, Rodolfo Carvajal, and Enrique Vasconcelos are the instructors. These classes were originated 4 years ago.

Saturday's classes are held in Smeltertown at 2733 Doniphan Drive. PTA Members Josefina Villa and Ramon Roman are the instructors. All the other instructors are Lulac members of Council No. 132 with the exception of Miss Villa and Mr. Roman.

Each student attending the citizenship classes is given a DAR Manual for Citizenship, which is given to the Lulacs through the courtesy of the Daughters of the American Revolution.

This manual has a welcoming address by President Eisenhower and its contents contain the Growth of Freedom; the Flag of the United States; the Government of the United States; the Bill of Rights; the Oath of Citizenship; the American's Creed; the Responsibilities of Citizenship; How To Become a Citizen of the United States; Text of the Declaration of Independence; and Text of the Constitution of the United States of America.

The book is published in both English and Spanish.

"Time and patience are rewarded when we see the expression on the faces of those persons who receive their citizenship papers," Mr. Sandoval said.

"The Lulacs try to teach Americanism," Mr. Vasconcelos said. "Our council feels that our job will never be complete until there aren't any immigrants left that have wanted to become citizens. We of Lulac Council No. 132 ask all persons interested to contact either Mr. Sandoval at KE 2-2885 or myself at KE 3-2255 or to drop in at any of our classes. They are more than welcome."

Forty persons who attended the Lulac's classes received their citizenship papers Monday. A reception is held after each class graduates.

Nonpartisan Selection of Judges in Maryland

EXTENSION OF REMARKS
OF
HON. J. GLENN BEALL
OF MARYLAND
IN THE SENATE OF THE UNITED STATES
Wednesday, April 23, 1958

Mr. BEALL. Mr. President, in Maryland we are proud of the fact that we elect our judges on a nonpartisan basis. When we find well-qualified men for our judgeships, the leaders in both the major political parties get behind those men with full support.

A case in point is the current candidacy for full, 15-year elective terms on the supreme bench of two sitting judges, serving under appointment by the Governor of Maryland, Judges Joseph Allen and Anselm Sodaro. Unqualified recommendation of these two judges for the elective terms have been made by the Bar Association of Baltimore City, the Junior Bar Association and the Federal Bar Association. I concur fully with these recommendations and with an editorial on this subject which appeared in the Baltimore Sun on Sunday, March 16, 1958. The two judges have won the confidence and respect of their colleagues and the members of the bar, as well as the general public of whatever party affiliation, for their judicial temperament and impartiality and for their industry.

I ask unanimous consent to have printed in the Appendix of the RECORD the editorial to which I referred, and copies of the recommendations of the several bar associations.

There being no objection, the editorial and letters were ordered to be printed in the RECORD, as follows:

TWO GOOD JUDGES

The Bar Association of Baltimore has lost no time in throwing its full support behind the candidacies of Judges Joseph Allen and Anselm Sodaro for full, 15-year elective terms on the supreme bench. This is as it should be. The two judges have already served more than a year under appointments by Governor McKeldin and have proven through this service that their election would be in the public interest.

In giving its support to Judges Allen and Sodaro the association, through its judiciary committee, noted that the two candidates have won the confidence and respect of their colleagues, as well as of the members of the bar, for their industry, impartiality, and judicial temperament.

Each of the two judges has filed for both the Democratic and Republican nominations. This means that if both are successful in the major party primaries May 20, their election in November would be assured unless an independent candidate were to pop up under the petition procedure in the meantime.

Judges Allen and Sodaro will have opposition May 20. There is one other candidate. But there should be no trouble here—if the independent voters back the two qualified judges and the political leaders of both parties work with determination to avoid the political shenanigans that defeated a highly qualified judge in the primaries 2 years ago.

The executive committee of the junior bar association has unanimously voted to endorse Judge Joseph Allen and Judge Anselm Sodaro for election to full 15-year terms on the supreme bench of Baltimore City. In the opinion of the junior bar association, both Judge Allen and Judge Sodaro have displayed qualifications in keeping with the highest traditions of the bench and we feel that they deserve the vote of all citizens interested in keeping a qualified and competent judiciary.

JUNIOR BAR ASSOCIATION
OF BALTIMORE CITY.
WILBUR D. PRESTON, JR.,
President.

THE BAR ASSOCIATION OF
BALTIMORE CITY,
March 12, 1958.

FRANCIS A. MICHEL,
President, the Bar Association of Baltimore City, Baltimore, Md.

DEAR MR. MICHEL: In November 1956, due to the untimely deaths of Judges Moser and Nice, 2 vacancies were created on the supreme bench of Baltimore. The Bar Association of Baltimore City at that time submitted to Governor McKeldin a list of lawyers who were recommended as possessing the qualifications necessary for appointment to the bench. The Governor appointed Judge Joseph Allen and Judge Anselm Sodaro from that list.

Under the law, these judges have to stand for election at least 1 year after the occurrence of the vacancy at the next congressional election. The reason for this trial period, as is well known, is to afford the bar and the community at large an opportunity to observe the new appointee in the performance of his duties, and to judge, on the basis of this experience, his fitness to be continued in that position.

Judge Allen and Judge Sodaro each has now served on the supreme bench for more than a year. In that period, they have both won the confidence and respect of their colleagues, as well as of the members of the bar, for their industry, impartiality, and judicial temperament. During this trial period required by the Constitution of Maryland, Judges Allen and Sodaro have fully justified the action of this association in submitting their names to the Governor and in recommending them for appointment. They have distinguished themselves for integrity, wisdom, and sound legal knowledge, and are endowed with characteristics requisite for service on the bench.

The committee has fully considered the qualifications of every person who has entered the primary election, and we unanimously state it to be our opinion that Judge Anselm Sodaro and Judge Joseph Allen, through their demonstrated ability and experience, have proved that they are the best qualified of the candidates for the high office of judge of the supreme bench of Baltimore City. Their election will be in the public interest and will enable the supreme bench of Baltimore City to continue to maintain its high standard of judicial administration.

Yours very truly,
CARROLL F. FITZSIMMONS,
SAUL A. HARRIS,
JOSEPH S. KANPP, JR.,
DANIEL B. LEONARD,
MORTON E. ROME,
DONALD N. ROTHMAN,
KARL F. STEINMANN,
Chairmen.

STATEMENT OF ELI BAER, ESQ., PRESIDENT OF FEDERAL BAR ASSOCIATION FOR MARYLAND

Attached hereto is a copy of report which I received as president of the Federal Bar Association for Maryland, from its judiciary committee under the chairmanship of the Honorable Bernard J. Flynn. The said report advises that the judiciary committee, consisting of seven members, considered the question of electing judges to the supreme bench of Baltimore in the forthcoming election, and unanimously decided to recommend that the present sitting judges, the Honorable Joseph Allen and the Honorable Anselm Sodaro, be supported, they having demonstrated that they are eminently qualified to carry on the work required of them as members of the supreme bench.

The judiciary committee met in the realization that although membership in the Federal Bar Association is restricted to lawyers who have been or are now in the Government service, all of its members are qualified and entitled to practice before the courts of this State. The committee took full cognizance of the provision in the national constitution of this association which requires the membership to deport themselves in accordance with the highest ethics of the legal profession, and requires of them a pledge to take an active interest in the administration of justice by urging the selection of judges of the highest competence, in the realization that the sacred functions and the grave responsibilities imposed upon judges constitute them the conservators of

our political institutions and the bulwark of constitutional liberty:

"The judiciary committee of the Federal Bar Association, consisting of Wilfred T. McQuaid, James B. Murphy, Morris Fedder, Calhoun Bond, Charles A. Trageser, Charles W. Wilkerson, and Bernard J. Flynn, has considered the question of the election of the judges to the supreme bench of Baltimore City and they have unanimously decided that they would recommend to the Federal Bar Association that the association support the election of the present sitting judges, the Honorable Joseph Allen and the Honorable Anselm Sodaro, at the coming election.

"Both Judge Allen and Judge Sodaro during the period that they have served under appointment of His Excellency, the Governor, have demonstrated that they are eminently qualified to carry on the work required of them as members of the supreme bench of Baltimore City.

"BERNARD J. FLYNN,
"Chairman."

United States Rochambeau Commission Observes Fifth Anniversary

EXTENSION OF REMARKS
OF
HON. WILLIAM M. TUCK
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 23, 1958

Mr. TUCK. Mr. Speaker, there appeared in the Alexandria Gazette, Alexandria, Va., on April 17, 1958, an interesting article concerning the observance of the fifth anniversary of the Rochambeau Commission of the United States. Under leave to extend my remarks in the RECORD, I include the complete text of the article, which is as follows:

[From the Alexandria (Va.) Gazette of Thursday, April 17, 1958]

UNITED STATES ROCHAMBEAU COMMISSION OBSERVES FIFTH ANNIVERSARY

Charles Parmer of Hunting Terrace is receiving congratulations on the success of the Rochambeau Commission of the United States.

This is the national organization he founded 5 years ago April 16 when—in answer to his call—the governors of Rhode Island, Connecticut, New York, New Jersey, Delaware, Pennsylvania, Maryland, and Virginia sent representatives to Mount Vernon.

Where Mr. Parmer asked their support in a project to honor the people of France whose ancestors had come to Gen. George Washington's aid in his darkest hour—and whose armies had helped the Continentals establish the United States of America.

Mr. Parmer's original suggestion was that the almost unknown route over which the French General Rochambeau led King Louis XVI's legions from Rhode Island to Washington's side at Yorktown should be uniformly marked the Rochambeau Victory Route, an idea he had conceived when a student at the University of Toulouse, in France.

Already Virginia's General Assembly had adopted Mr. Parmer's suggestion: empowering the governor to appoint a commission to arrange this with the other States—a body which had unanimously chosen Mr. Parmer chairman.

GREETINGS FROM IKE

During that momentous Mount Vernon meeting, President Eisenhower wired his congratulations to Mr. Parmer, saying in part:

"In planning the uniform marking of their victory route, you are once again acknowledging the important role which France played in securing the independence of our Nation. I join you in this tribute to the people of France—our allies in 1781, our friends today." And Senator BYRD stated the route marking was an action of honor long overdue to the people of France, our first allies.

France's then Foreign Minister, Georges Bidault, cabled his greetings, saying in part:

"It was a thoughtful initiative indeed when you decided to uniformly mark the route which Rochambeau and his soldiers took in 1781. In so doing, you are stressing upon your countrymen the fact that France is the oldest friend and ally of the United States * * * today as in 1781, in 1917 and in 1944, our 2 countries stand united for the defense of liberty."

Fired by Mr. Parmer's enthusiasm, and sparked by his initiative, the no-called Rochambeau States began a series of national celebrations: Connecticut—later that year—staged a great 2-day Rochambeau Festival; the next year—1954—Mr. Parmer inaugurated the yearly commemoration over the graves of the unknown French dead at Yorktown—the Marine, General Shepherd, dedicating the first Rochambeau plaque, marking the end, there, of the Rochambeau route.

In 1955 Rhode Island staged its reenactment of the arrival of Rochambeau—Navy Secretary Thomas addressing the throng which gathered to welcome the arriving French battleship, *Jean Bart*, the same year the Rochambeau Commissions of New York State—and in Pennsylvania—began yearly commemorations, marking the stay of the French Army within their borders. In 1955, Mr. Parmer inaugurated the second national Rochambeau event:

OTHER EVENTS NOTED

The birthday honors at the Rochambeau statue in Lafayette Park, opposite the White House, each July 1: the first year Mrs. Alice Roosevelt Longworth laid a wreath in honor of her father, who had dedicated the statue 50 years before; the next year Mrs. Woodrow Wilson was guest of honor in memory of America's wartime President who went to France's aid in 1918; and in 1957 congressional ladies—led by the wife of Senator PURTELL, of Connecticut, placed flowers of friendship on the statue, while America's wartime Ambassador to France in World War II, Fleet Admiral Leahy, stood at attention with French Ambassador Alphand.

Last fall, under Mr. Parmer's guidance, historical groups dedicated General Rochambeau's headquarters in New York State at Yorktown Heights; Mr. Parmer flying there with Maj. Gen. Henry R. Paige, United States Marine Corps, and French Minister Robert Valeur to unveil the market. General Paige spoke on behalf of America, and Mr. Valeur represented France.

Mr. Parmer conceived the idea of naming the new East 14th Street Potomac River highway bridge as the Rochambeau Memorial Bridge—his researches revealing that General Rochambeau crossed the Potomac thereabouts September 10, 1781, en route to Mount Vernon; and thence with Washington to Yorktown. This, he said, should be a Keystone arch to the marking of the Rochambeau Victory Route.

Virginia's statesman, Senator HARRY FLOOD BYRD, introduced, at Mr. Parmer's request, S. 768, to so name the bridge; and Mr. Parmer secured 29 other Senators as cosponsors with Senator BYRD. The measure passed the Senate unanimously; and then, shepherded by Representative JOHN L. MCMILLAN, (who made a powerful floor speech in its behalf), it unanimously passed the House. President Eisenhower signed it into law on Rochambeau's last birthday, July 1, 1957.

The members of the Rochambeau Commission serve without pay. The expense entailed in promoting the bridge naming was borne entirely by Mr. Parmer. Supporting him in his activities are some of the Nation's foremost citizens: historians, statesmen, church leaders, generals, admirals, business and professional stars, and outstanding gentlewomen.

STANCHLY SUPPORTED

Virginia's first families stanchly support the cause he inaugurated. Mrs. Granville Gray Valentine, of Richmond, long the directing genius of Colonial Dames, State of Virginia, was the first organization doyen to come to his side. Colonel Catesby ap Catesby Jones, president general of the Society of the Cincinnati (of which Washington and Rochambeau were the first leaders) gives powerful support. And Mrs. J. Powell Wardlaw, regent, the Commonwealth Chapter, Daughters of the American Revolution, Richmond, placed her organization with the commission.

The late Mrs. Rebecca Ramsay Reese, direct descendant of Alexandria's Lord Mayor, gave her powerful endorsement; as have Miss Esther Green, Mrs. Dabney Halsey Little, Miss Ellen Coolidge Burke, Mrs. Joseph Crockett, Dr. H. A. Latane, Armistead Boothe, Marshall J. Beverley, Henry Fowler; Mrs. E. Stuart James and Mrs. Charles Marbury Seaman, representing the Children of the American Revolution; while Col. Robert P. Waters stands for the Sons of the American Revolution in the commission's ranks.

Colonel Casey of Casey's Corner brought his famed Irish War Veterans into the commission. Count Henry Harrison de Frise and Dr. Samuel White Patterson and Mrs. Logan Billingsley, of New York, Col. James R. Case, of Connecticut, Claiborne deB. Pell, of Rhode Island, Miles L. Frederick, of Delaware, Judge John Raymond Fletcher, of Maryland, have been with the movement from its inception.

Among the clergy are the Reverend B. B. Comer Lile, rector of Christ (George Washington's) Church, Alexandria; Dr. Joseph F. Thorning; the Right Reverend Monsignor Edward L. Stephens; the Reverend Dr. Frederick Brown Harris, Chaplain of the United States Senate; and Rabbi Emmett Frank.

Virginia's political leaders, headed by Senator HARRY FLOOD BYRD, Judge HOWARD W. SMITH, and three governors, Congressmen, and general assembly members have advanced the Rochambeau Commission's achievements.

Winder R. Harris is a leader of one strong supporting group, among whom are David Bacon, Frederick Coleman Rosenberger, Warren D. Quenstedt, Paul Eckman, Leroy Bendheim, Thomas J. Broyhill, Irving Diener, John A. K. Donovan, Patrick Hayes. The military chairman is Maj. Gen. Charles R. Landon, United States Air Force (retired). Though it was Senator BYRD's bridge bill that passed the Congress unanimously, Representative JOEL T. BROYHILL introduced a similar measure in the House.

The Mount Vernon Guards, under the direction of Comdr. John Harris are an integral part of the Commission. Mr. Parmer states that in the next Rochambeau commemoration—which will be an international one—the Mount Vernon Guards will be given a post of highest honor.

Sister Cities in History

EXTENSION OF REMARKS
OF
HON. RALPH W. YARBOROUGH
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Wednesday, April 23, 1958

Mr. YARBOROUGH. Mr. President, this week is one of special significance to Texans—a week steeped with the history of our State and the great battle which made possible its independence from Mexico, its existence as a republic, and finally, its admission to the Union. For on April 21, 1936, Gen. Sam Houston, who later became the first United States Senator from Texas, triumphed over the forces of Santa Anna on the battlefield of San Jacinto. Santa Anna's surrender at San Jacinto battleground was to Texas independence what Cornwallis' surrender at Yorktown was to American independence.

There are no communities in Texas more intertwined with the history of Texas, as a republic and as a State, than are East Columbia and West Columbia in Brazoria County, Tex. Jim Mousner, a staff writer for the Houston Post, writing in the April 20, 1958, issue of that newspaper, stated it very succinctly when he said:

> East and West Columbia live easily with history. There are families here, three generations of which span more than a century of Texas history from the raw, turbulent prerevolutionary years to the present.

There are families in East and West Columbia like the Underwoods, a pioneer merchant family in Texas—transplanted from Lowell, Mass., in 1834. There are families here like the Weems, whose ancestors came from Virginia in 1831. Grandfather Weems was one of the few physicians who came to Texas in the prerevolutionary era. His sons and daughters, still bearing the proud name of Weems, have lived in West Columbia ever since, and although they are no longer physicians, they have been stanch fighters in the many recent battles to remove the germs of corruption and inaction which have plagued Texas' body politic in this generation.

Miss Ima Hogg, generous daughter of one of Texas' alltime great governors and champion of the people, Jim Hogg, recently gave the beautiful and historic Varner-Hogg home in the area to the State of Texas, and it has been made into a State park. Several weeks ago, West Columbia won second place in a nationwide community beautification contest.

Jim Mousner closed his story in the Houston Post with these beautiful words:

> So here beside the Brazos, an old and growing town considers its future and the preservation of its past, and an old and fading town lives comfortably with yesterday as it gazes out over the muddy river flowing endlessly to the sea.

Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the feature entitled "Brazos' Sister Cities," by Jim Mousner, which appeared in the Houston Now magazine section of the Houston Post of Sunday, April 20, 1958.

I believe that this article is worthy of the study of all who are interested in American history, and particularly the history of the westward movement of the American people.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

BRAZOS' SISTER CITIES

(By Jim Mousner)

You may hardly notice the little village of East Columbia as you cross the narrow Brazos River bridge on State Highway 35 between West Columbia and Angleton, the Brazoria county seat.

Perched there overlooking a sweeping curve in the dun-colored Brazos, it contrasts sharply with West Columbia 2 miles away.

At East Columbia (population 200) a handful of the ante-bellum homes framed by magnolias and Spanish-moss line a winding drive beside the river. A few decaying store buildings and some residences of more recent vintage are scattered along either side of the highway.

West Columbia (population 3,500) is a busy town of modern stores, homes, schools, and churches, material manifestations of an economy made secure by oil and agriculture.

There is little to indicate that 50 years ago these two communities, whose histories date back to the second decade of the last century, presented entirely different faces to the world.

At the turn of the century and for more than 50 years before, East Columbia was the prospering town, waxing rich as the key river port in the cotton- and sugar-producing Brazos Valley.

West Columbia, sight of the Texas Republic's first capital for a brief period, was a little more than a suburb of its sister community.

Park your car beside the bridge at East Columbia and give your imagination free reign. You may be able to make out the steamboat *Yellowstone* rounding a bend in the river on its way to old Columbia to carry the body of Stephen F. Austin to nearby Peach Point for burial. The father of Texas died at the home of Judge G. B. McKinistry near West Columbia on December 27, 1836.

Take another look at East Columbia and visualize a bustling port of mercantile stores, inns, and taverns, its warehouses bulging with the produce of great plantations—places with magic names like Osceola, Chanango, Willow Glen, and Orozimbo.

Now, drive into West Columbia and stop at the stone marker on Brazos Street where the building that housed the Texas Republic's first senate once stood.

Perhaps, with a little concentration, you can hear Gen. Sam Houston's voice drifting back over the years as he takes the oath of office as the new republic's first president.

Look down the street where the giant Capitol Oaks, now long gone, once spread their branches over the enigmatic Santa Anna after his capture at San Jacinto.

East and West Columbia live easily with history. There are families here, three generations of which span more than a century of Texas history from the raw turbulent pre-Revolutionary years to the present.

Take, for instance, Miss Laura Underwood who lives in one of those venerable homes beside the Brazos in East Columbia—a home built in 1836 and first occupied by her great-grandmother, Mrs. William Carson who, with her husband, was one of the original 300 members of the Austin Colony.

A small, gray-haired woman with a charm and graciousness that reflects a past era when such virtues more highly prized, Miss Underwood remembers well her grandfather, Ammon Underwood, one of Texas' first merchants.

Underwood came to Columbia from Lowell, Mass., in 1834, just 10 years after Josiah Bell laid off the town of West Columbia and established the river port of Marion on the grant of land given him by Stephen F. Austin. The settlers called "Old Squire Bell's" river port Bell's landing. It was later renamed Columbia.

Fortunately for historians the young New Englander was a faithful dairy keeper during the years from 1834 to 1838. In prose that sometimes rose to a lyrical pitch, he chronicled the ominous rumblings of the coming revolution, the expedition against San Antonio, in which he participated, prior to the battle of the Alamo, the Runaway Scrape, and the hurried return to Columbia after the victory at San Jacinto "for fear that whatever goods or merchandise has been left by the Mexicans would be plundered by the Americans."

On the records of Underwood's mercantile business in an unpaid debt of $10 incurred by Dr. Anson Jones, the Texas Republic's last president, who once made his home at Columbia.

The house in which Miss Underwood lives has been moved twice since its construction to prevent its collapse into the ever-meandering Brazos, which has shifted several hundred yards to the west over the years.

Miss Laura recalls the great floods of 1899 and 1913 when "some people climbed to the second stories, some moved to higher ground, and others just left the country."

"In one deluge," she says, "you could go all the way from West Columbia to Angleton by boat."

Across the street from Miss Underwood live S. S. Weems and his wife. Weems is a retired merchant but his father and grandfather were physicians. Grandfather Weems, a Virginian, came to Texas in 1831.

Weems worked at Columbia and Velasco during the early 1890's, a period oldtimers call the "Velasco boom," when land promoters were trying to develop the old town at the mouth of the Brazos as a port.

"It was a circus," grins Weems. "People by the hundreds would come down from Houston on the old Columbia Tap (a county subsidized railroad built in 1859). Here they would get on steamboats with brass bands playing and whistles blowing and head for Velasco."

T. M. Smith, whose father operated a fleet of river boats, agrees that it was quite a sight. Smith lives two doors up from Weems in a house built by the Dance brothers, George and David, who made small arms for the Confederacy.

The home is believed to date from about 1855. Nothing is left of the gunshop, which once stood across the street from the house, and the Dance pistol is a collector's item.

The Smith boats, like the Dance gunshop, are also just a memory. Proud stern-wheeler steamboats like the *Hiawatha* and the *Alice Blair* no longer head for the coast, loaded with cotton destined for Galveston, or their decks crowded with people bound for a gay weekend at Quintana Beach near Velasco. They lay on the bottom of the Brazos side by side at East Columbia.

But old Columbia didn't become the East Columbia of today by any single stroke of ill fortune. A town that helped spawn the Texas revolution, reigned over a plantation empire, withstood a Civil War blockade, and survived the Reconstruction wasn't going to die easily.

Most oldtimers think the decline began during the 3 years around the turn of the century when a trio of natural disasters swept the area. These were the great Brazos flood of 1899, 1900 storm, and the appearance of the boll weevil in Brazoria County cotton-fields in 1901.

In the meantime West Columbia had dwindled from a fairly prosperous community to a couple of stores, a post office, and a one-room school.

Then, one January day in 1918 an oil-drilling rig operating on the Varner-Hogg Plantation 2 miles north of town changed everything.

The Tyndall-Hogg No. 2 came in at 600 barrels a day heralding the discovery of a prolific new sand.

The village of West Columbia became a boisterous, brawling boomtown. Its population mushroomed. Rude buildings appeared overnight on previously bald prairie. Some East Columbia merchants moved their businesses to West Columbia or established new ones. At one time the town had two banks.

Nothing slowed the urgent quest for oil, not even the wet weather of the coast country. Mules and oxen, 20 to the team, dragged heavy oil field machinery through seas of mud to the West Columbia field.

Businessman T. M. Smith recalls the time a mule drowned on the town's main street in front of where the First Capitol State Bank now stands.

As the boom days waned in the early 1920's, West Columbia looked around to find itself cast in its sister community's old role. It has played the part so successfully that in the past 5 years alone it has almost doubled its population.

A $400,000 bond issue voted a few years ago financed such improvements as a sewage disposal plant, water and sewer extensions, a new city warehouse.

A few weeks ago West Columbia won second place for towns within its population class in a national community beautification contest. Earlier it had been voted first place winner of a similar countywide contest.

Stimulated by Miss Ima Hogg's gift of the Varner-Hogg plantation home and a 53-acre site to the Texas State Parks Board recently, a group of West Columbians are considering the restoration of at least 1 of the old capitol buildings which were destroyed in the 1900 storm.

So here beside the Brazos an old and growing town considers its future and the preservation of its past, and an old and fading town lives comfortably with yesterday as it gazes out over the muddy river flowing endlessly to the sea.

The Case for States Rights

EXTENSION OF REMARKS
OF
HON. HERMAN E. TALMADGE
OF GEORGIA
IN THE SENATE OF THE UNITED STATES
Wednesday, April 23, 1958

Mr. TALMADGE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Why States Rights?" from the April 17, 1958, issue of the Indianapolis Star. The editorial deals with a book entitled "States' Rights—The Law of the Land," which is one of the most masterful presentations on this subject ever written. The author of the book is one of Georgia's foremost legal scholars, Hon. Charles J. Bloch, of Macon, Ga.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

WHY STATES RIGHTS?

Under the impetus first of the Soviet sputniks and now of economic uncertainty, advocates of big government in Congress and out are devising new or increased invasions into fields where the Federal Government has no right to be. A Federal highway bill uses Federal tax money to influence State legislation on billboards. An administration proposal urges greater Federal participation in State unemployment benefits. All along the line the encroachment continues. It works through Congress, through the United States Supreme Court and through weak-spined local failure to resist.

Increasing federalization of American life is due partly to ignorance. States' rights has become a phrase which seldom evokes in the minds of its hearers any real conception of its meaning. Too many are inclined to think of it as merely a political slogan instead of as the vital constitutional doctrine it actually represents. For this reason we recommend to any American who wants to understand the framework of his own Government a book recently published by the Harrison Co. of Atlanta, Ga. It is States' Rights, the Law of the Land, by Charles J. Bloch, a Macon attorney.

Bloch has done in his book what so few technical legal writers ever do, making his material understandable to anyone who can read high school English. While his prime target is the trend of the United States Supreme Court in recent years toward focusing all power in Federal hands, a discerning reader will find equal application to Congress and the functioning of State legislatures in many of the book's passages. Despite an unfortunate tendency to place too much stress on racial issues, and notwithstanding the fact that in some few instances Bloch is open to strong rebuttal on legal points, his book by wide circulation would do much to increase America's understanding of what States' rights is all about.

Without what the authors of the Constitution believed to be firm guarantees of widely inclusive States' rights, there would never have been a Constitution. Even Alexander Hamilton, the great Federalist, recognized and subscribed to the doctrine that "whatever is not expressly given to the Federal head is reserved to the members (the States)." He added, "The truth of this principle must strike every intelligent mind." He was in these words paying heed to the universal demand of his time that the Constitution place strong barriers against Federal expansion of power. The original States demanded these barriers before they agreed to ratify the Constitution.

From the time when Patrick Henry, George Mason, James Monroe, and others fought against ratifying the Constitution unless the Bill of Rights was agreed to as a set of specific injunctions against Federal authority, the right of the States to manage most of the affairs of government was never in serious question until comparatively modern times. Even the War Between the States did not involve this issue, as has been generally thought. It was not the right of States to govern which was at issue there, but their proposal to breach a contract of federation, the Constitution. The war was fought to keep them from leaving the Union, not to subject them to greater Federal control.

Bloch's research has turned up a tremendous store of Supreme Court opinions bearing on States rights, issued in the days before the Court felt itself licensed to change the Constitution by a 5 to 4 vote. Touching every imaginable governmental problem, these seems gradually to have established a clear, unmistakable picture of the law of the land as set forth in the Constitution. It is that the Federal Government has no rights of government which are not specifically listed in that document.

The law as it has been throughout most of American history is admirably summed up in Bloch's quotation of an opinion written 50 years ago by the first Justice Harlan: "The preservation of the dignity and sovereignty of the States, within the limits of their constitutional powers, is of the last importance, and vital to the preservation of our system of government. * * * The country should never be allowed to think that the Constitution can, in any case, be evaded or amended by mere judicial interpretation, or that its behests may be nullified by an ingenious construction of its provisions."

Congress and the States themselves, as well as the Supreme Court, need a refresher course to take States rights out of the realm of slogans and put them back into practice. Bloch's book is a good beginning.

Education

EXTENSION OF REMARKS
OF
HON. EDWARD MARTIN
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES
Wednesday, April 23, 1958

Mr. MARTIN of Pennsylvania. Mr. President, we are now considering proposed legislation relating to education. Education is one of the most important subjects confronting the people of the United States.

Mr. John C. O'Brien, senior representative of the Philadelphia Inquirer in Washington, makes some very able comments on the subject of why students drop out of college, in an article published in the Philadelphia Inquirer.

Mr. O'Brien comes to the conclusion that money is the third reason if students drop out of college. I ask unanimous consent that the article may be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

MONEY RANKS ONLY THIRD IF STUDENTS DROP OUT

(By John O'Brien)

WASHINGTON.—One of the assumptions underlying the demand for more money for education is that not as many of our talented youth are going to college as should be doing so.

A recent study by the United States Office of Education showed that only half of the students graduating from high school in the upper half of their classes went on to college or university. Less than one-third of all high school graduates became full-time college students in the fall following their graduation.

It is commonly supposed that the chief reason why so many bright high school seniors fail to go to college is that the colleges do not have room for them or the students do not have the money to pay for their education. Hence, the clamor in the hearing rooms of Congress for a large Federal appropriation to aid colleges expand and to help needy students through scholarships. It is true, no doubt, that a certain percentage of talented youths is deterred from pursuing higher studies because of lack of financial means, but the number who have to forego college or university for this reason may be smaller than most people think.

Financial difficulties, according to the Office of Education study, are not the principal reason why students drop out of college after once being admitted. One out of 4 students who enter college, so the study

showed, drop out by the end of the first year, and about 1 out of 4 of those who start the second year do not graduate.

The higher percentage of dropouts in the first year suggests that the method of selecting students for entrance into college is highly ineffective. But apparently this is not the explanation of the high washout rate, for among those who quit in the first year 1 out of 5 was in the top 20 percent of his high-school graduating class.

This waste of talent has been described by Lawrence G. Derthick, United States Commissioner of Education, as distressing, particularly at a time when the number of 18-year-olds in our population is very low.

Students taking scientific courses in technoligical institutions have the best record for tenacity of purpose, yet only 42 percent of the male freshmen in such schools are graduated 4 years later, according to the Office of Education study.

Aside from military service, the reason for leaving college most often cited by the male students was lack of interest in studies. Women reported marriage and the taking of full-time jobs as the chief reason why they did not wish to complete their college courses. Financial difficulties ranked as the third most important reason for the dropouts.

The Office of Education report also showed that scholarship money was being used to pay the expenses of some students of marginal ability while students of demonstrated ability were allowed to quit college because of finance difficulties.

United States Aid Program Called "Scandalous"

EXTENSION OF REMARKS
OF
HON. STROM THURMOND
OF SOUTH CAROLINA
IN THE SENATE OF THE UNITED STATES
Wednesday, April 23, 1958

Mr. THURMOND. Mr. President, Hon. Brent Breedin, editor and publisher of the South Carolinian magazine, has recently returned from Pakistan, where he was resident manager for the Hunt International Petroleum Co.

In the April 16 issue of the South Carolinian magazine, Mr. Breedin has presented some first-hand observations of the United States foreign aid program, and I think these observations will be of interest to every citizen.

I ask unanimous consent that the article entitled "United States Aid Program Called 'Scandalous'" be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

UNITED STATES AID PROGRAM CALLED SCANDALOUS

(By Brent Breedin)

"If the average person back home knew how much of his money was being wasted over here, there'd be a national scandal bigger than any we've ever had."

In substance, this statement was made to me by several United States Government officials working in Pakistan during 1956 and 1957.

When I asked one of the observers why he didn't report this to his superiors, he laughed and said, "What do you want me to do? Lose my job?"

And so aid to the sixth most populated—estimated 85 million—nation in the world is provided in an inefficient manner and, instead of winning friends for the United States, it is losing many.

This is a real shame, for the Pakistanis are a fine people and deserve better. Their heritage is among the world's oldest, and their friendliness to the United States and England alike is genuine. There are few Pakistani leaders who have not visited one or both of these English-speaking nations, and English is the language in which most business and government matters are handled.

My experiences in setting up and managing the Hunt International Petroleum Co.'s interests in Pakistan convinced me that private capital, not Government handouts, are the answer to Pakistan's problems, and what holds true in Pakistan would likely be true in many other nations now overrun by United States Government employees. Private capital will not tolerate inefficiency for long periods; the result is more work accomplished in lesser periods of time and good examples set for the Pakistani employees and observers to follow.

United States aid is needed in Pakistan, but handouts in themselves and the sending of hundreds of mediocre individuals to administer them is not the solution. Private capital, working with the Pakistani Government direct, but receiving solid support from a streamlined United States State Department, is my idea of the answer.

Israel Confronts Tomorrow

EXTENSION OF REMARKS
OF
HON. JACOB K. JAVITS
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Wednesday, April 23, 1958

Mr. JAVITS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a sermon on the subject Israel Confronts Tomorrow, which was delivered on April 19 by Rabbi Philip Bernstein, chairman of the American Zionist Committee for Public Affairs, who delivered the prayer at the commencement of today's session of the Senate.

There being no objection, the sermon was ordered to be printed in the RECORD, as follows:

ISRAEL CONFRONTS TOMORROW, TEXT OF A SERMON DELIVERED ON APRIL 19, 1958, BY RABBI PHILIP S. BERNSTEIN OF TEMPLE BRITH KODESH, ROCHESTER, N. Y., IN OBSERVANCE OF ISRAEL'S 10TH ANNIVERSARY

The 10th anniversary of the founding of the state of Israel is a source of the profoundest gratification to the Jewish people, as well as for me personally. I became a Zionist when as a young boy in Rochester, I joined the first Young Judea Club here. From that day to this I have been deeply involved in the problems, needs, hopes and aspirations of the Jewish people. I winced with every manifestation of antisemitism. I suffered personal agonies with every cruelty of nazism. The Zionist answer to the Jewish problem always seemed logical, democratic and necessary. I still hold to that view. To me, zionism is a word of honor, not of disparagement as some antisemites, including Jewish antisemites, have attempted to make it. It was the zionist who steadfastly clung to the idea of rebuilding a Jewish commonwealth in Palestine, over every conceivable opposition. They saw it through, they fought it through. They sustained the morale of the world Jewish community both against antisemitism and against assimilation. They brought about the renascence of the Hebrew language. They built Jewish pride and world respect. My zionism, therefore, has always been and continues to be a badge of honor.

And as I suffered with the sufferings of my people, I have rejoiced in their joys. The establishment of the State of Israel 10 years ago gave me a sense of personal exaltation and fulfillment. I knew the people who were going there, as I knew the people who were the leaders there.

Out of this background of personal experience and deep personal feeling I speak to you tonight about the meaning of the 10th anniversary and I call my message Israel Confronts Tomorrow. I intend to draw a balance sheet of assets and liabilities, of strengths and weaknesses, as the 10-year-old Jewish state faces the future. This will be my philosophy, and also my program.

Let me begin, in the category of assets, with the religious impulse. A miracle has been achieved. This broken decimated people, staggering under the lethal assaults of nazism, rose to its feet, established a state, defended itself against murderous attacks, and made it strong, democratic, free and viable. There is nothing like it in history. And I say to you tonight that it would not have been possible on a pragmatic basis. Certainly, the establishment of a state solved the individual problems of innumerable Jews who were not wanted where they were and were unwanted elsewhere. But there would not have been this unflagging devotion, this fierce determination, this sacrificial valor without the religious impulse at its heart and center. The most precious associations in judaism and in Jewish history were with that little strip of land along the Mediterranean. It was promised to the descendants of Abraham. It brought about the emancipation of Egypt and the return to Canaan. It drove David to build Jerusalem and his son to construct the Holy Temple. It was the goal of prophetic thought, the enduring basis for Hebrew prophecy. It was the dream of the exiles who said that their hands would lose their cunning and their tongues cleave to the roofs of their mouths if they forgot Jerusalem. It was the final hope of the Messianic dream for building God's kingdom, not in heaven, but here on earth in Zion, from which would come forth the law, and the word of God from Jerusalem, to teach men to beat their swords into ploughshares and learn war no more.

A second asset is what the Israelis call the philosophy of no alternative. And, of course, they are right. It sounded pretty for some American Jews to proclaim that our persecuted brethren should stay where they were and fight the battle for democracy. It wasn't so hard to say this from the fleshpots of New York or Philadelphia or Rochester. But this made no sense to Jews of Poland who saw their loved ones done to death by pogromists, nor to Jews in Germany, the stones of whose streets cried out with the blood of their slaughtered parents and children. This had little meaning to the Jews of Morocco who had been oppressed for centuries and saw, under even a more enlightened regime, no basic change in their position or any real hope for a better future.

This is not a matter of the past. Khrushchev recently restated his antisemitism. I view with profound misgiving the future of those Jews who remain under his domination. There was a very serious trial in Germany during the past week of a high-school teacher who said publicly and taught in his classes that Hitler did not kill enough Jews, and who was cheered by the men and kissed by the women even when convicted of violating German law. In the United States there has been the bombing of synagogues and no one can predict the impact on group

relations of a deepening recession, which might become a depression.

This does not mean that in every case where Jews are problems they must think immediately of fleeing to Israel. In the United States I believe in light and when necessary, fight, rather than flight. Education can serve and does serve a very useful purpose here. Flagrant antisemitism should be resisted. But we are in a singularly fortunate position. Tonight, if I were in Morocco, or even Tunis, or Germany, or Poland, or Russia I wouldn't hesitate a minute about getting out if I could. And for those who would get out Israel remains, as it has been for the past 10 years, the one sure answer.

Thus when an Israeli is confronted with the problem he really has no alternative. When a man knows that he must either resist Nasser or be thrown into the sea, that he must work on the land and the roads or perish, that he must tighten his belt or starve, he has a very powerful motive for working and building and defending himself. And this motive becomes a very important asset.

Another of the major assets is the Jews. I am aware of Jewish faults. One who lives in Jewish life all his life knows when a human group this is with all its failings and imperfections, but as Dr. Weizmann ounce said, I love them. Jews are bright and eager and independent. They have more intellectual curiosity, a greater critical faculty, more freedom of the mind per square inch than any group I know. They are sensitive to suffering and injustice. They are capable of combining the purest idealism with the crassest materialism. They produce more violinists, more chess geniuses, more top level physicists than any other group. They can drive you crazy but I love them.

And this is the people that is settling the Jewish state and building it. I have heard Israelis express the wish that God had led Moses in another direction toward a more fertile land, and I have heard Israeli leaders express the wish that God had given them an easier people to deal with, but all these qualities of which I have spoken and many more are now simmering and seething in the pressure cooker that is Israel. To use another simile it's as if suddenly the lid were taken off a boiling pot. All that has been suppressed and repressed in Jews for centuries is now bursting out. Nowhere in the world is there such intense vitality, tremendous creativity as one encounters on every level in Israel. This is a people in a hurry. A sand dune today, a new city tomorrow. A wilderness this month, the next, an oasis. And newspapers and orchestras, physicists and chemistry, the fastest commercial airlines in the world. Some of the quickest and best trained jet pilots. The human factor, the Jewish factor, is a tremendous asset in Israel.

This, I must add, is one of their problems. The whole Middle East has been somnolent and backward. Suddenly, into its midst from without has been projected a dynamic western community. It is understandable that this should be regarded with suspicion and with resentment and with envy as both a challenge and a threat.

Even within Israel this constitutes something of a problem. There the 20th and 10th centuries meet, and there have been many tensions in this juxtaposition. But I have the feeling that this too will prove to be an asset. There is cross-fertilization, and all sorts of new and interesting developments are coming out of it. This is another source of vitality and creativity.

The frontier is a hazard turned into an asset. All Israel is a frontier and that is a situation hard to live with. It means that at any moment an enemy can dart across the border, or shoot across the border and kill. You can never relax. I must add immediately that the atmosphere in Israel is not tense. Even during the Sinai campaign, I am told people went about their ordinary business in the ordinary way. But they have had to remain strong and prepared, always ready to defend themselves and to shoot back, if necessary.

On the other hand this very frontier characteristic is a source of strength. Frederick Jackson Turner promulgated a famous theory in which he stated that the frontier was the greatest single influence in shaping American character and history. If true, it also applies in large measure to Israel. The people live a hard, austere life. It keeps them vigorous, alert, vital. Their boys and girls are not softened by luxury as ours are here. They are able to take care of themselves in the emergencies which they take for granted.

This is also true in the economic frontier. In an older society there is a kind of hardening of the arteries. Less experimentation, more acceptance of limitations. But in a new society, the fact that something hasn't been done before is a challenge rather than a handicap. It's a little like the competition between business, those long-established in families for generations with plenty of deadwood, and a new business being built by a family, perhaps new to the community, in which everybody works his head off and everybody has to produce. Consequently, Israel is producing everything. From copper to phosphates, from transistors to concrete pipes, from fruit to nuts, from the last word in fashions to the newest idea in furniture.

This has been helpful to Israel in its relations with new states. Israel actually has a point 4 program for countries like Burma and Ghana. It is helping them to bring backward countries forward. It is sharing its advances in scientific technology. It is introducing new methods of production and distribution. And this is not only helpful to them but promising for Israel because it is developing friends and trade with the great continents of Asia and Africa, which probably hold the key to the future.

On the subject of economic assets, one must mention German reparations, and having something to do with initiating this program, I take personal satisfaction in its results. In a period of 10 years over $800 million will go into Israel from Germany, chiefly in the form of efficient German products—housing, machinery, motors, ships, buses, etc. This can never compensate for the slaughtered 6 million Jews nor will it ever free Germany from its moral guilt before the bar of history, but at least it means that the survivors will be aided by these former Jewish assets rather than the murderers.

Prime Minister Ben-Gurion in his 10th anniversary message points up another asset. He reminds us that when all nations and the United Nations failed to come to Israel's aid when the Arabs invaded the new state established by the United Nations, the Israelis had one ally and that was the Jews of the world. They sent money and arms and fighters. The Jewish defenders included people who had come from 60 different countries of the world to help the infant state survive. The United Jewish Appeal has represented the most generous giving of any known philanthropy. This does not mean that all giving is generous. There are many Jews who ought to have bad consciences, but the United Jewish Appeal is commonly accepted as a sacred responsibility of the American Jewish community and there is, in many quarters, perhaps most, really sacrificial giving.

The bond drive has proved to be a tremendous asset. The United Jewish Appeal provides for human needs but every penny must be spent on resettlement, medical care, social welfare, etc. How shall the Israeli economy sustain this growing population. This can be done only through large scale economic projects, the deepening of harbors and rivers, hydroelectrification, heavy industry, large housing projects, and this is accomplished through investment in Israel bonds. I urge you, this year particularly, to buy bonds as you have never bought before. That is one way of showing you appreciate the meaning of the 10th anniversary.

Thus far the assets have been essentially Jewish in character. But they go beyond Jewish sources of strength and help. The United States has played a very important, yes, even a crucial role. Every American President since Woodrow Wilson, some before him, displayed sympathy toward Zionist aspirations. United States Congressmen, governors and State legislators, the press and clergy, the rank and file of the American people have displayed good will toward this undertaking of Jews to rehabilitate themselves and to establish through their own efforts a democratic state. President Truman, with whom I will be participating in the 10th anniversary ceremony in Philadelphia at Independence Hall on Thursday, gave recognition to the State of Israel within minutes of its formation. For this he will always be honored by Jewish history and, I believe, by the human conscience. The United States has been generous with its aid through the years and this year the economic aid and loans will surpass any year since 1949.

America and Israel have much in common. Both were formed by pioneers. Both welcomed peoples from many lands. Both have been democratic, freedom loving, emphasizing individual liberty and dignity. This kinship has reflected itself on the one hand in American sympathy and aid and on the other in Israel's commitment to the West, as the only trustworthy bastion of democracy in that part of the world.

Finally, let me speak of the United Nations as an asset. It was the United Nations which created the State of Israel, that might not otherwise have come into existence. World opinion agreed to the formation of a third Jewish commonwealth. The United Nations brought together Russian and American support of the establishment of the Jewish state. The United Nations has officially acted on the assumption that it is committed to the preservation of this state. It has at least taken an official position against aggression toward Israel. It helped bring about the truce in the violence that erupted along Israel's borders. Its troops now keep peace in Gaza and Aqaba and enable the Israeli settlers to relax their vigilance.

The final asset implicit in much of what has already been said, and the result perhaps of all other assets, is Israeli strength. A handful, they successfully resisted the invasion of the armies of 6 Arab countries with a total population of over 40 millions. Through 10 years of unremitting hostility they have steadily built and defended what they built. When it became clear that Nasser with the aid of Russian arms was in the process of attempting to destroy them, they struck, swiftly and successfully and as a result the Fedayeen raids stopped, there was quiet along the borders, the Gulf of Aqaba is open to Israeli shipping, and the Arab states know they will get badly hurt if they really try to make trouble.

I for one, and I know there are many like me, both in Israel and in the United States, do not exult in this kind of armed strength. I do not want to see any building up of militarism which is a real danger in this situation if the present condition continues for many years. I would like to see Israel concentrate on its peaceful objectives and not have to devote so much of its energy and means to defense. But, ringed round by Arab steel

supplied by Russia, they now have no alternative. They must be strong in order to survive, and they are strong. And I must say that I do take real satisfaction from the knowledge that Jews can no longer be killed with impunity. It was 15 years ago tomorrow that that tiny band of pathetic survivors provided the world with an heroic but pathetic example of resistance in the Warsaw ghetto, and what they did was more noteworthy because it was so exceptional. Most Jews went like sheep to the slaughter. It was only 10 years ago that British troops were bashing in the heads of Jews with no other place to go, who were trying to get into Palestine. It was hardly 10 years ago that the Arabs announced that they would drive the Jews into the sea and promised the Arabs living among Jews that if they would join them in the war against the Jews soon they would have their own property and get that of the Jews as well. So without exalting militarism, I, for one, am grateful and proud that Jews in our generation, after all their humiliation and degradation, have shown again they are capable of Maccabean courage and have said to the world, "We, too, must be treated with dignity and respect."

Would that one could end this address on this note. But a balance sheet requires that we look at the other side of the picture. Once again, we have learned that nothing worth while comes easy. Neither men nor nations achieve emancipation without sacrifice, usually through blood, sweat, and tears.

The major problem continually confronting Israel is Arab hostility. No one really knows how deep rooted nor widespread this is. In the vast illiteracy of the deserts of Saudi Arabia or the upper Nile peasantry of Egypt, perhaps they have never even heard of Israel. The ordinary impoverished Arab probably is much more concerned with his daily bread than with Zionism. But the articulate Arab leadership remains violently hostile. By a strange paradox the spoken hostility is more violent among so-called United States friends in the area than with its problem children. Perhaps just because they feel they may be accused of pro-West and pro-Zionist sympathies, the leaders in Iraq and Jordan have said uglier things about Israel than has Nasser. After one makes due allowance both for Arab hyperboles of speech and for Arab politicians' necessity for saying things in order to survive, the fact still remains that there is no known break in the wall of Arab hostility. What shall be done?

The Huleh drainage issue indicates one problem. Israel has an abundance of water in the north and no water in the south. Therefore, it drains swamps in the north to make land cultivable, and channels the waters to the south that it may become fertile. This does not harm anyone and brings benefits to all. But the Syrians don't like it. They can't use these waters; they don't need them, but they don't want Israel to progress. So they make difficulties and shoot from across the frontiers which are nearby. Israel doesn't want trouble. It needs a period of tranquillity, but it cannot permanently hold up progress because of ongoing Arab opposition.

Nasser has become the leader and the symbol of rising Arab nationalism to most of the Arab world. * * * Regardless of credit or blame the fact is that Nasser emerged from this crisis with greater prestige and strength than before. He confiscated the assets of the Suez Canal and holds on to them. He gets Russian aid and uses it for bargaining power with the West. He has taken over Syria and Yemen. His cohorts and supporters are powerful and dangerous in every Arab country.

And now there is a rising sentiment in the West for some rapprochement with Egypt's dictator. He is no trustworthy friend of the West. At the very moment he is negotiating for United States aid, his controlled press and radio have denounced United States leaders as criminals. If we strengthen Nasser we are building up Soviet influence and power in the Middle East. Let him learn the hard way, that Russia does not keep all its promises, that he cannot repudiate his commitments and defy the West and expect it to rescue him from his difficulties.

If we give him this type of aid we will alienate our own tested friends in the Middle East and North Africa, Bourguiba in Tunisia, Chamoun in Lebanon, the majority in Sudan and other Arabs like King Hussein of Jordan, who don't wish to come under his domination or the Russians. In effect we will be saying to them that they made a mistake in trusting us, that they will profit more by resisting us than by joining with us. United States policy should be clear and firm. We should give economic aid for the peoples of the area, not arms. We should be helping our friends, not our enemies. We should commit ourselves to resist aggression. Beyond this both Israel and the United States should do all in their power to reach through to the masses in the Arab countries, to show them the way to emancipation and to seek out progressive forces, the potential democratic forces in each land. We should not ally ourselves with decadent, backward feudalism, destined to disintegrate and disappear.

The second major problem that confronts Israel is economic. This need not be so. If the Israelis were to close their borders, they could probably soon be self-sustaining. But they have already taken in over 1 million Jews and many more are yet to come. No one knows when the doors in north Africa will open and close. No one knows when the satellite countries will permit or stop Jewish immigration. No one knows whether or when Russia will allow some of her Jews to depart. But what we do know is that we must be ready and this means preserving and strengthening the institutions of American Jewry such as the United Jewish Appeal and the bond organization, and on the local levels, the welfare fund. It means the ongoing readiness for generous aid. It means substantially increased investments in Israel. It means the increased use of American technology, and Americans ready to contribute their know-how.

The third problem is spiritual. I refer in the first place to the unresolved church-state problem in Israel. * * * Israel did not come into existence to become another Balkan State. Harassed by enemies, it had no alterative but to become strong and to defend itself. But the ultimate purpose of the Jewish commonwealth is spiritual. Israel is intended to be the fulfillment of Hebrew prophecy. It has already redeemed over a million Jews, and that is a heroic achievement, not only of the Jews but of the human spirit. It should lift the hearts of oppressed man everywhere. But we dare hope also for the redemption of their souls. We dare hope for a return to the Torah as the guiding principle of their lives, freely given and accepted, not under compulsion. We dare to hope for new Torah. The Jewish soul has not had its last insight, nor has the Jewish voice spoken its last immemorial word. I hope for light and healing from that sacred soil and I dare hope that Israel may become a bridge between East and West.

This is not a light task, nor for small-minded men. I dare hope that this generation of Jews, aided by friends outside their own group, will have the vision and the courage and the determination and the statesmanship to rise to the challenge, not of this hour but of the centuries.

Radioactive Fallout

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Wednesday, April 23, 1958

Mr. HUMPHREY. Mr. President, the distinguished head of the physiology department at the University of Minnesota, Dr. Maurice B. Visscher, has recently made an important contribution to the current debate on radioactive fallout.

In a letter to the editor of the Minneapolis Star, Dr. Visscher attempts to clarify some of the current public confusion on the fallout peril. I ask unanimous consent that the text of Dr. Visscher's letter be printed in the Appendix of the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

POLITICS, SCIENCE ALL MIXED UP

TO THE EDITOR: As I listen to and in a minor way participate in the controversy over the present or future danger to mankind from the radioactive fallout associated with bomb-testing, I am becoming more and more sympathetic with the nonscientists in our society who must be getting more and more confused by the day. I am therefore encouraged to try to clarify the situation for the nonscientist.

There are as I see it three main reasons for the confusion. The first is that literally no one really knows what damage to the human race can be expected from low levels of radiation from the radioactive elements produced in bombing.

We know a great deal about high-level radioactivity damage. We can extrapolate from information on lower animals such as mice and flies at various levels of radiation and deduce that as to genetic damage there is a linear relation between radiation dose and damaging effect. This would mean that any additional radiation would mean additional damage.

Very few persons seriously challenge the validity of this extrapolation. Those who do only point out that the magnitude of the damage at present levels of radiation due to bomb testing would be very small. They argue further that even if it did produce an additional 15,000 defectives per generation per bomb, it would be worth the cost to society as a whole.

But the fact that the magnitude of the damage is just an educated guess is the first great difficulty. The real effect may easily be only one-tenth or it might be 10 times as great. No one actually knows.

The same is true in an even more extreme way in connection with the cancer-producing effects of radioactive elements. We think, but do not really know, that strontium 90 is the main hazard as far as cancer is concerned with low-level radioactivity from fallout. Furthermore, we do not really know how little strontium 90 will produce cancer.

The public should know that it will be absolutely impossible to know how dangerous this element is for at least 20 years, which is the time we have found it takes for similar radioactive substances to produce cancer. The public should know that we scientists have no actual data on the carcinogenic (cancer-producing) activity of low levels of strontium 90.

We are simply making educated guesses again as to what it will probably do.

These gueses or extrapolations are based on comparisons with radium, about which we do know something because of unfortunate industrial accidents which led to many deaths in the luminous-dial industry. The guesses are probably correct within a tenfold range, up or down, but no scientist would dare say that he positively knows what the lower limit of damaging effect is.

In other words, here again we are dealing with a substance which we know is damaging to the point of lethality and we are guessing that it will not do much or any harm below a certain dose level.

The second reason for our confusion is secrecy. Right now the most extensive data on strontium 90 in milk in the United States are in the hands of the United States Atomic Energy Commission. On March 6, 1958, I was shown these data which are marked "For Official Use" and I am therefore now not privileged to disclose the facts they contain.

There is one point about this situation that disturbs me greatly. It is that the top administrative officials do not have confidence in the intelligence of the American people. They act as though they did not really believe in the democratic system.

The facts in question have no conceivable military significance. They are important only as background information for policy decisions. To withhold them from the public means 1 of 2 things, either that our Washington administrators do not trust our intelligence, or that they hope to control opinion by monopolizing information.

Either conclusion would be distressing to me as one who believes in the democratic process, because it would mean that we are imitating the practices of authoritarianism, which I abhor.

The third reason for confusion is, I believe, the fact that scientists who talk and write about this problem mix up science and public policy.

We should all be more careful to point out exactly what is fact, what is guess and what is opinion as to public policy. I firmly believe that this is the only way in which scientists can be really useful to society in public policy questions.

Scientists have some special competence regarding knowledge of facts, and even in being able to make the most probable guesses about situations in which specific facts are not available. But they have no special competence in arriving at policy judgments.

Policy in a democracy must be based on informed public judgment and therefore clear distinctions between fact, guess, and policy judgment must be made. I hope that in the future this will be done by every scientist who undertakes to deal with this or other questions of public policy depending on scientific information.

PROFESSOR MAURICE B. VISSCHER,
Head, Physiology Department,
University of Minnesota.

Freedom of Information

EXTENSION OF REMARKS
OF
HON. WILLIAM E. PROXMIRE
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Wednesday, April 23, 1958

Mr. PROXMIRE. Mr. President, secrecy in government is like a slow paralysis that can be combated successfully only by continuous exercise and exertion. That is why I rise at every opportunity to speak for the right of the people to know what their government does. That is why I pay tribue to every man and every group that joins in the fight for freedom of information and wins a victory, large or small.

One of the most aggressive champions of freedom of information is the American press. That is to be expected; it is the lifeblood of their enterprise. One of the most respected members of the press is the Christian Science Monitor, which proves in its daily conduct that freedom and responsibility go hand in hand. Therefore the editorial "A Right to Know," which appeared in the April 21 issue of the Monitor, is worth wide distribution and reading.

Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the Monitor editorial.

There being no objection, the editorial was ordered to be printed in the Appendix of the RECORD, as follows:

[From the Christian Science Monitor of April 21, 1958]

A RIGHT TO KNOW

Americans properly feel that totalitarian governments are treating their people badly when they prevent them from receiving honest information about the rest of the world. But Americans have some reason also to be concerned about limitations on the freedom of information—the right to know—in the operation of their own Government.

Representative JOHN E. MOSS told the American Society of Newspaper Editors last week that, although some gains have been made, the fight against censorship in Federal Government departments is far from having been won. The House of Representatives has just passed a bill to amend a law of 1789 so as to prevent department officials from withholding information from the public or limiting the availability of records. Certain necessary exceptions, of course, are made. It is to be hoped that the Senate also will enact this bill.

No one wishes national security endangered, or confidential FBI files thrown open, or trade secrets exposed, but a great deal of information has been denied to the press and public under circumstances which suggest that its release would have been politically awkward or embarrassing rather than a detriment to defense or an injustice to individuals.

A law would help establish the right of information where executive departments are concerned, but Congress itself is sometimes an offender on the issue of excessive secrecy about public business. The Congressional Quarterly has made a survey of congressional committee meetings which indicates that these sessions, including hearings, have been closed to the public one-third of the time so far this year.

Many such meetings unavoidably are closed because secret military information is discussed. Some lawmakers believe less time is lost to grandstand speeches when no audience is present. Nevertheless, many occasions occur when it could pertinently be asked, "Is this secrecy necessary?"

Probably as much or more should be said about public access to information in State and local government as on the national level. A survey by a legislative research council in Massachusetts disclosed that 187 town and school councils, boards, and committees customarily conducted the public's business in secrecy, with press and public barred. Most of these refused public inspection of their minutes and some kept no minutes. Surveys in Maine and Wisconsin showed similar conditions.

On such findings the Sigma Delta Chi journalistic fraternity has urged adoption of State laws requiring open government records and open government meetings. Twenty-nine States now have such laws as to records and 19 as to meetings. California enacted 66 statutes, 1 for each State board. Thirteen States whose legislatures are meeting this year have no law requiring open government meetings; 8 of these lack also a requirement of open government records.

The right to information about public business is not merely a concern of the press for news as a commodity. Far more importantly it is a concern of the whole people to have the facts on which the conduct of public affairs should be based.

Job-Producing Measures Too Slow

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 23, 1958

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a very timely and most sensible editorial which appeared in the Evening Tribune, Lawrence, Mass., on April 21, 1958:

JOB-PRODUCING MEASURES TOO SLOW

Democrats in Washington have finally taken the bull by the horns and drafted a new unemployment relief bill calling for outright Federal grants to provide 16 weeks of emergency Federal unemployment benefits to jobless workers. Cost of the plan, which would be financed wholly by the Federal Government, is estimated at about $1 billion.

At least one half million persons thrown out of work in the recession have run out of unemployment benefits since the first of the year. Unless business takes a sharp turn for the better it is estimated that the number in this particular fix may grow to more than 2 million by the end of 1958. Jobless benefits are paid for a maximum of 26 weeks in more than half the States, including Massachusetts.

At last count, the jobless in Massachusetts totaled close to 170,000. Of these more than 50,000 already have used up their unemployment compensation rights. And the present claim exhaustion rate continues at 7,400 each month.

A somewhat similar situation exists in various other sections of the Nation. In some States it is worse than in others. It is a matter that needs attention, whether it is at National or a State level.

With so many people losing not only job income but also jobless income, it is gratifying that some Members of Congress should return from their Easter recess prepared to do something about the situation.

Substantial opposition has arisen to any action by Congress to alter the unemployment insurance system, temporarily or permanently. A good many people think it's up to the individual States to make any necessary changes. They condemn plans for emergency extension of benefit periods, financed by Federal loans or grants, as improper use of an insurance system to distribute relief.

What is needed, persons of this mind say, is not a dole but action to make more jobs. But most job-producing measures are slow-working.

Congress should not feel it can ignore the plight of a rapidly growing group of unemployed workers while waiting for general

antirecession legislation to take effect. The quicker it provides help for this group, the better.

Taxes and Individuals

EXTENSION OF REMARKS
OF
HON. FRED SCHWENGEL
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 23, 1958

Mr. SCHWENGEL. Mr. Speaker, in the April 19 edition of the Davenport (Iowa) Times-Democrat there appears a guest editorial by Lyle R. Mercer, president of the Iowa Taxpayers Association. His remarks, Taxes and the Individual, are more apropos when applied to today's situation. In his six questions, by which he measures the necessity for any Government spending proposal, he provides us with a yardstick which we should apply when such proposals come before us.

Under leave to extend my remarks in the RECORD, I include the editorial as follows:

[From the Davenport (Iowa) Times-Democrat of April 19, 1958]

TAXES AND INDIVIDUALS

(By Lyle R. Mercer, president, Iowa Taxpayers Association)

When Thomas Jefferson said, "The power to tax is the power to destroy," did he foresee the situation toward which we appear headed today?

The level of taxation is higher than during any other time in our history. While the Federal Government still gets the biggest share of the total tax take (73 percent), State and local spending has risen 201 percent in 10 years, compared with a 19-percent increase in Federal spending.

Continuation of this trend at State and local levels with no offsetting reductions in Federal spending means an increasing share of the national wealth will continue to be taken by governments. Perhaps this is what Jefferson had in mind, for such a trend carries grave risk of stagnating enterprise and eroding personal liberty.

Until recently, there was little indication that people had taken Jefferson's warning seriously. Most of us show concern about Government spending only by complaining about taxes, particularly at this time of the year when our burden is so apparent. This accomplishes nothing; nor is any useful purpose served by the unreasoning opposition offered by some toward all public expenditures, regardless of need or merit.

The Nation's growing population has created additional service demands at all levels of government, particularly State and local. Since 1946, for example, about half the 30-million increase in population has been in the school age and retirement age groups. This, in part, accounts for increasing expenditures for education and welfare programs.

The number of automobiles has increased during this same period from 34 million to 53 million with resulting demands for more and better roads. These and other instances have caused legitimate increases in Government spending.

These increased demands make even more acute the need for individuals, singly or through organized groups, to take a serious and continued interest in the spending of public funds. Worthwhile existing programs should be supported, but inauguration of new spending activities should receive close scrutiny.

Expansion of existing programs whose purposes are to provide services that properly belong to private initiative should meet with citizen opposition at every turn. And wasteful practices in Government should be opposed with all the force at our command.

Next time you are wondering if you should or should not support a Government spending proposal, ask yourself these questions:

1. Is it necessary? Or is it something already being provided by a private or public group?

2. Can we afford it? There is no limit to what we would like; only to what we can afford.

3. What will it cost ultimately? Many proposals are like icebergs—only a small fraction of the total cost is apparent on the surface.

4. Is it in the balanced best interest to all?

5. Does it place too much power in the hands of one individual or group and thereby lessen effective citizen control?

6. Is its appeal based on emotional propaganda or facts?

Often, individuals feel it is useless to attempt to do anything to control Government spending.

This feeling prevails first because many of us believe our opinions receive little, if any, attention; and secondly, because we are not skilled to assemble the necessary data for effective argument.

However, there is ample indication that Government representatives do pay close attention to the expressions of their constituents. And where research is necessary to acquire statistical and other data necessary to effectively question Government spending, individuals can employ help to perform this service by banding together through local or State taxpayers groups.

Providing this type of service at the local and State levels is one of the prime functions of the Iowa Taxpayers Association.

The Significance of the Federal Milk Marketing System

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Wednesday, April 23, 1958

Mr. WILEY. Mr. President, one of the systems utilized for distribution of the Nation's milk supply is the system of Federal milk marketing orders.

Under these orders around one-third of all the milk sold by the farmers of our country is marketed.

Naturally, to America's dairyland, the State which is the greatest single supplier of milk, Wisconsin, these orders are of particular significance.

In order to help illuminate what is otherwise a not sufficiently understood subject, I send to the desk an article from the current April 19 issue of the magazine Wisconsin Agriculturist and Farmer.

The article will go a long way toward clarifying the purpose and background of these orders.

I ask unanimous consent that the article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

FEDERAL MILK MARKETING ORDERS

Currently about one-third of the milk sold by United States farmers is marketed under the terms of 68 Federal milk marketing orders. Furthermore, the prices of most of the rest of the fluid milk in this country are strongly influenced by Federal order prices. Thus Federal milk marketing orders either directly or indirectly go a long way toward determining the prices that farmers in this country receive for milk for fluid purposes.

The demand for Federal milk marketing orders dates back to the late 1920's and early 1930's when milk prices were very unstable, retail prices were rampant and milk strikes were fairly commonplace occurrences. Farmers felt that they could not individually or collectively protect themselves against disastrous price declines in farm milk prices. Federal milk orders resulted.

The number of Federal milk marketing orders, and the volume of milk regulated under orders has been continuously expanding in recent years. It therefore appears that these orders are here to stay.

ORDER SETS MINIMUM PRICE

A Federal milk order is issued by the Secretary of Agriculture and requires that farmers regularly supplying the market be paid no less than a certain price for milk used for various purposes. A minimum price may be set for milk used in the bottle, another minimum price for milk used in manufacturing products, and some other minimum price for milk used in ice cream, cottage cheese and products of that type. The point here is that, regardless of what happens at the retail level, the farmer is still assured of a minimum price for his milk used in various classes. Thus, retail price wars can't hurt the farmer.

However, Federal milk orders do not set minimum average prices to producers. The average or blend prices to producers are determined by the so-called "class" prices mentioned above, and the amount of milk disposed of in each "class." Also a Federal milk order does not set retail prices. Some State milk orders do.

Federal milk orders also assure farmers of accurate weighing, classification, and accounting of milk. The market administrator has the authority to audit the records of all the dairy plants and make sure that the minimum prices set up under an order are paid to farmers.

PRODUCERS MUST APPROVE

Normally only grade A milk is priced under Federal milk orders. Thus cheese factories, creameries, and others buying grade B milk are not regulated. Federal milk orders have no relationship to the dairy price support program.

Orders are generally petitioned for by farmers or by their organizations. The order itself is issued by the Secretary of Agriculture only after a public hearing is held, and consumers, dairy plants and farmers alike have had a chance to be heard. The order itself has to be approved by the milk producers before it can become effective.

The Government cannot impose a Federal milk marketing order on any market unless it has the producer support. Furthermore, if more than half of the farmers vote to get rid of an order, it will be removed. So farmers make the final decision as to whether an order will become effective in a market, and whether it will stay.

Only the dairy plants are regulated. Thus, if a farmer does not wish to be under a Federal milk order, he can withdraw by stopping his sales to a plant which is regulated under an order. So a Federal order does not tell a farmer whether or not he has to be regulated.

The dairy plants do not have such an option: They will be regulated whether they want to be or not. However, the order will not tell the dairy plants whom they must

buy from, whom they must sell to, or how much they must charge when they are selling their products. All the order does is to tell the plants what they must pay farmers for milk used in various purposes.

MARKETING AREA IS DETERMINES

The marketing area determines which plants will be regulated and hence which farmers will be affected by the order. All plants selling milk in the marketing area who meet the requirements set up under the order will be regulated. All farmers selling to these plants will therefore have their milk priced under the Federal order.

It is important to point out here that the plants and farmers do not need to be located in the marketing area in order to come under regulation, but merely that the plants sell milk in the marketing area.

A recent development has been the emergence of so-called superpools, or farm milk prices over and above the Federal milk order price. These are negotiated between producers and plants and are not part of the Federal milk order. Chicago, Milwaukee, Detroit, Cleveland, and others have such superpools.

From the pattern of development it appears that these so-called superpools will be with us until such times as an increase in farm milk prices are authorized under Federal orders. Dairy plants apparently are not adverse to increases in farm milk prices so long as they can be successfully passed on to consumers, and so long as all of their competitors also increase prices.

It also appears that the Government is not going to suspend or eliminate Federal orders which have superpools. Evidence thus far does not indicate that the superpools have substantially reduced the per capita sales of milk.

MILKMEN WANT CONSOLIDATION

Pressure is developing among farmers and dairy plants for consolidating Federal milk marketing orders. The reason is that competition between orders has often resulted in unsettled conditions and disorderly marketing. Thus in the future instead of orders for individual cities, one order may serve a 2 or 3 State area. This recently happened in the New York area.

Wisconsin now has milk directly regulated under at least seven different orders. They are: Chicago, Milwaukee, Duluth-Superior, Minneapolis-St. Paul, Rockford-Freeport, Quad Cities, and Dubuque. Another order is being proposed for 22 counties in northeastern Wisconsin. The consolidation of at least some of these orders will probably command a great deal of attention in the future.

H. R. 968 Permits Homeowners to Deduct for Income Tax Purposes Expenses of Home Repairs Up to $500 Annually

EXTENSION OF REMARKS
OF
HON. JAMES E. VAN ZANDT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 23, 1958

Mr. VAN ZANDT. Mr. Speaker, if the leaders of Government are looking for a method of tax relief to bolster the Nation's economy and at the same time make a contribution toward the betterment of community, State, and Nation, they would do well to consider seriously the merits of my bill, H. R. 968, which I introduced January 3, 1957.

H. R. 968 is a bill to permit a homeowner to deduct for income-tax purposes up to the amount of $500 for money spent on ordinary and necessary repairs to his home. All that would be necessary would be for the homeowner to submit with his income-tax return an itemized account of home repairs, which would include painting, papering, repairing porches, roofs, spouting, and so forth. As you know, the owner of a rented dwelling under existing law is entitled to deduct such expenses, and my bill merely extends the privilege to the homeowner's dwelling used as his own residence.

Mr. Speaker, for a moment stop and think of the effect this type of legislation will have on the economy of the Nation, because it will promote employment and at the same time increase the sale of paint, hardware, lumber, wallpaper, and numerous other items of building material used to make home improvements.

Mr. Speaker, I originally introduced this bill in the 84th Congress, and at that time the Treasury Department submitted an adverse report to the House Committee on Ways and Means. However the economic conditions of the country have changed considerably since the adverse report was rendered in 1955.

President Eisenhower has proposed that people start buying the things they need, and in this connection I can think of no better stimulant to our free enterprise system than to encourage the homeowners of America to fix up and paint up their homes.

Point of View

EXTENSION OF REMARKS
OF
HON. FRED SCHWENGEL
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 23, 1958

Mr. SCHWENGEL. Mr. Speaker, an editorial in the April 11 issue of the Muscatine (Iowa) Journal, has much food for thought for all of us. Under leave to extend my remarks in the RECORD, I include the editorial as follows:

[From the Muscatine (Iowa) Journal of April 11, 1958]

POINT OF VIEW

It all depends upon the point of view.

Some folks see the doughnut; others see the hole in it.

Different individuals would see a pint of milk in a quart jar with varying viewpoints; to one it would be a jar half empty; to others, a jar half full.

Take the most recent figures on employment in the United States, for example, for the month of March.

The number of unemployed has been estimated at 5,198,000, the most jobless since August, 1941.

That's one way of looking at the picture.

On the other hand, only twice since employment figures have been available, have more people been employed in the month of March. That was in 1956 and 1957.

That's the other side of the picture.

It shows that a whole lot of people are still working regularly.

And even in March of 1956 and March of 1957, when record numbers were working there were nearly 3 million in the ranks of the jobless.

What Would Henry W. Grady Say About a Southern Funeral Today?

EXTENSION OF REMARKS
OF
HON. PAUL BROWN
OF GEORGIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 23, 1958

Mr. BROWN of Georgia. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include an editorial from the Anderson, S. C., Independent, entitled "What Would Henry W. Grady Say About a Southern Funeral Today?"

WHAT WOULD HENRY W. GRADY SAY ABOUT A SOUTHERN FUNERAL TODAY?

Seventy years ago that great spokesman for the South, Henry W. Grady, of Georgia, made a speech in Boston, Mass., at the Bay State Club.

His oration on that occasion dealt in part with a funeral Grady said he had attended in Georgia. That speech became a classic.

"This funeral was particularly sad," he said. "It was for a poor one-gallus fellow, whose breeches struck him under the armpits and hit him at the other end about the knee. They buried him in the midst of a marble quarry; they cut through solid marble to make his grave, and yet a little tombstone they put above him was from Vermont. They buried him in the heart of a pine forest, yet the pine coffin was imported from Cincinnati. They buried him within touch of an iron mine, yet the nails in his coffin and the shovel that dug his grave were from Pittsburgh.

"They buried him by the side of the best sheep-grazing country on the earth, and yet the wool in the coffin bands and the coffin bands themselves were brought from the North.

"They buried him in a New York coat and a Boston pair of shoes and a pair of breeches from Chicago and a shirt from Cincinnati.

"The South didn't furnish anything for that funeral, but the corpse and a hole in the ground."

Writing in the Memphis Commercial-Appeal, Paul Flowers wondered the other day what Henry W. Grady would say today if that poor, unfortunate one-gallus fellow could be brought back and reburied. Here, says Flowers, is what Grady could now say:

"The cow's milk that nourished him all through his childhood and helped him keep his health came from fine Jersey and Guernsey cows well grazed on lespedeza on southern hillsides; the diapers and clothing he wore came from Dixie's King Cotton, carded, spun, woven, cut out and sewed in Dixie factories; the toys and sporting goods he used in his youth came from southern materials and plants, fabricated by southern workmen; the books he read were bound in the South; the piano to whose chords he sang Glory to God in his church was made in Dixie; the pews and pulpit were a golden oak raised on a neighboring hillside, and processed by his kinsmen near home.

"When he married, his bride wore man-made silk created in a southern mill; the meat they ate came from white-face cows that had turned green grass into red meat on Dixie's gentle slopes; the wool of his 'longies' in wintertime came from Ba-Ba Black Sheep that shoved King Cotton off a Mississippi Delta plantation.

"The muffler and tailpipes and tires on his two-toned hardtop convertible were made near his southern home; many of the electronic devices in his radio, record player, and television were fabricated almost within a stone's throw of his birthplace.

"And now he has gone to his fathers, but in a well-built coffin as native to this soil as he was; his winding sheet was grown, spun and woven near home; even the embalming fluid which protects his mortal remains was made and packaged in an adjoining county.

"His widow and orphans will get their regular monthly checks from an insurance company whose home office is in the capital city of his own beloved State, and the bronze plaque that proclaims his name and character was designed and cast just over the next hill.

"All these came to enrich his life and to ease his pains of death, without taking away one fragment of trade or commerce from any other place on the planet.

"All this in 70 years, one man's lifetime."

How right the man is.

And how fortunate are we, who live in this region embracing western South Carolina and northeast Georgia, that the historic fact in our lives today is diversification—in both industry and agriculture.

This Would Help Protect You

EXTENSION OF REMARKS

OF

HON. ROBERT W. HEMPHILL

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 23, 1958

Mr. HEMPHILL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Rock Hill (S. C.) Herald of April 19, 1958:

THIS WOULD HELP PROTECT YOU

In Washington, Government secrecy is a newsman's worst enemy.

Under a security order issued by President Eisenhower, the heads of 17 big Federal agencies can censor information if they believe security is involved. The power is often abused in order to hide information that might be embarrassing.

Executive agencies of the Federal Government have twisted the meaning of a 1789 housekeeping law in order to withhold information from the public.

And under a policy laid down by Eisenhower, the executive branch can hide anything but final decisions on Government business on the grounds that it's "confidential executive business." By the time the final decision is announced, of course, it might be too late to change course.

Against this background, the United States House of Representatives this week passed and sent to the Senate a bill to curb censorship. The bill says simply that the old housekeeping law can't be used as a basis for withholding information from the public.

The housekeeping law charges agencies with the responsibility for keeping Government records in a safe place, and assuring they will be handled in such a way that they won't be destroyed. It has often been used to hide information.

The House action is a good start on the important job of making sure that the people of this country know what's going on in Washington. We hope the Senate will give speedy approval.

Seventy-fifth Anniversary of the Milwaukee Journal

EXTENSION OF REMARKS

OF

HON. WILLIAM E. PROXMIRE

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Wednesday, April 23, 1958

Mr. PROXMIRE. Mr. President, in any roll of the Nation's great newspapers, the Milwaukee Journal must be given an honored place. So must the Christian Science Monitor. Both of these outstanding newspapers are models of accurate reporting and responsible editorial policy.

It is a matter of great satisfaction to me, therefore, to place in the RECORD a tribute from the Christian Science Monitor, which is celebrating its 50th anniversary, to the Milwaukee Journal, which is observing its 75th.

As a Member of the Senate from Wisconsin, I have reason to know and take pride in the record of independence and fearless reporting of the Milwaukee Journal. The Journal is more than just a newspaper in Wisconsin. It is a force—a moral force for better government and community responsibility. I am glad to take advantage of the opportunity afforded me by the Monitor's fine editorial to acknowledge my debt, and the debt of the people of Wisconsin, to a newspaper without which the State would be infinitely poorer in moral and intellectual resources.

Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the editorial entitled "Salute to a Senior" which appeared in the Christian Science Monitor for April 21, 1953.

There being no objection, the editorial was ordered to be printed in the Appendix of the RECORD, as follows:

[From the Christian Science Monitor of April 21, 1958]

SALUTE TO A SENIOR

This newspaper, as its readers know, is celebrating its 50th anniversary. The Milwaukee Journal has just completed celebration of its 75th. As the junior we salute an esteemed senior contemporary!

A newspaper, like other institutions, can often be measured by something which symbolizes the ideals which have guided its growth. In the case of the Journal, the symbol can be found in the Nieman Fellowships. These were established at Harvard University in 1937, shortly after the passing of Lucius W. Nieman, the paper's founder, by his widow, Mrs. Agnes Wahl Nieman.

These fellowships are awarded on merit to working newspapermen and women to afford them, without loss of income, a year in which to enrich the background of knowledge and understanding out of which they write. The roster of the 229 who thus far have been Nieman Fellows presents a representative cross section of enlightened journalism. And this newspaper is proud to have had four of its staff numbered among them.

The Journal, from its early days, has remained courageously nonpartisan and independent. During World War I it battled pro-Germanism in a community of overwhelmingly German heritage; after World War II it aggressively fought the threat to American civil liberties implicit in McCarthyism, and in Senator McCarthy's home State.

Here is the "fourth estate" functioning as it should.

Economic Aid to India

EXTENSION OF REMARKS

OF

HON. RICHARD L. NEUBERGER

OF OREGON

IN THE SENATE OF THE UNITED STATES

Wednesday, April 23, 1958

Mr. NEUBERGER. Mr. President, on March 25, 1958, the junior Senator from Massachusetts [Mr. KENNEDY] discussed in the Senate, in one of the thoughtful and well-documented foreign policy statements which are characteristic of him, the great need for assisting India in her efforts at economic development. He explained the resolution, Senate Concurrent Resolution 74, which he has introduced along with the distinguished Senator from Kentucky [Mr. COOPER], who used to be our Ambassador to India, which would endorse American action toward assisting these efforts of the largest non-Communist nation in the world to meet its pressing economic needs in the context of democratic means and political institutions. The New York Times, on March 27, 1958, carried an editorial praising the initiative taken by the Senator from Massachusetts and the Senator from Kentucky, and supporting their statements concerning the importance of assistance to India from this country. I ask unanimous consent to have printed in the Appendix of the RECORD the editorial from the New York Times of March 27, 1958.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

NO THOUGHTFUL CITIZEN

In urging full American support for India's economic development program Senator KENNEDY observed that "no thoughtful citizen can fail to see our stake in the survival of free government in India." The point that he and the cosponsor of his resolution, Senator COOPER, were making on the floor of the Senate is painfully obvious. Yet the alarming thing about it is that blind congressional resistance to aid to India and other neutralist nations—not to mention to such Communist deviators from Russia hegemony as Yugoslavia—is strong and may even be growing.

Though India's foreign policy is not always to our liking, "no thoughtful citizen"—to repeat Senator KENNEDY'S words—could fail to recognize that India is a great and vital hope of democracy in Asia. And to succeed in the ways of political freedom India is in a desperate race with the demands of economic necessity. She must be able to show to the hundreds of millions of impoverished peoples in underdeveloped areas throughout the world—in Africa and even South America as well as in Asia—that there is a way to a better future through democratic means and free institutions, and that there is a happier and more effective and

more satisfying alternative to the way the Russian and Chinese Communists have chosen.

India is in desperate economic straits and has already had to scrap all but the core of its ambitious 5-year plan. The new American loan of $225 million is helpful, but it will not be enough. What will really be needed is a far more imaginative and ambitious program to assist India than anything the administration has yet proposed; but it is hard to believe that Congress could be so unresponsive to American interests as to fail to grant what little the administration has been asking. Help to India without any political strings whatsoever may serve so to strengthen the economic foundation of democracy in that subcontinent that it will remain a bulwark of the free world. No one can be sure of this, but everyone can be sure that if there should be an economic collapse or even a lasting discrepancy in China's favor between India's rate of progress and that of China, it is the entire free world that will be the loser.

In the case of Yugoslavia and, for that matter, Poland, the situation is of course entirely different. These are Communist states; but it is so clearly in freedom's interest to help them as much as possible in their attempts to establish themselves as independent entities that again one can only wonder at congressional resistance to the administration's efforts in this direction. American military aid to Yugoslavia is, in fact, ending; but American economic assistance to any country of Eastern Europe that will accept it creates an invaluable link with the democratic world. And the cultural exchanges already established and now gradually increasing may be of even greater importance.

The Late Honorable Anton J. Johnson

SPEECH
OF
HON. ROBERT B. CHIPERFIELD
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, April 21, 1958

Mr. CHIPERFIELD. Mr. Speaker, I was deeply saddened to learn of the passing of my good friend and neighbor, Hon. Anton J. Johnson.

Before the redistricting of Illinois he represented part of the district which I now have the honor to represent, and I had the privilege to know him well during the 10 years we served together. We worked in close cooperation on matters of mutual interest to the State of Illinois. We helped each other in our campaigns. I always admired him for his ability and have been grateful for his friendship.

Anton was known as an outstanding authority on farming and dairy products, and was an able member of the House Agriculture Committee. Many of his colleagues leaned heavily upon him for advice in this field.

Anton was a sincere man, a hard worker devoted to his service and to his country. After he retired from Congress he continued to serve his people as mayor of Macomb. Personally, I have lost a warm friend, one for whom I had great regard and affection. I join with my colleagues in expressing sympathy to his devoted wife.

The Tornado and the Community

EXTENSION OF REMARKS
OF
HON. PAUL G. ROGERS
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 23, 1958

Mr. ROGERS of Florida. Mr. Speaker, on Tuesday, April 15, a tornado struck for the first time in Fort Pierce, Fla., which is in my congressional district. It struck when the community was overcoming the results of a long, hard winter which had destroyed many vegetable crops and had affected businesses and industries. The tornado struck with violence and ruthlessness and did severe damage to many homes and businesses, and injured numbers of residents. Local and State officials immediately took action to aid in the disaster, and the Red Cross responded in its usual tradition. I was glad to be of assistance at this time by enlisting the immediate aid of Federal agencies.

The way the community responded after the disaster is a fine example of the way our people in America respond to crises and disasters. The community rather than panic and bemoan its fate, responded in a most remarkable way and all of its citizens joined together in a fine spirit of cooperation to overcome the disaster which had struck.

The community's spirit and action are pointed up in a very fine editorial which appeared in the Fort Pierce News-Tribune of April 20. The News-Tribune is one of our leading newspapers in Florida and is published by Mr. H. T. Enns, who has had an outstanding career in the newspaper field.

The editorial follows:

THE TORNADO AND THE COMMUNITY

Things have been pretty much on the rugged side here in Fort Pierce and St. Lucie County since about 1 o'clock last Tuesday afternoon. If there was anything which we didn't need, after the worst winter weather in history, it was that tornado we had tossed at us.

Why did it have to happen here? Who knows. That question is as impossible to answer as it is to give a reason for the vicious twister taking the unpredictable path which it did. Striking with the violence and ruthlessness which mark such storms, it seems almost a miracle there were no fatalities—for that, at least, we can be thankful.

Damage was heavy. The full total of the losses suffered probably will never be known. It will be possible to add up the losses paid by insurance companies. Local insurance agents really went all out to check losses and to get adjusters on the ground to process claims. But such losses do not always cover full replacement cost; other losses were not covered by insurance; and how would it be possible to arrive at a total represented by such things as personal injuries? Nor can one estimate in dollars the wholesale destruction of trees, shrubs, and plants.

Our community has suffered severe blows before. We recovered from them just as we will from the results of this tornado. In fact, the tornado was hardly over before the cleanup had started; and in most areas right now, outside of some boarded-up windows and some piles of debris in the streets, the average visitor would hardly realize a tornado had struck.

Maybe it takes such an ordeal as the recent tornado to bring out the real character of a community. All of us have heard many times about how a person must go through a certain amount of suffering before they actually grow up, just as steel must be tempered. From this idea came such phrases as "through adversity to the stars" and "sweet are the uses of adversity." There is much truth in them, although there surely must be easier ways to find such truth than suffering through the savagery of a tornado.

But we did have a tornado, and the community did measure up. There was little talk—and even less wailing and bemoaning. There was work to be done and the universal reaction was simple and direct, let's get at it. Those in positions of responsibility stuck to their posts—the needs of the community transcended personal well-being.

The various departments of the city responded magnificently. The entire police force went on duty—and stayed on duty until the emergency was over. Every county law-enforcement official was on the job until the end. So was the highway patrol. And bouquets to the National Guard for its immediate response and fine conduct. The efficiency and cooperation of these various law-enforcement bodies was amazing. Despite blocked and debris-littered roads—and sightseers who should have stayed at home—traffic was handled unbelievably well. And, with all the havoc and open stores in the business districts, not the first attempt at pilfering or looting occurred.

As for the utilities, the power went off, of course. Lines were down all over town. But with line crews and the fire department working round the clock, accidents and fires were kept to a minimum, how as much service was restored as quickly as it was we'll never know. And maybe—just maybe—the telephone company some day will figure out how, with so many lines out, it handled a record number of both local and long-distance calls. Nor should it be forgotten how the city crews tackled, and licked, the tremendous task of clearing streets blocked with trees, wires, and storm debris of all kinds.

City and county forces couldn't do it all alone. They didn't have to. Doctors, nurses, and the entire personnel of Memorial Hospital responded to care for the heavy list of injured. The Red Cross was on the job, as usual.

All of these things done by all of these people were essential. But, alone, all they did could not get the wheels of the community turning again. For the amazingly quick return to what is close to normal business in many lines credit must go to all the builders, contractors, electricians and other outfits who call their crews together, put them on round-the-clock schedules, and got things done.

Under pressure—and let all be assured that the visitation and the aftermath of a tornado is pressure—people have been known to fall to pieces. That didn't happen here—to the contrary the people did better than they knew they could do in getting to work to put the pieces back together.

And, as a community, in such a time of emergency you don't only find out about yourself, you also find out about your friends, thank goodness, we have friends. The folks from Vero Beach, Stuart, and Okeechobee, were not only ready to help, they did help. They did not wait to be asked, they got on the job, sending men, and materials, and needed supplies. Even from as far aways as Orlando and Sebring came offers of help and aid. Should the need ever arise—and Heaven forbid that it does—may we, in turn, prove as good friends.

The outer scars of the tornado have mostly been erased. It will take more time to care for all the inner scars. But that will be done. The tornado did not destroy—it only tempered to a keener edge—the spirit of the community which knows only one way to go, ahead.

America Must Not Be Made Sitting Duck

EXTENSION OF REMARKS
OF
HON. ARTHUR V. WATKINS
OF UTAH
IN THE SENATE OF THE UNITED STATES
Wednesday, April 23, 1958

Mr. WATKINS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an excellent editorial entitled "America Must Not Be Made Sitting Duck," which was published in the Salt Lake Tribune on April 20.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Salt Lake Tribune of April 20, 1958]

AMERICA MUST NOT BE MADE SITTING DUCK

Foreign Minister Gromyko, of Russia, has accused the United States of being provocative, because American planes armed with atomic and hydrogen bombs have flown over the Arctic in the direction of the borders of the Soviet Union.

Russia demands that these flights be stopped.

In effect this is a demand that the United States cease being on the alert to counter a surprise Russian attack, while the Soviet Union remains free to prepare just such an attack.

Of course, this country is not going to let itself be talked into becoming a sitting duck target for Communist warmakers.

Now the Communists insist they are not warmakers. The cry of "peace, peace" echoes constantly from all the propaganda mouthpieces of Red nations. Mr. Gromyko sounded the same old cry in his attacks on the United States Strategic Air Command flights. He assailed those who have tried to frighten the American people into believing there was danger of a Communist-made war.

But nobody has to frighten the American people into such a belief.

Americans know the record of Communist warmaking all too well. They know about the rape of Estonia, Latvia, and Lithuania. They remember the unprovoked attack on little Finland. They recall the plot with Hitler to divide up Poland. They know about the Communist attack on South Korea. They know about Communist-fomented conflicts in China, in Malaya, and in Indochina.

The truth is Communists cannot be trusted. Their own actions, as well as their well-documented policies of deception and faithlessness, prove that.

America must be prepared to strike back unfailingly against a Russian surprise attack. And such preparedness requires nuclear-armed planes in the air, as well as ships at sea. Planes at their bases and ships at their docks are sitting ducks for sudden attack, as this Nation well learned at Pearl Harbor.

That must not happen again.

Now admittedly this constant readiness to attack Russia is a danger. Nuclear war might conceivably be triggered by accident. A more immediate danger is that a plane may crash or drop an armed bomb through some error.

The accidental dropping of an unarmed nuclear device over a South Carolina town last month brought that peril home.

The danger of accidental nuclear war is real. It must be recognized. It must be guarded against with every possible mechanical and human precaution.

But this Nation dare not substitute a real and present threat of American destruction for a potential but not certain threat of accidental nuclear bombing.

In the present state of world affairs America must remain prepared to counter surprise Soviet attack.

The United States is ready, however, to talk with Russia and other nations about the threat of accidental or deliberate nuclear warfare. And one cannot be discussed without the other. For it is the danger of surprise attack that is responsible for the danger of accidental nuclear bombing.

If the Soviet Union is really concerned about the accidental war danger, let it come to the United Nations Security Council meeting Monday prepared to offer some effective guaranties against a Soviet attack.

Russia's very protest emphasizes the need for such guaranties.

Russia likely knows what American defense forces are doing. But we know little about what Russian forces are doing.

We cannot know when a deadly strike might come. Therefore we must be ever on our guard.

Three years ago President Eisenhower offered his "open sky" inspection plan. As a protection against surprise attack it might have lessened the need for America being ever on its guard.

But the Soviet Union has scoffed at the plan—and offered no satisfactory alternative inspection plan of its own.

Perhaps the Security Council airing of this Russian protest about American bomber flights will bring the real issue of peace clearly to world attention. Perhaps it will even force Russia to face up realistically and honestly to inspection and disarmament problems.

And if that should develop, that long-debated conference might really be worth holding.

Time To Hone the Blade?

EXTENSION OF REMARKS
OF
HON. ROBERT W. HEMPHILL
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 23, 1958

Mr. HEMPHILL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Rock Hill (S. C.) Herald of April 18, 1958:

TIME TO HONE THE BLADE?

Now that President Eisenhower is showing more vigor about the Defense Department mess, we wish he would take a look at the State Department—which is in an even worse mess.

Secretary of State John Foster Dulles runs the show, and he makes sure that it's a one-man show.

The State Department has an array of experts and career diplomats who are highly qualified to analyze the political situation in any part of the globe. Does Dulles lean on the recommendations of these men? Does he take advantage of the brainpower and experience of the people who run the many divisions of the State Department? Far from it.

The situation has become so bad, in fact, that the heads of State Department divisions sit on the back row at Dulles' press conferences in order to learn what his policies are.

Perhaps the pressure of running a one-man show and trotting all over the world, briefcase in hand, has made Mr. Dulles testy. That seemed to be the case Tuesday when he exploded at a Washington news conference and charged the Russians with prostituting diplomacy for propaganda purposes. His personal blast gave no indication that Mr. Dulles is interested in diplomacy.

The Secretary of State has lost the play to the Russians and has slipped into the feeble position of reacting indignantly to everything the Soviets propose. In the delicate, razor sharp world of diplomacy, John Foster Dulles is getting a bit dull.

Why Iowans Chase Cosmic Rays

EXTENSION OF REMARKS
OF
HON. FRED SCHWENGEL
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 23, 1958

Mr. SCHWENGEL. Mr. Speaker, in a recent United Press article, Dr. James Van Allen of the State University of Iowa, one of America's leading scientists in the development and successful launching of our Explorer satellites, explained why so much time and money is being spent in studying cosmic rays. Because of the part this study will play in our conquest of outer space, I include this article in the Appendix of the RECORD:

WHY IOWANS CHASE COSMIC RAYS

(By Dr. James Van Allen)

IOWA CITY.—Like early experimenters in other fields, the upper air and space scientists don't know now what practical applications their findings will have.

Such predicting would be something like Benjamin Franklin offering the world the telegraph and telephone immediately after his explorations of lightning.

Michael Faraday, British pioneeer in the physics of electricity, had an answer for a member of parliament who came to his laboratory to find out what was practical about his work.

"I can't tell you what it will be good for," Faraday said. "But I'll tell you this. One of these days you'll be taxing it."

In 1831, Faraday discovered how to generate electricity by rotating a coil of wire within the field of a magnet. His discovery became practical 40 years later with the development of the arc-light dynamo, and machines to convert mechanical energy into electrical energy became major investments of taxable enterprises.

RAY RESEARCH IN INFANCY

It wasn't long ago that many people wondered why physicists were spending so much time and energy trying to split up those tiny atoms, things too small even to be seen in a microscope. Now, of course, atom-splitting is one of our major businesses, for peace as well as for war.

Cosmic ray and other upper atmospheric and space research is now in its infancy, like electromagnetism in Faraday's days of the 1830's and nuclear physics in the 1930's. We are now "crash programing" our efforts to grow in knowledge through several International Geophysical Year projects, using balloons, rockets and the Explorer satellites.

Cosmic rays possess enormous energy. They speed toward the earth with much more

zip than man has been able to generate in his most powerful cyclotron.

Cosmic rays, spawned both in the sun and in interstellar space, are natural "atom smashers," shattering both themselves and atoms of nitrogen and oxygen when they crash into the earth's atmosphere.

Because of their energy, cosmic rays have already taught physical scientists things which they could have learned in no other way. Some atomic particles, mesons, for instance, first identified about 20 years ago, were discovered when cosmic rays blasted them out of atmospheric atoms.

SATELLITES BROAD SWEEP

Cosmic rays at full strength can pierce several feet of lead or a hundred feet of water. But their energy is largely dissipated when they hit the atmosphere.

Therefore, we must send our detecting and measuring instruments up high enough to meet them before they are broken down from primary into secondary rays. Rocket flights are useful for quick vertical studies of these particles, but satellites provide a broad sweep of information over a long period of time.

In its cosmic ray experiments, the University of Iowa physics department is interested mostly now in charting how the intensities of cosmic rays vary from hour to hour, from month to month, and from year to year in the solar cycle.

Just as meteorologists have charted temperatures, wind speeds and other weather information at every possible latitude, longitude, and altitude, and at every hour and season, we hope to fill in some of the many gaps in mapping cosmic rays throughout the earth's immediate environment.

This detailed chartering of cosmic rays should lead to detailed plotting of the effects of the earth's magnetic field on outer space and to further correlations.

McElroy's Powers

EXTENSION OF REMARKS
OF
HON. ROBERT W. HEMPHILL
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 23, 1958

Mr. HEMPHILL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Gaffney (S. C.) Ledger of April 19, 1958:

MCELROY'S POWERS

The illogical way we go about running our Defense Establishment is typified by the mystery on Capitol Hill about the broad new powers being proposed for Secretary of Defense Neil McElroy. This is the reorganization plan promised the American people by President Eisenhower in January—when the public in this country was thoroughly alarmed over our lag in the rockets and missiles race.

Now the new plan is being proposed in Congress—a plan which was partly formulated by the new Defense Secretary himself. Knowing that he helped create the plan, one would hardly think his powers of office were to be lessened.

In addition to that, there is the unreal element involved as a result of McElroy's newness in his all-important job. Granting the fact that he was a good soap industry executive, it must be admitted that he has not been Secretary of Defense long enough to show what he can or can't do.

Yet we are ready to turn over the greatest department in the Government to this relatively untried business executive. It is difficult to believe that Congress will resolve concern over our defense program by going along with the administration's plan to enlarge the powers of the Defense Secretary who is a newcomer on the scene, so to speak.

What we really need is unification—something Congress tried to provide 10 years ago, and which has never yet been accomplished. There is still that jealous schoolgirl mentality in every one of the armed services, and the old-timers are more guilty than the youngsters, in most cases. The result is waste, overlapping and inefficiency. The waste is worst of all and staggering in scope.

Health and Welfare Trust Funds

EXTENSION OF REMARKS
OF
HON. HENRY M. JACKSON
OF WASHINGTON
IN THE SENATE OF THE UNITED STATES
Tuesday, April 22, 1958

Mr. JACKSON. Mr. President, we of the State of Washington are proud that not one hint of scandal has arisen in connection with the administration of health and welfare funds in our State.

The Journal of Accountancy recently saw fit, in its January 1958 issue, to feature an article by Mr. Percy A. Lockitch, a certified public accountant practicing in Seattle, reporting on health and welfare programs generally and in the State of Washington in particular. Mr. Lockitch is a graduate of the University of Washington and has practiced as a CPA in that State for more than 20 years. His article contains excellent advice on the administration and auditing of these plans, and makes timely reading for the Congress at a time when new legislation in the labor field is before us.

I should particularly like to emphasize that portion of Mr. Lockitch's article which deals with how the Washington State Federation of Labor, headed by Mr. Evan M. Weston, spearheaded the State law requiring the filing of an annual report with the State Insurance Commissioner and an audit by the insurance commissioner's office at least once every 5 years.

Mr. Weston, incidentally, now serves as president of the merged AFL–CIO Washington State Labor Council.

This is dramatic evidence that responsible union leadership is eager to see that health and welfare plans are administered properly, and I am proud that union leadership in my State has led the way. The final paragraph of Mr. Lockitch's article also deserves special emphasis. I ask unanimous consent that the article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

AUDIT AND TAX PROBLEMS OF HEALTH AND WELFARE FUNDS

(By Percy A. Lockitch)

Union-employer health and welfare trust funds have been very much in the news these past few months. It is the intent of this article to discuss the mechanics of these trusts, the accounting and the audit problems involved, and the tax situation confronting these trusts.

The Labor-Management Relations Act of 1947, referred to as the Taft-Hartley Act, requires in effect that a welfare trust fund contributed to by an employer as a result of collective bargaining shall be administered jointly by management and labor. This same section of the Taft-Hartley Act (302) contains the provision that an annual audit of the trust is required and shall be made available to interested persons at the principal office of the trust fund. No particular audit problem presents itself with single employer welfare funds managed by the employer. This article concerns itself with those health and welfare trust funds jointly administered by labor and management.

This is not to be construed as though management-administered funds should not be audited. Indeed, all health and welfare funds should be audited, since mismanagement and abuses can be found at any level, whether union, management or jointly administered. The challenge to an auditor in the main lies in multiemployer health and welfare trusts jointly managed by labor and industry.

These health and welfare trust funds were established through the medium of collective bargaining. In most instances labor had the opportunity of either accepting 7½ cents to 10 cents per hour for wage increases, or that amount for a health and welfare trust fund. So far as take-home pay is concerned the health and welfare trust fund proved to be the better bargain, since the trust can be tax exempt under code section 501 (c) (9). The employer's contributions are deductible by him under code section 162 (a)—necessary business expenses. The employer's contributions are not includable in the employee's gross income under code section 106, which section provides with reference to accident and health insurance that gross income to the employee does not include contributions by the employer to accident and health plans for compensation to his employees for injury, sickness, etc. This provision of the code also applies to hospitalization, medical, and surgical insurance for the families and dependents of employees.

Most of these jointly administered health and welfare trust funds are set up on an area craft basis. That is, each craft in a defined area will set up a separate trust for that area. An example would be a carpenters trust embracing all the carpenters in the San Francisco-Oakland area. All signatories to the labor contracts with the carpenter unions in that area would make contributions for their employees to that particular trust. It can be seen that in a metropolitan area there could be several thousand employer contributors making contributions coverings tens of thousands of employees.

Based on the latest membership figures this writer has seen on the various craft unions such as the construction crafts, machinists, and teamster trades, etc., a conservative estimate would be that several million employees are covered in health and welfare trust funds that are jointly administered by labor and management. A further conservative estimate would be that hundreds of millions of dollars a year are paid into these funds by managements for the benefit of their employees.

As of the date of this writing there are no compulsory reporting laws on the Federal statute books. It is possible that the next session of Congress may see compulsory reporting laws at the Federal level enacted.

The State of Washington has a compulsory financial reporting law in its statutes, enacted in 1955, which requires the filing of an annual report with the State insurance commissioner and an audit by the insurance commissioner's office at least once every 5 years.

It may be stated that a labor organization—the Washington State Federation of Labor—was instrumental in drawing up this piece of legislation and successfully guiding it through the legislature. It is the writer's understanding that the State of New York has enacted similar legislation recently, and that Connecticut and California are considering legislation along these lines.

ROLE OF THE TRUSTEE

When a jointly administered trust fund is established, trustees are first selected, an equal number from management and labor. It is unfortunate that some of the trustees either forgot, never knew, or did not attempt to find out what the definition of "trustee" is. These trustees take on the same degree of responsibility as do any other trustees of an organization such as a mutual life insurance company, and the responsibility follows on through the insurance broker, insurance consultant, and insurance carrier. This is occasioned by the fact that the trustees themselves are usually not versed in insurance matters and must of necessity rely heavily on the advice and counsel of brokers and carriers.

Since personal liability can attach to the trustees, it would be prudent for trustees to review their position as such and decide for themselves whether, through nonattention to trust matters or disinterest in the trust, they may have left themselves wide open for damage suits. It could also be an opportunity for trustees to mend their ways if mending is needed.

The trustees at an early date should, with the guidance of competent legal counsel, have a trust agreement drawn up. It is important that competent advice be obtained on the insurance, administrative and income tax details that the trust will encounter.

RULES OF ELIGIBILITY

The rules of eligibility should then be drawn up, but only after a careful study of the amount of funds that will be available, the ages of the employees, the proportion of male and female employees, the insurance coverage desired and the cost thereof, and the reserve that must be maintained. This reserve becomes of increasing importance where an hour bank is maintained. The rules of eligibility may provide for coverage based on hours worked in a month, quarter, or on a semiannual or annual basis. * * *

It is apparent then that the trustees should periodically review the liability for future premiums, and compare it with the reserves that have been accumulated. It may become necessary to revise the rules of eligibility, increase the employer's contributions or reduce the coverage, in order to match the future liability with the reserve. It is better to do this timely than to make the attempt after the trust is in financial difficulty.

Among the early duties of the trustees is the selection of a depository for trust funds and the selection of an administrator. The administrator can be a management representative, a union representative or an independent agency. The writer's preference is the independent agency not beholden to either labor or management. Recently trust departments of commercial banks have set up facilities for administering these funds, in connection with the pension trusts they also administer.

Among the duties of an administrator are the establishment and maintenance of the complete financial and accounting records for the trust. * * *

SUGGESTED AUDIT PROGRAM

Since there has been a great deal of criticism leveled at health and welfare trust funds, it is the writer's belief that an audit for such trusts must be more detailed in scope and positive in confirmation of all balance-sheet items than audits for commercial and industrial enterprises. The following audit program could reassure the trustees, the trust members, and the employer contributors that the fund is being properly maintained:

1. There should be direct positive confirmation with all employer contributors. This should be in the form of a letter stating the total amount of the employers' contributions during the year under review, and either an adding machine tape showing the monthly contributions or a tabulating machine listing of these contributions attached to it. The letter should leave space for a contributor to state his objections to the amount listed if it is incorrect. A self-addressed stamped envelope should be included with every confirmation. All confirmations returned which are not in accord with the records should be investigated. This procedure is valuable for two reasons:

(a) Since there has been criticism leveled at these funds, every contributor should be apprised of the fact that all his contributions are properly accounted for.

(b) Many employers, particularly in the construction crafts, make payments to as many as 12 different trusts. Through the medium of positive confirmation it has been the writer's experience that payments have been made to the wrong trust by the bookkeeping staff of the employer. It is thus possible that bona fide employees do not earn eligibility in either fund for which payments have been made for them, while in reality they are entitled to coverage had an error not been made. As stated, positive confirmation of employers' contributions remedies in part these errors.

2. There should be direct confirmation with all depositories that all bank accounts owned by the trust are in accord with the records.

3. There should be physical inspection of all securities owned by the trust, and cost values should be checked as of the date of purchase, to assure that the proper price has been paid for these securities.

4. All interest from savings accounts should be proved, and it should be ascertained that all dividends and interest from securities have been received and properly accounted for.

5. There should be direct confirmation with insurance carriers to account first for the amount of premiums paid to the carrier, second the extent of participation by insurance brokers or agents in commissions paid by the carrier as a result of trust business, and third the amount and computation of the experience rating dividend, if any, received by the trust. If possible a fee schedule of the carrier should be obtained and should be included in the audit report, so that the trustees know exactly the basis for commissions paid to the broker or agent.

6. There should be direct confirmation with all brokers to ascertain that no fee-splitting has been resorted to or inside deals made.

On the surface, points 5 and 6 may appear somewhat difficult to obtain. In many audits performed by the writer only one broker balked at giving the information requested. He complied when it was pointed out that his reply would be made part of the audit report and would be accompanied by a request to the trustees to probe the matter. In the main, both brokers and carriers welcome the opportunity to divulge brokerage arrangements. It is possible that they may not confirm truthfully, but at least the auditor will have done all he possibly can to determine the facts in these important facets of a health and welfare plan.

7. If there is a change in carriers during the year the auditor should investigate the reason for the change, since first-year commissions are usually higher than subsequent years.

8. The auditor should thoroughly check at least 3 months' eligibility records to ascertain that premiums had been paid only on those trust members entitled to insurance coverage.

9. All administration fees paid during the year should be proved.

10. The bank accounts should be reconciled for all months for the entire year. Canceled checks should be scrutinized to make sure that they are being signed by authorized persons. Usually one employer and one employee trustee are entrusted with the signing of checks. Endorsement of checks should also be examined.

11. There should be examination of all expense vouchers and authorizations for payment to determine that these expenses were actually trust expenses.

12. The usual checking, reconciling and verification that would develop during the course of any audit should be performed.

13. The trust agreement should be read or reread in the case of subsequent audits. The trustees' minutes should be read in their entirety to ascertain that the trust business is actually carried on in accord with the trust agreement and the minutes of trustees' meetings.

14. The adequacy of all fidelity bonds covering the administrator and the trustees should be checked.

15. Form 990—Annual Return of Organization Exempt From Tax—should then be prepared if the organization has been granted exemption, or Form 1041—Fiduciary Income Tax Return—if the trust has been denied exemption. The auditor should then prepare financial statements and an audit report for the period under review. * * *

AUDIT REPORT

The auditor should use a long-form audit report and apprise the trustees of the work he has performed and his findings. The statements should include a balance sheet, an analysis of the net worth or surplus account, and a statement of receipts and disbursements for the period under review. It has been found helpful to the trustees to include also a statement of receipts and disbursements for all years the fund has operated up to 10 years. It may also be helpful if a statement showing the liability for unpaid premiums to be paid based on eligibility of members on the audit date, is provided. This can be obtained through sampling (possibly 10 percent) of the employees' eligibility accounts. There should be notes to financial statements that are prepared on a cash basis of accounting, similar to the following:

1. All administration fees due and unpaid as at the audit date should be mentioned.

2. A statement regarding the delinquency of employers' payments, if any, and that liability for premiums might possibly attach to these delinquencies.

3. A statement to the effect that since the policy year does not correspond with the accounting year (if such be the case) it is not possible to determine whether an experience rating dividend for favorable experience will be forthcoming from the carrier.

4. A statement that there is a substantial liability for premiums to be paid subsequent to the date of audit, but which will be based on trust members' eligibility which had been paid for before the audit date.

5. A statement to the effect that securities are carried for balance-sheet purposes at cost, and that in the case of certain government securities, notably series K bonds, the bonds are redeemable at a price less than cost if they are redeemed before maturity.

Summing up the audit procedure, it can be seen that the receipts have been verified in their entirety, and all disbursements have been properly accounted for. The report will tell the trustees in detail about the financial status of the trust.

TAX PROBLEMS

After a health and welfare trust has been in operation for a full year it is possible to obtain exemption from income tax by filing an application (Form 1026) with the Commissioner of Internal Revenue at Washington, D. C. Accompanying the application there must be an executed copy of the trust agreement, an audit report for the first full year of operation, and a schedule of benefits that the members of the trust enjoy. If exemption is granted under code section 501 (c) (9) the trust will file annually on Form 990. If exemption is denied the trust will file Form 1041, Fiduciary Return.

Most trust agreements provide for coverage of associate employees, which term undoubtedly includes salaried personnel. Many trusts' agreements contain the following clause describing associate employees: "The term 'associate employee' shall mean (a) individual proprietors, partners, or corporate officers of individual employer contributors who are actively engaged in the affairs of the business of the individual employer and for whom the contributions as provided by this trust agreement are made for the purpose of providing such persons with the benefits set forth in this trust agreement." Section 501 (c) (9) of the Internal Revenue Code of 1954 provides that a health and welfare fund, in order to obtain exemption, must meet three basic tests, namely:

1. It must be a voluntary association of employees organized for the purpose of providing for the payment of life, sickness, accident, or other benefits for its members and their dependents.

2. No part of its net earnings may inure to any private shareholder or individual, other than through the payments of the prescribed benefits.

3. At least 85 percent of its income must be derived from amounts collected from members and amounts contributed by their employers, and not more than 15 percent of its income can be derived from other sources.

Practically all trusts which had a provision in their trust instruments containing the above clause, and who filed for exemption before 1955, were granted this exemption. Practically all trusts whose agreements contained this clause regarding associate employees who filed for exemption subsequent to 1954 were denied exemption on the basis that individual proprietors or partners cannot belong to a voluntary association of employees, for the reason that they are not employees. The following quotation from a denial of tax exemption issued by the Treasury Department will illustrate: "The Internal Revenue Service takes the position that a strict interpretation of the law which relates to the exemption from Federal income-tax organizations described in section 501 (c) (9) of the code of 1954 is mandatory. It follows, therefore, that the inclusion of employers as members of a voluntary employees' beneficiary association would preclude exemption for the reason that they would not meet the first of the three basic tests" (outlined above). In every instance where tax exemption has been denied the Treasury Department offers two suggested courses of action, namely:

1. The trust agreement can be amended by eliminating individual proprietors and partners as participants, or

2. Filing a protest which can be heard only in the national office at Washington, D. C.

The smaller trusts with very few individual employers or partners have successfully eliminated this class through amendment of the trust agreement and have thus obtained tax exemption. In many of the larger trusts this has proved not feasible or possible. * * *

To the writer's knowledge no protests have as yet been heard, and no hearings have been held toward an issuance of regulations governing section 501 (c) (9) of the Internal Revenue Code of 1954. Note that the exemption denials have been made in a strict interpretation of the law, and it is possible that a more liberal interpretation could rule that self-employed individuals or partners could contribute to such a fund on the same basis and for the same reasons that self-employed individuals cover themselves under the social-security laws.

This income-tax exemption denial brings up several problems in connection with trusts which have already been granted exemption and whose trust instruments contain substantially the same wording as those for which income-tax exemption was denied, namely:

1. Will the Treasury Department revoke the exemption granted upon a rereading of the trust agreement?

2. Will the Treasury Department revoke the exemption if the trust innocently accepts contributions from an individual proprietor or partner?

3. Will revocation of tax exemption follow if an unemployed member of the trust pays into the trust a sufficient amount to keep his coverage alive while he is unemployed?

These questions have been asked but have not been answered by the Treasury Department. For those trusts that have had tax exemption denied a further problem presents itself in the question as to what constitutes taxable income, and what deductions may be taken from this taxable income. At the very worst it can be held that all receipts from employers' contributions and all experience rating dividends from the health care contractor, coupled with investment income, constitute taxable income. At the very best taxable income could be investment income only, with a deduction for those expenses applicable to that income, such as investment counselor's fees and accrued interest purchased.

In a ruling dated April 10, 1957 the Director of the Tax Rulings Division helped solve this problem. He stated that "the contributions required to be made pursuant to a labor contract by the employers to a trust (reference is to health and welfare trusts) of this nature are regarded as contributions of corpus to the trust and would be excluded from gross income of the trust.

"Receipt of so-called dividend payments by the trust from the insurance companies as a result of favorable loss experience by the companies is considered a receipt in the nature of a refund or rebate of excess premiums paid by the trust, and not of gross income, provided the expenditures to acquire the insurance did not result in a tax benefit to the trust by reason of an allowance of a deduction therefor."

It follows that since the experience rating dividend and the employers' contributions are not considered taxable income the only remaining source of income would be investment income. The extent to which trust expenses may be deducted from this income is still a problem.

EXPERIENCE WITH WELFARE TRUSTS

There has been much unfavorable publicity regarding health and welfare trust funds. It has been the experience of the writer and auditors throughout the country that these funds are exceedingly well managed and that the trustees on both labor and management sides are exceptionally capable and honest individuals. They work hard and sincerely for no recompense. It is regrettable that an occasional lapse of morals on the part of some individual or corporation can give rise to such unfavorable comment and cause doubt as to the operation of all health and welfare trust funds.

Never Underestimate the Power of the Female

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 23, 1958

Mr. PORTER. Mr. Speaker, special honors came last week to two staff members of the Medford, Oreg., Mail Tribune—both were women.

The fact that women play an important role in the worlds of radio, television, newspapers, and allied fields is not news anymore. But the Mail Tribune's religious news editor won a coveted national award, 1 of 3 given nationally by the Association of Professional Religious Public Relations and Publicity Personnel.

And the skilled society editor again won statewide recognition in the competition sponsored by the Press Women of Oregon for her column, potpourri, for her Sunday society page and for a feature story. Her column will be entered in national competition.

How do the men feel about these award winners? My good friend, Managing Editor Eric Allen, Jr., sums it up in his editorial, Our Prizewinning Ladies, which appeared in the April 18, 1958 edition of the Mail Tribune.

What placed the small Oregon daily in the national eye for its religious news coverage? The reasons are the people involved: Miss Hutchinson and the men and women of the Medford area. This became apparent in the April 18, 1958, story which follows the editorial. Under leave to extend my remarks in the RECORD, I include both and commend the Mail Tribune, its capable editor Robert Ruhl and its staff, female and male for these latest honors which come to a newspaper already long noted as a Pulitzer Prize winner:

OUR PRIZEWINNING LADIES

The men in the newsroom bow to the ladies this week. We're proud of our gals.

Each of the 2 women regularly employed in the Mail Tribune news department has won a high honor for herself, and thus for the newspaper, during the week.

Mrs. Olive Starcher, our women's editor, pulled a repeat performance, and again won honors in the statewide competition of the Press Women of Oregon—for her column, for her Sunday society page, and for a feature story. Her column will be entered in national competition for excellence.

And on page 1 today is announced the fact that the Mail Tribune has won an award of merit from the National Religious Publicity Council, 1 of only 3 in the Nation.

The award is chiefly—almost entirely, in fact—due to the efforts of our church editor, Miss Peggyann Hutchinson.

Peg has taken a real and sincere interest in the work of reporting the religious news of the community, and has worked hard at it. The samples of her work which were sent in to the NRPC competition gave ample evidence that she has provided the Mail Tribune with rounded, interesting and complete coverage of the news of the churches in Medford.

Like every other working newspaperman, or woman, on a small daily paper such as the Mail Tribune, both Mrs. Starcher and Miss Hutchinson have a multitude of duties and tasks.

Miss Hutchinson, for instance, assists Mrs. Starcher in writing stories for the Sunday society section, in laying out the pictures for the section, and in the coverage of some social events. She is also a regular reporter for the paper, covering both the city hall and the courthouse at various times during the week. She has covered public hearings as well as church conventions; criminal trials, as well as weddings; new commercial construction, as well as new church buildings.

Mrs. Starcher, likewise, does a job that goes much further than is implied in her formal title of society editor, which really is a title which is more and more meaningless as the interests of women broaden in today's world, and encompass politics, music, drama, international affairs, the arts—anything, in fact, which occupy the time and attention of well-informed people.

The society section—or women's section, as some prefer to call it with perhaps greater accuracy—has long been a regular part of most daily newspapers.

On the Mail Tribune, as it has grown, the women's section under Mrs. Starcher's guidance has grown too, and now on a regular basis covers far more than the parties of "the 400," the current weddings and engagements, or the activities of the lodges and clubs of the city—although these are not skimped, either.

Her Sunday picture pages have covered a wide variety of subjects, from wild flowers to water skiing, and from homemaking to the activities of the great decisions groups.

The church section is relatively a more recent development. And on the Mail Tribune, only in recent years has it had the growth to which we feel it is entitled—representing, as it does, a major area of interest and activity for an increasing number of our readers.

At the ceremony in New York last night at which Miss Hutchinson accepted the award for the Mail Tribune and a citation for herself, a brief message from the newspaper, outlining its beliefs about religious news coverage, was read. It said:

"A good newspaper is, in effect, a mirror held up to the face of the community it serves. It prints the news—which is to say that it tells the story of what happens to people, and what people do, what they think, what they believe, and what they hope.

"An important part of this responsibility to mirror the community is the obligation to report the spiritual life of the community, largely through the activities of its religious institutions, for they are the outlets through which people give expression to their religious beliefs.

"We plan our church coverage in the belief that church news is, in truth, news; that it should extend beyond the simple listing of services and sermon topics, and that our readers are better served when we make the effort to make religious news coverage a significant part of our day-to-day operation."

We are proud of our girls. They certainly deserved the awards they have received.

We are equally proud of the people who work, mostly anonymously, to turn out the other parts of the paper—the sports pages, the farm page, the general news pages for both local and telegraph news.

It is no secret that we make mistakes, both of commission and omission. But that is true of all newspapers, despite the most conscientious efforts to avoid them.

What this editorial is all about, really, is to say that it is the constant endeavor of the Mail Tribune to bring its readers the best, most complete, best-written and best-edited paper it is within our power to produce.

When our people win awards such as those which Mrs. Starcher and Miss Hutchinson have won, we are delighted, pleased, and proud.

But our objective, of course, is not to win awards—it is to bring our readers a constantly improving daily newspaper.

E. A.

"PEG" HUTCHINSON GIVEN HONOR AS RELIGIOUS WRITER—WRITER IN NEW YORK TO ACCEPT AWARDS

The Mail Tribune last night was presented with an award of merit for distinguished coverage of religious news during 1957.

The award was one of three presented. The others went to the Detroit (Mich.) Free Press and the United Press Association.

The award was presented at the Riverside Church in New York City, and was accepted by Miss Peggyann Hutchinson, church news editor for the Mail Tribune, who herself was cited for "her extremely fair, accurate, and complete reports of religious activities in the Medford district," which have "won for her the confidence of ministers and all church people in the Mail Tribune's circulation area."

CASSELS RECEIVES AWARD

The awards were presented by the National Religious Publicity Council at the 29th annual convention of the Association of Professional Religious Public Relations and Publicity Personnel. Receiving the award for the United Press was Louis Cassels, of Washington (whose byline has frequently appeared in the Mail Tribune), and for the Free Press, the award was received by Adrian Fuller, religion editor.

The Mail Tribune's citation said:

"The Medford Mail Tribune is known for its high standards of professional journalism not only throughout its home State of Oregon but throughout the Nation. In 1934 it received a Pulitzer award 'for the most disinterested and meritorious public service rendered by any American newspaper during the year 1933.' It has always maintained the high caliber of reporting and editorializing which won for it that most respected of journalism awards."

SHOWN BY REPORTS

"Part of the public service rendered by the Mail Tribune is the unfailing attention it pays to news of the activities and interests of all religious organizations in Jackson County. This is shown by its full reports on through-the-week events in the life of the county's 80 churches, the considerable space given each Friday to stories and photographs concerning local religious activities, and the regular reporting of the wider State and national affiliations of Jackson County church men and women.

"Because the Medford Mail Tribune has an established policy of portraying reverently and completely the principal religious festivals and events important in the life of its community, without neglecting the wider national and world setting of these events, the National Religious Publicity Council presents to it this award of merit."

DEDICATED WORKER

Miss Hutchinson's award said:

"Miss Peggyann Hutchinson combines, to an unusual degree, the qualifications making for a superior type of religious news writer. She is, first of all, a dedicated church worker, a Sunday-school teacher, and a faithful member of her congregation. As a devoted Christian she brings to her journalistic tasks the insight, sympathy, and understanding which gives an added dimension to her news stories.

Her wide experience as a journalist with the United States Navy for 4 years and broad educational background in news and communication techniques, including radio and television, has given her an exceptional preparation for her present service as religion editor of the Medford (Oreg.) Mail Tribune. Her extremely fair, accurate, and complete reports of religious activities in the Medford district have won her the confidence of ministers and all church people in the Mail Tribune's circulation area.

"Because her personal efforts and professional dedication to her work as a daily journalist have contributed immeasurably to the understanding and knowledge which readers of the Mail Tribune have of religious affairs, the National Religious Publicity Council is honored to receive her as a fellow of this council."

FLEW TO NEW YORK

Miss Hutchinson flew to New York to receive the award, and will return next week. She is the daughter of Mr. and Mrs. Ansley E. Hutchinson, 912 South Holly Street, Medford, and is a member of the First Presbyterian Church here. She has been with the Mail-Tribune since 1956.

The citation to the United Press read, in part:

"Through its assignment of its most respected and experienced writers to cover events important in the life of religious groups, the United Press has shown that it regards religion as an integral aspect of modern life, which cannot be separated from the other affairs of men."

The citation to the Detroit Free Press noted that the newspaper "has earned for itself an honored place on the growing list of American daily newspapers which are giving religion the high place it deserves in their news and editorial columns."

Unsolved Problems of Natural Resources Management

EXTENSION OF REMARKS
OF
HON. RICHARD BOLLING
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 23, 1958

Mr. BOLLING. Mr. Speaker, as human population grows and the economy expands, the wise use of natural resources becomes increasingly the concern of all thoughtful citizens. This is evident to Members of Congress not only in the volume of legislation involving resource management, but also in the fact that more and more frequently we are hearing from our constituents about conservation matters.

Under leave to extend my remarks, I wish to direct the attention of my colleagues to a clear-visioned speech delivered by Mr. William E. Towell, director of the Missouri Conservation Commission, at the 23d North American wildlife conference held March 3 to 5, 1958, in St. Louis, Mo. Mr. Towell, a native of St. James, Mo., is a career conservationist. After 20 years with the Missouri department but while yet a young man, he is gaining distinction as an able administrator and leader among that growing body of professionally trained people who man our State and Federal conservation agencies. America is fortunate to have these dedicated public servants.

Speaking before the conference which annually is the largest assembly of conservation leaders and workers on this continent, and probably in the world, Mr. Towell made clear that resource waste is an uncured cancer eating at the

vitals of America. I commend to you his thoughtful and forceful address:

NATURAL RESOURCES GOING OUT THE WINDOW

(By William E. Towell, director, Missouri Conservation Commission)

"Going out the window" is a phrase that has developed specific meaning through usage. It implies waste. It signifies the act of throwing things away, never to be regained. The title of this paper, therefore, suggests that we are destroying our natural resources. In case there be any doubt, I think we are destroying them. According to the laws of physics, matter cannot be destroyed—only changed in form. But if the new form is not more beneficial to society than the original form, then there is a loss—not to matter, perhaps, but to mankind. At the very best, we are not getting wisest use for the greatest number.

The fight for conservation can never be relaxed, and we must direct the fight. Our enemies are greed, selfishness, apathy—and ignorance. Some of the most appalling misuses of natural resources are perpetrated under the banner of conservation. Even in apparently legitimate conservation projects, we may close the windows of waste to open larger doors of destruction. We must consider 1978 as well as 1958; we must consider the whole complex of human use instead of the individual project.

We cannot possibly consider all natural resources in the time allotted to this panel; I can only attempt to highlight a few that most demand we close the windows of waste. In our minds we must still reserve room in which to consider long-range effects of atomic radiation, of air pollution and of powerful new pesticides on both man and wildlife. But for now, let us consider some of the windows where the forces of conservation can best stop the wastage of natural resources.

Soil and water are the two most basic resources of life. You and I know this; we have repeated it over and over again. But how many people really recognize the obvious fact that man, no less than all other members of the plant and animal kingdoms, is utterly dependent upon the availability of soil and water in sufficient quantity and quality. Civilizations and cultures die when these resources are exhausted or even degraded. We need only look back into the history of northeast Africa or southeast Asia for the proof. Lands once prosperous are now sterile deserts. Though science today can transform seemingly abundant resources into food, clothing, and shelter—and probably more ways will be found to produce these essentials synthetically—our ultimate survival still rests with water and the soil. We had best not assume that science will save us; science can also destroy us.

Soil resources are going out the window: agricultural production in America is not geared to the food requirements of the Nation, but to the competition for wealth. Subsidies to maintain guaranteed higher prices stimulate greater production—not for food but to add to growing surpluses. Again and again our western wheatlands are lifted by the winds to darken the eastern skies—just to produce crops that are not to be eaten. Acreage allotments encourage the farmer to grow uncontrolled crops or force greater production from fewer acres. In any case, our soil is the poorer.

We read that millions of tons of topsoil are deposited in the Gulf of Mexico every year, (and you almost can see the earth's passage from your hotel window). Yet what percentage of Midwest farmlands are protected by terraces, contouring, and grassed waterways? The size-supremacy of Texas may be threatened by the growing delta of Louisiana (if you'll pardon a minor exaggeration for emphasis), but I think you will agree our soil resources are going out the window.

Water resources, too, are pouring over the sill. One of the few things keeping pace with the population surge of the United States and Mexico, and possibly Canada, is the consumption of water. Water tables drop lower and lower as the demand goes up and up. As water supplies grow less in critical areas, which needs will suffer most? Will the greatest good for the greatest number determine priorities? And who will decide where the good and number are to be judged? Already these questions are acute in some localities—but they remain unanswered. Antiquated water laws, or the absence of any controls at all, threaten wildlife and recreational interests. Fishing and recreation were ruled out as greatest good for the greatest number at the John Martin Reservoir in southeastern Colorado. Under the prior-appropriation doctrine, floodwaters stored in the reservoir had to be released when irrigation demands imposed their prior rights. Will obsolete laws influence court decisions and new legislation in States just beginning to face up to their water problems?

Shortages in critical areas and conflicting interests in use are only two phases of our water concern. A growing problem, along with a booming population and industrial expansion, is the abuse of water that makes it unfit for further use—pollution. In spite of Federal and State pollution control legislation, many streams throughout the Nation are simply open sewers. It seems barbaric that in 1958 a civilization such as ours can still foul its nest by dumping poisons into its streams. The water we drink in Jefferson City comes from the sewers at Omaha, St. Joseph, and Kansas City. Municipal and industrial wastes, dumped raw into stream channels, constitute one of conservation's greatest challenges: not only as an enormous public health problem but as a serious waste of fish, waterfowl and recreational resources.

Only a determined fight in the last session of Congress kept pollution control appropriations in the budget. Even a greater fight looms ahead, because the President has told Congress that this program should be discontinued entirely after the next fiscal year—although the bill for navigational development on the wild Missouri River was much higher than the water-pollution money for all rivers. For every barge on the Missouri, a half-million people must drink from it. Our fight for water is only beginning. Conservationists will face determined opposition from shortsighted industries and municipalities before the trend is really reversed.

A more insidious situation has become apparent lately, since industry has become public relations conscious. Knowing it dare no longer openly oppose pollution control measures, industry often joins the fight to shape legislation that is so watered down as to be scarcely effective, and conservation wins a hollow victory. By and large, the only forces openly opposed to pollution control are large municipalities which fear tax rises should pollution control become a reality. We can deal with opponents—but who will save us from our "friends"?

Constant vigilance is required to gain recognition of wildlife and recreation values for the public in flood control, irrigation and hydroelectric impoundments built with that public's money. Government ownership of shorelines has been forcefully advocated by conservationists, just to insure that the paying public may have access to these lakes. Previously Federal agencies had adopted a policy of only partly controlling lake shores under flooding easements. Proposed amendments to the Federal Coordination Act of 1946 would require evaluation of wildlife and recreation gains or losses before any new projects are authorized. These amendments would also require appraisal of the effects on these resources for impoundments previously authorized but not yet started. These changes are of utmost importance to all wildlife conservationists—but they will require a fight for the public interest.

In a determined battle, conservationists have so far blocked appropriations for the proposed Bruces Eddy Dam on the North Fork of Idaho's Clearwater River. This big flood control—hydroelectric project would stop spawning salmon and steelhead trout from migrating to one of their biggest breeding areas and would flood a major winter feeding range of elk and deer. In 1955 Congress authorized studies of the effect of this impoundment upon fish and game resources but proponents are unwilling to wait for the results of these studies. Some of the impoundment's opponents urge construction of Hell's Canyon Dam on Snake River as an alternate to Bruces Eddy that would not be so destructive to wildlife. Basically, this fight is for more than fish and big game—as most such struggles are. It involves major political issues and the battle between public-power and private-power factions. But fish and game conservationists must be ready to rally against this or any other threat to these resources or out the window they will go. Wildlife cannot be isolated from land and water decisions.

Another battle is being waged in the marshlands and in the pothole country to save waterfowl from threatened destruction. Northern nesting potholes are disappearing at an alarming rate under the stimulus of agricultural subsidies so that crops may be raised to go uneaten both in the United States and in Canada. Marshes and swamps along the flyways are being drained constantly for agricultural and industrial developments. The rate of waterfowl habitat loss far exceeds the rate of wetland acquisition by Federal and State agencies. Ducks and geese are flying out the window because there are fewer places for them to rest, feed, and breed. Meanwhile, the places left for waterfowl are under attack by agricultural forces because ducks and geese eat nearby grain—grain already in surplus supply.

We argue among ourselves on how to finance this urgent program of wetland acquisition: That is, how we can supply with the right hand what the left hand is taking away. The need for increased Duck Stamp fees is generally agreed upon, but we do not agree upon a sufficient amount to reverse the drainage trend. It is our job, if we are to promote wildlife conservation, to convince the sportsmen that they will have to pay the costs necessary to preserve these resources. We cannot afford to make this another feeble attempt of "too little and too late."

Wetland needs of waterfowl should receive primary consideration in planning of all large impoundments. The proposed Kasinger Bluff Reservoir in western Missouri, for example, could become a major waterfowl haven, without lessening its effectiveness for flood control. But multiple uses and secondary benefits such as this must be recognized and included in the early planning stages of water developments.

It is difficult, and perhaps unwise, to separate those resources actually going out the window from those that are being pushed dangerously close to the ledge. There are constant threats by private interests seeking to gain control of public forests and recreation areas for purely personal gains. Grazing interests never abate their longing to acquire control of Federal rangelands. Lumbering interests covet all remaining virgin timber under Government control. Fish, game, and recreation values have to withstand the determined competition of mining claims, oil leases, inundation, or the clutch of the military for airfields or bombing ranges. The

defensive struggle to maintain a sane balance never ceases.

Forest resources cannot be separated from the soil, from flood control or water storage, from wildlife or recreation. All are interwoven into a complex ecological pattern, and when one thread is broken the whole fabric begins to unravel. But in many ways forest resources, too, are making dramatic exits out the open windows. According to Timber Resources Review (U. S. Forest Service, 1955), fire is potentially the greatest forest enemy—but in 1952 insects killed 7 times as much sawtimber as fire did, and disease killed 3 times as much. Together these 3 destructive agents killed nearly 13 billion board-feet of sawtimber in 1 year. Perhaps of greater significance is that these losses amounted to 44 billion board-feet of potential growth.

Even though fire losses in our forests are now greatly exceeded by losses from insects and disease, this does not mean that fire protection activities can be relaxed. Expansion of fire-control efforts is needed everywhere, particularly to areas now lacking organized protection, for fire still remains the greatest potential enemy. But our new challenge is primarily one of organized protection from other forest enemies, principally insects and disease. And I think we must face up to our wasteful methods of forest utilization. Of every 4 cubic feet of timber cut, 1 cubic foot is wasted. It goes out the window in the form of sawdust, slabs or usable logs left to rot in the woods.

Still another challenge is the 115 million acres of forest land and in which less than 40 percent of the trees are desirable species. One-fourth of our commercial forest area is producing less than half of the timber that this land is capable of growing. In fact, many open windows are draining away America's forest wealth with unspectacular trickles that have cumulative effects.

Furthermore, we must continue to insist upon a correlation of efforts between foresters and wildlife people. The multiple-use—and wise use—of forests is our constant concern.

We have seen several wildlife species disappear completely through open windows: the passenger pigeon, the Carolina parakeet, the heath hen. Other species like the sage grouse and the whooping crane are barely hanging on to the sill, waiting for us to shut the window or to kick them on out.

What are we doing to stem the tide of habitat destruction? Are we going to sacrifice our remaining game because it cannot compete with the modern exploitive agriculture? The conservation reserve provisions of the Soil Bank Act and the small watershed program under Public Law 566 offer great possibilities to slow the rate of habitat losses. Are we taking full advantage of these opportunities? In fact, do we know how we can take such advantage? And are we also proposing further measures?

Other means must be found to encourage private landowners to manage their lands for game production. If we do not find some way to aid the farmer in providing beneficial wildlife practices, either wildlife goes out the window entirely or it remains only with those few who can afford to lease private hunting areas and pay for the necessary wildlife management. Unless we find a better solution, commercial put-and-take hunting areas may be the only answer for many sportsmen. The best waterfowl areas and big game ranges will be available only to a financially privileged few. I do not believe that building public fishing lakes and acquiring public hunting areas is enough of an answer for us, either. Our chief responsibility is to maintain wildlife production on private lands, and at the same time make it available for public harvest.

Land use is not the only window out of which wildlife is going. Antiquated views on sportsmanship and game laws contribute to such fallacies as permitting the harvest of only buck deer from herds far outnumbering the capacity of their range. Well-meaning sportsmen abhor the thought of killing a mother deer or her fawn but do not seem to grasp the fact that they will otherwise die of starvation and disease or fall to predators. Nature's harvest is ruthless, but sure.

Fisheries management is complicated by a similar problem—major fishing pressure concentrated upon a few favored game fish species. On one of our big impoundments in Missouri, 85 percent of the total fish production is of the so-called rough species; yet, the annual harvest from this lake includes only 15 percent of these species. Game fish production suffers from this competition of overpopulated nongame types. But when more liberal methods of harvest are proposed or commercialism is permitted, there is immediate objection by the fishing public.

It is inevitable that some natural resources will go out the window. Progress cannot be made without mistakes; advancement will always cost something. The mere fact that we recognize some of our own inconsistencies indicates progress.

But some of our lost resources represent impure and simple waste. No one can condone waste, although we attempt to justify the squandering exploits of early pioneers and somewhat later industries on the grounds that the supplies of resources then seemed inexhaustable. But today we take our stands—or say we do—against waste for economic or political expediency. We are wise, now; we know that the resources are not unlimited. But waste continues.

Despite our preoccupation with atomic power, satellites, and intercontinental ballistic missiles, our strength—even our lives—still depends upon soil and water, forests and minerals, and upon the plants and animals which they produce. The base supporting everything we call man and his civilization is the raw materials provided by nature; culture is only our ability to use these materials. And the most important culture of all, the one which we can never afford to let escape through open windows, is the organized effort of conservationists to preserve our heritage—which has made possible our prosperity, our progress and our strength as a nation—our natural resources.

I want to make this one last observation. In the struggle today between nations, we say we are defending our way of life by spending huge sums in building air bases around the world, in buying loyalties of other nations, in building satellites and warheads, in using all our resources for defense. Are we heading into a situation where, because of hysteria and fear, we may spend all our true wealth, the natural resources? Someone must see that we do not build a Maginot Line solely to defend the resources already expended in building it. That someone, I think, will have to be us.

Methodist Church in Hawaii

EXTENSION OF REMARKS
OF
HON. JOHN A. BURNS
DELEGATE FROM HAWAII
IN THE HOUSE OF REPRESENTATIVES

Thursday, April 3, 1958

Mr. BURNS of Hawaii. Mr. Speaker, under leave to extend my remarks, I submit for the information of the Members of Congress and readers of the RECORD the following letter received from the Hawaii Mission of the Methodist Church—one of our great Christian churches—as well as the resolutions referred to. The thoughtful objectivity evidenced in the resolutions merits like consideration:

HAWAIIAN MISSION OF THE METHODIST CHURCH,
Honolulu, T. H., April 18, 1958.

Hon. JOHN A. BURNS,
House of Representatives,
Washington, D. C.

HONORABLE SIR: Please find enclosed with this letter copies of resolutions pertaining to statehood, nuclear fallout, and manmade satellites. These resolutions were adopted at the annual meeting of the Hawaii Mission of the Methodist Church held in Honolulu, March 16, 1958.

We are forwarding these resolutions to your office for your information and record. We believe that these matters are of interest to you and commend them to your use in our behalf.

We appreciate very much the services you are rendering our Territory as our Delegate to Congress. With every good wish to you and your staff, we are

Sincerely yours,
HARRY S. KOMURO,
Superintendent,
Hawaii Mission of the Methodist Church.
ROLAND D. SAGUM,
Chairman,
Commission on Christian Social Concern.

RESOLUTION ON STATEHOOD

Whereas the Territory of Hawaii has repeatedly demonstrated its political maturity; and

Whereas the people of Hawaii have again and again voiced a desire to become full members of the United States; and

Whereas the present status of Territory imposes certain limitations upon the democratic rights of the people; and

Whereas both political parties have repeatedly promised statehood to Hawaii; and

Whereas a constitution has been written and approved, pending establishment of Hawaii as a State; and

Whereas the 1956 general conference of the Methodist Church endorsed statehood for Hawaii: Therefore be it

Resolved, That the Hawaii mission annual meeting now in session go on record in favor of immediate passage of a bill in Congress to bring the Territory of Hawaii into full statehood.

(Hawaii mission of the Methodist Church in annual session, March 16, 1958.)

RESOLUTION ON NUCLEAR FALLOUT

Whereas a significant number of scientists of international reputation in the field of nuclear physics are deeply concerned over the increased percentage of radioactivity in the atmosphere; and

Whereas representatives of Government and some scientists have denied the existence of any present danger; but

Whereas all are agreed that there is considerable increase in radiation; and

Whereas they also agree that at some point such radiation is a threat both to those living now and to generations yet unborn; and

Whereas there are now stockpiled enough nuclear weapons to create that threat: Therefore be it

Resolved, That we call upon our Nation to take the moral leadership of the world in seeking international agreements to limit experimentation in this field to that which can be conducted without risking the physical welfare of the population of the earth, and to provide a universal plan of nuclear control. We further urge that research in

the peaceful use of nuclear power be intensified and that results be considered public information.

(Hawaii Mission of the Methodist Church in annual session, March 16, 1958.)

RESOLUTIONS ON MANMADE SATELLITES

Whereas the launching of research satellites we believe to be a giant stride in the field of scientific knowledge; and

Whereas scientific findings have traditionally been in the public domain: Therefore be it

Resolved, That we urge our Government to release to the general public such scientific data as it gains from satellites.

Whereas artificial satellites have been successfully projected into space; and

Whereas manned exploration of space seems imminent: Therefore be it

Resolved, That we urge the creation of a United Nations authority for the control of such explorations, and declare that any bases established in space or upon the moon, or upon any planet, shall be subject to United Nations authority. Further, we urge that this authority have the power of enforcement, and that, to this end, the United Nations be given ultimate regulatory powers over all space carriers of either men or material.

(Hawaii Mission of the Methodist Church in annual session, March 16, 1958.)

Walter Reuther's Background

EXTENSION OF REMARKS

OF

HON. TIMOTHY P. SHEEHAN

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 23, 1958

Mr. SHEEHAN. Mr. Speaker, Mr. Bob Siegrist's daily radio news commentary program over station WLS and WGEZ is being handled by Dr. J. B. Matthews while Mr. Siegrist is on vacation.

In today's broadcast, Dr. Matthews details some of his views on Walter Reuther and his philosophy, based on his many years of research and personal acquaintance with the three Reuther brothers.

Dr. Matthews' broadcast is as follows:

I propose to show that the very foundations of Walter Reuther's career were erected, first, on ruthless violence; second, a typically Communist disregard of the rights of private property which are observed in every civilized society; and, third, a revolutionary defiance of law and order.

Walter Reuther is a many-sided personality. When he chooses, he is the ranting Socialist orator who strives to incite class prejudice and the mob spirit. At other times, he is the polished demagog, giving forth with an urbanity of speech which leaves the so-called intellectuals entranced.

The well-known political essayist, Peter Drucker, says that American politics have undergone a revolutionary change during the past 60 years. We have made, writes Drucker, a transition from Mark Hanna to Walter Reuther.

If Drucker is only half right, the American people will do well to learn all about the background of Walter Reuther. If Reuther is to crown his political career by becoming the Socialist equivalent of Mark Hanna, the sooner his record is fully exposed, the better off we will all be.

Reuther was weaned on socialism, went through a phase of pro-Stalinism, and has reverted to socialism in its modern dress of welfare statism and anti-anticommunism. He is a national board member of the socialistic Americans for Democratic Action. He is also vice president of the socialistic United World Federalist.

Inasmuch as Walter Reuther has not repudiated any of his past, it is relevant to any consideration of his present.

For more than 25 years, I have followed the amazing career of Walter Reuther closely—from his student days when he was a campus Socialist agitator to his present pinnacle of power as a labor-union leader.

I met Reuther personally during the 1932 election campaign when he and I were both stumping for Norman Thomas and the Socialist Party.

Reuther, then a student at Detroit's City College, invited me to speak before the school's Social Problems Club which he had organized and of which he had characteristically become the chairman.

A few weeks after the 1932 election, Walter and his brother Victor decided to abandon their formal education in favor of a less academic preparation for their careers. They decided to spend some time in the workers' paradise of the Soviet Union.

And so in February 1933 Walter and Victor came to New York on the first lap of their journey to Russia. A small group of Socialists, of which I was one, gave the young Reuthers a dinner party the evening they sailed. After dinner, we saw them off on the boat.

For years, the Reuthers have tried hard to distort the facts of their travel to, and their stay within, the Soviet Union. It has been made to appear that they simply went on a general world bicycle tour, covering more than a score of countries without any special interest in any one of them.

The fact is that the Reuthers were absent from the United States from February 1933 until October 1935, a period of at least 32 months. More than half of that time was spent in the Soviet Union.

I can say of my own knowledge that there was no secret about the Reuther boys' bubbling eagerness to get to the Soviet Union. This was evident in their dinner conversation the evening they sailed from New York. Several of us at the dinner party had already been to the Soviet Union and that was the main topic of discussion with the Reuthers. The workers' fatherland was the real goal of the Reuthers when they boarded ship in New York Harbor; and a prolonged residence in the workers' fatherland was the goal they had achieved when they walked down the gangplank in San Francisco almost 3 years later.

I should say here that the term "workers' fatherland" was standard Communist jargon in those days; and in a letter home the Reuthers used that term in referring to the Soviet Union.

Once established in jobs in the large automobile plant at Gorky in the Soviet Union, the Reuthers wrote with almost hysterical enthusiasm about the achievements of communism in Stalin's slave state. They contrasted conditions in the Soviet Union with life in the United States, to the emphatic disparagement of the latter.

You have all heard about the now-famous letter which the Reuther boys wrote to Melvin and Gladys Bishop in January 1934. This letter runs to approximately 1,500 words. It gushes with maudlin sentimentality over almost every aspect of life under communism. I give you a single passage from the letter. The Reuthers wrote: "We are watching daily socialism being taken down from the books on the shelves and put into actual application. Who would not be inspired by such events?"

While Walter and Victor Reuther were being inspired by the applications of socialism in the Soviet Union, millions of Russians were being herded off to a living death in slave-labor camps. While the Reuthers were being inspired by the trappings of Stalin's tyranny, millions of Russians were literally starving to death as a result of the Kremlin's applications of socialism. I, myself, was in the Soviet Union a few months before the arrival of the Reuthers and, with my own eyes, I witnessed scenes of indescribable horror. At every stop of the train on which I was a passenger, I saw thousands of men, women, and children fighting like maddened animals to get aboard the train—just trying desperately to get somewhere else, any place as long as it meant getting away from where they were.

It is characteristic of the Communist mind, once it has been committed to Socialist dogmas, to look upon the terrors of socialism merely as regrettable necessities—or even as supporting evidence of Socialist progress.

One passage in the famous letter of the Reuther boys has been little noted, if at all. It may provide a significant key to Walter Reuther's career. The letter says: "The workers in England have more culture and polish when they speak at their meetings, but they have no power. I prefer the latter." Yes; preference for power above almost everything else has characterized Walter Reuther's ascent to the heights of labor union leadership and political power.

There is not the slightest doubt about the authenticity of the Reuthers' letter to Melvin and Gladys Bishop. Roy Reuther, the third of the brothers, showed me the letter in Flint, Mich., on February 20, 1934. I am able to pin down the exact place and date because my records show that I was in Flint on that date lecturing for the League for Industrial Democracy. Roy Reuther attended my lecture and afterward showed me the letter.

I knew Roy well, having seen him many times while he was a student at Brookwood Labor College in Katonah, N. Y., where assorted radicals of Stalinist, Trotskyist, Lovestoneite, and socialist persuasion were studying to become union organizers. On showing me his brothers' letter from the Soviet Union, Roy remarked with obvious distress that Walter and Victor had apparently gone completely Stalinist.

I also knew Roy Reuther during that period as a member of the revolutionary policy committee, a small group of Socialist Party members who were trying to execute a party-splitting maneuver under the secret leadership of a well-known Communist.

While it was definitely anti-Stalinist, the Revolutionary Policy Committee was out-and-out Communist in its ideology. As a member of the RPC's national committee, Roy Reuther subscribed to the following Communist doctrine. "Workers' councils organized in direct response to a growing revolutionary situation shall constitute the basic unit or organs by which the working class can carry through an armed insurrection."

I have discussed my acquaintance with Roy Reuther in order to show the whys and wherefores of his reaction to the pro-Stalinist letters of his brothers, and the reason for his telling me about it.

Compensation of Military Lawyers

EXTENSION OF REMARKS
OF
HON. STROM THURMOND
OF SOUTH CAROLINA
IN THE SENATE OF THE UNITED STATES
Wednesday, April 23, 1958

Mr. THURMOND. Mr. President, there appeared in the New York Law Journal for March 31, 1958, an enlightening editorial discussing the need for adequate compensation and incentives for lawyers in the armed services. The editorial discusses the testimony recently given before the Senate and House Armed Services Committees by the American Bar Association regarding the problems the armed services meet in recruiting and retaining in the service qualified lawyers.

I ask unanimous consent that the editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

COMPENSATION OF MILITARY LAWYERS

The American Bar Association has informed Congress that the legal branches of the armed services are having so much trouble recruiting and holding lawyer personnel, that they are in danger of being unable to perform the mandatory functions required by the code of military justice.

The trouble, according to a report of a special ABA committee, lies in inequities in the pay schedules that apply to military lawyers. The report explained that lawyers in the military do not now receive adequate pay or career incentives comparable to what they could earn either in civilian practice or as civilian lawyers for the Government.

A recently completed ABA survey of 2,700 lawyers in the military services revealed that among young lawyers serving obligated tours of duty, over 99 percent planned to leave the services as soon as they completed their first enlistment periods. Eighty percent of the senior officers said they would leave as soon as they finished their minimum 20-year service period qualifying them to retire.

The American Bar Association house of delegates has gone on record as favoring the pending Thurmond bill (S. 1165) which would offer adequate compensation and incentives and would tend to equalize pay scales as between lawyers and other professional personnel in the services. That legislation is being actively supported by the ABA's special committee on lawyers in the Armed Forces under the chairmanship of Osmer C. Fitts, of Brattleboro, Vt. The committee's report was laid before the Senate and House Armed Services Committees now studying military pay legislation.

In a separate statement submitted to the Senate committee, ABA President Charles S. Rhyne pointed out that military law is a highly technical field requiring officer-lawyers of above average ability and experience.

"Therein lies the interest of the American Bar Association," he said. "The legal departments of the Army, Navy and Air Force are at this time providing legal services with approximately 50 percent inexperienced legal professional personnel * * *. There is no question that the efficiency of the legal services is impaired by the constant and expensive turnover of military lawyers."

At the present time inexperienced lawyers are called upon to handle legal work involving millions of dollars of Government money and also courts-martial cases involving the death penalty—tasks which normally would be assigned to mature, experienced lawyers.

The ABA survey of military lawyers disclosed that about 79 percent of all those replying to the questionnaire said they would reconsider plans to leave the services if the Thurmond bill is enacted and professional pay scales equalized.

Speaking of the "critical nature" of the problem of retaining experienced personnel in the legal branches, the ABA report says in part:

"The legal departments of the military services are facing a serious personnel shortage * * *. The critical nature of the situation is pointedly affirmed by the recent experience of the Judge Advocate General's department of the Air Force, when 238 applications for regular status were received for 387 spaces, as contrasted with 60,000 applications from Air Force line officers for approximately 20,000 spaces.

"Unless corrective action is taken, the legal departments will not be sufficiently manned with experienced lawyers to perform the mandatory functions prescribed by the Uniform Code of Military Justice."

In referring to the "inequities in pay within the military services" which compels the military lawyer to serve for "less pay throughout his career than either his line or professional contemporaries," the report emphasizes that the present heavy turnover of personnel in the JAG departments is excessively costly to the Government.

Every career officer that stays in the service eliminates the need for three newly commissioned officers each 7 years, the report said. The present replacement program is costing the Government at least $2,100,000 yearly, it added, estimating the annual cost of the Thurmond bill plan at about $6,500,000.

"Therefore, the cost of such legislation will be partially offset by the lessened rate of turnover," the report said.

Honor the Taxpayers

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 23, 1958

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include a very interesting article from the Chelsea (Mass.) Record, for April 21, 1958, which merits the attention of all the readers of the RECORD.

HONOR THE TAXPAYERS

This revised version of Lincoln's Gettysburg Address has a present-day application:

"Twoscore and four years ago our fathers brought forth on this continent a new misery, conceived in desperation and dedicated to the proposition that all men are created taxable. Now we are engaged in a great long form, testing whether that taxpayer, or any other taxpayer so confused and so frustrated, can long endure. We are met on a great battlefield of that struggle. We have come to dedicate a portion of our income to the great causes, useless and foolish, which have taken our money that this Nation might continue to support other nations. And yet, in a larger sense, we cannot afford, we have not got, we will not have, this hallowed money. For the brave taxpayers, broke and penniless, who paid here have dedicated it far above our poor power to add, subtract, multiply, divide, refer to separate schedule Z, etc. The world will little note nor long remember what we pay here, but the Bureau of Internal Revenue will never forget it if we don't. It is for us, the living, rather to be here dedicated to the unfinished payments which they who made here have thus far so reluctantly advanced. It is rather for us to be here dedicated to the tremendous payments still remaining before us—that from the examples of these financially bankrupt we take increased deductions for the cause for which they gave the last full measure of their money—that we here highly resolve that these paupers shall not have forked over in vain, that this taxpayer, underpaid, shall have a new birth of lower taxes and higher wages, and that government of the taxpayer, by the taxpayer, for the taxpayer, shall not perish from the earth."

Use of the Word "Recession"

EXTENSION OF REMARKS
OF
HON. GEORGE P. MILLER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 22, 1958

Mr. MILLER of California. Mr. Speaker, the San Leandro Chamber of Commerce under the leadership of John B. Alexander, its president, and its very effective secretary, Frank M. King, has adopted a resolution memoralizing the press, radio, TV, and public officials to avoid the use of the word recession.

The resolution points out that there is a dynamic growth in the San Francisco Bay area and urges that all concerned assume a positive attitude on the current economic situation.

While there is a dynamic growth in this area, and that growth will continue, nevertheless, the unemployed within the area are not going to be impressed by semantics. The butcher, baker, and candlestick maker who is a member of the San Leandro Chamber of Commerce will hesitate to take words instead of money for goods.

I think it well that we look up and not down in trying to work our way out of the paradoxical economic condition in which the country finds itself facing rising prices and rising unemployment. I commend the San Leandro Chamber of Commerce for urging all of us to renew our confidence in the ability of this country to go forward.

Text of the resolution follows:

RESOLUTION TO BAY AREA PRESS, RADIO, TELEVISION, STATE ASSEMBLYMEN, STATE SENATORS, UNITED STATES CONGRESSMEN, UNITED STATES SENATORS, AND EVERYBODY ELSE

Whereas San Leandro enjoys a healthy economic climate and the area's employment is generally at a high level; and

Whereas the entire San Francisco Bay area region is experiencing a similar dynamic growth; and

Whereas there is a need for constant and universal positive thinking by all forms of mass media, by California and Federal legislators and everybody else: Now therefore, be it

Resolved, That the San Leandro Chamber of Commerce board of directors strongly and unconditionally recommends that all forms of mass media, and that all State and Federal legislators representing the San Francisco Bay area, and everybody else do in-

mediately assume a positive attitude on the current economic situation; and therefore, be it further

Resolved, That the constant and needless use of the misleading word recession be eliminated, axed, excluded, abandoned, eradicated, extirpated, ejected, jettisoned, dumped, ousted, parted with, discarded as useless trash, thrown out, heaved overboard, scattered to the four winds, and put the kibosh on in all forms of printed and spoken information; and therefore, be it further

Resolved, That all mass media present their careful analyses of business conditions in a positive manner and that State and Federal legislators representing this area and everybody else constantly reflect this positive attitude in all activities.

Unanimously adopted April 17, 1958.

JOHN D. ALEXANDER, *President*.
FRANK M. KING, *Secretary*.

Directors of the San Leandro Chamber of Commerce today called upon communication officials and newsmen of the bay area press, radio, television, as well as State and National legislators to eliminate all use of the needless and misleading word "recession" in their work.

The chamber's action came on the basis of the city's healthy economic climate and the similar dynamic growth which the entire San Francisco Bay area is experiencing. A recent summary of San Leandro construction projects just completed, underway or planned total more than $22 million in investment and will add 2,000 or more employees when in full operation.

Chamber directors' unanimously approved resolution came following a kickoff campaign luncheon by the chamber and San Leandro auto dealers urging the public to buy the things they need and want now. This psychology is in line with President Eisenhower's stated position that the so-called economic dip is psychological, and maintenance of our prosperity only requires continuation of sound purchasing practices by consumers to protect the economy, said Chamber President John D. Alexander.

With the chamber's slogan "Buy Now—Boost Jobs—And How," chamber leaders heard William Martin, top executive from Detroit's Chrysler headquarters, speak on the value of retailers and all businesses moving goods in terms of fulfilling needs and wants. This can be done with creative selling and the proper attitude on the part of the public.

Otto Z. Fox, Charleston, S. C., Receives America's Highest Brand Names Award

EXTENSION OF REMARKS
OF
HON. L. MENDEL RIVERS
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 22, 1958

Mr. RIVERS. Mr. Speaker, in a recent testimonial dinner in New York City, Brand Names Foundation, an organization designed and created for the purpose of protecting legitimate products by the producers of commodities familiar to every American, awarded a bronze plaque as a top award for 1957 competition to Otto Z. Fox, owner of Fox Music House, Charleston, S. C. This bronze award was the result of Mr. Fox's having been selected from the competition of 134 firms and 25 retail categories. The ceremonies attendant to this fine and distinguished honor awarded to my friend, this outstanding Charlestonian, culminated a week's celebration, and it was held in the grand ballroom of the Waldorf-Astoria Hotel, in the great city of New York on April 16, 1958.

Charleston and the Nation are proud of Mr. Fox. Mr. Fox is identified with the civic and community pride for which Charleston has been famous over the centuries. Mr. Fox never loses an opportunity to contribute to every program designed for the betterment of the vast and sprawling community of Charleston. He is a fervent believer in the American enterprise system and the right of small business to exist in this era in which big business is getting bigger and little business is getting smaller. Mr. Speaker, it is a great honor to call to the attention of my colleagues in the Congress this singular and outstanding contribution Mr. Fox has made to music and to the industry which produces the finest musical instruments the world has ever known.

This week, Mr. Speaker, Mr. Fox visited me in Washington and was my guest along with his charming wife for lunch in the Capitol of the United States. I want the records of the Congress to show that from the city of Charleston came the outstanding music dealer in the Nation for 1957, and I want the RECORD to show that this fine American achieved this honor in one of the most competitive communities the world has ever known. He achieved this distinction in an era when the capacity to stay in business taxes every fiber of every business and every sinew of every American.

An Untapped Pool

EXTENSION OF REMARKS
OF
HON. OVERTON BROOKS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 22, 1958

Mr. BROOKS of Louisiana. Mr. Speaker, reservists and the Reserve program have always been among my prime concerns. As chairman of Subcommittee No. 1 of the House Armed Services Committee, I have a great responsibility to the Nation for overseeing the Reserve program of the Department of Defense. Much commendable progress has been made during the past years but I and my subcommittee are constantly looking for even more improvement in the Department's Reserve policies and programs.

In that connection, the Air Force has recently developed a program deserving of recognition and praise from Congress. I refer to the joint efforts of the Air Research and Development Command and the Continental Air Command to better utilize for defense purposes the talents and scientific knowledge of Air Force reservists. Their aim is to employ the pool of untapped Reserve scientists.

An article in the April issue of the Air Reservist entitled "Untapped Pool of Scientists," explains how the Air Force is making use now of the wealth of experience of its reservists, rather than waiting until after the whistle blows. Already reservists have undertaken specific research problems and special projects which have resulted in large savings to the Government. For example, Flight B of the 9263d Air Reserve Squadron of Springdale, Conn., saved the Government $150,000 through its work on intelligence and electronic warfare techniques.

This is how the reservist can pay his own way—by service rendered in peace as well as war. In fact, the Reserve research and development program could very well pay for itelf completely.

In time, scientists and technicians throughout the country will be absorbed into this very worthwhile activity. Reserve training centers across the land may find themselves involved in important research projects.

Last July I had the privilege and honor of dedicating a new Reserve center at Shreveport, La. I know that the facilities at such centers are excellent for many kinds of training and could be used for research activities as well.

My compliments to my friend Lt. Gen. "Bill" Hall, the outstanding commander of Continental Air Command and to Lt. Gen. Samuel Anderson, the capable commander of Air Research and Development Command. Further, I extend praise to all those officers and men in both commands, and the reservists themselves who are making this program so worth while.

Mr. Speaker, under leave to extend my remarks, I include in the RECORD this article from the Air Reservist of April 1958:

UNTAPPED POOL OF SCIENTISTS

(By Fred Giachino)

There's a virtually untapped and unsolicited pool in America's Reserve Forces, and the Air Force is proving it could make a heck of a splash.

The pool includes over 6,000 air reservists, trained and in many cases eminently qualified, who are available for contributions to the advancement of the Air Force's space-age mission.

The splash is taking the form of a two-pronged program designed to utilize the scientific potential of these reservists to the maximum. The Air Research and Development and Continental Air Commands have cooonjured projects which will allow such reservists to maintain and increase valuable technical skills in fields especially needed in today's defense structure.

In addition, approximately 1,400 research and development spaces have been allotted and are being filled at 30 Continental Air Command Air Reserve Centers, Headquarters Air Research and Development Command and its subordinate commands by eligible air reservists.

Further, Air Research and Development Command is contemplating plans to involve the more than 4,500 remaining specialists wherever and whenever possible in such activities as avionics, armament, aircraft and propulsion, missiles, geophysics, nuclear systems, exploratory research, weapon systems management, human factors, and sundry other scientific free-lance studies.

EVALUATION BEING MADE

Though the latter group remains in the background pro tem, it is being evaluated for its potential. This enlightenment or recognition of the Air Reserve potential is not the result of sputniks, messers 1 or 2, but the product of considerable spadework during the past 2 years. Its basic concept

is timeless—as practical yesterday as tomorrow. Maj. Gen. Richard H. Carmichael, United States Air Force, Director of Personnel Procurement and Training, expresses it most succinctly:

"Reserve training should be geared to active establishment tasks and problems. * * * Training of this nature is more meaningful to the individual and it can make a tangible contribution toward the accomplishment of the Air Force mission * * *."

The Continental Air Command Air Reserve Centers chosen to inaugurate the plan form the primary prong of Research and Development Reserve activity. Strategically located near industrial areas where large research and development populations exist, they are expected to provide more effective training at minimum cost.

However, even though the majority of the 1,400 spaces currently allotted are being systematically diverted from other locales to the Air Reserve Centers, this phase of the program is still in its infancy. Actually, it will not be until the advent of fiscal year 1959 that the Research and Development spaces will be pinpointed in these specific centers.

Thus far, it has been the second prong which has been most active. This phase, emanating from Headquarters, Air Research and Development Command and its subordinate commands, already has seen basic projects devised and completed.

Brig. Gen. Don R. Ostrander, deputy commander for resources, declares that our real potential pay-off is during the reservists' peace time active duty tours and inactive duty training. Therefore, the program has been designed to exploit the pool of untapped Reserve scientists and to use such skills as may be found there today—not just after the whistle blows.

Perhaps the dynamo most closely allied to the planning and implementation of this program for Air reservists is Col. William R. Weber, Assistant for Reserve Affairs, Air Research and Development Command. Under the direction of Col. Arnold L. Smith, Air Research and Development Command Director of Personnel, he has taken the initial steps to acquire the necessities to make the ambitious program tick. However, from all indications, the entire command has been imbued with that sense of urgency.

Colonel Smith voices the command's sentiment in this way: "The value of the Reserve program to the Air Research and Development Command lies in the utilization of the talents of our reservists now. Our Research and Development Reserve officers represent a wealth of experience in industry and the military service, and, as such, are particularly well equipped to handle many specific research problems and special projects."

How are Air reservists being selected for Air Research and Development Command projects?

Air Research and Development Command's first or test project was typical of how and what happens. In that instance, a specified task was selected. Then on the basis of the square peg selective method employing electrical accounting machine punch cards which job-man match the available individuals while giving such pertinent information as education, experience, and proficiency in technical groupings, four qualified reservists were chosen and given the project of surveying industrial research and development facilities.

In order of rank, the pioneers are Lt. Col. Thomas Cosgrove, Lt. Col. Carl Luneke, Maj. William Djinis, and Capt. Richard Bielfoss. They were then called on active duty for 15 days at Headquarters, Air Research and Development Command.

Their problem was to develop a pilot questionnaire for sampling industry and universities pertaining to long-range planning for research and development facilities. The survey covers a group of 800 industrial corporations and its results will be used with other information being developed for final determination of the Air Force.

The work done on these questionnaires will contribute immeasurably to the future of Air Force research and development. It will facilitate Air Research and Development Command's attempt to forecast Air Force research and development requirements which must be based upon sound knowledge of existent and planned research and development facilities in industry, colleges, universities, and in Government.

The men chosen for the inaugural problem at Air Research and Development Command are indicative of the basic talents to be found within the Air Force Reserve.

Col. Cosgrove has had over 30 years' experience in electronics and general engineering fields, including engineering economics. He is currently employed by the city of New York with the mayor's bureau of the budget, and trains weekends with the New York Air Reserve Center.

His comment was typical of the four individuals chosen for the survey: "These projects give the reservists an opportunity to get into long-range Research and Development planning and allow professional experience obtained in civilian occupations to be merged with military experience and thinking.

Major Djinis, another mob assignee who trains with Gotham's Air Reserve Centers, is the senior project engineer with the Reeves Instrument Corp. His civilian duties have run the gamut of functional analyses and research, investigating such problems as automatic guidance systems, nuclear reactor control instrumentations, specialized computer systems, and the initiation of technical studies leading to new contract proposals. He has had several technical articles published and has received patents in the fields of crystal radiation detectors and thermal computer components.

Major Djinis applauds the fact that the talents and experience of reservists are being utilized to the best advantage through such problems where vital solutions are needed.

PLEASED WITH TEAM PROJECT

Colonel Luneke is from Ohio where he is a mob assignee with the Dayton Air Reserve Centers. He is one of USAF's civilian aeronautical engineers and has been employed in that capacity at Wright-Patterson Air Force Base for the past 21 years. He is especially pleased with the group or team-type of project for which he was selected, being of the mind that it utilizes the individual's capabilities to a greater degree than working an individual project.

Captain Bielfoss, an Illinoisian who trains with the Chicago Air Reserve Centers, is an estimating engineer for the Guardite Co. of Wheeling, Ill. Guardite is a division of the American Marrieta Corp. and designs and builds high-altitude aeromedical equipment for the Air Force. He is convinced that these scientific projects will increase the interest of the involved reservist in the problems of the Air Force, since it will add a greater element of value and belonging for the individual, when he has had a say in these problems.

Another excellent example of the second prong in action is the project undertaken by members of Flight B of the 9263d Air Reserve Squadron (New Haven Air Reserve Centers) of Springdale, Conn., working through the Rome Air Development Center in New York.

There was no 15-day active duty tour involved. Rather, 9263d's contribution could be a model of how responsible and qualified reservists may turn reserve time into research time.

Composed of a group of scientists and engineers, Flight B recently produced a new approach for intelligence and electronic warfare techniques which are being accepted by Air Research and Development Command for Air Force application. The unit took the initiative and contacted the Rome Air Development Center, then chose one of the several projects offered for possible study. Their completed research compares to the first phase of a study contract and has resulted in a $150,000 saving to the Government.

The findings included the successful production of several techniques pertaining to the studies of liquid level detection.

During the 6-month project, the flight submitted regular monthly activity and progress reports to the Rome Air Development Center in order to establish official control and observation of the scientific program.

The individuals involved represent some of the outstanding industrial firms in the New England area. Thus, Lt. Col. Leonard S. Horner, Majs. Charles A. Mills and Millard F. Smith, Capts. Charles O. Baughn, Jr., Alexander Bliznick, and Wayne O. Montgomery, 1st Lt. Jack E. Antes, and T. Sgt. Raymond C. Rodger may also stand up and be counted among the pioneers of the Reserve research and development forces.

Obviously, the projects discussed are not considered as merely "busy work" by either its Air Research and Development Command or Continental Air Command champions. Its enthusiastic proponents view the good they will do the Air Force, the reservist and, in turn, the Nation. During this era of mounting costs, the reservist must pay his way in value rendered in peace as well as war. The research and development program for reservists is definitely a shot in this direction.

Air Research and Development Command's Science and Warfare Office, under the guidance of Brig. Gen. Marvin C. Demler, deputy commander for research and development, has been a prime advocate in the utilization of Air Reservists. The general acknowledges that Air Research and Development Command has many problems in which reservists can contribute. He recently summed up the aim of the command toward such individuals:

"If we can just get one good workable solution from reservists to one of our problems, this entire Reserve research and development program will pay for itself."

Looks as though the general already may have several—and it's barely the beginning.

The University of Texas Oratorical Association Prize Winning Orations

---

EXTENSION OF REMARKS

OF

HON. RALPH W. YARBOROUGH

OF TEXAS

IN THE SENATE OF THE UNITED STATES

Monday, April 21, 1958

Mr. YARBOROUGH. Mr. President, the year 1958 marks the 75th anniversary of the founding of the University of Texas. However, one student organization on the campus of the University of Texas, the Oratorical Association, has the distinction of being even older than the university itself.

In the year 1883, one night before the new University of Texas was to open its doors, a group of students met in the home of a faculty member and founded the Athenaeum Literary and Debating Society. Partisans of the Rusk Literary

and Debating Society, a rival organization which is still active, dispute this fact and contend that their organization was founded before Athenaeum. Nevertheless, both groups were the forerunners of the present Oratorical Association. It is the task of the Oratorical Association to direct and coordinate all extracurricular speech and forensic activities on the campus of the University of Texas.

Under the leadership of Dr. Donald M. Williams, its faculty sponsor, and Meyer Witt of Palestine, Tex., its student president for the past 2 terms, the Oratorical Association provides an opportunity for the students of the University of Texas to participate in several types of competitive speech and forensic events.

The University of Texas varsity debate squad, one of the major activities of the Oratorical Association, has an enviable record of victories in major debate tournaments throughout the country, and just recently returned from the annual spring tournament of the Missouri Valley Forensic League, held this year at the University of Wichita, where it won several top awards.

Another of the fields where the University of Texas Oratorical Association provides an opportunity for the students of the university to participate in forensic work is in the area of intramural speech contests. Each semester the oratorical Association sponsors a series of various types of intramural speech events which are open to all students except varsity debate lettermen. This series of speech contests draws a larger number of participants than the intramural speech program of any other university in the United States.

In a third area, the field of prize speech contests, the Oratorical Association, in cooperation with the Department of Speech of the University of Texas, awards nearly $1,000 a year to the students of the university who win these various prize contests in debate, oratory, and declamation.

One of the most notable of these prize events is the annual Battle of Flowers oratorical contest which is held in April of each year. This contest is sponsored by the Battle of Flowers Association of San Antonio, Tex., and it provides the $400 in prize money which is awarded the 3 winners. The first place winner of the contest not only receives $200 in prize money, but also delivers his oration, which must deal with the subject of Texas history and Texas independence, before the annual banquet of the Battle of Flowers Association. This banquet is held every year in San Antonio, during the impressive and gala Fiesta de San Jacinto, commemorating Sam Houston's victory over the forces of Santa Ana on the battleground of San Jacinto.

While the Battle of Flowers Association of San Antonio sponsors the annual oratorical event, which is now in its 34th year, provides the prize money, and judges the orations, the supervision and direction of the preliminary and final round of the contest is the task of Professor Thomas A. Rousse and Dr. Donald M. Williams.

Professor Rousse is the distinguished and long-time chairman of the department of speech at the University of Texas. He is a widely known authority in the field of forensics, and rhetoric, and public address, and has written extensively in those fields. Professor Rousse was for many years the debate coach at the university, and many now-famous Texans are indebted to him for the expert guidance they received from him while a member of his debate squad. Professor Rousse served as president of the Speech Association of America in 1955, and he has for many years been a top national officer of Delta Sigma Rho, the distinguished national forensic fraternity. While I was a student in the University of Texas Law School, Tom Rousse and I was classmates, and we have been friends ever since.

Dr. Donald M. Williams, associate professor of speech at the University of Texas, is the young and able director of forensics and the very active faculty sponsor of the Oratorical Association.

The chairman of the oratorical committee of the Battle of Flowers Association, of San Antonio, is the capable Mrs. Merton M. Minter, of San Antonio, Tex.

This year the first-place award of $200 in the Battle of Flowers contest was won by H. G. Wells, of Tulia, Tex. Mr. Wells, who will deliver his oration at the annual banquet of the Battle of Flowers Association in San Antonio, on April 24, is a second-year law student at the University of Texas, and a former history teacher in the high schools of Texas. The title of his oration is "A Concept of Liberty."

The winner of the second-place award of $150 is Miss Almalee Cartee, of Coral Gables, Fla. Miss Cartee is a sophomore student majoring in speech at the university. She has won several intramural and prize contests during her short collegiate forensic career, and promises to be one of the most outstanding women debaters ever produced by the University of Texas. Miss Cartee's oration is called "Our Priceless Heritage."

The winner of third place in the contest, and $50 in prize money, is Andre Bacon, of San Antonio, Tex. Mr. Bacon, a junior in his studies at the University of Texas, has successfully participated in several speech events. His oration is entitled "Heritage."

Mr. President, these prize-winning orations demonstrate that their young authors have a full grasp of Texas history, and that they possess the ability to communicate their knowledge of Texas history and the ideals and beliefs that flow from that knowledge and understanding, to others. I ask unanimous consent to have printed in the Appendix of the RECORD these orations: "A Concept of Liberty," by H. G. Wells, of Tulia, Tex.; "Our Priceless Heritage," by Miss Almalee Cartee, of Coral Gables, Fla.; and "Heritage," by Andre Bacon, of San Antonio, Tex.

I am informed by the Public Printer that the manuscript is estimated to make approximately 3¼ pages of the RECORD, at a cost of $263.25.

There being no objection, the orations were ordered to be printed in the RECORD, as follows:

A CONCEPT OF LIBERTY

(By H. G. Wells)

It was over 100 years ago that a man mounted his horse and rode through the gates of an abandoned mission and into the darkness. He had been ordered by his commander, W. B. Travis, to ride for help. His name, of course, was Jim Bonham, and the mission that now served as a fortress for the Texas forces, was the Alamo.

Escaping through enemy lines, he rode to Goliad and there used all of his powers of persuasion to get reinforcements for the men at the Alamo. Rebuked in his attempt, he returned to San Antonio and found that the Alamo was now completely surrounded by Mexican forces, the roads blocked by Santa Anna's men. Knowing that an attempt to reach the Alamo would place his life in peril, he tied a white handkerchief about his hat as identification, and rode past the startled Mexicans and through the Alamo gates.

Today, the story of Jim Bonham's return to the Alamo, and the story of the fall of the Alamo are familiar stories all over the world. They have been read and reread, told and retold, and they never grow old, or less thrilling, or even a little bit lusterless. Ask a Texan what the Alamo was all about, and he will relate proudly the story of our forefathers' fight for independence. Ask him why Jim Bonham left the Alamo, and he'll more than likely be quick to answer, "To get reinforcements." But ask one who knows the story by heart, "Why did Bonham return?" and you must wait for an answer.

Probably some of you here are among the many who have said to himself as he read of Bonham's unforgettable return to the Alamo, "Why, why did he return?"

There are those who say that the fight by the Texans was stimulated by a desire for land and by dreams of wealth.

But does this explain why Bonham returned when he was aware that those within the Alamo faced almost certain death? Some say that the Texas fight was a battle for self-survival, but does this explain why Bonham returned when he could easily have escaped? Any high school student would reply that the Texans fought for independence. Ask them what independence is, and a clear majority will answer "freedom."

But ask them what freedom is, and you will receive a diversity of answers. Last year, as a high school history teacher, a student gave me this definition: "I suppose that you could say that freedom is doing what is right as opposed to doing what is wrong."

How would you define "freedom?" What was the concept of freedom that motivated those who won for us our freedoms, who gave their lives as downpayment for our liberty?

If you seek an answer, you must first remember that the men of the Alamo fought for a dream.

Unlike the Mexicans who opposed them, the Texas forces were not professional soldiers but were volunteers. Most of them were farmers who were lured to Texas by the promise of cheap land and the dream of a way of life. They were mountain men who were brought by Davy Crockett from Tennessee to fight for Texas independence. They were representative of the people who pioneered our State. Therefore, to understand the dream for which they fought and which they considered more important than life itself, one must look to the pioneers of Texas in the 1830's.

Their diaries and letters reveal them to be a hard working people who met nature on her own terms and won in the battle for survival. Nature was their friend and their

adversary. They knew nature. It is not surprising that there was much talk about natural rights. The men of the Alamo said that Jim Bowie was their leader by natural right. They also felt that they had a natural right to worship as they pleased. This right to worship was important to them. One of the pioneers recorded in her diary that her family returned home from the runaway scrape on a Sunday. They found their home burned, and those crops that were not destroyed were badly in need of attention. It was, she states, the only Sunday she could remember that her parents worked instead of devoting to worship. The early Texans felt that helping their neighbor was a natural thing. A letter written in 1832 tells of the arrival of a new family in a Texas community. The writer states: "There was a family nearby who had a wagon and they were kind enough to move our belongings to our new home. Father offered to pay them, but they refused saying that wasn't the Texas way." A piece of correspondence records that a stranger traveling through a Texas community became ill and died. It relates that the stranger was nursed in his illness, buried and mourned by those of the community.

To the early settlers freedom included a right to education. Numerous accounts tell us of the struggle to find teachers; to build schoolhouses. It was difficult to provide any type of formal education for the children. One diary records: "Mother taught us to read and we recited to Pa and Uncle Redus when they were in from the field for the noon meal."

And to all of the early settlers patriotism was a real, living, and vital part of their way of life. The American Revolution was still fresh in their memory. The July Fourth celebrations were attended by all and included plenty of stump speechifying, as they called it.

These things were a part of what our founders considered the free way of life. Of course, all those who came to Texas did not share this attitude. There was a minority who thought freedom was something different. A pioneer who lived in the days of the men of the Alamo relates in his correspondence the story of one of his neighbors. We'll call him Mr. Morgan. Mr. Morgan seemed to dislike everyone. His neighbors helped in gathering his crops, and he grudgingly consented to help them in return, but he had little more to do with the rest of the community than was absolutely necessary. He was found to be a cattle rustler, and only the fact that his family would have been left in the wilderness without support saved him from being hanged. There was no jail nearby in which to imprison him. He refused to take part in the building of a community church and would not allow his children to attend the school which was built by his neighbors. Finally he was killed while attempting to murder the man who had revealed his cattle-rustling activities.

If you say that freedom is the right to do as one pleases, I answer that Mr. Morgan shared the same concept.

Was this the concept that Travis had in mind when he wrote from the Alamo, "Under the flag of independence we are ready to peril our lives a hundred times a day"?

It would be absurd to suggest that men would fight for such a freedom. Yet it seems that are still some Mr. Morgans in our midst today. For example: There are those who espouse the theory that there's nothing wrong with breaking a law, if you can do it without getting caught. It seems to me that these people join Mr. Morgan in saying freedom is our right to do as we please. And certainly we all know of those among us with whom it is unpopular to be patriotic Perhaps our standard of values is changing. To the Texas pioneers, education was worthy of sacrifice, yet in last week's Saturday Evening Post there was a cartoon which came too close to the truth to be very funny. A teacher resigned giving as his reason the fact that he had received a better paying position. The next day he showed up at the school as usual, but as janitor.

To the early Texas settlers who volunteered to fight for a way of life, religion was important. They fought for the right to worship as they pleased. Yet there are many today who interpret this freedom as the freedom not to worship at all. We are free even to ignore those freedoms for which our founders gave their lives. These men died for the right to govern themselves, yet today there is an embarrassingly large number of us who have not even bought a poll tax. And one who becomes active in politics does so at the risk of being labeled a crook.

Peter Marshall stated that the Founding Fathers sought freedom not from law but freedom in law, not freedom from government, but freedom in government; not freedom from religion, but freedom in religion; not freedom from others, but the freedom to live with others as neighbors.

Today there is much talk about our freedom, but we do not speak of the concept of our Founding Fathers unless we realize that they envisioned a positive freedom, and active freedom that includes, as the high school student pointed out, the doing of what is right.

Why did Jim Bonham return to the Alamo? The records show that prior to his coming to Texas, Bonham received a letter from W. B. Travis in which Travis said: "Great things are astir in Texas, come on out and take a hand in affairs." And although we are not sure, I like to believe that Bonham returned to the Alamo because he realized that freedom calls for taking a hand in affairs, that freedom is the opportunity to do what is right, rather than the right to do as one pleases.

Today, the Alamo stands with such names as Guadalcanal, Valley Forge, and Heartbreak Ridge as a reminder that our freedom was bought at a tremendous price. And today the same message that brought Jim Bonham to Texas beckons you and me to keep freedom alive:

Great things are astir in this world, big things are happening, within our lifetime the dreams of democracy and freedom will be accepted or rejected by millions of people. We need your help in preserving our freedom. Come on out and take a hand in affairs.

Our Priceless Heritage

(By Miss Almalee Cartee)

Many years ago men traversed the frontiers of the United States to reach a country of magic and legendary fame. This land was to bring sought-after fortunes to many, sadness and death to others. Yet, men still came, attracted by the magnetic force of the Lone Star State. Some gave their lives in the great battles of the Alamo, San Jacinto, and Buena Vista; but they blazoned the trail of freedom for all who followed. They were the great ones, and their names are now only historic relics and remembrances. But the ideals for which they fought live on today. These men were hewing a way of life out of a wilderness.

I am not a native of Texas. A little over 2 years ago, I set foot for the first time on this magic soil. I grew to learn that the Lone Star State was more than a land of oil wells, tall tales, and 10-gallon hats; that it was a State with a thrilling and colorful history; a State whose people had a sincere pride in its accomplishments. I can still remember the first time that I visited the Alamo. It etched a vivid picture in my mind—a picture of the Texas fighting man as he must have been those great days. He was a man who traveled to this section and became a part of the fight for independence. Because he came before, I am able to come today, just as he did, drawn by the magic wonder of Texas. Who was this Texas fighting man?

A sober-faced lad, a rifle slung over his shoulder, a battered hat shading his eyes, he is the one we remember on Texas independence day. A squint-eyed man in buckskin, crouching beside the walls of the small mission at the Alamo, his hands wet with sweat as he waits for a firing order, he is the one we honor. A jaunty captain, gallantly manning the cannon to keep alive the hope of victory, he is the hero. He wears many uniforms and has many names. He fought in many places and many years. He is the Texas soldier. He gave his life to put down wrong and to gain the priceless ideal of freedom. He rests today in the bivouac of the dead. His silent ranks are marked by rows of crosses and banners stirring in the breeze. His voice is stilled now, yet he speaks. From the grave this soldier can tell many stories. Listen.

"I am 183 Texans massacred at the Alamo. I met old Santa Anna in the Mexican War of 1846 and knocked him good. I was 13,283 men who didn't come home, but we kept the enemy on their own side of the Rio Grande." These Texas soldiers were the great ones, who died in their greatness for a belief in independence. They were a part of the spirit of Texas. They had belief in the dignity of the individual, in government subject to the control of its citizens, in rule by law, not by men, in the right to live, to worship, and to work where one chooses. These men believed in individual freedom as a way of life. They were not planning to die. They had come to Texas across the frontier to find excitement, to make a fortune, to run from trouble at home, or to take part in a revolution for freedom as their forefathers had done in 1776. On all of them some of the glory rubbed off.

They were men like Jim Bowie who wrote, when the Battle of the Alamo was reaching a crisis, "We will rather die in these ditches than give them up to the enemy." There was Davy Crockett, the legendary coonskin hero who left Tennessee with the parting words, "You can go to hell, and I'm going to Texas." Buck Travis, the young lawyer, came to Texas for fortune and forgetfulness. Of course we remember Bonham, the young South Carolinian who rode out from the Alamo for help, and who rode back, to find his greatness in death. These were the great names which were recorded in the history books and legends of the Alamo. But there were some two hundred others. Their spirits live on the story of a fight for freedom. After that heroic battle of the Alamo, Santa Anna took up the bemused march that was to lead to the field of San Jacinto, and ultimate victory for Texas independence. This final battle ended in a slaughter, and the struggle of the Mexicans was convulsive and brief. As the Texans swarmed over the defenses, with what breath they could spare as they finished the bloody business, they yelled "Remember the Alamo. Remember Goliad." And Sam Houston, the commander of ambition and destiny, still sitting on his horse with a shattered right leg, was from this moment on to be called a hero. The war was over.

There were two things that these battles proved, not only to the people of Texas, but to the peoples of the Nation and the world. They showed, first, that freedom is an innate right which all men strive for and, second, that freedom is worth the price which men must pay to attain and to preserve it. The Texas fighting man is now only a symbolic hero, but he established for future generations an example of devotion to duty and devotion to a principle of human right. The ideals that he sought to preserve have found expression in every phase of Texas governmental, social, and economic life, and they

will continue to stand as long as men value the principle of free society. The spirit of the soldier who died at the Alamo, Goliad, or San Jacinto, speaks out to us today in a history which each person is proud to remember as part of his heritage. This Texas fighting man might have thought, as he sat in a division camp near the site of San Jacinto:

"I'm not bragging for all I've done. Bragging just doesn't go with fighting. It's too bad that votes and speeches can't do it all—that it takes iron and blood. There's nothing pretty in the roll of drums, or the spit of guns, or even the blare of bugles on a battlefield. But it's part of history's hammer and anvil of justice. It's not glory nor fame I did it for, but because I had to; because there was a great ideal to save by fighting." The soldier's creed is ended. It is necessarily short, for he expressed his philosophy in actions, and his tale was an admirable one.

No, I am not a native of Texas. A little over 2 years ago I set foot for the first time on this magic soil. Now, I want others to learn what I have learned, that Texas is more than a land of oil wells, tall tales, and 10-gallon hats; that it is a State with a thrilling and colorful history; a State whose people have a sincere pride in its accomplishments. Only when people everywhere know the true story of Texas, only when they realize the ideals of freedom and liberty for which the Texas soldier died, will his job be completed. Only as we, you and I, help to make those ideals prevail can we pay a just and lasting tribute. Then, and only then, can we rest assured that people everywhere will reverently and proudly, "Remember the Alamo."

HERITAGE

(By Andre E. Bacon)

Could you ever imagine a Texas without Sam Houston? Could there have been a Houston without a Texas? For the best answers to these questions, let's look in on Texas in 1833.

"Hell and Texas" took its place in the vocabulary of the 1830's as a mild cuss word; a loose expression or Texas would have been mentioned first. A person who left town under cloudy circumstances was said to have GTT, gone to Texas. A Texas lawyer of this time, advising a client who was disturbed in mind over the circumstances of his coming to Texas, recommended, "Leave this place before sundown." "Leave!" exclaimed the client. "Where'll I go? Ain't I in Texas now?"

Another lawyer of this time, the barrister of Nacogdoches, later wrote, "All new States are infested, more or less, by a class of noisy, second-rate men who are always in favor of rash and extreme measures. But Texas was absolutely overrun by such men." What Texas needed was a leader, brave enough for any trial, wise enough for any emergency, and cool enough for any crisis.

Yes, in 1833 we are on the brink of an abortive revolt in Texas. Stephen Austin is imprisoned in Mexico. Jackson, still trying to purchase Texas, is being embarrassed by his envoy to Mexico, Antony Butler, who is trying to stir Texas to revolt over the arrest of Austin.

Is there a man on the scene, of great enough stature, to command this situation, to lead Texas to independence, to guide the ship of state if independence is won? Fortunately, yes. But if he had not been there, I wonder what flag would fly over Texas today.

With his visible fortunes at their lowest ebb, Sam Houston received a letter from Tennessee at the Wigwam Neosho. Elizabeth Houston was dying. In September of 1831, Sam wept at the bedside of a heroine, his mother. She pressed the hand that wore a ring with a motto in it. And then Elizabeth Houston died. Heed your mother's last gesture Sam Houston, and listen to these words of Ralph Waldo Emerson. "Never mind the ridicule, never mind the defeat; up again old heart, there is victory for all justice; and the true romance which the world exists to realize will be the transformation of genius into practical power."

Sam Houston stood upright again, mounted in his country's esteem during the Stanberry affair, then turned west and rode to Texas and enduring fame. But what if Mexico had sold Texas to the United States in 1833? Suppose that Texas had been annexed before Sam Houston rode upon the scene. How would we remark Sam Houston today?

For what did happen let us drop in on Captain Elliot, British Chargé d'Affaires in the Republic of Texas. It is 1843 and Captain Elliot is writing to a colleague about Sam Houston. "His career * * * has been strange and wild. * * * A domestic tempest of desperate violence, and calamitous consequences; habitual drunkenness; a residence of several years amongst the Cherokee Indians * * * a sudden reapperance on this stage with better hopes and purposes, and commensurate success, but still with unreclaimed habits. Finally, however, a new connection with a young woman brought up in fear of God, conquered no doubt as women have been from the beginning and will be to the end by a glowing tongue, but in good revenge making conquest of his habits of tremendous cursing and passionate love of drink." Years later when asked why a girl of her upbringing would marry such a man as Sam Houston, Margaret answered, simply, "He had won my heart."

The annexation of Texas brought its problems to the United States, but it was our best way out. Texas had come into the Union as a slave State, but the status of the great domain beyond the mountains which formed its dowry was to be determined. North and South buckled on their armor, and the session of Congress that was to convene in December of 1849 was anticipated with a sense of apprehension.

The early weeks of Congress saw a confusion of suggestions to which no great attention was paid. The Nation awaited the voice of Henry Clay. For 6 years the great compromiser had lived in retirement with his blooded horses and his bluegrass. In 1820 and again in 1833 this moderate southern statesman had calmed the seas of national politics troubled by slavery.

In January of 1850 he laid before the Senate an expertly balanced program to which Sam Houston had contributed some important ideas. Mr. Clay made a 2-day speech in support of his proposals. He portrayed the glories of the Union, which he and every other old man present had seen born and grow. He said these could be preserved if each side would pursue a reasonable course of give and take.

Sam Houston braved the hostility of his homeland to speak in favor of the Clay proposals. Shall we join the others in the Senate gallery? Senator Houston has begun his speech. "I must say that I am sorry that I cannot offer the prayers of the righteous that my petition be heard. But I beseech those whose piety will permit them reverentially to offer such petitions, that they will pray for this Union, and * * * ask of him who buildeth up and pulleth down nations * * * to unite us. I wish, if this Union must be dissolved, that its ruins may be the monument of my grave."

Sam Houston was governor when Texas was to vote on the secession ordinance in February of 1861. In the days before the vote was to be taken, Governor Houston took the stump for Union. Let us join him at the close of his tour at Galveston. The behavior of the crowd is ugly. Will he dare to speak? Yes, there he is, up on the balcony of the Tremont House. The crowd is silent. Governor Houston begins his speech. "Some of you laugh to scorn the idea of bloodshed as the result of secession. But let me tell you what is coming * * * your fathers and husbands, your sons and brothers, will be herded at the point of the bayonet. You may after the sacrifice of countless millions of treasure and hundreds of thousands of lives, as a bare possibility, win southern independence * * * but I doubt it. I tell you that, while I believe with you in the doctrine of State rights, the North is determined to preserve this Union * * * they move with the steady momentum and perserverance of a mighty avalanche; and what I fear is, they will overwhelm the South."

For his support of Union, Sam Houston was deposed as governor. At this time he wrote "I stand the last almost of my race stricken down because I will not yield those principles which I have fought for. The severest pang is that the blow comes in the name of the State of Texas."

On July 25, 1863, Gen. Sam Houston was sick unto death with pneumonia. He slept through the night with Margaret at his side. When morning dawned she asked for her Bible and began to read in a low voice. General Houston stirred. It was mid-forenoon. Margaret put down the book and clasped her husband's hands. His lips moved. "Texas—Texas—Margaret"

As the slanting shadows of sunset crept upon Steamboat House General Houston ceased to breathe. Heritage? Texas gave to Sam Houston enduring fame. Sam Houston gave us Texas.

Suicide at the Summit for the United States

EXTENSION OF REMARKS

OF

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 23, 1958

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter and an article concerning a meeting at the summit:

WEST WYOMING, PA., *April 11, 1958.*

The Honorable DANIEL J. FLOOD,
United States House of Representatives, Old House Office Building, Washington, D. C.

DEAR CONGRESSMAN FLOOD: It is believed that machinery is now set in motion to persuade United States officials to consent to a high-level, face-to-face conference between the leaders of this Nation (the United States) and the Soviet Union for what is known as summit conference.

The enclosed letter to the editor of one of our countywide daily newspapers concerning summit talks is self-explanatory.

On behalf of district 12,. the American Legion, Luzerne County, Department of Pennsylvania, I urge you to work for passage of a "sense of the House" resolution opposing a summit conference.

In the best interest of this Nation and the freedom-loving people of the world, district 12, the American Legion, representing more than 13,700 Legion veterans, urge you to do all within your power and command to make our sentiments known among the Members of the United States House of Representatives.

Very truly yours,

LOUIS J. GRECO,
Commander, 12th District,
The American Legion.

SUICIDE AT THE SUMMIT FOR UNITED STATES

EDITOR, TIMES LEADER-NEWS:

The campaign now underway to persuade United States officials to consent to a high-level, person-to-person conference between the leaders of America and the Soviet Union should be of special interest to all freedom-loving Americans. Unless action is taken immediately by responsible Americans, such a summit conference may soon take place. And it will take place if the overwhelming majority of Americans continue to stand on the sidelines waving the banners of apathy.

Americans, we have too much at stake to be indifferent.

It is appealing to one's sense of justice to think it is necessary to have to argue against a meeting of our American President with the world's top-ranking hapgman, Nikita Khrushchev.

Presently, the Communist plan is to get us to attend international conferences. And every time we sit down with the atheists, make no mistake about it, we lose on all fronts.

Unfortunately, Americans are being sold on the virtue of summit talks. This rush act ignores utterly that America has nothing to gain unless she agrees to the wetting of all her powder in exchange for a Soviet promise. Every realistic American and Legionnaire knows that something very essential is missing at any Soviet conference table—the vital element of integrity and honor. Its absence makes any Russian agreement worthless because the first tenet of communism is that any means justifies the end. The Soviet record of violating every one of 69 solemn treaties, pacts, agreements, and guaranties since World War II speaks eloquently for itself. If any security and preparedness concessions are made at any summit talk, it will mean only another Communist triumph in the cold war to add to its long list.

There are thousands of reasons why such a meeting is unthinkable and every one is a dead hero or heroine of the revolt against Communist tyranny in Hungary in October-November 1956. Have we forgotten so early, Korea? And what about Poland, Estonia, Latvia, Lithuania, and others?

One by one the leaders and presidents of these onetime free nations were stunned by the heavy blows of the Red hammer while the simultaneous action a swish of the Red sickle swept entire populations only to be added to the Red harvest of 900 million enslaved people.

Summit talks. Who would do all the talking? How good are the Russians at talking? Let's look into the record at the U. N. During 1955 the Soviet Union used 40 percent of the speaking time in the United Nations, while the United States used only 4 percent. Imagine the Soviets used 40 percent of the speaking time. And it happened right here on our home grounds.

Shall we, the sentinels of freedom, crawl on our bellies to some summit solution with the Kremlin gangsters that once more, to our shame, can only be at the expense of life and liberty of other peoples? Or shall we rise up proudly to the pinnacle of principle and courage that our Founding Fathers bequeathed us?

Our Declaration of Independence commands that we have no meeting with Khrushchev. The ideals contained in that freedom document will be perpetuated, not by agreements with slave masters, but by alliances with freedom fighters. We need, not Khrushchev, but the heroes of Hungary, Poland, etc. Let us not betray them by clasping his hands red with their blood.

Your voice, your pen, must not remain silent. You can act now to head off another summit conference by writing to Senators JOSEPH CLARK and EDWARD MARTIN, and tell them to work for passage of a "sense of the Senate" resolution opposing a summit conference. Also, write to Congressman DANIEL J. FLOOD to put himself on record, too, against any such high-level meeting. Write, right now.

LOUIS J. GRECO,
Commander, 12th District,
American Legion.

In Time of Emergencies

EXTENSION OF REMARKS
OF
HON. ROBERT W. HEMPHILL
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 23, 1958

Mr. HEMPHILL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Camden News of April 17, 1958:

IN TIME OF EMERGENCIES

New York City was visited by a severe snowstorm in late March. Traffic facilities in that city are more advanced, probably, than anywhere else in the Nation. It is interesting therefore to take note of the following which appeared in the New York Times during the period of the storm:

"Cars stalled in Nassau.

"Suffolk roads crippled.

"The Rockland Coach Co. suspended all services.

"The parkways looked like junk-car yards.

"Five airlines canceled 190 departures.

"Most inbound flights canceled or diverted.

"Buslines to suburbs canceled."

Well, how do you suppose it happened that the great city with 9 inches of new snow in its streets and 23 inches in many suburbs functioned rather busily?

Well the news columns of the New York Times tells how as follows:

"Commuter travel on the New York Central, Long Island, New Haven, and Pennsylvania Railroads was generally good.

"Arrivals of long distance trains were only 30 to 90 minutes late.

"Rail stations were crowded.

"Departures were generally on schedule.

"Frozen switches caused the minor delays on railroads."

The Memphis Press-Scimitar commenting on the above said:

"And that's the way it always is in emergencies. The airlines, with their great speeds and requirements of delicacy in handling, are knocked out early. The bus lines fight it valiantly, but they are ineffective in the end if for no other reason because masses of abandoned cars block their way. And on the railroads, it's just a busy day.

"The railroad men get to their jobs, if they have to crawl. And they stick to them. Their equipment is built to take it, and does.

"When is the Nation going to wake up and treat the railroads right? We are the only nation in the world which is abandoning railroad mileage."

The Memphis paper has asked a very pertinent question.

When World War II broke out the country again became very railroad conscious and all during the war the railroads did a tremendous business. But as soon as the war was over many people forgot about them again.

If war should break out tomorrow this country would again become very dependent on the railroads. It would be only a question of a short time until we needed them for transportation purposes the same as for freight purposes. Would they have enough passenger cars left to supply the needs of the traveling public? We doubt it.

The country should do better by its railroads. They are a vital necessity in emergencies. If we do not treat them better when there are no emergencies existing we may not have them when emergencies do come.

National Guard Opens All-Out Fight To Prevent Proposed Economy Cuts

EXTENSION OF REMARKS
OF
HON. PAUL BROWN
OF GEORGIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 23, 1958

Mr. BROWN of Georgia. Mr. Speaker, under leave to extend my remarks, I include in the RECORD a timely editorial from the April 11, 1958, issue of the Augusta Herald, Augusta, Ga., entitled "National Guard Opens All-Out Fight To Prevent Proposed Economy Cuts":

[From the Augusta (Ga.) Herald of April 11, 1958]

NATIONAL GUARD OPENS ALL-OUT FIGHT TO PREVENT PROPOSED ECONOMY CUTS

The Army National Guard, as if to show off its vaunted battle readiness, has turned from the defensive in its fight to halt a 10 percent reduction in strength and is laying siege to the enemy on two fronts—the Pentagon and Capitol Hill.

The guard, which has no inconsiderable political weight, has one main objective—to halt a Defense Department order for paring down the guard's effectiveness by 6 of 27 divisions. In order to do this, it hopes to influence Congress to appropriate the $51.8 million which will be necessary to keep the guard at its present strength of 400,000 men.

Dropping of the six guard divisions is being urged by the Defense Department for reasons of economy and to tighten its organization. The guard may overcome the first, since Congress seems well-disposed to grant the needed extra funds. But the citizen soldiers may not have as much luck with the second Defense Department objective.

The Defense Department—or, to be more exact, the Army—wants to reorganize all guard units along the lines of its own pentomic divisions for a closer dovetailing of Reserve and Regular components. Such reorganization has been given the approval of top Army brass—but not the endorsement of the powerful National Guard Bureau. The latter wants to keep all guard divisions, even if some changes in unit distribution are necessary to meet the requirements of modern warfare.

The guard's contention is that stripping it of 40,000 men is not going to make the guard stronger, as the Army contends it will, but is simply going to weaken it by 40,000 men—an eminently sound arithmetical deduction.

One of the most amazing things about the Army's reorganization proposal is that it is being undertaken completely without reference to the guard's traditional role as a State organization. Backers of the guard say the militia's function as a force available for disaster and emergency use and as a part of the State's internal security has been entirely ignored. This they find disturbing enough to make them carry their fight to Washington with renewed vigor and determination.

One thing about the proposed reduction in strength has struck us as highly inconsistent. That is, why the Defense Department feels it is necessary to trim the guard in the

name of economy while the administration daily is pumping more and more millions into all channels of defense spending.

Since the close of World War II the United States has gone to considerable expense of time, money, and energy to build up its Reserve program—including the National Guard, which has been one of its most dependable sources of trained reservists. It would seem to be the height of folly for this country now to undo all this work, particularly when the need for economizing has not been clearly shown when the units scheduled to be dropped could be utilized in other ways.

What Part Will I Play as a Citizen

EXTENSION OF REMARKS
OF
HON. WILLIAM M. McCULLOCH
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 23, 1958

Mr. McCULLOCH. Mr. Speaker, each year the American Legion of Ohio promotes an essay contest among the high school students in Ohio.

The subject assigned always has some connection with civic or governmental responsibility.

This year, the subject assigned was: What Part Will I Play as a Citizen.

Three winning essays are selected from each class group. I am proud of the fact that of a total of 12 winners, 2 come from the Fourth Congressional District of Ohio.

Thomas L. Braun of Coldwater, Ohio, is one of the 10th grade winners. His prizewinning essay is as follows:

WHAT PART WILL I PLAY AS A CITIZEN

(By Thomas L. Braun)

When we look to the future we sometimes forget what it consists of, for our future if any, will flourish on the happenings of history. And the history of our future will be the present which we live today; therefore, the lives which we lead today as so-called teen-agers, and the respect that we show toward the gifts of yesterday will reveal the outcome of our future. A simple and easy deduction, but one that is sometimes wished to be forgotten is that in order to speak of the future, one must have a history from which to learn and be in the present time in order to think about the future.

When we think of history, it reminds us of the days and ways in which our forefathers lived. As they lived their lives, played their part, and observed their duties toward citizenship in their country, they lived the same as we do. Maybe not inasmuch as conveniences are thought of, but they had their trials, tribulations, their misgivings, and also their happiness and fervent love toward each other and their country. In doing their duty as citizens, they often sacrificed their pleasures, loved ones, and many times their lives for the welfare of the new generations who were to surpass everything beyond their wildest expectancy. That is the way the history of our country is. It's the story of humble and yet of proud people who loved their way of life, and yet gave the greatest example of frontier citizenship.

Citizenship today, however, is not only love but the fact of loyalty and respect toward our American heritage. In the present of today we have every opportunity to express ourselves as good citizens. First of all, we have our duty to ourselves, our country, and to our fellow citizens. We owe our duty to ourselves by partaking in the many opportunities of education that our present-day modernized world has to offer. For, without a good basis of knowledge for ourselves, what chance do our future generations have, of maintaining a good and strong democratic country in which to live? The duty that we owe our country is one of loyalty. In event of any aggressive action from another country, it is our duty to remain loyal and fight for her protection. The duty we owe to our fellow citizens cannot be surpassed by anything on earth, because it is the duty of love. In time of danger and distress, it is not only a duty of good citizenship to heed them, but that of love, a virtue given to us by God that will never die.

In the future, our duties as citizens will be to maintain, support, and strengthen the course of the future. In every man's life, he has a goal, and that is to be free and able to do what he pleases, and go where he pleases; therefore, it is our duty as citizens to maintain the freedom of not only ourselves, but of every man on the face of the earth. No human is born as a slave, but many are born into slavery. There is no greater feeling of freedom to man than to work the fields, or stand on the hill with the wind blowing the grass at your feet, to look down on a valley, with a river flowing through it, winding its way from the snow-capped mountains in the distance, and to feel yourself next to God.

This is the reward we get for maintaining our respect, our loyalty, and our love, all of which is true citizenship. The example of citizenship which we put forth in our years on their earth will be the basis of their lives and also their standards which will yield to them newer and better rewards. And, if they follow these standards of citizenship, maybe it will be the beginning of everlasting peace.

Judith C. Wehrley, of Eldorado, Ohio, is also one of the 10th-grade winners. Her prizewinning essay is as follows:

WHAT PART WILL I PLAY AS A CITIZEN?

(By Judith C. Wehrley)

There are many kinds of citizens—good, bad, and indifferent. The good, who do all they can to help their country; the bad, who seem to do all they can to hurt it; the indifferent, who just don't care one way or the other.

Which kind of citizen will I be? I intend to do all that is in my power to become the good kind. I am only a teen-ager and have not had the opportunity to show much of the world what kind of a citizen I am now. Only in my small community, my school, my church, and my home have I been able to show what kind of a citizen I may become as I grow up.

What can I do to become a good citizen? I know that my training in citizenship was started by my parents when I was very small. First and foremost, I have been taught to live by the golden rule—to do unto others as I would have them do unto me. I have been taught discipline, courtesy, and to show respect to everyone I meet. It has been impressed upon me the importance of living compatibly with my fellow men. Now I must put into practice all these teachings.

I must learn to give of my talents in whatever field they lie—business, education, religion, science, politics, or entertainment. There is a great need in each field. Whichever one I enter, I shall do the best of which I am capable.

I must make every use of the educational advantages our schools and colleges have to offer. I realize how inportant a higher education is in our modern society.

I will attend the church of my choice and support it in every way that I can, not only in a financial way, but by attending services and participating in the church activities. Here I will learn to love my fellow men and to live a Christian life. If I can do this, I will be a good example for all with whom I come in contact.

We read and hear much about juvenile delinquency in today's world. If I can live my life in the right way and always see the need of being a decent, clean-minded citizen, perhaps in some small way I can serve to influence some boy or girl to turn from the wrong path of life. If my influence can aid even one teen-ager, I will be glad for this opportunity.

Perhaps the big part I will play as a citizen will be as a wife and mother. I feel the need to excel in both these roles. As a wife, I will help my husband to be a good and useful citizen. As a mother, I will raise and train my children to be the kind of citizens our country needs. If I am able to do all these things, I will feel that my life has been worthwhile.

This is the part I hope to play as a citizen of our United States of America.

These fine young people won a trip to Washington by their good works, and Legion and Legion Auxiliary officials are guiding the winners to the really important places in and about Washington this week.

I commend the reading of each essay to interested people everywhere.

Let's Adopt a Definite Course and Follow It—or Turn Back

EXTENSION OF REMARKS
OF
HON. HAROLD R. COLLIER
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 16, 1958

Mr. COLLIER. Mr. Speaker, the current civil war in Indonesia must certainly create certain doubts about our present foreign policy. The situation in which we find ourselves today is not unique from the standpoint of the apparent reluctance on the part of our State Department to exert pressure in behalf of the anti-Communists.

It was not too long ago that the free world was outraged by the merciless assault upon the Hungarian people by Communist troops. Then the Nagy government of Hungary, which had temporarily shake nthe yoke of oppression of Soviet rule, declared itself independent and pleaded with the West for assistance in its fight to remain free.

While the freedom fighters were given sympathy in abundance by the United States and other free nations, Russian tanks rolled into the streets of Budapest and drowned their hopes in pools of blood. This was the last real opportunity of a Soviet satellite to rid itself of communism and join the community of free nations.

In keeping with the spirit of the United Nations Charter, western nations felt impotent to assist. The free world sat in the amphitheater of Europe and witnessed the rape of Hungary by the Soviet Union.

The Hungarian situation is not entirely analagous to that of Indonesia since the Hungarian freedom fighters were in control of the government. Hence, the

anti-Communist forces engaged in the civil war in Indonesia must technically be called rebels. That is apparently the only difference in the two situations.

The Indonesian rebel forces are avowed anti-Communists. In fact, the reason behind present hostilities is the determination on the part of a large segment of the Indonesian population not to be dominated, much less subjugated by the Communist type of government.

It seems quite clear to me, as it should to other Members of Congress, that while our intentions may be good and our sympathy again with the forces opposing communism, the forces of freedom will inevitably succumb to the Communist elements. Battles are not won by sympathy. They are won by the force of arms. Here we find the pro-Communists being supplied with the weapons of war while the gallant rebels are receiving no assistance.

At a recent press conference, Secretary of State Dulles was asked whether it was true the Indonesian Government has been receiving assistance from the Communist world. He replied in the affirmative, stating that the Russian Government has placed at the disposal of the Indonesian Government $100 million in aid. He indicated, however, that to his knowledge no military assistance had been given. When asked, Secretary Dulles stated that the United States Government's official policy regarding the rebellion was one of hands off.

The New York Times of Wednesday, April 2, 1958, in reporting on the Secretary's news conference reported that some of the aid already received by the Indonesian Government has been ships—ships which are obviously blockading the anti-Communist forces in Sumatra and the Celebes.

The morning papers of Monday, April 7, 1958, reported that the Djakarta Government has concluded an agreement with the Governments of Poland, Czechoslovakia, and Yugoslavia whereby those nations would sell military equipment to the Indonesian Government with no strings attached. The irony of this announcement is the fact that in the instance of Yugoslavia and Poland, the United States has been giving them military and economic assistance, respectively, to the tune of hundreds of millions of dollars.

Is this position not inconsistent with the purpose of the Mutual Security Act? Is this the way to win the minds of freedom seeking people to the cause which has swallowed more than $76 billion in a program designed to deter the spread of communism? Teddy Roosevelt's famous admonishment, "speak softly, but carry a big stick" so frequently comes to mind when one conscientiously appraises the Hungarian and Indonesian episodes.

I do not profess to be an expert in international relations nor do I claim to have any more solutions to the complex international problems which concern us as a Nation today. But, I am convinced there is something wrong when we lose ground because the assistance being given is not available when and where it is needed the most. Certainly one does not have to be an expert on foreign policy or international relations to sense the faltering of one force as opposed to another.

There is not enough money in the entire United States to buy the remaining free nations of the world. Certainly I do not recommend that we engage in open conflict when internal strife develops as it is in Indonesia—as it did in Poland or in Hungary. But, I do strongly urge that the Department of State reexamine its present policy and determine whether it is possible to aid anti-Communist forces. If we are committed to the global struggle for freedom. If it is the conclusion of the Department of State that this is not possible, then I believe it is time we make an agonizing appraisal of our foreign commitments and entanglements.

Proponents of the present foreign-aid program repeatedly talk in terms of preventing the spread of communism. Is our position in the Indonesian struggle an admission that we are engaged only in a program of deterrence? Have we given up the idea of spreading the principles of democracy? If the answer is in the affirmative to these questions, then our task can only be an endless and probably futile one. Seems that we must make up our mind as a Nation just where we are going and how we intend to get there. Or the alternative is to take a different path than we have travelled over the past 13 years.

The Mind of Vice President Nixon

EXTENSION OF REMARKS

OF

HON. PETER FRELINGHUYSEN, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 23, 1958

Mr. FRELINGHUYSEN. Mr. Speaker, under leave to extend my remarks, I should like to include an article from the Thursday, April 17, 1958, issue of the Manchester Guardian Weekly, by Max Freedman entitled "The Mind of Vice President NIXON":

Vice President NIXON must often wish that he could revise his early campaigns in California. He has been haunted by them as his national stature has grown more impressive. Perhaps it would be more correct to say that he has been tormented by a brutal myth which has usurped the place of reality. In the judgment of some Democrats he is a cruel, political warrior who savaged his way to greatness. To listen to these critics, one would almost believe that there had never been a rough political contest before he matched his name with destiny. These charges should defeat themselves by their very violence, yet somehow they are sustained by stubborn prejudice. It is a mere act of justice to scrutinize this indictment in the light of the neglected record. In doing so it is quite unnecessary to defend every act in Mr. NIXON's early career or to deny that he sometimes blundered into harsh and capricious extremes. No one is trying to polish a politician's halo. All we seek is a measure of perspective and fairness.

There seems little doubt that Congressman Voorhis, an energetic and respected Member, went down to defeat when he agreed to meet the unknown Mr. NIXON in debate. In the limited arena of one congressional district Mr. NIXON gave a prophetic display of the powers which in after years made him the most dextrous Republican advocate in the country. The campaign against Helen Gahagan Douglas, fought for the more splendid prize of a seat in the Senate, was disfigured by smudges of prejudice and angry bitterness. But one must be curiously indifferent to all the available evidence to believe that every wrong was committed by one side while the other party moved serenely in the majestic robes of political virtue. There are more registered Democrats than Republicans in California. Mr. NIXON could never carry the State by a campaign which outrated the patriotism of the Democratic Party or impugned the loyalty of its accredited leaders. He insists that he won because of his exposition of the public issues, not because of his rough arraignment of Mrs. Douglas.

Mr. NIXON profoundly resents the charge that he imitated the blundering brutalities of McCarthy, or that he is a repentant isolationist converted to more generous policies under the stress of necessity. His voting record in Congress certainly clears his name of the false charge of isolationism. The spots on his record do not vanish so easily, however, as one revives the memory of the two national campaigns in which he took so strenuous yet so inglorious a part. He pleads in extenuation that many of his remarks have been tortured into spiteful error; and he adds with mournful conviction that many people have wrongly ascribed to him the prejudices and antipathies sown with such angry gestures by Senators McCarthy and JENNER. All the same, when the last syllable of the candid defense has been heard one is still left with the impression that Mr. NIXON would not object if the memory of these early campaigns were covered in the mercy of swift oblivion.

Mr. NIXON believes that the congressional election this year will be dominated by the economic debate over the recession. In coming years he sees every national campaign influenced by the play and commotion of world events. Recent speeches have shown his capacity to speak with courage and conviction on matters of extreme controversy. These qualities gleam with yet more distinction in the relaxed intimacies of private conversation when he lets his mind brood on the overcast world scene. He ponders with reluctant admiration the Communist gift for planning its strategy against vast stretches of time. Never for one moment does he underestimate the strength of the Communist empire, either in its moods of calculated caution or in its strident thrust for world domination. He might not be so eager as other members of the administration to flourish the maxims of pious sentiment (and the world would have no reason to regret this respite), but American policy in his hands would be sternly braced to endure the long challenge of communism.

Many Americans who carry an ugly image of Mr. NIXON would be very surprised if they heard him expound his personal philosophy in world affairs. He has studied these world problems with an incisive and creative mind. What is more, he can state his views with eloquent conviction. Most important of all it is a generous, constructive, and spacious philosophy, akin to the vision which once led Senator Vandenberg and not very different in essentials from the saving faith of the Democratic sages. The Democrats will not like this comparison but they really must begin to examine Mr. NIXON and not the malignant myth of their own invention.

Nothing is more impressive than his instinctive sympathy for Britain and France, expressing itself in the desire to make the alliance a still stronger shield to protect the

threatened freedoms of mankind. He understands the passionate divisions of British public opinion and extends to Prime Minister Macmillan a most generous comprehension of the difficulties facing the British Government. But he would show the same magnanimous judgment in dealing with a labor government in London. Generous to allies, he remains skeptical of Russia. He believes Mr. Khrushchev wants to stop the tests before America and Britain fully develop the small tactical bombs that would forever destroy the advantages now held by the numerical superiority of the Russian and Chinese armies. A hard, disciplined, able growing mind that is the final impression after an evening with Mr. NIXON. He may yet grow into a statesman. The experiment is worth watching.

Red Duplicity

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 23, 1958

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article which appeared in the Wilkes-Barre Times Leader of April 15, 1958, concerning a meeting at the summit:

RED DUPLICITY

EDITOR, TIMES-LEADER NEWS:

I would like to take this opportunity to commend Comdr. Louis J. Greco of the 12th district of the American Legion on his fine article concerning a summit meeting which appeared in the readers' column on March 7.

I believe it is appropriate at this time to outline briefly the Communist record in such conferences.

Talks at the summit: Three American Presidents have traveled 40,454 miles, spent 36 days talking with Soviet Premiers. Roosevelt met Stalin at Teheran in 1943. Result: Stalin entered into four major agreements, violated them all. Roosevelt met Stalin at Yalta in 1945. Result: Stalin entered into 6 major agreements, violated 5. One agreement, to enter the war against Japan, was kept by the Soviet Government. Truman met Stalin at Potsdam in 1945. Result: Stalin entered into 14 major agreements, violated them all. Eisenhower met Khrushchev at Geneva in 1955. Result: No concrete agreements. Khrushchev promised a new spirit of conciliation in 3 major fields—disarmament, German reunification, and East-West contacts. No substantial progress has developed in any of these fields.

Talks between foreign ministers: Six American Secretaries of State have traveled 113,268 miles, spent 426 days talking with Soviet Foreign Ministers. Cordell Hull went to Moscow for talks with Molotov in 1943. Result: Soviet Government made three major agreements, violated them all. Edward R. Stettinius, Jr., went to San Francisco in 1945, where he talked with Molotov. Result: One major agreement, violated by the Soviet Government. James F. Byrnes went to Moscow, to London, to New York, and three times to Paris for talks with Molotov in 1945 and 1946. Result: Soviet Government made 10 major agreements, violated 9. George C. Marshall went to London for talks with Molotov in 1947. Result: Soviet Government made one major agreement, violated it. Dean Acheson went to Paris for talks with Vishinsky in 1949. Result: No agreement. John Foster Dulles went to Berlin, Vienna, twice to Geneva in 1954 and 1955 for talks with Molotov. Result: One major agreement on an Austrian treaty has been kept by the Soviet Government.

As a result of 19 top level conferences between the United States and the Communists, 40 agreements were made; only 3 agreements were kept by the Soviet Government.

School Assistance Laws Best Educational Legislation Ever Enacted

EXTENSION OF REMARKS
OF
HON. JOHN E. FOGARTY
OF RHODE ISLAND
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 17, 1958

Mr. FOGARTY. Mr. Speaker, under leave to extend my remarks in the RECORD, I believe that the school-assistance laws, Public Law 815 and Public Law 874, are examples of some of the best educational legislation ever enacted by the Congress. They meet a real need by providing educational facilities and services to many thousands of children for whom local educational agencies in the various States would not be able to provide such services adequately without the assistance authorized in these laws. When these laws were passed in 1950 many people did not realize how the need for them was going to grow; but since then they have been revised and extended on 2 or 3 occasions by unanimous votes of both Houses of Congress. The House Committee on Education and Labor has held extensive hearings on the need for extension of both laws this year and H. R. 11378 was formulated after careful study.

The extension of these laws as provided in this bill is of great importance to good school progress for all those children who are connected with Federal property through residing on it or having parents employed on it in work in which the United States has a definite interest.

Public Law 874 provides a measure of Federal support for school districts which have financial burdens because their available revenues have been reduced by the acquisition of some of their real property by the United States under certain conditions, or because they provide free public elementary or secondary education for specified percents of their total average daily attendance residing on Federal property or residing with parents employed on Federal property or both, or because there has been a sudden and substantial increase in their school attendance resulting from Federal activities. The amount of the Federal payment is related to the local revenue lost by the loss of tax base and to the additional attendance burden assumed by the school district by reason of the Federal activities.

No provision is made for reimbursing the States for State aid paid on account of these Federal impacts because a State can impose certain taxes on the residents of Federal property which cannot be imposed by local communities. The law is based further on the assumption that generally throughout the Nation about half of the local tax income to finance the current operating expenses of schools comes from taxes on places where people live, and the other half from taxes on places where people work. Specific formulas are included for determining when a school district is eligible for assistance and how much it is entitled to receive. A district is determined to be eligible when it is shown that the Federal impact constitutes a distinct financial burden. All assistance is channeled through the Office of Education, and any interference or control over any aspect of the local educational program by any Federal agency is prohibited.

Since 1951, the first year of operation of the school assistance program, the number of participating school districts under Public Law 874 has trebled, eligible Federal properties claimed have more than trebled, the number of federally connected pupils has more than doubled and Federal payments have nearly quadrupled. This rapid growth has been caused by first, increased Federal activity; second, increases in school population; third, increased interest in the program by State and local officials, and fourth, liberalizing amendments to the legislation.

For example, in the eligible districts in 1957 federally connected pupils accounted for 15.4 percent of their total attendance as compared with 16.6 percent in 1954 and 17.5 percent in 1951. The slight decline in percentage of federally connected pupils is attributable to the increased number of new applicant school districts each year, which reported a smaller degree of Federal "impact," than the original applicants. The average percent of Federal payments to total school budgets remained over the 7-year period at approximately 5 percent. The average Federal payment per child increased from $56.60 in 1951 to $92.30 in 1957; but the total per capita cost of education in eligible districts increased from $177.90 to $285.

Applicant districts receiving Public Law 874 funds in fiscal year 1957 had a total attendance of about 7.6 million children or about one-fourth of the total public school enrollment in the Nation. In 1951 the estimated 2.9 million children in attendance in eligible districts was only one-eighth of the Nation's public school enrollment. Thus the Federal payments are now helping to support free public education over twice as broad a base as in 1951.

Under Public Law 815, approximately 1,500 local educational agencies have been aided by grants. The United States Commissioner of Education had allocated $715 million by June 30, 1957, to 3,715 eligible projects. The recipient local school districts had added more than 300 million of their own funds to these projects. Thus, more than $1 billion in

public school construction has been initiated under this program, and the approved projects will provide facilities to house some 950,000 pupils. When existing authorizations have been fulfilled, schoolhousing will be provided for an additional 100,000 pupils.

In the first 7 years of operation of these school assistance laws, 21 local educational agencies in Rhode Island were granted $1,135,602 for maintenance and operation of schools for federally connected children; and 6 school systems received grants totaling $3,005,706 in school construction assistance for such children.

GENERAL RATIONALE OF THE BILL

By the extension of these two laws, the Congress will continue to recognize its responsibility for the impact on local school attendance of Federal activities conducted largely on tax-exempt Federal property. Thus, in theory, the Federal Government will assume the role of a local taxpayer for schools with respect to Federal property as defined in these laws. The varied activities conducted on Federal properties require in many instances large numbers of resident military and civilian personnel whose presence necessitates the performance of public services not distinctly Federal in character, such as the maintenance and operation of schools for the children of resident personnel. The Federal Government is now the largest single owner of real property in the United States, owning more than 11,000 properties, which exceed in area the 6 New England States plus Texas. Many of these properties are being used for activities instituted by the Federal Government or in the Federal interest. Thus the Federal Government has the responsibility for assisting in providing educational services for the children who would be prevented from enjoying adequate educational advantages otherwise by the tax-exempt character of these properties. Additional educational services are required in many nearby or "bedroom communities" which, though they are separate political subdivisions, must provide free public elementary and secondary education for children who attend their schools and whose parents are employed on tax-exempt Federal properties outside their school district boundaries. The enactment of H. R. 11378 will be a real boon to school districts in the various States which have taken upon themselves the function of providing excellent educational advantages to thousands of families that are serving the Federal interest.

The Record of Soviet Ambassador Menshikov

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 23, 1958

Mr. FLOOD, Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following column by Mr. David Lawrence, which appeared in the Washington Evening Star on April 16, 1958, in which he discusses and comments on the record of the new Soviet Ambassador Mikhail Menshikov:

THE RECORD OF MR. MENSHIKOV—SOVIET ENVOY'S BAN ON UNRRA RELIEF TO NON-REDS IN POLAND IS RECALLED

(By David Lawrence)

For several weeks now the American people have been told that the new Soviet Ambassador, Mikhail Menshikov, is a nice fellow and that maybe, if he is a typical example, the Communists aren't such bad folks after all. So the new envoy has been wined and dined, visiting delegations of Americans at the Embassy here have been charmed by his smile, and he has been invited to sit down with some of the capitalistic elite in the Midwest.

But what is the true background of Mikhail Menshikov, and why, it might be asked, hasn't public attention been called to it before? For in the official proceedings of the Congress of the United States there is a record of his willingness to let human beings starve in order to further the Communist cause. This is in the report of a subcommittee of the House Committee on Foreign Affairs printed in 1946 after a study in Eastern Europe from August to October 1945. The report tells the sad story of what four Members of Congress found out about Mr. Menshikov's cruelty to hungry men, women, and children in Poland. Here is the full text of an extract from that report to Congress:

"The committee made some effort to investigate the operation of UNRRA (United Nations Relief and Rehabilitation Administration) in Poland but unfortunately was somewhat limited in its efforts, due to the fact that UNRRA had not as yet had sufficient opportunity to become organized upon a permanent basis. However, under the temporary arrangements that had been concluded, the committee was deeply disappointed in both its operation and the distribution of its supplies.

"The temporary head of the UNRRA delegation was Mikhail Menshikov, a Soviet citizen, who wielded great control and influence over the distribution of UNRRA's yet meager supplies. The distribution was limited to recipients who were active supporters of or collaborationists with the provisional Polish Government.

"Upon the committee's return to this country, it lodged a strong protest with the President of the United States and was happy to learn that soon thereafter Mr. Menshikov was recalled and his place taken by Brig. Gen. C. M. Drury, of Canada. Since the committee's return to the United States, it has kept in close and direct contact with UNRRA operations in Poland and has noted great improvement both in the operation and in the distribution of relief supplies."

Three of the 4 members of the above-mentioned committee are still in Congress—Representative THOMAS S. GORDON, of Illinois, Democrat, chairman of the Foreign Affairs Committee; Representative FRANCES BOLTON, of Ohio, Republican, and KARL MUNDT, Republican, now Senator from South Dakota.

Since Mr. GORDON is temporarily out of the country, this correspondent interviewed Representative BOLTON and Senator MUNDT. Mrs. BOLTON said:

"Yes, I remember the experience and what we found. Unless a person was a Communist, he didn't get anything to eat. It was a very bad situation, and the people who needed our food most didn't get it. Mr. Menshikov was to blame for what happened, and we said so plainly on our return to Washington."

Senator MUNDT, confirming this, said:

"That is correct. As stated in the report, Menshikov was distributing these UNRRA supplies to the Communists and not to the other people—and claiming credit for the Soviets, rather than for this country. The Soviets were contributing very little, if anything, to this relief agency. By getting the leadership echelon partly into the hands of the Russians, they very skillfully maneuvered their people at the top in these countries which even then, I suppose, they had in mind taking over. This was a very handy tool to win friends and influence people—that's what they used it for."

When Ambassador Menshikov came to Washington he was received with open arms by various persons here. He was given time on television and he was publicized widely as exuding the best of feelings toward the American people. Yet behind the mask of smiles is a cruel streak. Here is a man who abused his trusteeship as the custodian and distributor of food to starving people. He was the agent of an international relief organization, but his first allegiance was to communism—he was willing to see human beings suffer unless they accepted Communist domination, even while he used relief supplies to reward those who were politically on his side. It is a sorrowful chapter. It is not important alone as a revelation of what one Communist did, but it's an example of the tyranny and inhumanity which lie behind the whole Communist creed and the Communist government.

One wonders why the Department of State didn't look up the record before giving its approval to Mr. Menshikov as an ambassador to the United States. For every government has a right to decide whether an individual is "persona grata"—acceptable to it—and certainly the record shows Mr. Menshikov had committed a serious offense against the American as well as the Polish peoples. With such a record revealed, Mr. Menshikov's usefulness in America can be considered at an end. His own government ought to recall him and, meanwhile, American organizations should hesitate to invite to their rostrums and banquet tables anyone who has such a record of willful cruelty to human beings. If they do, such functions should be picketed by those who wish to register a protest against inhumanity.

Resolutions Memorializing Congress To Repeal the Federal Excise Taxes on Transportation of Persons and Property

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 23, 1958

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the resolutions adopted by the Commonwealth of Massachusetts on April 7, 1958:

Resolutions memorializing Congress to repeal the Federal excise taxes on transportation of persons and property

"Whereas the Federal transportation tax on the movement of passengers and freight was adopted as a wartime tax to discourage movement of civilian passengers and freight in 1942; and

"Whereas hostilities having ceased, this tax rather than being of a benefit to Massachusetts welfare, is now working as a detriment to Massachusetts economy; and

"Whereas the transportation tax, being inapplicable to certain carriers for hire, is working a hardship on those carriers for hire to whom said tax applies and which are en-

sential to the national defense and welfare; and

"Whereas the transportation tax because of its nature or application tends to become discriminatory as to communities and individuals, and tends to restrict trade areas, thereby interfering with the free flow of commerce: Now, therefore, be it

"Resolved, That the General Court of Massachusetts respectfully urges the Congress of the United States to repeal the 3 percent Federal transportation tax on commodities shipped by carriers for hire, and to repeal the 10 percent transportation tax on passenger fares; and be it further

"Resolved, That a copy of these resolutions be forwarded by the secretary of the Commonwealth to the presiding officer of each branch of Congress and Members thereof from this Commonwealth."

House of representatives, adopted April 2, 1958.

LAWRENCE R. GROVE,
Clerk.

Senate, adopted in concurrence April 7, 1958.

IRVING N. HAYDEN,
Clerk.

A true copy. Attest:

EDWARD J. CRONIN,
Secretary of the Commonwealth.

Kansas Commonsense in Foreign Aid

EXTENSION OF REMARKS
OF
HON. ERRETT P. SCRIVNER
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 22, 1958

Mr. SCRIVNER. Mr. Speaker, on Tuesday, March 18, 1958, on page A2552 of the CONGRESSIONAL RECORD, there appears the story of Bill Graham and his one-man foreign aid program in India.

Bill Graham is now in Pakistan using his direct Kansas commonsense aid to foreign industry on a self-liquidating loan approach rather than gratuity.

The following Reuters dispatch from Karachi, which appeared in the Kansas City Star, Sunday, April 20, 1958, is self-explanatory:

HEAR KANSAN'S AID PLAN

LOANS FOR BUSINESS OUTLINED ON VISIT IN PAKISTAN

KARACHI, PAKISTAN, April 19.—A Kansas businessman today started to sell his ideas on private enterprise for the little man to the people of Pakistan.

After a conference with Pakistani officials, Bill Graham, head of Private Enterprises, Inc., explained how he will bankroll Pakistanis to develop their small businesses.

"Give us a man with energy and the ideas for making money," the 47-year-old Graham said. "We will advance him up to $20,000 as an interest-free loan.

"He gives us half his profits until finally he can repay the loan. We make a profit, he finishes up a little capitalist. This is business—not an American charity deal."

A local investment corporation now is taking loan applications from Pakistani businessmen. Graham, who will fly to the United States tomorrow, will return in 2 months to make the final decisions on what businessmen get how much money. Preference will be given to men wanting about $5,000.

For Tariff Protection

EXTENSION OF REMARKS
OF
HON. CLEVELAND M. BAILEY
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 23, 1958

Mr. BAILEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter to the editor which appeared in a recent edition of the Wall Street Journal:

FOR TARIFF PROTECTION

EDITOR, THE WALL STREET JOURNAL:

I have been subscribing to your paper for several years and have always enjoyed your editorials because they are invariably based on facts and are written without bias.

I do want to take exception, however, to the editorial "The Kangaroo's Pouch" (March 31).

As a small manufacturer, I have been directly affected by cheap foreign imports, particularly in recent years by competition from Japan, which involves, in many instances, the complete imitation of our products.

Several of our Congressmen have suggested aid through subsidy, but I don't think this is the answer, nor do I feel that the average businessman would be interested in this type of aid.

You editorial appears to follow the erroneous thinking which has been evident all through the current testimony in favor of the extension of the Reciprocal Trade Act at the hearings before the House Ways and Means Committee. In the first place, the argument seems to be made without fear of contradiction that this country is exporting more than it is importing. I haven't had the opportunity to check these figures, but it seems to me that a good part of our export volume consists of surplus farm commodities and manufactured goods being furnished under foreign aid giveaway programs.

The second and more important error, and the one that is the most misleading, is the argument, as expressed in your editorial, marginal firms that cannot meet competition should try something else. In effect, this means to go out of business in a situation such as we are personally faced with. This argument might hold water if business in this country were operating in a free economy. I don't have to tell you that this is not the case. We would have no trouble competing with Japan if we did not have to pay high real estate taxes in the city of New York, a large part of which, in addition to our sales tax, goes to support a welfare program which has no residential requirement as far as its beneficiaries are concerned. In effect, business in New York and other large cities is being called upon to support hundreds of thousands of migrants from the south and from Puerto Rico. Do the Japanese manufacturers have this burden?

Do they have our high income taxes, a good part of which go to support foreign aid giveaways? Are they forced to comply with laws requiring time-and-a-half after 40 hours, and double time on Sundays? Do they have a minimum wage law which requires them to pay $1 per hour?

I imagine you can complete this list more readily than I can; the point is, how can any manufacturer in America, whose merchandise is made with small machines, and involves a certain amount of hand assembly work, hope to compete on an equal basis with a manufacturer in Japan? I might add that this type of product embodies the great bulk of our national products, involving hardware, textiles, and small appliances.

The only people that aren't hurt are large manufacturers, such as the automobile companies and, to a certain extent, the steel companies. These people all have large plant investments abroad, which may help their year-end profits, but doesn't do any good as far as employing American labor is concerned.

I think when it comes to the matter of logic and emotionalism, as referred to in the last paragraph of your editorial, the shoe is on the foot of the free traders, and not with the protectionists.

V. K. SCAVULLO.

LONG ISLAND CITY, N. Y.

The High Cost of Highways

EXTENSION OF REMARKS
OF
HON. BURR P. HARRISON
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 23, 1958

Mr. HARRISON of Virginia. Mr. Speaker, rising costs of highways, particularly in connection with the big Interstate Superhighway System, are causing increasing concern among those in the States charged with responsibility for planning and financing road improvements generally. The public, too, is becoming aware of the huge bill that will have to be paid in order to provide the major road improvements.

Under leave to extend my remarks in the Appendix, I include an interesting editorial on this problem which appeared on April 17, 1958, in the Shenandoah Valley, a weekly newspaper edited and published at New Market, Va., by John G. Miller. The editorial follows:

A $25 MILLION ROAD IN A $25 MILLION COUNTY

Hon. HARRY F. BYRD, United States Senator from Virginia and a good-roads advocate and expert, if there is any, sees the hole in the doughnut in the new interstate highway program. He points out that the extreme cost of this program, which requires the several States to put up 10 percent of the cost, is strangling the farm-to-market roads.

So astronomical are the costs of this modern network of speedways, that the Richmond brethren are scratching their heads in an effort to figure out where to get the money to do the matching, even if all sources of income were tapped. That 10 percent of the State's share looks small on paper, but when one figures out the cost of the program in Virginia, it amounts to a terrific drain on the highway funds.

Mr. BYRD hinted at the uneconomic side of the case when he pointed out that the program seemed to be foisted on the State despite the fact that much of the new construction parallels highways such as U. S. 11, which is presently in position to carry the load of traffic well.

The early estimates of the cost of the new Interstate System ran as high as a million dollars a mile in metropolitan and highly populated areas. To be sure, the average cost was not placed that high. Later we heard that the program was slowed on account of the fact that, though the income from the extra gasoline and tire taxes was bringing in the estimated amounts or more, the costs of building the highway were much higher than first anticipated.

It may be that a million dollars a mile will be the average cost. Think of what that means. Shenandoah County will have about 35 miles of this high speed highway according to the published plans. If it cost an average of a million dollars a mile, that would be $35 million for Shenandoah County. Let's be reasonable and shave 5 million from that figure and you have a $30 million tab of which amount the State has to chip in $3 million.

Well that sounds too high to be true. So let's cut it another $5 million and settle for $25 million. Let's hope that is still too big, but there is a limit to which you cut these Government programs which are to be built in the future.

The chances are that the $25 million may be about right. The recently awarded contract for a 5.7 mile portion of the bypass east of Harrisonburg was let at slightly over $4 million, not including cost of rights of way. That makes a good round figure of $700,000 a mile. With 35 miles of road to be built in Shenandoah County, it would appear that the cost would be $24,500,000.

The figure is only approximate of course, but in traversing Shenandoah County there will be a number of bridges over streams, over existing highways, etc., and it is likely that when the program gets rolling the contractors will be pretty well booked, so they will jack up their bids to make the extra profit that less competition permits.

So there you have it. A nice new $25 million highway for Shenandoah County. We find that the assessed valuation of Shenandoah County property for 1957, both real estate, and personal property, public utilities and what have you, was $24,250,000. So we will have a $25 million road in a $25 million county. According to mathematics, when the job is done we should have a $50 million county, half of it brand new.

Of the $25 million for the new road the State of Virginia will have to chip in $2,500,000. Man, what that would do to the roads other than U. S. 11 if it were spent on them. According to the present rate of money expended for new construction in Shenandoah County from State and Federal revenues for farm to market roads it would take a quarter of a century to get that much money spent. Maybe twice that long. If the Federal highway project goes through and the State has to divert money from existing revenues to paying its 10 percent there won't be any money at all for secondary and country road construction.

Man, do those figures make you dizzy? Do they add up to anything important to all of us? It sure is something to think about.

On the basis of that record, we can't see any advantage of spending more money on the interstate road system in an effort to bolster the incomes of our citizens. It seems to us, other ways should be found.

The American Stockholder

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 11, 1958

Mr. MULTER. Mr. Speaker, I have just concluded the reading of a most interesting book entitled "The American Stockholder" by J. A. Livingston, who has acquired a well-deserved reputation as an outstanding financial writer.

I commend the book to the attention of every legislator on State and national levels. It not only brings a fresh viewpoint to this important subject but presents most important information without which the intelligent legislator can not exercise the judgment required of him.

There is an interesting subnote in the book, indicating that any person not mentioned in it, on appropriate identification, may purchase the book at the regular price. Not being mentioned in the book, I exercised the privilege of borrowing the book from the Congressional Library. I apologize to the author for thus depriving him of his royalties.

Trade Act Extension Supported

EXTENSION OF REMARKS
OF
HON. PATRICK J. HILLINGS
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 21, 1958

Mr. HILLINGS. Mr. Speaker, the Pasadena, Calif., Star-News of April 18, 1958, published a thought-provoking and, in my opinion, an excellent editorial on why the Reciprocal Trade Agreements Act should be extended.

The editorial also is a tribute to Henry Kearns, Assistant Secretary of Commerce, who is an articulate administration spokesman on international trade.

I commend this editorial, which follows, to the attention of every Member of Congress:

Henry Kearns, former Pasadenan, now Assistant Secretary of Commerce, recently told his friends here "a retreat from our reciprocal-trade agreements would be a scorched-earth retreat. It would leave in its wake ruined industries and loss of thousands of jobs."

President Eisenhower, in his battle with Congress, has been stressing the same theme. It is good to hear it also from Mr. Kearns, for this idea should be driven home to every American, be he employer or employee. Everyone has a major stake in the issue.

Mr. Kearns also stressed that present world trade creates jobs for at least 4,500,000 Americans.

Republicans who remember the pre-Roosevelt era may find this ironical. Historically, the GOP had been a high-tariff party. In those days, while this Nation was building its industrial empire, American business required protection from imports which were the product of cheap labor. At that time, too, American industry was required to import few raw materials.

Today the United States is no more isolated economically than it is politically. The picture has changed. Unfortunately, many in Congress still do not realize this. Last year's extension of the Reciprocal Trade Act, for instance, passed the House by a single vote.

This year the struggle is even more bitter. High-duty advocates want to curtail, rather than enlarge, the President's authority to reduce tariffs on a gradual selective basis. The issue has crossed party lines. What used to be a protective policy espoused only by the GOP is now accepted by many Democrats, particularly those from the South.

Should the reciprocal-trade program be jettisoned, or even crippled, American payrolls would feel the blow.

America's exports last year totaled roughly $19.5 in United States goods, or one-fifth of total world exports. Exports are directly connected with imports. Last year the United States imported approximately $13 billion in foreign goods.

Between $10 billion and $11 billion in imports comprised noncompetitive raw and partially processed materials which we do not produce yet which are essential to our economy. If we are to sell abroad, we must also import from abroad.

Despite the early day battles over tariff, America grew through foreign trade.

If we are to learn from experience, then one has only to bear in mind the effects of the Smoot-Hawley Act of 1930. Its severe import restrictions reduced foreign competition with our industries but, at the same time, cut our export trade from $9.6 billion in 1929 to $2.9 billion in 1932, a drop of 70 percent.

Foreign trade did not begin to rise again until this act was expunged by act of Congress.

With this catastrophe in the background it is hard to see how anti-reciprocal-trade forces can rally the support they have in Congress.

Henry Kearns did a service, not only to the President, but to the people as well, in his recent talk in Pasadena.

The Blight of Politics

EXTENSION OF REMARKS
OF
HON. LEE METCALF
OF MONTANA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 22, 1958

Mr. METCALF. Mr. Speaker, this week the city of St. Louis, Mo., is host to the North American Wildlife Conference. Some 1,100 conservationists are taking part in discussions covering the whole broad range of conservation, including soil, water, timber, and wildlife. Delegates represent all types of organizations, public and private, in 48 States, the Territories of Alaska, Hawaii, and Puerto Rico, and the provinces of Canada and Mexico.

As usual, the conference was opened by one of this Nation's great conservationists, Dr. Ira N. Gabrielson, president of the Wildlife Management Institute and former Director both of the United States Fish and Wildlife Service and of its predecessor, the United States Biological Survey.

"Gabe" will hit hard at partisan and personal politics in an address on March 5. He says they "have wrecked more good conservation programs," both State and Federal, than all other forces combined. As he points out, in a sense, conservation is national defense—for a nation without rich soil, clean water, productive forests, and adequate recreation for its people cannot retain a place of leadership among nations. In Dr. Gabrielson's words: "Soil erosion, overgrazing, and exploitative forest management have destroyed more nations than bombs, shells, and gunpowder."

Dr. Gabrielson's address, which is of concern to all of us, follows:

THE BLIGHT OF POLITICS, OR CONSERVATION BE DAMNED

(By Ira N. Gabrielson, president, Wildlife Management Institute, Washington, D. C.)

Webster's dictionary offers four modern definitions of politics, an honorable word that in its original meaning merely meant the science of government. Webster, however, must have known something about conservation issues when he coined definition No. 4. This speaks of politics in terms of political scheming, factional interests, and partisan rivalry. This is the politics that is bad for natural resources, and Webster's definition, in reverse order, makes a fair outline for a discussion of the wrong kind of politics in conservation administration today.

"Ding" Darling, when chief of the Bureau of Biological Survey, frequently said that the two worst enemies of wildlife were Republicans and Democrats acting as Republicans and Democrats. During the nearly 25 years since that time, I have seen little to refute that statement and much to convince me of its wisdom. Partisan and personal politics have wrecked more good conservation programs than all other forces combined.

The use of jobs in conservation agencies to repay political debts, or similar positions in any other agencies requiring the services of technically and scientifically trained personnel, is one of the most pernicious aspects of the American form of government. In selecting men to fill such positions, party bosses usually are more concerned with a man's loyalty to the party than they are with his qualifications to fill the job. In some States, the two-party system is little more than a myth, and, in these, personnel and programs often continue for many years simply because there is no change in party control of the State government. In many States, however, there is a continual turnover of power between two relatively equal political parties. When this situation prevails, the common practice is to "throw the rascals out" once every 2 or 4 years and replace the entire upper echelon of the conservation department with a new set of rascals of the new governor's choice. The extent of the overhaul is governed to some extent by the legal safeguards given the employees through civil service or similar institutions, and somewhat on the number of political friends to be paid off.

The political appointees owe political debts and loyalties and are far more sensitive to outside pressures than career employees in the same positions. In the usual situation where turnover is rapid, the heads of the departments know that they will be through in a couple of years and so they do nothing. If they do act, they frequently take the easiest course by following the path of least resistance rather than bucking political headwinds toward a sound program.

When such political appointees do evolve constructive programs—as some of them do—the programs usually are thrown out with the incumbent himself in the next housecleaning in the State capital. Republicans rarely can see any merit in sound conservation programs initiated by Democrats, and vice versa.

I do not mean to infer that this practice always turns up incompetents. More often than not, the conservation administrators placed in such positions, even in the most politically minded administrations, are men of sincerity who are interested in the resources and who honestly try to do their jobs. Usually, however, when they take over their offices, they are totally unfamiliar with the programs or with the responsibilities of their positions. If permitted by circumstances to remain long enough to learn their jobs, they sometimes become competent administrators, and, in fact, a few of the best fish and game administrators in the business today have come up through this somewhat devious route.

I do wish to say, however, that politically appointed heads of conservation agencies, at best, work under decided handicaps. The administration of fish, wildlife, and all other natural resources requires sound long-range planning and programing. The finest administrators backed by the best biologists and technicians that money can hire can hardly be expected to plan and put into operation long-term programs when they know that their own tenure of office will end with the next State election.

We have a prime example of what partisan politics can do to a career organization in the United States Fish and Wildlife Service, which is only now recovering from its devastating bout with the spoils system. The Biological Survey had, since it was founded in 1885, been headed by career scientists, and the Bureau of Fisheries, save for one disastrous experience with the spoils system in the early New Deal days, had been headed by trained fisheries men. When these 2 were combined in 1940 to form the United States Fish and Wildlife Service, the career tradition was maintained. In 1953, all the top positions in this Service were placed in the schedule C category—in other words, they were made political appointments. The career men holding those positions were downgraded to meaningless jobs of small responsibility and eventually forced out of the Service, if not by actual pressure, at least by personal and professional pride. Morale sank to a low ebb all along the line. Many excellent career employees of long service, with nowhere to go but down, left to take jobs with universities and State conservation departments. Ironically, some of the men were loyal Republicans, but they had never thought of their jobs in political terms. The result was a chaotic 4 years of inaction, vacciliation, and generally unwise decisions. The important position of chief of wildlife research and others equally vital remained on an acting basis throughout that period.

The Republicans have redeemed themselves somewhat in the eyes of the conservationists by the forthright actions of Secretary Fred Seaton and Assistant Secretary Ross Leffler. Under their leadership, the wreckage is being salvaged and repaired, and the Federal agency entrusted with the management and restoration of the Nation's fish and wildlife services is getting back on the track and is moving forward. It now appears that the Fish and Wildlife Service has reassumed its interrupted tradition as a career agency. It will not regain its old status completely, however, until the Commissioner and his staff are included in the career service.

Among the States, the management of natural resources often is handled in the same way. In fact, it frequently is worse because there quite often is a turnover in the governor's office every 2 or 4 years. Where no protection against political raiding exists for conservation personnel, the direct effects generally reach far down into the ranks of conservation officers.

Indiana is not the only State that operates almost completely through the spoils system, but it offers a good example of a State whose conservation administration machinery is model-T structure in a swept-wing age. Indiana once could boast of having one of the most progressive fish and game programs in the Middle West, but that was for only a decade. In recent years, the Hoosier State has changed administrative personnel so often that only a confirmed optimist could expect to occupy the director's desk and plan ahead for more than a year or two.

The State forestry program in Indiana is in no better condition. Employees of all conservation agencies in this State are subjected to the vicious political assessment program that compels all employees to contribute to the faction or party in power.

In Oklahoma there has been a similar lack of continuity in the game and fish administration. That State has had five directors in the past 15 years. Oklahoma, superficially, has had a sound basic conservation organization, and it has achieved much under tremendous difficulties. It has had a commission form of administration for the past 10 years and a director appointed by the commission—both features characteristic of the best in the Nation. It fell short of the ideal, however, in several respects. The entire commission could be removed at the pleasure of the Governor, and the director could be fired without hearing or cause on a majority vote of the commission.

There were many loopholes in an otherwise sound structure through which a number of potentially able administrators were chucked before they had time to learn their jobs. In addition, the director often found himself short circuited in his relations with his subordinates when various commissioners bypassed his office and issued orders directly to his staff. Such a situation, which is not unique in Oklahoma, is dangerous. It can lead only to divided loyalties and poor morale.

Oklahoma voters, by a large majority, in 1956 passed a constitutional amendment which was planned to remove the affairs of the new Department of Wildlife Conservation from partisan political interference. Commissioners now are appointed for staggered terms of office with one vacancy occurring each year, and the director can be dischaged only for proper cause after a public hearing. Both moves were steps in the right direction.

Unfortunately, however, in protecting the organization from partisan politics, the State legislature, in its vitalizing act, left the door open for the kind of political meddling which Webster called factional interests. The act permits the State legislature to void or negate any rules or regulations passed by the Commission, and on its face, it appears to remove power from the governor and place the same power in the hands of the legislature. This definitely was not the intent of the voters, and it looks as though they may have traded one type of political interference for another. Certainly the activities of several State senators in recent months strongly suggest a determined effort to use the department for political purposes.

Factional politics can play hob with State conservation departments, even where there is practically no turnover in political power between parties. The latest example of this can be found in the recent history of the Louisiana Wild Life and Fisheries Commission. For many years, Louisiana was close to the bottom of all States, no matter what standard was used to judge the efficiency or effectiveness of wildlife administration. Under the leadership of the Louisiana Wildlife Federation, the State, in 1952, finally pushed through a constitutional amendment designed to protect the commission from political tampering.

Under the new departmental administration established by this amendment, the status of the Louisiana department rose rapidly. Within a year or two, it was recognized as one of the most progressive in the Nation. It had a well-trained staff of biologists, a well-organized law-enforcement staff, a fine information and education organization, and a progressive program. Its director, although not a career conservationist, was an able administrator with the ability to seek advice from his informed subordinates before making decisions.

When Governor Long assumed office, he immediately descended upon the conserva-

tion department. The director was fired and a new director appointed by a commission packed by the Governor through legally questionable tactics. Almost overnight, Louisiana slipped back into the old ways. Game farms, which had been found to be of little value in improving hunting in Louisiana, was reopened, habitat-improvement programs and research were curtailed, and the morale of the entire staff dropped. Some of the biologists left to seek jobs in other States or in other fields. Those who remained must compromise their professional ethics to satisfy the whims of political appointees. Public hunting grounds, carefully built up by the previous administration were closed and converted into refuges for deer and upland game, a practice that has been found to be of little value in augmenting game stocks on surrounding lands.

After this raid, Governor Long immediatley began a campaign to make his wrecking job permanent by trying to push through a new amendment which would repeal the constitutional status of the State wildlife agency. Fortunately, the move failed when the Governor was repudiated by a 3-to-1 majority of the voters. Still, however, the commissioners, appointed by Governor Long, are hampered by local and State politics, unable to serve properly the sportsmen of Louisiana. It will be a long time in recovering from the disruptive forces that all but shattered it 2 years ago.

The present Governor of Kentucky removed a competent State forester because he would not play factional politics with his organization.

These are only examples of the many cases of poor administration of natural resources that could be mentioned if time permitted.

A similar situation could prevail in Florida if present proposals for a constitutional revision in that State are accepted by the people. The proposal affecting the fish and game agency would remove the earmarking of fish and game license funds, and would place complete control of both revenues and personnel of the department in the hands of the Governor. In other words, the proposed "improvement" in the fish and game department would unquestionably pave the way for a prompt return to the worst kind of a politically controlled administration. Florida got away from that sort of thing a few years ago, and the politicians are making a supreme effort to get control of the fish and game funds and personnel again for political patronage.

Factional politics likewise can occur within a well-organized department to the detriment of the public and of the department concerned. The most common example of this is when commission members are appointed according to political or geographic subdivisions of the State. It is difficult to attain a balanced program on this basis.

Another common failure of commissioners is when they feel they must meddle in affairs that should be left to the professionals within the department. They insist that their favorite areas receive the heaviest stocking of birds or fish and the lion's share of the output of the State forestry nurseries. Often a single strong appointee to a conservation commission will dominate all of the other members and the entire departmental organization under its nominal control. The fine progress made by the Tennessee Game and Fish Department is in jeopardy at the present time because of domination and personnel meddling of certain commissioners. This is a difficult situation to correct. Usually, it can be licked only through pressure on the commission by militant citizens' groups on the outside.

Factional quarrels within the Department are more easily solved, but often only after they have done great damage to the morale of the organization. I have examined departments where the fishery men were sniping at the game men, the forestry people were feuding with the soil experts, and the conservation officers were mad at everyone. A strong administrator, backed by an intelligent commission, usually can solve such situations promptly by knocking heads together and the judicious use of the pruning axe.

As long as mankind exists there will be politics both in the good sense and the bad. Politics in its highest meaning is an indispensable part of the American way of life. In its narrower and less-honorable aspects, however, particularly when applied to the administration of natural resources, it is both a blight and a blot on the name of democracy.

In anything as important as the conservation of renewable natural resources to the future of America, party-first politics and petty personal politics have no proper place any more than they have in matters dealing with national defense. In a sense, conservation is national defense of the most important kind; for a nation without rich soil, clean water, productive forests, and adequate recreation for its people cannot retain a place of leadership among nations. Soil erosion, overgrazing, and exploitative forest management have destroyed more nations than bombs, shells, and gunpowder.

In order to assure sound conservation programs, political interference, from within or without, must be kept to a minimum. We must select the best trained and most experienced administrators to handle these programs and permit them to work without improper pressure from the office of the governor, from legislative bodies, or from narrow or pressure groups among the people themselves. Any sound law should have machinery for removing an incompetent or dishonest administrator from office for due and reasonable cause, but due cause should not include the way he voted in the last election or the fact that he failed to stock the farm pond of a commissioner or governor-elect.

All conservationists should work to remove the blight of this kind of politics from the management of natural resources. Great progress has been made in this field since the early 1930's when the International Association of Game, Fish and Conservation Commissioners drafted a model law to cover the administration of wildlife resources. The basic elements of the law have been widely adopted and have provided more good management of the resources than any or all other systems yet devised.

The enactment of a law, and the inauguration of a sound program, does not stop the politicians from trying to retain political control of the funds and positions in the department, however. Many States have started such programs only to have resource management fall back into the old ways as soon as the conservationists relaxed their vigilance.

It is and will be a constant battle to get and keep sound, continuous programs going.

Extension of Unemployment Benefits

EXTENSION OF REMARKS

OF

HON. ROBERT L. F. SIKES

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 15, 1958

Mr. SIKES. Mr. Speaker, the Honorable James T. Vocelle, chairman of the Florida Industrial Commission, has issued a very interesting statement on the extension of unemployment benefits. Mr. Vocelle is a recognized authority in this important field and it is with pleasure that I submit his statement for publication in the CONGRESSIONAL RECORD.

The statement follows:

I have just returned from Washington where, among other things, I attended hearings being held by the Ways and Means Committee of the House of Representatives on numerous bills which have been introduced in Congress concerning the extension of unemployment-compensation benefits. In the light of present economic conditions, it appears desirable to briefly review the situation with respect to unemployment insurance in general; Florida's place in the picture, and the overall effect of pending legislation on the subject.

It is well for us to remember that while unemployment insurance did not come into being in the United States until 1935, it is not a new program but has been in existence for many years in other countries of the world. It was enacted by Congress in 1935, after a thorough study by leading economists of the country in the light of the tremendous impact upon the Nation's economy resulting from the disastrous depression of the early 1930's. We saw what it meant to our Nation's economy to have lines of people out of work, vainly seeking to find employment, and having no way to turn for bread for their families except in breadlines.

This created a double burden in that unemployed workers were not only nonproductive and, consequently, were unable to purchase goods in the market but also had to be cared for by gainfully employed members of society, thereby exacting double drain upon the economy. I am unalterably opposed to doles and, in my opinion, nothing is worse than giving people something for nothing. I am also in complete accord with St. Paul's admonition to the Thessalonians when he said, "If there is any man among you who will not work, neither let him eat."

A completely different situation arises, however, when people who have been genuinely attached to the labor market find themselves out of work through no fault of their own and are unable to secure work. Such a situation requires action and some provision must be made for such cases. This is what the Nation is faced with at the present moment, and it is when unemployment insurance can come in and make its contribution toward the solution of some of the problems.

In adopting the unemployment compensation law, Congress provided for a flat 3 percent payroll tax against employers with eight or more employees on the first $3,000 of wage earnings for each employee. There were exception, of course, to covered employment such as agricultural and domestic workers. This coverage has since been extended so as to include employers with four or more employees. Provision was made for States to enact unemployment-insurance laws and for employers to receive credit up to 90 percent of the Federal tax for State taxes paid, or which would have been paid except for State experience rating provisions. All the 48 States, in addition to Alaska, Hawaii, and the District of Columbia, have unemployment-insurance laws and the effect of these laws has been to reduce the Federal tax to three tenths of 1 percent. This is the source of all funds used for administration of such programs on both the Federal and State level.

Florida's law has been so geared as to reduce the costs of the program to the employers of Florida to such an extent that we warned the employers of the State beginning with the 1953 session of the legislature, being the first session after I became

chairman of the commission, that our experience rating was so liberal as to jeopardize the solvency of the program and that unless a change was made, the State's unemployment fund would be reduced to the point where the employers of the State might be called upon to pay the maximum 3 percent tax in the time of a recession when they could afford it the least. This warning was based not only on our own research but on the basis of a most comprehensive survey of the entire unemployment insurance program by the Tax Foundation, whose board of trustees comprises the leaders in big business in the country. In a report issued in 1953, the Tax Foundation called attention to the fact that Florida did not have a high enough average tax rate to meet the impact of recession. Our pleas, however, fell on deaf ears until the 1957 session when Associated Industries, representing a large group of employers in the State, saw the logic of our position and an amendment was made to the law which has helped the situation considerably, although not to the full extent needed to meet the full impact of an extended recession. As a matter of fact, the statistics show that the average tax rate paid by the employers of Florida has decreased in 10 years from 1.44 percent in 1947 to .69 percent in 1957, making the average rate paid in Florida the lowest of any of the 51 jurisdictions with the exception of Colorado, Iowa, Virginia, and Arkansas. The amount which the employers of Florida would have been called upon to pay in 1957 on a basis of 2.7 percent tax would have been $58,131,000. They actually paid $15,462,315.

Florida also has the unenviable distinction of providing the smallest amount of benefits of any of the 51 jurisdictions, and Florida probably has more restrictions on the payment of benefits than any of the other jurisdictions. This also is a situation to which we have directed our attention and while the maximum amount of weekly benefits has been increased, since I have been chairman of the commission, from $20 to $30, the maximum duration of 16 weeks has been left unchanged. Governor Collins in his message to the 1957 legislature recommended an increase of the maximum duration to 20 weeks but formidable opposition prevented the change being made.

At the present time unemployment is widespread over the Nation. Florida, however, has had a lower impact than the rest of the country. In some of the States unemployment has risen as high as more than 12 percent of workers covered by unemployment insurance and the national average for the week ending March 30 was 7.8 percent, while in Florida during the same week 4 percent of covered workers were drawing unemployment benefits. This represents an increase of eight-tenths of 1 percent since January and is 178 percent above the claims load a year ago.

The demands upon Congress for something to be done to alleviate this situation are enormous and many bills have been introduced on the subject. In analyzing these bills, from my viewpoint, some considerations must be kept uppermost in mind. One is that I think it would be disastrous to divert the unemployment insurance program from an insurance program into that of a dole. Likewise, I am opposed to federalization of the program and feel that it should be left as it is on a Federal-State relationship. However, when some States drag their feet and fail to have a completely sound program geared to meet the reasonable needs that may arise, it is an invitation for Federal intervention. Regrettably, Florida is in this boat and the fact that we have the lowest benefit payments of any of the 51 jurisdictions, save Arkansas, is one of the strong arguments being used by the proponents of federalization at this time.

It is my considered judgment, after having listened to the arguments presented before the Ways and Means Committee, that something is going to have to be done to provide more extended benefits in many of the States to workers who are out of work through no fault of their own and cannot find employment. In order to keep unemployment compensation on an insurance basis and to prevent federalization, I feel that the administration's proposal as presented in the House of Representatives by Congressman REED of New York, ranking Republican member of the Ways and Means Committee, and being H. R. 11697, is the soundest approach to the problem that has been presented I do not think that this bill is a panacea but I feel that it will help to make up for some inadequacies now existing in the program. I feel that those who need assistance outside of the unemployment insurance field should be cared for on a basis of need through the public assistance approach.

Basically the Reed bill does these things:

1. It extends duration of benefits for an additional 50 percent beyond that provided by State laws to those workers who have exhausted their benefits after December 31, 1957. Payments would be made to eligible claimants for weeks of unemployment beginning 30 days after the law becomes effective and prior to April 1, 1959.

2. It does not change any provisions of the State law with respect to amount of benefits nor to eligibility provisions. A person still must be unemployed through no fault of his own to be eligible. The Federal Government will advance the funds for payment of the extended benefits.

3. It is not a grant but is a loan which must be repaid by the States either out of a direct appropriation or by transfer from the State's unemployment trust fund. If this is not done, then the repayment will be made by a small increase in the Federal unemployment tax on employers beginning with the year 1963.

It seems to me that we cannot ignore the rising tide of unemployment throughout the country and that Florida, prior to the present recession, had the highest rate of exhaustion of benefits of any of the 51 jurisdictions. Since Florida normally experiences highest unemployment in summer it appears that a long, hard summer lies ahead of us.

If a blanket extension of duration of benefits is made as provided in what is known as the Mills-McCormack bill pending before Congress, which also provides for an outright Federal grant, it would mean that the employers of Florida would be called upon to pay not only for unemployment in Florida but for their share of unemployment in States having a much heavier ratio. This is because funds for the program would come from Federal general revenue. Under the Reed bill the employers in each State would carry the burden of extension of duration in their own State and the employers of Florida would be called upon to pay only the cost of extension in Florida, which would be relatively small compared with what the burden would otherwise be if we had to share the costs in other States as well.

I think it well to point out the limitations contained in Florida's law on the payment of benefits. In order to qualify for unemployment compensation in Florida these conditions must be met:

1. The worker must be unemployed through no fault of his own.

2 The worker must be physically able to work full time.

3. The worker must be actively seeking suitable work and satisfy the Commission that such is the case.

In addition to these qualifying conditions the worker must have been genuinely attached to the labor market and no one can receive unemployment compensation benefits unless he has earned at least $200 during the base year, and he also must have been paid wages during his base period equal to or in excess of 1¼ times his highest quarter wages. The worker is also limited to benefit payments in any 1 benefit year not to exceed 25 percent of his total wages in his base period. There is also the overall ceiling of 16 weeks at a maximum of $30 a week, which means that no worker could receive more than $480 in unemployment insurance benefits in any 1 year.

Under Florida law the minimum weekly benefit payable is $10 and the maximum $30, depending upon the earnings of the worker. Thus Florida benefits are payable for a minimum of 5 weeks at $10 per week, or $50, to a maximum of $30 per week for 16 weeks, or a total of $480. Under the provisions of the Reed bill the amounts payable would be extended 50 percent. In the first example claimant could draw $25 more at $10 per week for 2 weeks and $5 for 1 week. In the second case claimant could draw $240 more at $30 per week. The extension of maximum number of weeks under this bill would still leave Florida's maximum duration of 24 weeks below that being paid by the vast majority of the States.

While, as I have stated, I do not think the Reed bill by any means represents a complete answer to the problems I feel that it goes as far as unemployment insurance could be expected to go without destroying its basic insurance principle. I feel though, in the light of the present situation, the 1959 legislature should carefully re-examine Florida's place in the picture so that we may preserve unemployment insurance as a State program and yet at the same time measure up to the responsibility which we have to provide reasonable benefits for unemployed workers who have been genuinely attached to the labor market and who are seeking work and who are unable to find it. To do less than this, in my opinion, is to invite disaster and to evade the moral responsibility that goes with living in a free society.

Tumult in the City

EXTENSION OF REMARKS
OF
HON. RALPH W. GWINN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 23, 1958

Mr. GWINN. Mr. Speaker, last week the National Society, Daughters of the American Revolution, had their annual national convention in our city.

Among the speakers was Mrs. Ray L. Erb, chairman, national defense committee. Mrs. Erb's address states with clarity and sincerity the underlying viciousness which is Soviet Russia. She points out that the Union of Soviet Socialist Republics is intoxicated with a dream of world domination.

I hope all my colleagues will take time to read Mrs. Erb's excellent speech, which follows:

TUMULT IN THE CITY

Many years ago I was taught a poem which helped to inspire, in my heart and mind, appreciation of, and devotion to, my native land. I doubt if any of today's youth are familiar with it, but I am wondering if some of my contemporaries in the audience might be. Though consisting of nine verses, I shall read but a few lines.

"There was tumult in the city
In the quaint old Quaker town
And the streets were rife with people
Pacing restless up and down—
People gathering at the corners
Where they whispered each to each
And the sweat stood on their temples
With the earnestness of speech.

'Will they do it?' 'Dare they do it?'
'Who is speaking?' 'What's the news?'
'What of Adams?' 'What of Sherman?'
'Oh, God grant they won't refuse!'

So they surged against the State House
While all solemnly inside
Sat the Continental Congress,
Truth and reason for their guide.
O'er a simple scroll debating
Which, though simple it might be,
Yet could shake the cliffs of England
With thunders of the free.

Quickly, at the given signal,
The old bellman lifts his hand,
Forth he sends the good news, making
Iron music through the land.

That old State House bill is silent,
Hushed is now its clamorous tongue
But the spirit is awakened
Still is living—ever young."

Tonight I am forced to ask—in how many hearts in America today is that spirit living and in how many minds in America is there the comprehension of the vision of those leaders of old—or loyalty to the statements they so courageously signed. The tumult of that memorable first July 4th, when the Liberty Bell rang out our independence, was the reaction of a young and vigorous country marking a momentous step away from state control and toward self government.

The shouting and singing which arose from the crowd waiting for a decision that hot afternoon in Philadelphia was joy for their new freedom but fear for the dangers it might bring for each of them. They knew that the signers of that declaration would be considered traitors in the eyes of their former rulers and that many would pay dearly for their courage and convictions. Even in that restless crowd, facing an uncertain future, it was one thing to declare their independence and quite another to maintain it.

Every Daughter of the American Revolution knows well the inspiring history of the years since our national independence was declared; the individual liberty enjoyed and the magnificent successes achieved.

Today many of our citizens seem to have strangely lost America's vision and faith in our form of government. They stand idly by while that superb protector of their liberty, the Constitution of the United States of America, is being undermined and annihilated.

Many ancient and modern nations have cast off oppression, but those which have been able to enjoy a few precious moments of liberty are most rare, for they soon relapsed into their old political vices.

There is tumult in our hearts today as we observe mere illusions being accepted as reality; license taken for liberty; treachery for patriotism; revenge for justice. We are deeeply concerned and distressed over the disregard for the next generation, the expression of which is the ever-increasing astronomical national debt. A Member of Congress recently said: "If we continue to go on as we have in the past three decades, our children's children will be left with a Nation so mortgaged that it will be void of all individual incentive or initiative."

Have we been free so long as to have forgotten what enslavement means? Have we become smug in our fake security and apathetic regarding the worldwide struggle for the minds and souls of men?

May we never forget that we are dealing with men misled by the illusions of error, and, in many instances, by evil incentives.

The hour of trial has indeed become a reality and one which must be met with confidence and strength. In order to safeguard our future it becomes obligatory that we endeavor to preserve the inheritance of a great past.

The Union of Soviet Socialist Republics is intoxicated with a dream of world domination. Our people must be protected from the clever and consistent propaganda of those who would destroy us. It is imperative that clear thinking permeate the mists of confusion with the ensuing determination to courageously confront our enemies, and now, with no further postponement, time is of the essence.

Many Americans are asking: What shall we do? Where shall we turn for guidance? These are questions no Daughter of the American Revolution should hesitate to answer. When the tumult and the clamor arise, when fears and suspicions overtake our leaders, and when some Americans doubt the rightness of their own liberty, we Daughters have a proven and well-tried solution to offer. We can demand that our people and our Government return to the Constitution, the safeguard of all of our liberties, the champion of our freedom.

The world is looking for an answer to the promises of tyrants and for a way out of the slavery that seems to be their lot no matter what words their governments employ to rob them of their individual rights. They would like to follow our pattern of limited government but they are told daily of the failure of our freedoms, and the glory of the superstate. We must restore our constitutional government not only for our own security and that of our children, but as a promise of what constitutional government can do for other nations.

America's noblest destiny is to demonstrate the keeping of freedom.

I believe in America's power of regeneration. I believe we can remake ourselves from within in order that we be not remade from without.

We daughters have only to rely upon the demonstrated wisdom of our Bill of Rights with its proven power to give men the good life. With dedication and determination we can preserve the Constitution and our Nation in all its glory and majesty.

Let us help make the courage of eternal youth run once more in the veins of our country. The vital breath for the future of our Nation is individual liberty.

At this great meeting let us renew our vows of devotion to the great ideals which have animated us. May we rise above the present confusions to meet today's challenge, and work forward to the new day when truth will triumph over falsehood, when statesmanship will prevail over blackmail, and when government of the people, for the people, and by the people will be the common heritage of all mankind.

Let us raise our thoughts to the fearless independence of that majestic symbol of our Nation, the American eagle, as it soars above the tumult of today.

This is the challenge, my fellow Americans, and we will not fail.

Communism: A False Religion

EXTENSION OF REMARKS
OF
HON. HENRY J. LATHAM
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 23, 1958

Mr. LATHAM. Mr. Speaker, I wish to set forth a very timely and penetrating discussion on communism and the churches by Mr. J. Edgar Hoover, which appeared in Human Events on April 21, 1958, and which is an excerpt from Mr. Hoover's book, Masters of Deceit:

COMMUNISM: A FALSE RELIGION

(By J. Edgar Hoover, Director, Federal Bureau of Investigation)

Something utterly new has taken root in America during the past generation, a Communist mentality representing a systematic, purposive, and conscious attempt to destroy Western civilization and roll history back to the age of barbaric cruelty and despotism, all in the name of "progress." Evil is depicted as good, terror as justice, hate as love, and obedience to a foreign master as patriotism.

Numerically speaking, this mentality is limited to a few men and women, the disciplined corps of the Communist Party, USA. However, Communist thought control, in all its various capacities, has spread the infection, in varying degrees, to most phases of American life.

This mentality, imported to our land for the purpose of eventually leading to a destruction of the American way of life, poses a crucial problem for every one of us. It can destroy our constitutional Republic if it is permitted to corrupt our minds and control our acts.

In our tolerance for religious freedom, for separation of church and state, we sometimes lose sight of the historical fact: Western civilization has deep religious roots. Our schools, courts, legislative bodies, social agencies, philanthropic organizations, as well as our churches, are witnesses to the fundamental fact that life has a significance that we ourselves do not create.

It is part of our tradition and belief that each of us is obligated to give, when reality requires it, a reason for the faith that is in him. The presence of communism in the world and in our own country is a kind of stern reality which should make each of us explore our own faith as deeply as we can and then speak up for its relationship to our American way.

The very essence of our faith in democracy and our fellow man is rooted in a belief in a Supreme Being. To my mind, there are six aspects to our democratic faith:

1. A belief in the dignity and worth of the individual, a belief which today is under assault by the Communist practice which regards the individual as a part of the class, the mass, and a pawn of the state;

2. A belief in mutual responsibility, of our obligation to feed the hungry, clothe the naked, and care for the less fortunate, which is affronted by Communist policies of calculated ruthlessness;

3. A belief that life has a meaning which transcends any manmade system, that is independent of any such system, and that outlasts any such system, a belief diametrically opposed by the materialistic dogma of communism;

4. A belief in stewardship, a feeling that a great heritage is our sacred trust for the generations yet to come, a belief that stands today as the competitor to Communist loyalty to Marxism-Leninism;

5. A belief that the moral values we adhere to, support, and strive toward are grounded on a reality more enduring and satisfying than any manmade system, which is opposed by the Communist claim that all morality is "class morality";

6. A belief, which has matured to a firm conviction, that in the final analysis love is the greatest force on earth and is far more enduring than hatred; this forbids our accepting the Communist division of mankind that by arbitrary standards singles out those fit only for liquidation.

It is only as we thus take stock of what we mean by saying that our culture has religious roots that we become ready to make an accurate appraisal of Communist ideology and tactics.

The most basic of all Communist comments about religion is the statement of Karl Marx that religion is "the opium of the people." This Marxian doctrine has been restated by William Z. Foster and applied to Communist action in these words: "* * * God will be banished from the laboratories as well as from the schools."

Inherited from fanatic minds abroad, this mentality poses today a crucial problem for every patriotic man and woman in America. If allowed to develop it will destroy our way of life.

Communists have always made it clear that communism is the mortal enemy of Christianity, Judaism, Mohammedanism, and any other religion that believes in a Supreme Being.

"Don't think that the Communists have changed their minds about religion," says Nikita Khrushchev. "We remain the atheists that we have always been; we are doing as much as we can to liberate those people who are still under the spell of this religious opiate." As long as communism remains, the assault will continue.

To the Communist, Marxism-Leninism is the "perfect science." It accounts for everything; it has a plan for everything; it can be the source of everything a man needs. Therefore, said Lenin, "we shall always preach a scientific philosophy; we must fight against the inconsistencies of the Christians."

No Communist can be permitted to set an abstract truth above an expedient lie, or to extend compassion to an enemy whom the party intends to smear or liquidate. The Communists dismiss our sentiments motivated by spiritual force as silly prattlings that reflect bourgeois weakness. Therefore, they have their own morality, Communist morality, as stated by Lenin:

"We repudiate all morality that is taken outside of human, class concepts. * * * We say that our morality is entirely subordinated to the interests of the class struggle."

That is why a Communist can commit murder, pillage, destruction, and terror, and feel proud; lie and feel no compunction; seek to destroy the American form of government and feel justified. Communism has turned the values of western civilization upside down.

It would seem that Communists, in view of the above, would make clear, always and at every point, their opposition to religion. Often, however, tactics have made it necessary to play down or to conceal entirely the party's intentions, in line with Lenin's advice: "* * * but this does not mean that the religious question must be pushed into the foreground where it does not belong."

The Communists realize that the vast majority of non-Communists believe in God. Too bold an approach might antagonize them, doing the party more harm than good. In line with theses tactics, the party is today engaged in a systematic program to infiltrate American religious groups.

"The Communist Party," said the national committee in 1954, "declares that it seeks no conflict with any church or any American's religious belief. On the contrary, we stretch out our hand in the fellowship of common struggle for our mutual goal of peace, democracy, and security to all regardless of religious belief." Members are being told: "Join churches and become involved in church work."

The party's objectives inside religious groups are several:

1. To gain respectability; "* * * a church is the best front we can have." Comrades, by associating in church circles, secure an acceptable status in the community, greater credence for their opinions, and the lulling of non-Communist suspicions.

2. To provide an opportunity for the subtle dissemination of Communist propaganda. Churches are convincing places in which to identify Communist programs with such genuine religious values as peace, brotherhood, justice. One member bragged how in a church talk he had plugged for Marx. The Communists are careful, however, not to overdo it. One fellow was too ambitious. He was challenged by alert church members and relieved of his leadership duties.

3. To make contact with youth: through class discussions, recreational affairs, etc. The object is not necessarily to recruit (although in one church several young people did join) but to plant a seed of Marxist-Leninist thought.

4. To exploit the church in the party's day-to-day agitational program. In the 1930's and 1940's the approach was chiefly through immediate economic and political problems, with the party attempting to exploit the church's legitimate interest in better housing and the elimination of social injustices.

Today this tactic is overshadowed by the peace issue. Every possible deceptive device is being used to link the party's peace program with the church. One Communist Party section issued instructions that every clergyman in the community be contacted to give a sermon on peace. Encourage party church members to organize discussion groups, perhaps showing a peace film. If possible, circulate peace literature. If you can't get inside, stand outside. One organizer said: "We are to dress up like other people and stand outside churches in our neighborhoods and use the slogan, 'Peace on earth, good will toward men.'"

5. To enlarge the area of party contacts. One party section advocated: join small churches (100 to 500 membership), so that one can more easily work himself into a position of leadership. Make as many personal contacts as possible. Learn where the church member works, what his hobbies are, etc. Someday he might be used. One party member, active in youth work, learned that the parents of several young people were working in an industrial plant. Securing this information was most important, he said.

6. To influence clergymen. A dedicated clergyman, being a man of God, is a mortal enemy of communism. But if he can, by conversion, influence, or trickery, be made to support the Communist program once or a few times or many times, the party gains. If, for example, a clergyman can be persuaded to serve as sponsor or officer of a Communist front, to issue a testimonial or to sign a clemency petition for a Communist "victim of persecution," his personal prestige lends weight to the cause.

Behind these deceptive tactics, however, can be seen the real nature of communism. For the member, religion is not a private affair. No tolerance is allowed. He cannot be a Marxist and adhere to a religion. The party is today desperately working to mold atheistic materialism as a weapon of revolution, a revolution which, if it is to succeed, must first sap religion's spiritual strength and then destroy it.

The party's attack can be traced through four stages:

1. Recruitment: keyed to the party's general approach toward non-Communists, the issue of religion is minimized. "Try to win recruits on the basis of wages and the class struggle rather than religion"; and "go ahead and tell a fellow you believe in God to keep from getting into an argument." Likewise it is urged: "If we approach a churchgoer we do not hit him over the head and tell him his idea is crazy. We take a tactical approach."

2. Early indoctrination: keyed to patience if recruits continue to attend church after joining the party. They must be gradually "educated." If new members begin to ask questions, they are to be made to feel, not that their fellow Communists are trying to take away their belief, but that these Communists are "advanced thinkers," that they hold a "scientific" concept of the universe, and that religion is to them simply "old-fashioned."

3. Special indoctrination: Keyed to the real job of teaching Marxist materialism are special indoctrination classes. "Our program thus necessarily includes the propaganda of atheism," said Lenin, directing his words, of course, to party members.

4. Final goal: The utter elimination of all religion (called bourgeois remnants) from the heart, mind, and soul of man, and the total victory of atheistic communism. Religious attitudes keep cropping up, however, even in the trained member. One individual admitted that it had taken him a long time to give up his religion. "It was one of the hardest parts of my party development."

Here, then, is the fight the Communist leaders wage. We do not believe they can ever win it. So-called religious survivals represent something far deeper in man than the Communists can grant; some eternal reaching toward a creative source. But if the party does not realize the true nature and strength of these survivals, it does realize that religion is its most potent foe.

To meet this challenge no hesitant, indifferent, half-apologetic acts on our own part can suffice. Out of the deep roots of religion flows something warm and good, the affirmation of love and justice; here is the source of strength for our land if we are to remain free. It is ours to defend and to nourish.

Financing Small Business

EXTENSION OF REMARKS
OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 22, 1958

Mr. MULTER. Mr. Speaker, on March 31, 1958, the Federal Reserve Board transmitted to the chairmen of the Banking and Currency Committees and the Select Committees on Small Business of both Houses of Congress a document on the financing of small business which was very clearly labeled a study of financing of small business. The Board of Governors was very careful in the letter of transmittal not to refer to the document as a report. The four chairmen of the congressional committees joined in the statement, submitting this study to the Congress for its attention. They, too, carefully referred to it as a study and not as a report.

In the preparation of the document as a committee print for use by Members of Congress, unfortunately, somebody placed upon the cover of the document the word "report" instead of "study."

That has brought about an unfortunate situation, due to careless reporting and careless editorializing on the part of some members of the press. One editorial in the Wall Street Journal editorialized about this study, indicating "it would be well if Congress paid attention to it" and further stated that the "report" indicated the Small Business Administration was a temporary and a

"distress organization," holding out no promise to small business primarily because the agency was set up "to grant loans to applicants who cannot get them anywhere else." It then goes on to say that this is unsound business practice, and the Government should not encourage loans to poor credit risks.

It is easy to write, but it takes real hard work to become properly informed before writing.

Not only was the study not a report but the study itself very plainly states that no member of the Board participated in the writing of the material submitted, and, on the contrary, the "views expressed are those of the authors and do not necessarily reflect the views of the Board of Governors of the Federal Reserve Bank."

Now let us turn our attention for a moment to the contents of the study to determine whether or not there is anything there to sustain the criticism and improper conclusions found in the news item.

The study very properly states that the law has always required of the Small Business Administration and its predecessor lending agencies, that before the Government makes any credit available, it must appear that the loans cannot be obtained from private financing.

This provision has been found sound and workable. It is necessary in order to protect private enterprise from Government competition.

That does not mean, however, that loans are to be made to bad risks. As a matter of fact, the Government lending agencies, and particularly the Small Business Administration, have a very good record in that respect. Actually, there have been more complaints made against the Small Business Administration because it adheres too strictly to the requirement of the law that no loan be made unless there is "reasonable assurance of repayment." The loss ratio by the Small Business Administration is much, much smaller than that experienced by private lenders.

There are many reasons why small business can get no loans from private lenders other than the fact that it is a bad credit risk. There are plenty of good credit risks among the small-business men of the country who have been unable to get private loans. The Small Business Administration is filling that void to the limited extent permitted by existing law.

There is nothing in the study as presented by the Federal Reserve Board which justifies the conclusion that Government encourages private lenders to consider poor credit risks.

There is no doubt that the Government can and should play a greater role in connection with making risk or equity capital available to small business and there is much to be said for making loans available for a term beyond the 10 years permitted by the existing law to the Small Business Administration. Constructive criticisms along those lines will be helpful to the Congress in performing its duty. News items and editorials, such as referred to above, will do nothing except to create confusion.

In connection with the foregoing, I am pleased to call to the attention of our colleagues the following letters written to and received by the ever-vigilant George J. Burger, vice president of the National Federation of Independent Business:

BOARD OF GOVERNORS OF THE
FEDERAL RESERVE SYSTEM,
Washington, April 16, 1958.

Mr. GEORGE J. BURGER,
Vice President, National Federation of Independent Business, Washington Building, Washington, D. C.

DEAR MR. BURGER: Thank you for your letter of April 14. I am glad to have your further comments about the Small Business Administration.

The report to which the Wall Street Journal release referred is a technical study of the problem of small-business financing, prepared by the staff of the Federal Reserve System with a number of university or independent scholars also collaborating. The conclusions drawn in the individual studies are those of the authors, and do not necessarily represent the views of the Board of Governors. The published study was given to the press without an accompanying release prepared by the Board or its staff. Such comments as the press may have made of the study, or such points as the press may have taken out of context, are, therefore, the responsibility of the press and in no way the responsibility of the Board.

Sincerely yours,

WM. MCC. MARTIN, Jr.

APRIL 14, 1958.

Hon. WILLIAM MCC. MARTIN,
Chairman, Federal Reserve Board, Washington 25, D. C.

DEAR MR. MARTIN: I noted in the Wall Street Journal today: "Reserve Board says small business agency, banks fail to aid growth." Of course both this office and our head office at Burlingame, Calif., will closely scrutinize and study the report issued by the Board to the Committee on Banking and Currency and the select Committees on Small Business. However, we do believe there is some need for a clarification and proper evaluation of the operations of the Small Business Administration.

As the saying goes: "Rome wasn't built in a day" and it goes without saying that in our opinion, after closely scrutinizing the operations of the agency from its inception, it may be found that the operation of the agency was handicapped from the first instance through impediments. To substantiate that statement—from the very first instance the National Federation of Independent Business vigorously opposed the establishment within the agency of the Policy Board, and we are referring to the Secretary of the Treasury or his alternate, and the Secretary of Commerce or his alternate, and the SBA Administrator.

When the vote came up on this in the United States Senate in the first instance this office wired 96 Members of the Senate opposing that part of the act. In other words, we maintained that the administration of the act should rise or fall on the actions of the Administrator himself, and we have lived to see the day that we were correct in our findings.

We know that when the agency was originally established and a few months into its operation, after a hurried nationwide visit in key regional offices of SBA, and upon reporting our findings back to Washington the result was that the whole operation of the SBA as to its lending policy was changed as it related to those eligible to secure SBA loans.

The Wall Street Journal report further states: "The study criticized the SBA for granting loans only when small business finds it impossible to get them anywhere else." What's wrong with that? I believe it may be found in the act itself that small business is expected to attempt to secure loans from private sources, and when they are not available and the credit standing of the applicant is okay, the Small Business Administration moves in. In other words the procedure used by SBA is not in competition with private banking circles.

The report further states: "The tremendous postwar increase in indebtedness of small businesses might raise the question of whether credit had become too readily available." The writer's experience in private business for better than a quarter of a century or more prior to my connection with the federation leads me to believe that where small business goes in for financial loans from private banking institutions their applications are generally scrutinized very very carefully before any consideration is given to the loan.

We believe, from reviewing the operations of the Small Business Administration, and after having recently completed personal visits to SBA Offices in Chicago, Minneapolis, Seattle, Portland, San Francisco, Los Angeles, and New York City, that the Agency is showing consistent progress more in keeping with the will of the Congress and the full intent of the act.

We further believe, due to the splendid action of the House in the 1st session of the 85th Congress, which voted and approved improved SBA legislation expanding the powers and operations of the Agency, and more important, the key to its operation as to financing matters—authorizing a new Advisory Board consisting of the Administrator, Secretary of Commerce, Secretary of the Treasury, and not less than 3 nor more than 5 small-business men, this will go a long long ways in bringing long overdue financial assistance to small business where such credit is not available through private banking institutions, and in closing we might add that the opinion we have expressed above is also the opinion held by some members of the banking fraternity.

Sincerely,

GEORGE J. BURGER, V. P.,
National Federation of Independent Business.

APRIL 17, 1958.

EDITOR, WALL STREET JOURNAL,
44 Broad Street, New York, N. Y.

DEAR SIR: I noted with considerable interest on the editorial page of today's Wall Street Journal "Topsy-turvy business," which certainly calls for our attention in view of the interest our nationwide membership—all independent business and professional men, has in the operation of the Small Business Administration.

You state: "The temporary Small Business Administration will probably outlive us all." You are correct, and it will outlive us all until such time as banking institutions throughout the Nation are permitted to make long-term capital loans to small business. You are well aware that under present banking laws the banks more or less are regulated by State and Federal law on long-term loans.

We are leaving no stone unturned, which after all is the majority vote of our membership, to have the Senate take concurrent action on the improved Small Business Administration legislation which was voted by practically unanimous action in the House in the 1st session of the 85th Congress—to be exact, 392 for and 2 against.

Our understanding of the recently released report of the Federal Reserve Board "Financing small business" is that it was not a report of the Board itself but was merely a report of the staff which was engaged to study the situation.

Page 19 of the report carries letter of transmittal dated March 31, 1958, directed to the Chairman, Senate Committee on Banking and Currency, Senate Select Committee on Small Business, House Committee on Banking and Currency, House Select Committee on Small Business, signed by Wm. McC. Martin, Jr., chairman, in which he stated: "Last fall the research staffs of the Board of Governors and the Federal Reserve banks undertook a study of the financing problems of small business." We could find nothing in Mr. Martin's letter to the committees where he called the Small Business Administration a distress organization, nor do we find in his letter any comments as quoted: "hold out any promise for development" of small businesses.

We believe in fairness to your nationwide readers of the Journal that you may find it convenient to publish this letter as it goes without saying many thousands of small business people throughout the Nation do read the Wall Street Journal.

Sincerely yours,

GEORGE J. BURGER,
Vice President, National Federation of Independent Business.

A Brass Ring for Mr. Gary

EXTENSION OF REMARKS
OF
HON. BURR P. HARRISON
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 23, 1958

Mr. HARRISON of Virginia. Mr. Speaker, under leave to extend my remarks in the Appendix, I include a well-deserved tribute to our distinguished colleague, the Honorable J. VAUGHN GARY, which appeared in the Richmond News Leader on April 18, 1958.

It is an old southern custom, and it has been of enormous usefulness to the South, that when a man really establishes his hold on a congressional seat he generally is spared opposition from within his own party. And because over much of the South there is no opposition from outside his own party, the Southern Congressman builds up seniority as a monument picks up patina.

This genteel approach to politics is the green envy of officeholders elsewhere. They watch Southerners climb committee ladders with patient and effortless ease, and rage against the apathy and indifference of the South. Doubtless it is true that so placid a custom has its drawbacks, for there is something to be gained from the hurly-burly of a hot campaign: A man emerges from it a little more responsive to his people. But the other side of that argument is that many Southern solons are able to exercise a legislative freedom they could not exercise otherwise; they are more independent of pressure groups and less beholden to kingmakers.

Anyhow, what we started to say is that J. VAUGHAN GARY is now benefiting from this venerable southern custom. The Richmond Congressman won a bress ring on Wednesday, when the deadline passed for filing primary candidacies, and thus enjoys a free ride to the November general election. "Opposition," Bill Tuck once remarked feelingly, "is a hateful thing." We are pleased that Mr. GARY has been spared this expensive travail this spring.

It was not always so. Looking back over Mr. GARY's campaigns, one is impressed by the number of skirmishes he has had to fight in order to retain his seat. He has been in the House 13 years last month, and no fewer than 13 candidates have tried to knock him off his perch. Among these, interestingly, was a Communist candidate by the name of David P. Bennett, who ran against Mr. GARY in the general election of 1948. Bennett was one of the only real, live Communists we ever had around this town, and a right attractive youg fellow he was. He came by the office one day looking for some clippings. He got 775 votes. What ever became of Alice Burke?

Mr. GARY scrambled into the House on March 6, 1945, 3 months after Dave Satterfield's retirement, as a plurality winner. He had 10,444 votes, against 8,407 for Ashton Dovell and 2,663 for Curtis M. Dozier. Seventeen months later, he had his closest race, when he defeated Minetree Folkes, Jr., 17,527 to 15,152. In November of 1946 he toppled F. Earle Lutz, Republican nominee. In 1948 Mr. GARY dumped James E. Gardner in the primary, and defeated Republican Dick Poage in the general election. Mr. Folkes tried again in the primary of 1950, but with even less success, and Mr. GARY had only a couple of lady candidates against him that November. He hasn't had any Democratic opposition since 1950, but 3 Republicans, Walter R. Gambill (1952), J. Calvitt Clarke, Jr. (1954), and Roy E. Cabell, Jr. (1956), have managed to claim 41 or 42 percent of the vote against him each time. Mr. GARY hasn't had a specially easy road.

The Richmond attorney, now 66, has served this district well. He ranks 10th among 30 Democrats on the House Appropriations Committee; he is respected by his colleagues especially for his experience in postal affairs, but he is gaining wisdom and understanding in foreign affairs also. The seniority he has gained in the House benefits this district, just as each additional year of experience benefits Mr. GARY. He deserves reelection, and it's good to see him get a merited green light past primary day.

Racial Relations

EXTENSION OF REMARKS
OF
HON. FRANK W. BOYKIN
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 23, 1958

Mr. BOYKIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a letter addressed to the editor of the Mobile Register, Mobile, Ala., by one of the colored citizens of Mobile County, which letter appeared in the Register under date of April 17, 1958. The letter from this citizen, Henry E. Royal, voices the sentiment of the overwhelming number of our colored citizens who have discussed with me the integration problem, and I feel it will be of interest to the citizens of other States outside the South.

RACIAL RELATIONS

DEAR SIR: I am an American citizen, born and reared up in the deep South; born in the colored race and I'm very proud to be just what I am, for God made me what I am. I would like very much to express my personal opinion concerning today's racial situation.

I think it is a horrible situation that's facing our country today. And I personally think the United States Supreme Court should review the integration bill and laws and leave it up to the whole of American citizens to vote on and not bring something forcefully that 98 percent of the country is against.

I know my people and my race and we don't need, and we don't want, integration. What would it benefit either race? What we need is a peaceful solution and mutual understanding and Christ Jesus in our lives today more than ever before.

I can see so much trouble and unrest in integrated schools. Something we do not need as gift or for price. What would benefit our race more than anything I know today would be more and better jobs with better pay. Better schools with equal but separate facilities—this would provide better living conditions for our people and would help to prove our ability of being a first-class, honest citizen. And this would allow our race to provide our own places for recreation and would better our conditions to meet our obligations of indebtedness. This would help us more.

I hope and pray not for my benefit alone, but all America, that a peaceful solution will be found. We do not need integration.

HENRY E. ROYAL.

CODEN, ALA.

United States Owes Debt to Representative Fallon

EXTENSION OF REMARKS
OF
HON. EDWARD A. GARMATZ
OF MARYLAND
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 23, 1958

Mr. GARMATZ. Mr. Speaker, it is most gratifying when from impartial sources there is heard a well founded expression of commendation for one of our fellow members who has distinguished himself by exceptional service for the advancement of the interests of our country. Such a tribute has recently been paid to the dean of the Maryland congressional delegation, Congressman GEORGE H. FALLON, who through arduous efforts and signal ability lead the bipartisan effort for the enactment of the Federal road program.

Voicing the sentiments of all who are conversant with the details of the handling of this gigantic undertaking, the Baltimore News-Post has published an editorial entitled "United States Owes Debt to Representative Fallon." It so accurately and eloquently expresses the viewpoint of countless numbers of them that I ask unanimous consent that the text of the editorial be reprinted in the CONGRESSIONAL RECORD.

UNITED STATES OWES DEBT TO REPRESENTATIVE FALLON

There is gratification for everyone in America in the second major Federal anti-recession step, the program to invest an additional $1.8 billion of Federal and State money in the Nation's roads now.

Everyone benefits by every turn of any wheel that reverses the decline of the Nation's whole business, and everyone, aside from driving on them, will benefit by every day of the earlier completion of the national roads that are the lifeline of the Nation's whole business that provides the jobs and the income for all of us.

It is gratifying that new jobs will be provided this very year, an estimated 88,000

that will grow to 520,000 when roadbuilding reaches full pace in another couple of years.

Those 88,000 jobs are for on-site workers, the men motorists see on the rights-of-way. But road dollars, just as defense dollars do not go just to soldiers and sailors, go to the payrolls for materials from suppliers and manufacturers in all 48 States.

This starts with pencils for draftsmen, through timber and ore and coal and petroleum, steel and aluminum, autos and trucks and tractors, sand and gravel, cement and asphalts and explosives, even to glass and paint for the signmakers and those who put down the white-line lane markings at $1,000 a mile.

These payroll benefits are substantial, for Senator ALBERT GORE, Democrat, Tennessee estimates that 90-cents of each road dollar goes into wages and salaries.

It is gratifying that the price tag in tax money for all of this is not staggering, for this is simply spending right now money that the 1956 Federal road law anticipated spending next year and the year after that.

It is gratifying that the Congress and the President were in accord on a road-construction speedup to aid the Nation's whole business right now, and that both Houses of Congress acted so promptly and so overwhelmingly in favor of it, a renewed demonstration that party politics are not entangled in the road program.

It is gratifying that the Congress took a stand on roadside billboards and barred them from at least 65 percent of the new 41,000-mile Interstate Highway System.

The News-Post and Baltimore American have a proprietary interest in the Federal road program because the 1956 law that created it was predicated solidly on the Hearst Newspapers' plan for better roads as the key for relief of the country's highway crisis.

Maryland will benefit by $6,700,000 this year.

Thus it is doubly gratifying that this congressional step puts the main roadbuilding back on its 13-year schedule and averts a stretchout, perhaps to 20 years, that might have us in 1976 building roads to a concept that had become obsolete the year before.

For persistence in returning the program to its timetable, the Nation's whole business owes measures of thanks to Senator GORE and Representative GEORGE H. FALLON, Democrat, of Maryland's Fourth District, Baltimore City, chairman of the two Houses' Subcommittees on Roads.

Now let the bulldozers roar.

Life and Problems of a Young Farmer

EXTENSION OF REMARKS
OF
HON. FRANK M. COFFIN
OF MAINE
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 23, 1958

Mr. COFFIN. Mr. Speaker, there is no field of legislation more complex than agriculture. Sometimes I think it is helpful to look closely at one of the trees in the forest of agriculture, the individual farmer. Recently, when I was in my State, I had occasion to talk with a young farmer of excellent reputation. I asked him to write to me concerning his life and his problems. I think his answer will interest every member of this body. It illustrates the tremendous demands which are made upon a young man if he is to be a successful farmer in my part of the country. It also illustrates that this kind of farmer is not, as many people seem to feel when they discuss the farm problem, getting paid for doing nothing. There still is a need for sound Government assistance to help this kind of farmer achieve a sensible credit position so that he will not grow old before his time.

Mr. Speaker, here is the letter:

Mr. FRANK M. COFFIN,
Maine Congressman,
House of Representatives,
Washington, D. C.

DEAR MR. COFFIN: I have not forgotten the matter that my wife and I promised to write you about. I keep thinking every day that I must just sit down and write but somehow there just aren't hours enough.

This evening I'm going to start this anyway. I do hope this letter, along with others I now hope to write, will prove of interest to you. I told you the night of February 15 about our undertaking. I will just briefly outline it here again.

On January 1, 1958, my wife and I took on by purchase the 200-acre farm on which we now have 55 head of milking cows and young stock. I was able to get this place by promising to pay my father and others of lesser importance a total of $32,000. As we had no funds to pay any downpayment we now owe all the amount. I want to say that as of January 1 our total cash on hand was less than $500.

Sometimes, Mr. COFFIN, we now really wonder if it was the right move as you see in order to meet our debts outside of normal operating expenses of the farm—taxes, grain, repairs, fertilizer, etc.—we have to pay out nearly $400 a month. A little simple math says that the total for the debts like that for a year is nearly $5,000. I am going to feel very pleased if I can gross $20,000 this year. After paying the debts and operating expenses we would not make it if it were not that my wife holds a good job in ———. We are unable to save any amount of money to make any improvements in the dairy business at all.

Right here one might say that maybe if we would refinance and take a longer time to pay as on our present plan we have to pay the $32,000 in about 12 years. That is all well and good but who will lend that kind of money at reasonable terms. I have tried a number of places and I can't stand the interest rates or in most cases I am nicely told "No." The Farm Housing Administration would help me out but in our State of Maine they just don't get enough money. All they have is $100,000 for the whole State to put on real estate. As you can readily see, Mr. COFFIN, that amount doesn't go far on the amount of farm real estate that we have in this State of Maine.

I should say right here and now, Mr. Coffin, that my wife and I are not the only ones with such burdens to carry. There are many more though. Mr. ——— and his wife can tell similar stories. And there are others.

You asked me the other evening how hard my hours were. Well, these hours are for 7 days a week. I rise at 4 in the morning and get to the barn about 4:45 after I have eaten some lunch. I am working all alone now milking on an average 30 cows and feeding and caring for the cows plus about 25 young stock. I get the morning's work done about 10:30 so I can then eat and do the other things that must be done to make the place run. Tomorrow I must take grain in to be ground. Today I went to an extension meeting on the planning of better forage programs.

I have to start the evening chores by at least 2:30 in order to ever get done at night. I usually am in the house for supper with my wife by 7:15. I never see my daughter, 1½ years old, other than on weekends as she is to bed at 7:15 and my wife works during the week so we board her out during the weekdays.

You may ask now, Mr. COFFIN, how do I stand this life. Well, in the first place I love cows and like to handle them. Of course, I would like to get a fair return for my efforts. We have wanted to get a hired man but as yet the operating budget won't stand it so I have to put in the long day. I hope to be able to save enough now by working alone so I can hire my dad who will be 66 years old this summer. He will be my only help to put in the crops and harvest them this summer. I do so hope that in a couple of years that we can find a way to get a young man as a steady man. I have to get a man as I can't stand this work for many years or I'll be an old man young as the saying goes. You may wonder, Mr. COFFIN, how old we are. I am 25 years old and my wife is 21.

I try to attend all the extension meetings in the area that I can. There is one group of very interesting meetings that you mentioned in your address in———the ones on farm affairs. You will find enclosed a copy of some matters discussed at one of these meetings. I will try to send you material on others that might interest you. These meetings are getting a lot of interest and at them there are many ideas given on what different ones think could be done to help the situation that we farmers are in.

Well, Mr. COFFIN, it is late and I must close now. I do hope this letter can give you a clearer picture of one farm problem at home. The problem of how young farmers start in with little money and big investment.

Very sincerely yours,

——— ———.

Our Natural Resources

EXTENSION OF REMARKS
OF
HON. LEE METCALF
OF MONTANA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 4, 1958

Mr. METCALF. Mr. Speaker, among the significant papers to be presented to the North American Wildlife Conference in St. Louis, Mo., this week is one by Mr. William E. Towell, director of the Missouri Conservation Commission.

Mr. Towell directs one of the finest State conservation departments in this Nation. This model department, with a successful program and an excellent staff, shows what the States can do in the natural resource field.

Mr. Towell says some of our natural resources have gone out the window of waste; some are going, and others are being pushed dangerously close. His advice: Shut the window—by conservation.

This excellent paper, to be presented March 5, 1958, follows:

NATURAL RESOURCES GOING OUT THE WINDOW
(By William E. Towell, Director, Missouri Conservation Commission)

"Going out the window" is a phrase that has developed specific meaning through usage. It implies waste. It signifies the act of throwing things away, never to be regained. The title of this paper, therefore, suggests that we are destroying our natural resources. In case there be any doubt, I

think we are destroying them. According to the laws of physics, matter cannot be destroyed, only changed in form. But if the new form is not more beneficial to society than the original form, then there is a loss, not to matter, perhaps, but to mankind. At the very best, we are not getting wisest use for the greatest number.

The fight for conservation can never be relaxed, and we must direct the fight. Our enemies are greed, selfishness, apathy, and ignorance. Some of the most appalling misuses of natural resources are perpetrated under the banner of conservation. Even in apparently legitimate conservation projects, we may close the windows of waste to open larger doors of destruction. We must consider 1978 as well as 1958; we must consider the whole complex of human use instead of the individual project.

We cannot possibly consider all natural resources in the time allotted to this panel; I can only attempt to highlight a few that most demand we close the windows of waste. In our minds we must still reserve room in which to consider long-range effects of atomic radiation, of air pollution, and of powerful new pesticides on both man and wildlife. But for now, let us consider some of the windows where the forces of conservation can best stop the wastage of natural resources.

Soil and water are the two most basic resources of life. You and I know this; we have repeated it over and over again. But how many people really recognize the obvious fact that man, no less than all other members of the plant and animal kingdoms, is utterly dependent upon the availability of soil and water in sufficient quantity and quality. Civilizations and cultures die when these resources are exhausted or even degraded. We need only look back into the history of northeast Africa or southeast Asia for the proof. Lands once prosperous are now sterile deserts. Though science today can transform seemingly abundant resources into food, clothing and shelter, and probably more ways will be found to produce these essentials synthetically, our ultimate survival still rests with water and the soil. We had best not assume that science will save us; science can also destroy us.

Soil resources are going out the window: agriculture production in America is not geared to the food requirements of the Nation, but to the competition for wealth. Subsidies to maintain guaranteed higher prices stimulate greater production, not for food but to add to growing surpluses. Again and again our western wheatlands are lifted by the winds to darken the eastern skies, just to produce crops that are not to be eaten. Acreage allotments encourage the farmer to grow uncontrolled crops or force greater production from fewer acres. In any case, our soil is the poorer.

We read that millions of tons of topsoil are deposited in the Gulf of Mexico every year (and you almost can see the earth's passage from your hotel window). Yet what percentage of Midwest farm lands are protected by terraces, contouring and grassed waterways? The size-supremacy of Texas may be threatened by the growing delta of Louisiana (if you'll pardon a minor exaggeration for emphasis), but I think you will agree our soil resources are going out the window.

Water resources, too, are pouring over the sill. One of the few things keeping pace with the population surge of the United States and Mexico, and possibly Canada, is the consumption of water. Water tables drop lower and lower as the demand goes up and up. As water supplies grow less in critical areas, which needs will suffer most? Will the greatest good for the greatest number determine priorities? And who will decide where the good and number are to be judged? Already these questions are acute in some localities—but they remain unanswered. Antiquated water laws, or the absence of any controls at all, threaten wildlife and recreational interests. Fishing and recreation were ruled out as greatest good for the greatest number at the John Martin Reservoir in southeastern Colorado. Under the prior appropriation doctrine, flood waters stored in the reservoir had to be released when irrigation demands imposed their prior rights. Will obsolete laws influence court decisions and new legislation in States just beginning to face up to their water problems?

Shortages in critical areas and conflicting interests in use are only two phases of our water concern. A growing problem, along with a booming population and industrial expansion, is the abuse of water that makes it unfit for further use—pollution. In spite of Federal and State pollution control legislation, many streams throughout the Nation are simply open sewers. It seems barbaric that in 1958 a civilization such as ours can still foul its nest by dumping poisons into its streams. The water we drink in Jefferson City comes from the sewers at Omaha, St. Joseph, and Kansas City. Municipal and industrial wastes, dumped raw into stream channels, constitute one of conservation's greatest challenges; not only as an enormous public health problem but as a serious waste of fish, waterfowl, and recreational resources.

Only a determined fight in the last session of Congress kept pollution control appropriations in the budget. Even a greater fight looms ahead, because the President has told Congress that this program should be discontinued entirely after the next fiscal year, although the bill for navigational developments on the wild Missouri River was much higher than the water-pollution money for all rivers. For every barge on the Missouri, a half million people must drink from it. Our fight for water is only beginning. Conservationists will face determined opposition from shortsighted industries and municipalities before the trend is really reversed.

A more insidious situation has become apparent lately, since industry has become public-relations conscious. Knowing it dare no longer openly oppose pollution-control measures, industry often joins the fight to shape legislation that is so watered down as to be scarcely effective, and conservation wins a hollow victory. By and large, the only forces openly opposed to pollution control are large municipalities which fear tax rises should pollution control become a reality. We can deal with opponents, but who will save us from our friends?

Constant vigilance is required to gain recognition of wildlife and recreation values for the public in flood control, irrigation, and hydroelectric impoundments built with that public's money. Government ownership of shorelines has been forcefully advocated by conservationists, just to insure that the paying public may have access to these lakes. Previously Federal agencies had adopted a policy of only partly controlling lake shores under flooding easements. Proposed amendments to the Federal Coordination Act of 1946 would require evaluation of wildlife and recreation gains or losses before any new projects are authorized. These amendments would also require appraisal of the effects on these resources for impoundments previously authorized but not yet started. These changes are of utmost importance to all wildlife conservationists, but they will require a fight for the public interest.

In a determined battle, conservationists have so far blocked appropriations for the proposed Bruces Eddy Dam on the north fork of Idaho's Clearwater River. This big flood control hydroelectric project would stop spawning salmon and steelhead trout from migrating to one of their biggest breeding areas and would flood a major winter feeding range of elk and deer. In 1955 Congress authorized studies of the effect of this impoundment upon fish and game resources but proponents are unwilling to wait for the results of these studies. Some of the impoundment's opponents urge construction of Hells Canyon Dam on Snake River as an alternate to Bruces Eddy that would not be so destructive to wildlife. Basically, this fight is for more than fish and big game, as most such struggles are. It involves major political issues and the battle between public power and private power factions. But fish and game conservationists must be ready to rally against this or any other threat to these resources or out the window they will go. Wildlife cannot be isolated from land and water decisions.

Another battle is being waged in the marshlands and in the pothole country to save waterfowl from threatened destruction. Northern nesting potholes are disappearing at an alarming rate under the stimulus of agricultural subsidies so that crops may be raised to go uneaten both in the United States and in Canada. Marshes and swamps along the flyways are being drained constantly for agricultural and industrial developments. The rate of waterfowl habitat loss far exceeds the rate of wetland acquisition by Federal and State agencies. Ducks and geese are flying out the window because there are fewer places for them to rest, feed, and breed. Meanwhile, the places left for waterfowl are under attack by agricultural forces because ducks and geese eat nearby grain, grain already in surplus supply.

We argue among ourselves on how to finance this urgent program of wetland acquisition: That is, how we can supply with the right hand what the left hand is taking away. The need for increased duck stamp fees is generally agreed upon, but we do not agree upon a sufficient amount to reverse the drainage trend. It is our job, if we are to promote wildlife conservation, to convince the sportsmen that they will have to pay the costs necessary to preserve these resources. We cannot afford to make this another feeble attempt of too little and too late.

Wetland needs of waterfowl should receive primary consideration in planning of all large impoundments. The proposed Kasinger Bluff Reservoir in western Missouri, for example, could become a major waterfowl haven, without lessening its effectiveness for flood control. But multiple uses and secondary benefits such as this must be recognized and included in the early planning stages of water developments.

It is difficult, and perhaps unwise, to separate those resources actually going out the window from those that are being pushed dangerously close to the ledge. There are constant threats by private interests seeking to gain control of public forests and recreation areas for purely personal gains. Grazing interests never abate their longing to acquire control of Federal range lands. Lumbering interests covet all remaining virgin timber under Government control. Fish, game, and recreation values have to withstand the determined competition of mining claims, oil leases, inundation or the clutch of the military for air fields or bombing ranges. The defensive struggle to maintain a sane balance never ceases.

Forest resources cannot be separated from the soil, from flood control or water storage, from wildlife or recreation. All are interwoven into a complex ecological pattern, and when one thread is broken the whole fabric begins to unravel. But in many ways forest resources, too, are making dramatic exits out the open windows. According to Timber Resources Review (United States Forest Service, 1955), fire is potentially the greatest forest enemy, but in 1952 insects killed 7 times as much sawtimber as fire did, and disease killed 3 times as much. Together these 3 destructive agents killed

nearly 13 billion board feet of sawtimber in 1 year. Perhaps of greater significance is that these losses amounted to 44 billion board feet of potential growth.

Even though fire losses in our forests are now greatly exceeded by losses from insects and diseases, this does not mean that fire protection activities can be relaxed. Expansion of fire control efforts is needed everywhere, particularly to areas now lacking organized protection, for fire still remains the greatest potential enemy. But our new challenge is primarily one of organized protection from other forest enemies, principally insects and disease. And I think we must face up to our wasteful methods of forest utilization. Of every 4 cubic feet of timber cut, 1 cubic foot is wasted. It goes out the window in the form of sawdust, slabs or usable logs left to rot in the woods.

Still another challenge is the 115 million acres of forest land in which less than 40 percent of the trees are desirable species. One-fourth of our commercial forest area is producing less than half of the timber that this land is capable of growing. In fact, many open windows are draining away America's forest wealth with unspectacular trickles that have cumulative effects.

Furthermore, we must continue to insist upon a correlation of efforts between foresters and wildlife people. The multiple-use and wise use of forests is our constant concern.

We have seen several wildlife species disappear completely through open windows: the passenger pigeon, the Carolina parakeet, the heath hen. Other species like the sage grouse and the whooping crane are barely hanging onto the sill, waiting for us to shut th window or to kick them on out.

What are we doing to stem the tide of habitat destruction? Are we going to sacrifice our remaining game because it cannot compete with the modern exploitive agriculture? The conservation reserve provisions of the Soil Bank Act and the small watershed program under Public Law 566 offer great possibilities to slow the rate of habitat losses. Are we taking full advantage of these opportunities? In fact, do we know how we can take such advantage? And are we also proposing further measures?

Other means must be found to encourage private landowners to manage their lands for game production. If we do not find some way to aid the farmer in providing beneficial wildlife practices, either wildlife goes out the window entirely or it remains only with those few who can afford to lease private hunting areas and pay for the necessary wildlife management. Unless we find a better solution, commercial put-and-take hunting areas may be the only answer for many sportsmen. The best waterfowl areas and big game ranges will be available only to a financially privileged few. I do not believe that building public fishing lakes and acquiring public hunting areas is enough of an answer for us, either. Our chief responsibility is to maintain wildlife production on private lands, and at the same time make it available for public harvest.

Land use is not the only window out of which wildlife is going. Antiquated views on sportsmanship and game laws contribute to such fallacies as permitting the harvest of only buck deer from herds far outnumbering the capacity of their range. Well-meaning sportsmen abhor the thought of killing a mother deer or her fawn but do not seem to grasp the fact that they will otherwise die of starvation and disease or fall to predators. Nature's harvest is ruthless, but sure.

Fisheries management is complicated by a similar problem, major fishing pressure concentrated upon a few favored game fish species. On one of our big impoundments in Missouri, 85 percent of the total fish production is of the so-called rough species; yet, the annual harvest from this lake includes only 15 percent of these species. Game fish production suffers from this competition of overpopulated nongame types. But when more liberal methods of harvest are proposed or commercialization is permitted, there is immediate objection by the fishing public.

It is inevitable that some natural resources will go out the window. Progress cannot be made without mistakes; advancement will always cost somethhing. The mere fact that we recognize some of our own inconsistencies indicates progress.

But some of our lost resources represent impure and simple waste. No one can condone waste, although we attempt to justify the squandering exploits of early pioneers and somewhat later industries on the grounds that the supplies of resources then seemed inexhaustable. But today we take our stands, or say we do, against waste for economic or political expediency. We are wise, now; we know that the resources are not unlimited. But waste continues.

Despite our preoccupation with atomic power, satellites, and intercontinental ballistic missiles, our strength, even our lives, still depends upon soil and water, forests and minerals, and upon the plants and animals which they produce. The base supporting everything we call man and his civilization is the raw materials provided by nature; culture is only our ability to use these materials. And the most important culture of all, the one which we can never afford to let escape through open windows, is the organized effort of conservationists to preserve our heritage, which has made possible our prosperity, our progress and our strength as a nation, our natural resources.

I want to make this one last observation. In the struggle today between nations, we say we are defending our way of life by spending huge hums in building air bases around the world, in buying loyalties of other nations, in building satellites and warheads, in using all our resources for defense. Are we heading into a situation where, because of hysteria and fear, we may spend all our true wealth, the natural resources? Someone must see that we do not build a Maginot line solely to defend the resources already expended in building it. That someone, I think, will have to be us.

Tenth Anniversary of State of Israel

EXTENSION OF REMARKS
OF
HON. EDMUND P. RADWAN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 23, 1958

Mr. RADWAN. Mr. Speaker, this is a great day for the people of Israel and for Jewish people everywhere. All men who cherish freedom can join the citizens of the new State of Israel on the 10th anniversary celebration of her independence day. We have always been keenly conscious and fully sympathetic to the sufferings of the Jews. We have been amazed by their exemplary fortitude in adversity. We have profound admiration for their firm determination to pursue their national goal. Today we are deeply moved by their accomplishments and advancements in their newly-created state which is already firmly established as a democratic and progressive country. I join the citizens of Israel on the observance of this solemn occasion and wish them joy and happiness in their ancient homeland.

The Fruits of Freedom—An Address by Mrs. Frederic A. Groves, President General of the National Society, Daughters of the American Revolution

EXTENSION OF REMARKS
OF
HON. PAUL C. JONES
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 23, 1958

Mr. JONES of Missouri. Mr. Speaker, it is my honor and privilege to represent the district in which Mrs. Frederic Alquin Groves, of Cape Girardeau, Mo., resides. Mrs. Groves, the first Missourian ever elected president general of the Daughters of the American Revolution, and the second woman west of the Mississippi River to hold this distinguished office, was elected for a 3-year term on April 20, 1956.

In this capacity she presided at the sessions of the 67th Continental Congress of the DAR, which convened in Washington last week. It was my privilege, with Mrs. Jones, to be a guest of Mrs. Groves at the banquet of that distinguished group on last Friday evening.

We in southeast Missouri are particularly proud of the distinction which Mrs. Groves has brought to the State of Missouri, and that is one of the reasons why I have requested permission to have the address Fruits of Freedom printed in the CONGRESSIONAL RECORD. But first I think my colleagues would be interested in knowing more about this great citizen of Missouri, whose talents and whose capabilities have been recognized on a national level, and for that reason I would like to briefly recite some of the accomplishments of this gracious lady, who has been so signally honored by the members of the Daughters of the American Revolution.

Mrs. Groves joined the Nancy Hunter Chapter, one of the oldest in Missouri, 24 years ago. Devoted service to her chapter led to broader leadership as Missouri State chairman for the membership committee, building fund, State registrar, State vice regent, and State regent.

From 1952 to 1955, she was vice president general and organizing president of the Vice Presidents' General Club. As a State and national promoter of the Children of the American Revolution, she was instrumental in putting Missouri Children of the American Revolution activities on a sound financial basis.

Among her accomplishments as State regent of the Missouri society are two publications with wide national circulation which are much sought after by genealogists everywhere even today. These publications are the Genealogical Guide, a Master Index of Genealogy, found in the DAR Magazine, and the Missouri State Directory. Leadership and accomplishments such as this brought

the Missouri society to new peaks of excellence.

Mrs. Groves' tireless activity in leading the fight against legislation adverse to good government principles as recognized by the NSDAR, resulted in getting the Humber resolution—world government—rescinded in Missouri, the seventh State to rescind the resolution among others.

Proir to her marriage to Mr. Frederic A. Groves, she was Allene Wilson, the daughter of Judge Robert L. Wilson and Jane Allen Wilson. Her mother was a charter member and early regent of Nancy Hunter chapter, Missouri. Also, a member of this chapter is her one daughter, Marjorie Phillips—Mrs. George O.—who has served the chapter as corresponding secretary, as treasurer, and is currently State DAR chairman of the museum. Her two granddaughters, Allene, 7, and Eloise, 4, are members of the Children of the American Revolution, representing the fourth generation of the family in this group. Mr. Frederic A. Groves, her husband, is a civic leader and successful businessman in the automotive, banking, and farming fields. She is of a distinguished family with ancestors from Virginia, Maryland, and Kentucky.

With a membership of more than 184,000 members, the national society, Daughters of the American Revolution, is composed of women descendants of those who "with unfailing loyalty rendered material aid to the cause of independence as a recognized patriot, as a soldier or sailor, or as a civil officer in one of the several colonies or States." It has historical, educational, and patriotic objectives, and numerous projects are undertaken in furtherance of good citizenship and the preservation of the American way of life.

Mrs. Groves is no exception. She is affiliated with the following patriotic societies and has served as State treasurer, State vice regent, State regent, and national vice president of the middlewest section of the Daughters of the American Colonists. Too, she holds membership in the following: National Society of Colonial Dames of America; Colonial Daughters of the 17th Century, and the Huguenot Society of the Founders of Manakin in the Colony of Virginia; National Councilor of the Daughters of Founders and Patriots of America; the Daughters of the Barons of Runnemede; the Order of the Crown in America, and Daughters of Colonial Wars.

Widely versed in business, Mrs. Groves holds the position of executive vice president in a prosperous business and, in addition, serves as director on three boards. A member of the Episcopal Church, she has served several times on the diocesan board of the Women's Auxiliary. A history major and graduate of the University of Wisconsin, Mrs. Groves was a member also of Pi Beta Phi Fraternity. She is a member of the River Hills Garden Club, and a charter member of G. F. of P. E. O.

Mrs. Groves' lifelong interest in, and dedication to, patriotic, religious, and civic organizations brings to the National Society, Daughters of the American Revolution a wealth of experience and a record of outstanding leadership enhanced by a fine personal background of splendid educational attainments and gracious habits of living in her private life.

Now that you know about Mrs. Groves, I feel that you will be interested in reading the stimulating address delivered by the president general at the opening of the 67th continental congress:

THE FRUITS OF FREEDOM

As I look over this vast audience and bid you welcome, I am aware of two deep and compelling emotions; first, a sense of great pride in this manifestation, this proof, of your interest, your loyalty and your devotion; and second, a feeling of lively gratitude for the privilege we enjoy of meeting here and of being together. To all of you, and especially to those of you who have traveled long distances to be here with us, I wish to express my appreciation and my heartfelt thanks.

We are here for the purpose of discussing matters pertaining to our society and, in no less measure, to our Nation. May the results of our discussions prove to be mutually enlightening, and very real and constructive contributions to the welfare of our country.

I have taken as my theme this evening "The Fruits of Freedom," and I propose to examine some aspects of our society, with special emphasis on certain cultural aspects. It is a fact that here in our country we have an unprecedentedly high standard of living, a standard extended not just to the few, but, as never before, to the people as a whole. We have here, at the very least, the favorable climate for an intensive, active, and richly rewarding cultural life. But have we preferred to settle, instead, as our Communist critics claim, for a materialism, a gadgetry, that puts comfort and ease and security above all else? Have we in some way lost sight of the higher values? What is our true situation? What is our present danger?

Through the many years since the creation of our Republic, our American way of life has justified and largely fulfilled the vision and ideals of our Founding Fathers. Our ancestors came here from the Old World with the firm intention of creating a brave New World, a Christian society, a new society better and more just than the old social orders of Europe; it was to be a society based upon the rights and dignity of the individual, under a limited form of representative government, in which every citizen would be endowed with the same rights before the law, and equal opportunity in a free economy.

Certainly few countries have achieved as much, have garnered as rich a harvest, as we have in the less than 2 centuries since the birth of our great Nation. In the past 50 years, especially, we have witnessed a cultural advancement, in large measure due to, and certainly coupled with, increased leisure with which to study, appreciate and benefit by the best that other nations and societies have contributed. It is our economy that has provided this leisure, and at the same time, general access as never before to the cultural harvest of our civilization. We have responded, out of a great longing and hunger for all branches of knowledge, of history, of the practical and the fine arts. We have expressed this longing in a public participation broader and greater in scope than anything previously known.

The great, the basic quality of this rich cultural life is that it is offered to all classes and is participated in by individuals of all races, creeds and stations in life. Let us take 1 example, 1 area of cultural development. At the beginning of the century we had perhaps 3 or 4 orchestras of major standing. They were in New York, Chicago, Philadelphia, and Boston. In the past 50 years, appreciation and love of music have developed so rapidly that some 30 cities have major symphony orchestras; there are excellent symphony orchestras in many of our smaller cities; community orchestras of high caliber flourish, to the number of 650; and most of our universities and many of our high schools have their own student orchestras or bands.

Throughout the country we have art centers, museums—some 2,500—and civic centers which can house not only circulating art exhibitions, but orchestras, opera companies and theatrical groups. In this respect even small towns and communities can enjoy the advantages previously reserved to the larger cities. In the last few years we have developed tremendously our great love for the theater, for all forms of the drama. We have long had thriving little theater groups, on a widespread community basis; there are over 400 university- and college-drama departments and little theaters. We have creative writing groups as well as groups or workshops for those interested in studying and practicing the techniques of musical composition, of dramatic construction, or of painting. Our creative spirit is constantly, vigorously, searching for new fields of experience; we have been insatiable in our desire for the extension, the broadening, the enrichment of our knowledge and achievements.

Our consuming interest in the creative arts is perhaps no greater than that to be found in other nations. But we are singular in that we have had the leisure and the means of gratifying our desires, and we are singular too, I suggest, in the pace of our cultural activity and interest. Finally, the level of this cultural activity—our actual performance—measures up bravely and successfully to the actual performance of contemporary foreign cultures.

This has been possible, is possible, because we have always been a free people, free to earn our living at anything we chose, free to live where we chose, free to worship in our own way, and to vote for our own convictions. It is, to take one vital area, as a liberty-loving people that we have chosen to give—and have been able to give—our public schools the very best physical equipment, the libraries, the laboratories, the auditoriums, the sports arenas—all within the reach of the poorest student. And we have done so because we have been eager to supply the cultural advantages that increase the capacity for, and appreciation of, creative living; and because we have been intent on higher values, not just physical comfort and security.

The same basic concerns have led our great financiers to endow hospitals and research foundations so that our health standards are among the highest in the world. We have led the world in research to help raise the living standards and health standards of the common man. All of our efforts have been directed toward the realization of the good life, to be shared by all classes, and not reserved for just a few. And it is a fact that we have achieved these goals of welfare for the people at large more effectively and more completely than any socialistic regime has yet been able to do.

Our free economy, based on private property, free enterprise, and profit, and our limited form of government have permitted us to apply our energies to consumer goods, to labor-saving devices, to homes and to cars, rather than to the support of large standing armies or the promotion of wars. Yet in two world wars, we astounded the enemy, as well as our Allies, with our sudden manufacture of war materials without which neither war would have been won. It was the tremendous capacity and pace of our war production that proved to be the de-

termining factor in both world wars, and which gave the victory to free men.

Our society was not built upon, and has not profited from, the sweat and toil of others, as were some of the great colonial powers of the past. When we assumed responsibility for a colony such as the Philippines, we have helped them to become free and independent as soon as possible. We have never invaded another nation's territory except in self-defense; and have never enslaved another people. We have sent our armies and air fleets and navies, our war material and our food supplies to help other nations fight for their freedom. We have spent our energies and our resources, our manpower and our private capital, liberally and heroically to help build a better world. We have accepted gravely the responsibilities of a world power and have fought for justice and freedom for others, as well as for ourselves.

Now we are accused of being soft, of loving our material comforts more than we do our self-respect. The pursuit of happiness announced by our Declaration of Independence has degenefated, we are told, into the pursuit of purely physical and material well-being, comfort, and security. Our social structure is said by the enemy to be ready to fall, like overripe fruit. The fruits of freedom, they say, are blighted and deceptive, illusory and misleading; there is no soundnes at the core.

We are faced, then, with these questions: Are we secure in this good life we have created for all our people? Is there indeed a danger that we will succumb to the lure of materialism and to compromise with the Communists? Socialism has promised the common man all the good things of life that he cannot earn for himself. These promises have not been kept by any Marxist economy, because no government can give any individual anything more than it has first taken from him. It is only freemen who can make the good life for themselves, and do it independently of their government. That government is best that governs least. It is socialism that is based solely upon materialism, with its denial of other and higher values, with its denial of God. It is not material benefits that enslave people to materialism; it is the exclusive pursuit of material goods; it is the false worship of material possessions; it is the denial and rejection of other values.

Our answer to the challenge rises loud and clear from all over our country. We are saying with one voice to our Government, "We will not succumb. We will not compromise for the sake of ease and comfort. Spend as much as is necessary to remain free. We can afford as a Nation to survive. We will make any sacrifice necessary for wise and necessary expenditures, but not for bureaucratic power or blunders in high places." There can be no question that Americans will rouse to this danger as they have to every other peril with which they have been confronted in their history.

But deeper even than this, the real issue before us today, the basic issue that divides the free world from the enslaved, is: "How much should any government do for its people? How much can any self-respecting citizen accept from his government and remain free?" We must make now the most important decision of our lives. It is simply this: What kind of America do we want? Will it be, will it continue to be, a limited form of representative government, with our individual rights respected and guaranteed to us, or will we accept socialism in return for security, for Government favors and handouts?

More than half of the people of the world are now enslaved under some form of totalitarian government, or are struggling in the throes of some revolutionary change that will lead in most instances to socialism. These enslaved peoples constitute, alas, our greatest peril, because they are unable to revolt, but must work like robots for a centralized, all-powerful government which dictates their every move and thought.

Can free men maintain their liberties in such a world? We Daughters of our American Revolutionary Fathers, know that we can survive because we have inherited a Constitution that will protect us if we will but preserve it to the last letter. We know that as a free people we will voluntarily make every sacrifice necessary to remain a free and Christian Nation and to defeat permanently the Godless philosophy of communism.

But now our very way of life is at stake. Our present peril affects every American woman of every age and station in life. The freedoms which we have always taken for granted are now subject to proof. Russia's very successful propaganda has frightened us into a temporary state of defeatism. We are perhaps too much impressed by a man-made moon encircling the globe—a scientific device, which even if produced in great quantities, could never win even a limited war.

Victories are of the spirit as well as of the mind and body. Only people who have known freedom are willing to fight, and to fight hard enough to retain it. We American women have known such freedom; that freedom, I repeat, is at stake.

It has been said by statesmen and analysts that the American woman is the most pampered and indulged of any women anywhere in the world. Our free economy has given us modern homes, cars, mechanical kitchens, the conveniences of supermarkets—obvious benefits—and the leisure to study and to carry on community activities. But without our free economy and our representation in the House and Senate, we might soon find our lives approaching those of the Russian women. There the women plow the fields, work in the streets, cut cobblestones, and do the work of men. All but the few live in houses without any creature comforts or facilities. They bear children without hope of any future better than their own. Unless a child shows unusual ability, is he given anything beyond the rudimentary classes? If he shows a marked degree of promise, of application, he will be given education in the higher schools, in order to be a servant of the state. But he will never be a free citizen.

We women, and our children, who have profited most by our form of government and our free economy, are the ones who will suffer the most by the loss of our individual freedom. We must realize that everything we have, every advantage we enjoy, every opportunity for serivce, every vestige of our free existence—and not just those labor-saving devices that we have long become accustomed to—but all the true, the precious fruits of freedom, can be lost if we lose our form of government—a Republic functioning under that most superb body of laws ever conceived: The Constitution of the United States of America.

If we win this struggle for men's minds and souls, we must think straight about ourselves, and about our enemy, and we must learn to put first things first. God forbid that it be necessary to fight another war, but if it is necessary, then Americans will be in the first line. But we should first ask ourselves what we are fighting for. It must not be for socialism, with its cult of power in the hands of a few; it is, it must be, for those true spiritual values that keep men faithful to their ideals, and give them courage to endure hardships, in the knowledge that they are fighting in a just cause. Let us be proud, not apologetic about our high standards of living, enjoyed by the greatest number of people in any society. Let us ignore the accusations of materialism hurled at us by our detractors. Let us assume the responsibilities of our power in the free world to find, if humanly possible, a solution to our differences with communism, but let us impress upon the Russians and their neutral supporters, that we will never offer appeasement of any sort. The story of appeasement wherever found always has the same ending—degradation.

The free world is still looking to us for leadership in the struggle between liberty and serfdom. Freedom-loving peoples in evry land have become accustomed to looking to us for assistance of a material and moral nature. Every year we Americans contribute a sizable portion of our savings to preserve world peace. During the Korean war, we sent 1,200,000 of our young men 5,500 miles across the Pacific to fight for the principle of collective security. Our sacrifices for other nations in their struggle for freedom, have established the long record of our altruism, unmatched by any other power. We have always been motivated by an idealistic concept for others as well as for ourselves—the concept of the good life, a concept we can still achieve for all of the free world, if we can win the present cold war with the Kremlin against socialism.

As a nation we have used our strength to help less fortunate nations. We have shared our industrial skills with the underdeveloped nations. We have sent our Christian missionaries abroad as well as our soldiers; we have sent our doctors, our scientists, our engineers, to fight ignorance and poverty, sickness and superstition. We have applied our moral strength that law and order might prevail. We have used our economic strength that industries may thrive and prosper, that men may be employed. It has always been our privilege as well as our responsibility to use our strength for righteous purposes, never to enslave man's spirit.

But now, in these days, we are passing through our greatest testing. This is the crucible wherein our metal is tried and our motives purified. It is only by a period of testing that a nation, like an individual, matures into full spiritual being. Many aspects of our economy, our political and cultural life, are showing the maturity that comes with the fullness of achievement. If we Americans can pass through this present period of our spiritual endurance and can retain our limited form of Government, with our Bill of Rights intact, we shall have before us the bright promise of the greatest era of national achievement that any people have ever experienced.

This has been called the American century. Up until now, we have had possibly the greatest influence upon our contemporaries of any nation of the Western World. The remaining half of this century must see communism wiped out as a hoax, a false promise, an atheistic philosophy; and in its stead arise some form of representative government, as the best form of society for free men. Only by proving the falseness of communism as a way of life, and the rightness of some form of Republican self-government as the best guaranty for world peace, can we hope to enter into a period of true spiritual achievement, with justice and freedom for all, a golden era such as this world has never known.

To the questioning free world we give this answer: We offer our Christian faith and principles in contrast to the atheism of the Kremlin. We offer our constitutional Government in answer to the slave state. We offer our free economy as an answer to their slave-labor camps. We offer the freedom of the individual as an answer to the hopeless victim of socialism. These are indeed the fruits of our American heritage. These are our shield and our hope. With these principles we shall create a new era of peace and plenty for all mankind. With these we cannot and shall not fail. Without them, no government can long prevail.

Over a hundred years ago, the American patriot, Daniel Webster said, in an address given in Albany, N. Y.: "If it be true that the Constitution of the United States * * * has fulfilled all the just hopes, and more than even the most sanguine hopes, of the country, is there a question that, however it may be with others, however others may stray from the great object of national regard, for us and ours we will adhere to it, we will maintain, we will defend it, to our dying day."

As your president general, I echo these words for the national society, Daughters of the American Revolution.

Morris Long, Distinguished Citizen

EXTENSION OF REMARKS
OF
HON. PHILIP J. PHILBIN
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 16, 1958

Mr. PHILBIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include therein a very interesting article about a valued friend of mine of many years standing, Mr. Morris Long of Clinton, Mass.

Mr. Long's career is inspiring and reads like a Horatio Alger story. From humble beginnings through hard persevering work Mr. Long rose successively in the life of his community until he became a very successful retail merchant.

Esteemed and beloved by all who know him, he was the first Jew to hold public office in Clinton by virtue of election to the school committee for three terms, one of them as chairman. He has regularly participated in the civic and charitable life of the town.

As a founder of the Jewish Congregational Shaarei Zedeck he contributed much to the construction of the local synagogue. For many years he has been associated with the Zionist movement and with the United Palestine Appeal Organization, vice president of the Worcester Zionist District, B'nai Brith, Clinton Council of Jewish Welfare Board, and executive committee of the New England Zionist region. His charitable activities have been long continued, zealous and successful.

Still active at 83, Mr. Long goes about his daily business with his characteristic good humor and optimism and I join many of his other friends and well-wishers in extending him best wishes for continued good health, success and long life.

The article follows:

[From the Worcester (Mass.) Evening Gazette of April 4, 1958]

CLINTON MERCHANT ACTIVE IN HIS 65TH BUSINESS YEAR

(By Tony Mastro)

CLINTON.—At an age when most folks have long since retired and taken to their rocking chairs, Morris Long, of 54 Haskell Avenue, is entering the 65th year of a still very active selling career in the retail clothing business.

Long, who will be celebrating his 83d birthday April 15, is the granddaddy of local merchants. He can be seen bright and early every morning unlocking the doors of his clothing store at 184 High Street. His cheery "good morning" has been greeting passersby for more than 35 years.

CARRIED 250-POUND PACKS

His selling career in Clinton began in 1893, when as a Worcester boy of 18 he traveled here in the old horse-drawn cars. With a 250-pound pack of dry goods strapped to his back, he peddled his cloth house to house to women who "in those days," he said, "made their own clothes rather than buy ready-to-wear garments."

The trip from Worcester to Clinton, he recalls, took almost 2 hours.

As business picked up he began making his rounds in a horse and wagon rented at $1.50 a day from the Martin Murphy stables on Church Street near the Central Fire Station.

Business prospered so well that 2 years later he bought his own horse and wagon and opened his first store on Mechanic Street, remaining there 2 years.

FIRE DESTROYED STORE

He then opened a store in the Doggett Building on High Street. He remained there for 28 years, until a 1923 fire swept all the stores in the block, including his own.

His business ruined because of not enough fire-insurance coverage, Long, undaunted, started from scratch again and moved to his present location.

A beehive of activity and energy, Long throughout the years still figures prominently in political and civic affairs.

He was the first Jew in town history to be elected to the school committee. Elected in 1935, he served three 3-year terms, one of them as chairman. He was a member of the high school building committee in 1935 when fire destroyed the school's main building, as happened again in February of this year.

NAMED TO COMMITTEE

Last week, he was appointed by selectmen to serve on the school building committee to oversee and plan for construction of a new high school on the present and Central Park sites, voted at the March 5 town meeting.

He was a founder of the Jewish Congregational Shaarei Zedeck Synagogue on Water Street and a member of its building committee, of which he was president 7 years. He was the United Palestine Appeal Organization's first chairman, is now vice president of the Worcester Zionist District, and a member of the Worcester B'nai B'rith, the Clinton Council of the Jewish Welfare Board, and the executive committee of the New England Zionist Region.

In 1927 he was chosen one of the Zionist Region delegates to study conditions and supervise United States distribution of goods in Palestine. Recently he was named a delegate to the National Jewish Welfare Board committee meeting to be held April 17 through 20 in Washington, D. C.

STILL DRIVES DAILY

Hale and hearty at 83, Long drives his car every day, and in the past 35 years has attended every Zionist convention in the country.

Married to the former Eileen Stone, he has three sons, Milton, employed in the advertising department of Town and Country in New York City, Irving, of Natick, manager of the Clinton store, and Stanley Long, of Marlboro. His only living daughter, Miss Libby Long, of this town, also works in her father's store.

Asked if he had any regrets, Long, a bright twinkle in his eye and a smile breaking over his smoothly lined face, curtly said, "I never look back, but only ahead."

His recipe for a long life?

"Hard work and good friends go a long way," he said.

Italian Elections

EXTENSION OF REMARKS
OF
HON. EMANUEL CELLER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, April 21, 1958

Mr. CELLER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement on the Italian elections:

ITALIAN ELECTIONS

It is interesting for Americans to watch political events in Italy, particularly the coming campaign for the general elections scheduled for May. Thirty-two million Italians, as voters, will choose 596 deputies and 224 senators.

Such a campaign is accompanied by the usual meetings and assemblies of the contending parties and the plastering of the walls and fences with flamboyant posters and throwaway sheets containing trenchant cartoons, lampooning candidates and poohpoohing issues. Personally, I love cartoons and caricatures of men and events. Cartoons are often more effective than polemics and speeches, especially when liberty and democracy are threatened. "Cartoons," says the famous cartoonist David Low, "are a more direct medium with a wider appeal, since pictures speak even to the illiterate."

I am no expert on Italian politics. I have trouble enough with politics in the United States. But, from what I have observed and read about, politicians in Italy are not too unlike the politicos here in our country. Human nature is pretty much the same everywhere. Human reactions are generally the same in every country, with due allowance for local influences and national idiosyncracies. There are decided exceptions. I would say that Nenni, the extreme left Socialist, is such a one. He could not fit into the American scene. He is sui generis. He sways in many directions. He is very much like a mule with two heads—one in the front and one in the rear. One does not know, nor does he know, whether he is going or coming. And being a mule he is without pride of ancestry or hope of posterity. Nenni, at times, makes common cause with the Communists.

To me, all Communists are obnoxious, but Togliatti is particularly so. He certainly is dissimilar to anyone in the United States. He is too dangerous for comfort. He is a mere puppet of Moscow and all the more dangerous for Italy. Togliatti is the Italian prototype of his Russian boss, Khrushchev. He probably applauded that Russian braggart, when he recently said in Budapest that, as for the West, "we advise them not to poke their noses, or as we Russians say, their pigs' snouts, into our socialist garden." That is the language of a bully and gangster.

Togliatti would turn Italy into a Communist state with all its trials and tribulations for its people. He would even tell you conditions are getting better in the Soviet Union. He probably would tell you that when one dies in the Soviet Union, they bury one now in a coffin.

And what can be more absurd than the chatter of Nenni and the babble of Togliatti on peace. They are the most contentious and cantankerous persons one knows. They represent the very opposite of peace. Their conduct and character are consistent with the Kremlin's presenting the dove as a symbol of peace. Actually, the dove is a quarrelsome, not peaceful bird. Just so, Nenni

and Togliatti would stir up quarrels and muddy the waters for their selfish ends.

Italy's Christian Democratic Party, the ruling party, presents a platform to the voters that manifests complete loyalty to Western Democracy. It proposes to keep faith with the North Atlantic Treaty. Any plank of the platform of the Christian Democratic Party headed by former Premier Amintore Fanfani, is a recommendation for an East-West agreement to end the production and testing of nuclear weapons, but only under effective supervision. Fanfani and his party call for close political ties with other European countries of Euromarket and Euratom. The Christian Democrats will continue to seek the liberation of Hungary and other satellite countries from the Communist yoke. The Christian Democrats seek to protect free enterprise and would tighten control over economic monopolies and cartels. The urge better schools, fairer taxes and the spending of more monies for the development of the underprivileged suffering of Italy. Party workers will spread the gospel of their platform at some 20,000 election rallies to be staged all over Italy. One hundred and twenty-five thousand canvassers have been trained to make house-to-house calls to win votes. Hundreds of trucks will tour remote areas, staging outdoor campaign movies.

The Christian Democratic Party, under the able leadership of Fanfani, the old Tuscan economist, could make giant strides by winning over the Italian population to the ways of democracy. If the Christian Democratic Party is called upon to form a government, Signor Fanfani will probably become Premier. In the event the present Premier relinquishes the Premiership after the elections, Fanfani would be a worthy successor. Italy has made a good record under the Christian Democrats. It has signed various treaties for European collaboration, it has strengthened its position in Trieste, it has become a most worthy member of the United Nations, it has done a great deal toward rejuvenation of industry in the south, although much more remains to be done in that regard. The financing of a land reform program is almost completed. The INA-Casa plan, which seeks to provide housing for the indigent, has been expanded, unemployment has decreased, there has been a steady increase in national income, and economic progress has been continuous. Even greater would have been the progress, had not the Communists sought to impede the progress of Italy by their obstructionist tactics.

Togliatti and his confreres have one objective—the overthrow of the Democratic Italian Government—by fair means or foul. Instructions from Moscow are, put forth a weak sort of Parliament in Italy to serve as arms for launching the missiles of the Communist revolution.

It is to be hoped the Italian electors will resent this Kremlin interference in their domestic elections and register that resentment by a thumping victory for Amintore Fanfani and the Democratic Parties. Italians should boldly resist the effects of the tainted lucre that Moscow sends into Italy to influence voting. Italians would fight off any physical invasion of their land by Russians. The invasion by the subtle means of money and fifth column is just as dangerous—even more dangerous, since it is an attack that is covert and unseen. Khrushchev's aim is the same in both cases—the overthrow of Italy's democratic regime.

Italians, I am sure, must realize the diabolical mischief of Khrushchev. One day, through (the now deposed) Bulganin he sends in honeyed words to Italian Premier Zoli a proposal for coexistence and the next day he seconds Togliatti's campaign to win the coming elections—a victory that would make Italy a mere dependency of Soviet Russia. Common sense must force Italians to fight off such an insidious campaign. There can be no slackening of the struggle against communism.

Communism is far from dead in Italy. It still has strength of numbers of its adherents. Ten years ago they almost threw out DeGasperi and other democratic leaders. Now there has been a drop in party membership and Communists are on the defensive. Leaders in Milan, Naples, and Sicily have deserted the party. Labor unions under Communist domination have been losing steadily to democratic unions. The fight of 10 years against communism has not been fruitless.

But the Communists are still sufficiently strong for liberty-loving Italians everywhere to continue their fight against the baneful ideology that would make Italians slaves of Khrushchev, the new imperial czar.

Italians (and Americans too) must keep incessantly in the fore the recent tragedies attendant upon the unrest in East Germany and Poland and the uprising in Hungary.

Italians must be told that their choice is freedom and liberty or tyranny and brutality. Let Togliatti (and Nenni too), if he will, wash away the horrors of Poznan. Let him explain to Italian voters the murder of the innocent in Budapest by Russian tanks and machineguns.

It is hoped that in the coming election, the democratic parties will emerge stronger than ever. The job of insuring victory will not be easy. With precinct captains and leaders working hard and ceaselessly until the election, the votes necessary to obtain a majority of seats in the National Chamber may be attained.

In the cold war against Soviet Russia and its new Czar every member nation of NATO must be democratic and strong. We, in America, therefore, realize the importance of the Italian election. Democracy must win it, so that Italy as a NATO adherent remains strong. Thus this election is not merely a matter of domestic concern. It concerns the United States and all other democracies.

The Plight of the Railroads in the United States

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 23, 1958

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter from the executive secretary of the chamber of commerce of Greater Berwick, Pa., Mr. J. R. Bower, in which he discusses the economic plight of United States railroads and its impact upon the major industry of Berwick, the American Car & Foundry Industries, Inc.:

CHAMBER OF COMMERCE
OF GREATER BERWICK,
Berwick, Pa., April 19, 1958.

The Honorable DANIEL J. FLOOD,
House Office Building,
Washington, D. C.

DEAR MR. FLOOD: The chamber of commerce of Greater Berwick is extremely alarmed about the plight of the railroads of the United States. We all agree that our railroads are the lifeblood of our country and that something must be done to relieve them to some extent on their overhead costs. We all know that Senator SMATHERS, chairman of the Subcommittee on Surface Transportation, has been holding hearings on the entire transportation problem.

Secretary of Commerce Weeks has made a statement that we heartily approve, "that in view of this situation, it is extremely important to take every practical step to arrest declines in the Nation's economic activity without delay, to the extent that this may be done by tax reductions, with minimum loss of necessary tax revenues. It is imperative that such steps be taken now.

"There seems to be no other tax whose elimination could give more of a stimulant and restorative treatment to our economy at this particular time than the repeal of the 3-percent excise tax on the transportation of freight and the 10-percent tax on transportation of passengers. The net revenue loss to the Treasury on the transportation property tax, allowing for the fact that it is a deductible business expense for income-tax purposes, would not exceed $225 million, and might be considerably less."

We, in our community, are particularly interested in the abolition of these excise taxes, as it will place the railroads in position to purchase better equipment, as our community relies on ACF Industries, Inc., manufacturer of freight and passenger cars, to regain a large portion of our employment.

The elimination of these excise taxes will be of vast benefit to the entire Nation and especially so to our community.

We ask your support to vote for elimination of these taxes.

Very truly yours,

J. R. BOWER,
Executive Secretary.

Resolutions Memorializing the Congress of the United States To Make Available Surplus Farm Products to Correctional Institutions

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 23, 1958

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include resolutions adopted by the Commonwealth of Massachusetts on April 7, 1958:

Resolutions memorializing the Congress of the United States to make available surplus farm products to correctional institutions

"Whereas His Excellency the Governor, in his annual message to the general court on January 1, 1958, stated: 'The utilization of surplus food should be expanded to include benefits to correctional and other State institutions. If a portion of the available food surplus were so utilized, it would result in very substantial savings to the Commonwealth'; and

"Whereas the extension of surplus food to include correctional institutions will help to make effective use of the foods that are presently in warehouses and storage bins: Therefore be it

"*Resolved*, That the General Court of Massachusetts memorializes the Congress of the United States to enact legislation amending section 416 of the Agricultural Act of 1949 so that surplus food may be distributed to correctional institutions; and be it further

"*Resolved*, That copies of these resolutions be sent forthwith by the secretary of the Commonwealth to the presiding officer of

each branch of Congress and to the members thereof from this Commonwealth."

House of representatives, adopted March 31, 1958.

LAWRENCE R. GROVE,
Clerk.

Senate, adopted in concurrence April 7, 1958.

IRVING N. HAYDEN,
Clerk.

A true copy. Attest:

EDWARD J. CRONIN,
Secretary of the Commonwealth.

William C. Handy

EXTENSION OF REMARKS
OF
HON. PHILIP J. PHILBIN
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 16, 1958

Mr. PHILBIN. Mr. Speaker, under unanimous consent to revise and extend my remarks in the RECORD, I include therein a very beautifully written article from the New York Times concerning the last rites of our great friend, Mr. William C. Handy, Father of the Blues.

Thousands of people packed the streets of New York to pay final tribute to this great man, and in death as in life, he received the plaudits and acclaim of the common people of America for whom he wrote his striking musical compositions and songs.

I had high regard for Bill Handy because in his field he was a genius and in his heart a great American and a great humanitarian whose wholehearted desire it was to improve the lot of his fellow man.

His work for the blind is but one instance of his willingness to extend himself in order to help others.

Bill Handy's name and music will live forever. He wrote from his own heart and the hearts of his people and popularized a new school of music which has gathered many adherents throughout the world. He lived a long, fruitful life. His passing will be deeply mourned by millions of people everywhere and I extend my most heartfelt sympathy to Mrs. Handy and his family.

The above-mentioned follows:

BAND SEES HANDY OUT OF HARLEM—RITES FOR AUTHOR OF ST. LOUIS BLUES DRAW 150,000 TO NEIGHBORHOOD—JAZZ NOTABLES ATTEND—COOTIE WILLIAMS PLAYS HYMN AT SERVICE—BRASS HORNS LEAD LONG CORTEGE

(By Harrison E. Salisbury)

The sad trumpet of Charles (Cootie) Williams blew a requiem yesterday for W. C. Handy, father of the blues.

Mr. Handy, who was 84 years old, died Friday. Yesterday, last rites for the composer of the St. Louis Blues were conducted at the Abyssinian Baptist Church, 132 West 138th Street.

The police estimated that 150,000 persons watched the slow progress at the funeral procession, led by the 30-piece brass band of the Prince Hall Masonic Temple, 454 West 151st Street.

A sleek maroon Cadillac hearse, rather than the traditional black-plumed horses of New Orleans, bore the coffin of Mr. Handy to its resting place at Woodlawn Cemetery, the Bronx.

TWO THOUSAND FIVE HUNDRED IN CHURCH

Nearly 2,500 persons crowded into the Abyssinian Church for the rites.

The mourners were quiet as the Reverend Richard A. Hilderbrand, of the Bethel African Methodist Episcopal Church, offered a prayer. He said Mr. Handy had "captured the heartthrobs of a forlorn and stricken people and set them to music."

Then Mr. Williams took his place in the organ gallery. He hunched his shoulders and put one hand over the mouth of his golden trumpet as it sobbed the opening notes of Mr. Handy's favorite hymn The Holy City.

Mrs. Handy, in black straw hat, black mourning veil, black coat and dress, sat composed and silent.

Mayor Wagner called Mr. Handy "an example for generations to come."

The Reverend ADAM CLAYTON POWELL, JR., pastor of the Abyssinian Church and a Member of Congress, said:

"His personal blues are now finished. No more the problems of Beale Street. No more the irritations of Memphis. No more the vexation of the St. Louis woman. No more the cynical Love, Oh Love, Oh Careless Love.

POWELL CONTINUES

Mr. POWELL paused. After a moment of silence he continued:

"Gabriel now has an understudy—a side man. And when the last trumpet shall sound, I am sure that W. C. Handy will be there to bury this world, as a side man."

Within the church were great Dixieland jazz figures like Wilbur de Paris and Claude Hopkins, the famous "Shuffle Along" pair—Eubie Blake and Noble Sissie—and Cab Calloway.

Irving Caesar, the composer, and Oscar Hammerstein 2d, the lyricist, Langston Hughes, the poet; Marion Anderson, Harry Hirshfield, Ed Sullivan, and Col. Hubert Julian, the once-famous Black Eagle of Harlem, were also in the congregation.

There were also public dignitaries including Borough President Hulen Jack; and Paul Cunningham, head of the American Society of Composers, Authors, and Publishers, of which Mr. Handy had been a member for more than 30 years.

The mayor of Memphis sent a message offering the W. C. Handy Memorial Park in Memphis as Mr. Handy's last resting place. Mrs. Handy rejected the offer with thanks.

Outside the church the funeral procession assembled as television cameras watched. To the strains of Nearer My God to Thee the coffin was borne out. The crowd joined in singing the hymn.

Finally, all was ready. The band, bright in blue uniforms and gold braid, came first, playing the cadenced tones of Chopin's funeral march. Behind bearer on foot, 2 flower cars, the maroon hearse, and 31 cars of mourners.

The cortege turned up Lenox Avenue. Here a huge truck was drawn to one side of the street. It served as an impromptu reviewing stand for a dozen Harlemites. Further up the street cameramen clicked lenses atop a horse-drawn cart.

CROWD THINS OUT

At 152d Street and 7th Avenue the formal procession ended.

Here the crowd had thinned to a handful. The band stood at one side and struck up the St. Louis Blues in funeral tempo. After a few bars it switched back to Chopin's funeral march.

The funeral cortege re-formed without the marching band and pallbearers. It accelerated up the approaches of the bridge over the Harlem River. A Voice of America broadcaster talked ceaselessly into his portable microphone in French.

The wind in gusts from a gray sky whipped at the coats of the dispersing mourners. As the last cars sped up the approach to the bridge, Wolford Edwards, the conductor, turned to his bandsmen:

"All right, men, St. Louis Blues again. A little faster this time."

Attridge on Spring

EXTENSION OF REMARKS
OF
HON. PHILIP J. PHILBIN
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 16, 1958

Mr. PHILBIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include therein a truly remarkable article on spring which was written for the Saturday Evening Post by my valued friend, the most talented author, Mr. Richard Attridge.

This magnificent article on spring is the best of its kind that I have ever read. It ranks, in my opinion, with the greatest writings of past and present, and I do not think it could be excelled. The article is not only written with great perception, understanding, and ability, but it stirs feelings and sentiments that inevitably grip every human being at this time of year.

I heartily commend Richard Attridge upon his fine work and laud the Saturday Evening Post for printing it. Richard Attridge is one of our great contemporary American writers.

The article follows:

Spring is just around some windy corner, and we'll soon encounter the almost-forgotten sights and sounds of this gently blustering season. There's the early crocus sticking its inquisitive saffron head through a lingering patch of snow; the pale sunlight of forsythia, lighting even the drabbest day; white-capped mill ponds, stretching and tossing after their icy hibernation; pussy willows sunning themselves like wise kittens; and increasingly frequent flashes of bright birds back home after their vacation down South.

There's the first faintly perceptible yellowing of bare-limbed maples, beginning to get dressed in their cool summer green; wind-swept streets, and smoke-puffs of clouds across the face of the moon; snow banks of spirea blossoms making believe that winter has come back; lines of Monday morning wash whipping like bright flags under the high-riding sun; early gardens trying on their Easter bonnets; buds swelling and flowers shaping under the restless touch of nature we all feel in our hearts.

There's the sound of peepers in springtime pools, reminding us that even April can get a little frog in her throat in such changeable weather; the drip of maple sap from a boy-broken tree branch, and the back-to-work buzzing of bees; the chirping of newly hatched chicks, and the squeaking of baby pigeons in town steeples and towers; the eager rush and gurgle of city gutters and country trout streams; the satisfying crack of the first clean-hit ball, and the equally satisfying mud-sucking sound of boys' shoes, unfettered by galoshes, as the kids play catch in a soggy field.

There's a new ring to Sunday church bells, unhurried but clear over the balmy air, telling us that perhaps it is not yet irrevocably later than we think—echoing all the grace notes of nature's spring song, which promises us once more that there is always a new beginning, another chance for our sad old world, one more hope for us all in due season.

Appendix

Agricultural Research and Education in India

EXTENSION OF REMARKS
OF

HON. FRANK CARLSON

OF KANSAS

IN THE SENATE OF THE UNITED STATES

Thursday, April 24, 1958

Mr. CARLSON. Mr. President, Kansas State College at Manhattan, Kans., has for several years carried on an agricultural research and education program in India.

Recently, Dr. Arthur D. Weber, dean of agriculture at Kansas State College, visited India and made a study of the projects under their agricultural research and education program.

Dean Weber is one of our Nation's outstanding agriculturalists, and is so recognized nationally and internationally. On his return to the United States, he made a report to Dr. James A. McCain, president of Kansas State College, on our work in that nation. He entitled it "Some Impressions of the TCM-University Contract Project for Agricultural Research and Education in India."

As I had an opportunity to visit India last December and check some of the work being done by our own Kansas State College and other institutions of learning, I would commend this article to those interested in the progress we are making in the improvement of agriculture and education in that country.

I ask unanimous consent to have the article printed in the Appendix of the RECORD as a part of these remarks.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

SOME IMPRESSIONS OF THE TCM-UNIVERSITY CONTRACT PROJECT FOR AGRICULTURAL RESEARCH AND EDUCATION IN INDIA

(By Arthur D. Weber, Dean of Agriculture, Kansas State College, Manhattan, Kans.)

It was my privilege to be in India from December 13, 1957, to January 28, 1958, for the purpose of reviewing the work of members of the Kansas State College technical assistance team and observing other phases of the technical assistance contract programs being conducted by the University of Illinois, Ohio State University, and the University of Tennessee. These contacts also afforded me an opportunity to become acquainted with the organizational setup for India's agricultural research, resident instruction, and extension service activities. From these observations and through the acquaintances I made among India's agricultural leaders in government and in higher institutions of learning, I gained the impressions which are the basis of this statement. As a further introductory comment, I wish to state that since I concur heartily with the views expressed by director C. Peairs Wilson in the report he submitted following a visit to India during the summer of 1957, I shall concern myself here primarily with policy matters and an overall critique of the project. His report contains an excellent appraisal of the institutions where Kansas State College team members have been stationed and of administrative and other problems with which they were confronted.

At the outset, I wish to express as my deep conviction that members of the college contract technical assistance teams and the TCM staff, and their wives, deserve high commendation for their good work, which is being carried out under unusual, and in some instances, difficult circumstances. Everywhere I went I found evidences of respect and appreciation for the technical assistance program and those working with it.

In this connection, I feel that I would be remiss if I failed to mention that Dr. Frank W. Parker, chief agriculturist, TCM, New Delhi, is held in the highest regard by Indian agricultural scientists and administrators. His broad outlook and clear understanding of India's basic problems and the role research and education must have in the solution of these problems have brought to the technical assistance effort the vision and leadership which are essential to the attainment of the objectives agreed upon by the Governments of India and the United States of America.

It was also heartening to observe the support and overall administrative guidance being given to the TCM-University contract project by Ambassador Ellsworth Bunker and Minister-Director Howard Houston.

Interest in and concern for India and the direction she will take in solving her problems also are being manifested by other great world powers. The intensity of this interest and concern is being revealed in numerous ways, not the least of which is by official visits to India by heads of governments and other high officials. Effects of such visits are plainly evident in many places; so much so, in fact, that I keep asking myself whether it would be presumptuous to suggest, even urge, that the President of the United States lend encouragement and strength to our technical assistance program by visiting India.

Impressions gained on my visit to India are forceful reminders of the importance of understanding why the United States is furnishing technical assistance to India and other underdeveloped countries. Such understanding is especially important to those who are directly responsible for technical assistance projects, irrespective of whether their responsibility is that of administrators, technicians, or in some other capacity. For obligations assumed for technical assistance can be discharged most effectively by those whose sense of urgency has been sharpened by an awareness of the issues involved.

Then, too, impressions gained since my return from India have served to emphasize that citizens generally, and especially Government officials and Members of Congress, must have a sympathetic understanding of technical assistance to underdeveloped countries if the best interests of the United States are to be served abroad.

Yet it is not easy to state clearly and in simple terms what are the right reasons for technical assistance. Nor is it worthwhile to belabor the matter by repeatedly defining objectives, especially by public statements in the countries where assistance is being given. There the program—what it is, how it is administered, and what it accomplishes—would be the main public relations effort. Nevertheless, back of the program are the reasons for it; and too frequently, it seems to me, these reasons are not clearly understood either in the United States or India.

Whatever means are used to acquaint people with the reasons for technical assistance, the basis for understanding the program, in my judgment, is that the interests of the United States are promoted when an underdeveloped country resolves its problems and remains democratic and free. It is significant that India has chosen democracy and freedom. China, with many of the same problems as India—food production being the key to most of them—has chosen another route. The implication is crystal clear: Technical assistance has become freedom's first line of defense.

Those who doubt that it is in the best interests of the United States to help underdeveloped countries in their struggle to maintain and increase the food supply would do well, I believe, to ponder on this statement made by Sir John Boyd Orr in his book The White Man's Dilemma: "People will eixst on a meager diet if they have never had, and do not know that a better can be made available. But when the food position deteriorates, and food becomes scarcer and dearer, or when hungry people learn that more food can be made available, they naturally blame the government and are easily induced to overthrow it."

Basically, India's problems stem from the mores and the social and economic conditions responsible for a woefully inadequate food supply. In the long run, research and education, as has been demonstrated in many countries, offer the best permanent solution to these problems. Fortunately, India has intelligent, well-educated leaders who appreciate this fact and want to effectuate needed changes and improvements. It is because the problems are so far-reaching and the difficulties so great that outside assistance is welcomed by these men, dedicated as they are to the concepts of democracy and freedom.

The ultimate goal must be, it seems to me, a degee of literacy throughout India commensurate with the need for general understanding of the country's pressing problems and of the ways and means of solving them. But the food production problem is so critically urgent and so basic to the solution of all the others that it warrants immediate and special attention.

Here again it is fortunate that India has in its colleges of agriculture and veterinary medicine and in its agricultural research, community development, and extension service setups the basic ingredients for an integrated and coordinated system of research and education—a system that could have a tremendous impact on Indian agriculture by providing a sound basis for greater and more efficient production. I would be less than frank, however, if I failed to record my disappointment in observing that thus far existing agricultural institutions and agencies have contributed little to the well-being and economic advancement of India's farmers and stockmen.

On the other hand, I found that Indian institutions and officials recognize this shortcoming, and, as a consequence, consider the TCM-University contract project for agricultural research and education useful in promoting Government of India interests. I do not wish to imply that Indian coopera-

tion leaves nothing to be desired. In some instances, complacency and satisfaction with things as they are were plainly evident. And occasionally it appeared that cooperation was regarded as the price that had to be paid for equipment and commodities. I am happy to be able to report, however, that these were exceptions; in the vast majority of cases Indian cooperation appeared to be wholehearted and satisfactory.

It is not easy to measure the porgress that is being made in the attainment of this project's objectives. It is significant, it seems to me, that ways and means of attaining objectives are being discussed and implemented. There is growing understanding and appreciation of the reasons for the success of the land-grant college system in the United States. Throughout India, agricultural leaders, largely, I believe, because of our technical assistance effort, are beginning to realize that agricultural research, resident teaching, and extension service activities are not unrelated, separate programs with incompatible procedures and objectives to be guarded jealously by their repective proponents. Instead, there is an increasing awareness of the urgent need to integrate these activities at all levels, from top administration to the farms, where in the final analysis progress in the attainment of the basic objectives of technical assistance will be measured. How to effectuate such integration presents many knotty problems, owing to the fact that marked administrative and working realignments will be necessary to assure real progress

How to apply the results of agricultural research is being demonstrated by members of technical-assistance teams in such things as grassland improvements, poultry, and dairy production, crops and soils test plots, and the training of extension leaders and specialists. Participation of team members in research and teaching conferences is another important contribution to the overall project.

Training of Indian participants in American colleges and universities deserves special emphasis in any appraisal of the progress being made toward the attainment of basic objectives, in my estimation. For these men will bring enhanced technical competence to their home institutions and a better understanding of how to identify and solve farm problems. They will also have observed the operations of a land-grant college or university and thus will appreciate why the integration of agricultural research, resident teaching and ex ension are so essential in attaining greater production and improved efficiency.

The most important consideration with respect to the TCM-University contract project, as I view it, is whether India will realine her agricultural institutions and agencies within the rural university concept. I shall not dwell on what this would entail since several publications are available on the subject. Suffice it to say that it is my deep conviction that this development, more than any other, will assure the attainment of basic objectives which promote the interests of both the United States and the Government of India.

I also gained the impression that this realinement is something that will have to be worked out for each institution in accordance with broad guiding principles, but without adhering to any fixed or stereotyped pattern of organizational structure. This is necessary, it seems to me, because each institution has its own unique situation, resulting from the circumstances of its origin and development and from its relationships with other institutions, including those of Government.

Recent developments at the Coimatore Agricultural College illustrate how rural university status can be attained through compromise and adaptation to the institution's own special needs and requirements. And the proposed U. P. Agricultural University at Tarai state farm would provide an excellent opportunity to demonstrate how an institution of this kind should be organized and run. It would also serve as a key university or model for new developments and even for realinements elsewhere in the country.

As one becomes acquainted with this project, the possible need to extend it for a number of years—perhaps 10 or even longer—takes on added meaning. The guiding principle in this regard, in my estimation, should be the extent to which the basic objectives have been attained, and India's ability to carry on without outside technical assistance.

It seems to me that allotments of funds for the purchase of commodities, except books, could be withdrawn first. Equipment and other commodity purchases should be handled by TCM instead of by the colleges and universities, as at present, in my judgment.

Allotments for training of participants in American universities and colleges probably should be withdrawn last; but even after such training has been discontinued, funds might well be made available for maintaining professional contacts among these men in India and for continuing relationships with their American counterparts and American institutions.

It will be important in the years immediately ahead to follow through with technical assistance to specific projects; otherwise, apparent gains could easily be lost. A good example is the grassland improvement project at Rajkot.

I have recommended that the Kansas State College contract be extended to 1960, and that extensions thereafter be considered in the light of needs and the ability of the college to continue to release key personnel to the project.

It is important that staff members assigned to work on TCM university contract projects be considered as partners in the total technical assistance effort. Fortunately, working relationships are improving as a result of the establishment of a contract coordination unit in TCM. It is to be hoped also that group leaders, and officials of TCM and of the Government of India will see to it that insofar as possible team members will not have reason to complain because advance arrangements were not made for their families' personal living accommodations. Similarly, it would appear that frustrations arising because of program difficulties and misunderstandings could be minimized by careful, initial planning with the Indian college before the team member's arrival in India. Yet it should be made crystal clear to the prospective team member, it seems to me, that his success will be determined to a large degree by his own resourcefulness and patience. A man's personal attitudes and psychological fitness for a foreign assignment should count heavily when team members are being recruited.

Finally, I should like to observe that, in my judgment, tangible results from technical assistance when expressed in terms of increased production and improved efficiency of Indian farm operations will come very slowly. The magnitude of the difficulties to be overcome and the nature of the problems to be solved are such as to cause one to wonder whether changes can be brought about in time to attain basic objectives of the TCM university contract project.

Yet I believe that there will be time enough to get the job done because: (1) Indian farmers love the land and possess the inherent qualities of interest and intelligence necessary to bring about significant changes and improvements; (2) technical assistance, through coordination of agricultural research, resident teaching, and extension service activities, can reach the Indian farmer and cause him to change his viewpoints and practices; and (3) India's academic, scientific, and political leaders will meet this challenging opportunity to advance their country's interests by providing the administrative framework, organizational structure, and support necessary for the evolutionary developments that have been envisioned for the institutions primarily responsible for the destiny of Indian agriculture.

Texans Regret Veto of Rivers and Harbors Bill

EXTENSION OF REMARKS
OF
HON. LYNDON B. JOHNSON
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Thursday, April 24, 1958

Mr. JOHNSON of Texas. Mr. President, I continue to receive expressions of regret from people in my State that the President saw fit to veto the omnibus rivers and harbors bill.

I ask unanimous consent that there be printed in the Appendix of the RECORD telegrams I have received on this subject from the Honorable Jim Lindsey of Del Rio, county judge of Val Verde County; Harvey Weil, president of the Corpus Christi Chamber of Commerce; and R. E. Sallee, chairman of Nueces County Navigation District No. 1.

I also ask unanimous consent that an editorial, Veto Delays Worthy Projects, from the Wichita Falls (Tex.) Times, be printed in the Appendix.

There being no objection, the telegrams and editorial were ordered to be printed in the RECORD, as follows:

DEL RIO, TEX., *April 17, 1958.*
Senator LYNDON B. JOHNSON,
Office of Democratic Leader,
Senate Office Building,
Washington, D. C.:

Sincerely hope veto of water bill can be overridden. San Felipe Creek flood-control project in Del Rio is needed badly. Any suggestion you have for me to do will be promptly taken care of.

JIM LINDSEY,
County Judge, Del Rio.

CORPUS CHRISTI, TEX., *April 23, 1958.*
Senator LYNDON JOHNSON,
United States Senate,
Washington, D. C.:

The following wire was sent today to Senator DENNIS CHAVEZ: "Rivers and harbors omnibus bill which was vetoed by the President is of great importance to this port and the economy of the entire area. We urge that the President's veto be overridden so that vital projects may become reality."

CHAMBER OF COMMERCE,
CORPUS CHRISTI, TEX.,
HARVEY WEIL, *President.*

CORPUS CHRISTI, TEX., *April 23, 1958.*
Hon. LYNDON JOHNSON,
Senate Office Building,
Washington, D. C.:

The following is a copy of a telegram which was sent to the Honorable DENNIS CHAVEZ, chairman, Public Works Committee, United States Senate, Washington, D. C., this morning:

The waterways legislation, which was recently vetoed by the President, is of vital importance to Corpus Christi and this area of Texas. We urge that the veto of the

omnibus bill be overriden in order that local meritorious projects can be initiated.

NUECES COUNTY NAVIGATION DISTRICT NO. 1,
R. E. SALLEE, *Chairman.*

[From the Wichita Falls (Tex.) Times of April 17, 1958]

VETO DELAYS WORTHY PROJECTS

President Eisenhower's veto of the $1,578,812,000 flood control-navigation projects authorization bill must be branded as another picayunish action.

Like the blue-penciling of the natural gas act bill, the President strained for small reasons to justify the veto.

There is a vast difference between his veto message and the statement which came afterward from Representative JIM WRIGHT of the Texas delegation.

Eisenhower said that while many of the projects proposed were worthwhile, some were included against advice based on "careful study and considered judgments of the professional services and other executive agencies concerned."

Congressman WRIGHT retored that the veto message "was predicated almost wholly on a completely erroneous assumption that the bill contained a lot of projects objected to by the Corps of Engineers or the Bureau of the Budget. * * * This is not true. There has never been an omnibus rivers and harbors bill sent to a President which was more overwhelmingly approved by these agencies."

In the senatorial debate on the 1956 similar bill that the President also vetoed, Senator DENNIS CHAVEZ of New Mexico, had pointed out that projects on which the Army engineers' reports had not been received had been included in that bill because they were "of an emergency nature," and "complete and full justification of the economic feasibility of these projects should be established before appropriations are made for their construction."

The point Senator CHAVEZ made then, and equally applicable today, was that Congress would have the opportunity when the authorized projects came up for appropriations to review their feasibility and elimipate those which could be labelled as pork barrel.

In the meantime, unless the veto is overridden by Congress, the projects which the President himself admits are worthwhile face needless delay. These include all of the Texas projects which were in the authorization bill.

The delay also affects the ability of the public works program that would be initiated to stimulate the lagging economy of the Nation.

It would have been far more appropriate for President Eisenhower to have approved the authorization bill and cited those projects which he believed to be not worthwhile, and to have announced his intention to oppose appropriations for them when money was sought in Congress.

As matters now stand, the few rotten apples in the barrel have spoiled the whole in the opinion of one man, against big majorities in both Houses of Congress.

Fifty-nine Million Dollars in Benefits Paid Last Year to Wisconsinites by Private Health-Insurance Companies

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Thursday, April 24, 1958

Mr. WILEY. Mr. President, one of the great glories of the American system of free enterprise is how our people, by and large, look after themselves.

If there is a need, such as the need for financial security because of some emergency, the need is usually met by private companies and groups which act on a private basis to satisfy the demand on the part of the American public.

I was interested, therefore, to hear from Mr. Robert R. Neal, general manager of the Health Insurance Association of America, with regard to the growth of the important industry represented by his association in looking after the well-being of American families.

For example, last year, to the people of Wisconsin, no less than $59.7 million was paid in benefits, so as to cover bills resulting from illness, and to replace the income lost thereby.

Let me reemphasize that we of the United States do not believe in having the Government do for the people what the people should at least try to do for themselves. We recognize that government has an important role to play in many areas of our way of life. But we infinitely prefer to have the needs met, insofar as humanly possible, by private groups, such as the private insurance industry.

The great miracle of the free-enterprise system is that the profit motive has provided the incentive for the soundest possible public service in all the world.

As I have previously pointed out in the Senate, private insurance companies constitute an indispensable element in the life of this country and in the life of most of its 49 million families.

I ask unanimous consent that the text of the letter from Mr. Neal and the attached release on coverage in Wisconsin and throughout the United States be printed in the Appendix of the RECORD.

There being no objection, the letter and release were ordered to be printed in the RECORD, as follows:

HEALTH INSURANCE
ASSOCIATION OF AMERICA,
April 17, 1958.

Senator ALEXANDER WILEY,
Senate Office Building,
Washington, D. C.

DEAR SENATOR WILEY: The Health Insurance Institute has just completed a study of health and accident insurance benefits paid by insurance companies to citizens of your State in 1957.

I know you will be interested in the enclosed release which outlines the extent of these benefits for many of your constituents. As you will note, these payments increased over 1956, and this rise is also reflected in figures for the entire Nation.

The Health Insurance Association of America consists of 260 insurance companies which issue approximately 80 percent of the health insurance business written by insurance companies.

The Health Insurance Institute is an important part of our association and serves as a central source of health insurance information for the public on behalf of insurance companies. Its purpose is to bring about a better understanding of the many types of health insurance policies and to inform our companies of public attitudes so that increased service can be provided.

If our office can be of assistance to you at any time in providing facts, statistics, or other information on health insurance, I hope you will call on us.

Sincerely,

ROBERT R. NEAL,
General Manager.

Benefit payments by insurance companies to the people of Wisconsin who are covered by health insurance policies reached a new high during 1957, the Health Insurance Institute reported today.

In the period from January 1 through December 31, 1957, said the institute, over $59.7 million was paid out to help cover the cost of hospital and doctor bills, and to replace income lost through sickness or disability. This represents a 19.6-percent gain over the 1956 figure of $49.9 million, and is based upon reports from insurance companies doing business in the State.

The rise in benefit payments in Wisconsin was also reflected in the figure for the Nation as a whole, the institute further noted. Persons protected against the expenses of hospital and medical care and treatment received a total of $2.5 billion in benefits from their insurance company policies in 1957, up 16.1 percent over the previous year's high of $2.1 billion. By the end of the year, an estimated 70 million persons were covered by health cost policies bought from insurance companies, more than all other types of voluntary health plans combined.

The Health Insurance Institute is the central source of information for the Nation's insurance companies serving the public through voluntary health insurance.

A Hanging in Effigy

EXTENSION OF REMARKS
OF
HON. EDWARD MARTIN
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES
Thursday, April 24, 1958

Mr. MARTIN of Pennsylvania. Mr. President, Mr. John M. Cummings, a very able news commentator of the Philadelphia Inquirer, has written a very interesting article entitled "A Hanging in Effigy Isn't So Very Funny." It relates to the very distinguished senior Senator from Arkansas [Mr. MCCLELLAN]. I ask unanimous consent that the article may be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

A HANGING IN EFFIGY ISN'T SO VERY FUNNY
(By John M. Cummings)

HARRISBURG, April 22.—United States Senator JOHN L. MCCLELLAN, Democrat, of Arkansas, has a keen sense of humor. The chairman of the Select Senate Committee Investigating Rackets in Labor and Management laughed heartily when shown a photograph which appeared on page 1 of Monday's Philadelphia Inquirer.

In the photograph Senator MCCLELLAN, in effigy, was shown dangling from a rope anchored to a window of Moose Hall on North Broad Street. It was placed there by members of local 107 of the teamsters union as one means of showing their contempt of the committee, and indeed, the Senate itself.

To the general run of citizen this hanging in effigy of the chairman of the committee was about as funny as events last year in Little Rock, in the Senator's home State of Arkansas. In both cases lawless elements flouted constituted authority and by their actions focused attention on a condition that bodes no good for peace and order in this country.

It may be argued, of course, that the 2,000 or so teamsters who assembled at Moose Hall to give a rousing welcome home to Raymond Cohen, the secretary-treasurer and

boss of local 107, represented only a relatively small minority of the 14,000-member union. This group, it is contended, represents the hard core of Cohen's following. It has its own ways of expressing on the rank-and-file the wishes and the demands of the top echelon.

Again and again, while on the witness stand in Washington, Cohen and others connected with the union took refuge behind the fifth amendment to the Constitution. To answer truthfully a question propounded by the committee or its counsel would tend to incriminate them in thievery and skulduggery.

Because he defied the committee, and because he retreated time and again behind the fifth amendment, Cohen was acclaimed as a hero by the faithful 2,000 assembled in Moose Hall. By way of emphasizing their low opinion of the committee, the local increased the pay of its lawyers by $1,000 each.

When a conflict of interest was suggested, one of the lawyers, John Rogers Carroll, stoutly defended their right to represent both the fleecers and the fleeced. He said this had the approval of a committee of the Philadelphia Bar Association. At a meeting the committee concerned with ethical practice reversed its previous findings. Carroll was ordered by his law firm to withdraw as soon as possible.

A number of odoriferous conditions have been exposed by the McClellan committee. The stench of none reached quite so high as that given off by the officers and minor satellites of local 107 of the teamsters. And then they had the audacity to acclaim the ringleader, Cohen, as a knight in shining armor, when he came home to declare that what he and his associates did with the local's money was in no way the business of the Senate or any other subdivision of the Government.

A grand jury investigation has been called for by the committee of 70. District Attorney Blanc so far has been District Attorney Blank.

No physical hurt was experienced by Senator McCLELLAN when he was hanged in effigy by the teamsters. He thought the whole thing was very funny. Law-abiding Philadelphians suspect the crowd that roped the effigy would gladly perform the same service for the man it represented.

Youth Sunday Sermon by Kenneth Roberts Harding

EXTENSION OF REMARKS
OF

HON. JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 24, 1958

Mr. McCORMACK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following Youth Sunday sermon delivered in St. Patrick's Episcopal Church, Washington, D. C., by Kenneth Roberts Harding, who is one of the pages of the House of Representatives. We are very proud of the young men who serve us as pages. They are an important part of the organization of the House of Representatives. This is an illustration of the fine outlook on life that these young men have:

YOUTH SUNDAY SERMON DELIVERED APRIL 20, 1958, IN ST. PATRICK'S EPISCOPAL CHURCH BY KENNETH ROBERTS HARDING

Today we are celebrating Youth Sunday, 1958. This is the one day in the year when the young people of the church conduct the morning prayer service. This is why I am preaching instead of Mr. Williams. This is why my fellow teenagers have been leading the prayers, reading the lessons, and carrying on every other phase of the morning prayer service. Of course, the purpose behind the Youth Sunday exercises is to remind the congregation, young and old alike, that youth today is very much an important part of the Episcopal Church.

Since this is the Youth Sunday service, I think it is an appropriate time for us to stop for a moment and say: Youth: we're gonna take a look at you. We want to know where your generation is going. We're putting the spotlight on you. We want to know how you are similar to the generations that have preceded you; even more importantly, we want to know how you are different; and most importantly, we want to know how you and the world are going to adjust to these alleged differences. In other words, youth, we want to know exactly what the state of American youth is today.

Well, my friends, the spotlight is on us, and by us, I mean a generation that is unique in the annals of history. In the next few minutes I shall try to provide the answers to many of the questions which we have concerning youth.

First, let's see how similar we are to generations now gone by. Well, we certainly look the same. We have 2 arms and 2 legs, 5 fingers on each hand, and 10 toes. We come in all sizes, shapes, and personalities. You can look around the congregation and see for yourself that kids haven't changed in looks too much. Take a look at me, for example. Here I am, a 17-year-old high school senior. Now, just looking at me, you couldn't tell what year it is. You couldn't tell me whether this is 1958 or 1928. So, you see, we still look a lot like members of older generations did when they were young.

Kids still act about the same as they did years ago. Childhood is still a happy time, a time of growing up and of learning. Kids still play as they did; almost everywhere you look, you can still find kids playing dolls, or shooting marbles, or playing grownup, or slugging a baseball or each other, or swooning over movie kings and queens, or dating, or eating, or dancing, or doing about a million and one other things commonly called kid stuff. You can still find juvenile delinquency, too, but the percentage of juveniles, while it presents a large problem, is so small that it isn't really going to affect the future of the majority of today's youth.

Now, just what is different about us? We look, act, talk, sleep, dress according to fads, and eat, so that, for all intents and purposes, the youth of today seems to be quite similar to the youth of yesteryear.

The fact is that we are the same; we are not really different. What is different is the world we live in. This is what makes this generation so unique. Today's generation is the first to grow up in a world gravely threatened with communism. Today's generation is also the first to grow up in the space age. What the future holds for us, we don't know. This is what sets this generation off from the others, and consequently our thinking has changed, and our attitudes are a bit different.

Today's generation has many worries hanging over its head. Why shouldn't it? It seems to follow that a troubled world will have troubled inhabitants. There is always the threat of world war III; the Reds continue to break one promise after another; America is behind in the space race; and now it seems that economic difficulties are becoming widespread. It is no small wonder that the youth of today is troubled. World events have certainly influenced his thinking.

Of course, when I say troubled, I don't mean that everybody goes around with a face about 6 miles long, has rags on his back, and is bemoaning his plight. No; I don't mean that. What I do mean is that youth, especially the teen-age segment, is not as carefree as it used to be. In the back of our minds we are disturbed.

If this is what is in the back of our minds, what then is in the front of our minds? According to a survey recently made by Parade magazine:

"We are concerned with basic matters, such as marriage, children, homes, etc.; we are optimists: we expect to raise our educational and economic status well above the level of any previous generation; we are willing, even eager, to accept responsibility."

It seems that these statements are pretty accurate; we are willing to be concerned with basic matters; we are optimists; and we are willing to accept responsibility. I think, however, that I would go a little further and say that we are a group bustling with energy and ambition: we, I believe, very earnestly want to better ourselves, our society, and this old world. Today the world presents us with a challenge of competition, and the stakes are high. American youth is ready now to take on this challenge and is determined to win out. Now, I think you can see what we are like: a group of people who, collectively speaking, are anxious to use what's in the front of their minds to make sure that what's in the back of their minds does not materialize any further than it has already.

Our way of life is also changed, and it is still changing. The widespread use of the automobile has given youth a lot more freedom than our parents ever had. The ruling hand of the home is not as strong as it once was. In recent years we have all tasted prosperity and want more of it. We want to build upon the works of previous generations.

What about religion? Has this changed, too? I'll answer that one with an unequivocal "Yes," and I'm sure Mr. Williams will agree with me. This change, fortunately, has been for the better, for religion—Christianity, I mean—has grown tremendously. More and more people are going to church; more and more people are seeking the divine guidance of God; more and more people are accepting the Gospel of Jesus Christ. The emphasis within religion has changed too. I don't think people are as concerned with all of the frills and ritual of religion as they used to be. We are more concerned with the practical benefit we received from Christianity; such as how to live a better life; how to secure better relations with our fellow man; how to live so that we might go to heaven when we die—things like this.

Now, how do we plan to adjust to all of these economic, social, political, and religious changes? We have one mighty weapon and that is Christianity.

Our biggest enemy today is communism. Why is this so? Because it completely obliterates the dignity of every man, woman, and child. There is no place for personal freedom and worship under the communistic system. It defeats the purpose of the Declaration of Independence, of democracy, and of Christianity. Renewed faith in God is needed to make us work harder and more effectively. We must always be on our guard against the propaganda pitch the Reds are making. We need renewed faith to spread the teachings of Christianity, especially to the people behind the Iron Curtain, hoping that someday they will see the light before it is too late.

In the past few months we have come face to face with the greatest frontier man has ever known, the frontier of outer space. On October 4, 1957, mankind for the first time stood on the threshold of space when Russia launched her first sputnik. Now Russia has launched a second sputnik, and we have launched two Explorers and a Vanguard. Soon satellites will be orbiting around the Moon and Mars. Space ships will be speeding

out into the realm of the unknown—searching, searching, always searching for the truth.

However, among the clamor to get into space there seems to be a feeling of why go into space? What's wrong with earth?

This seems to me to be a step in the wrong direction. It seems to be a feeling similar to the feeling 500 years ago that the earth was flat and that anybody sailing on the ocean would fall off the earth if he went too far. This is no time for feelings such as this. We can't hold up progress, especially when it is as crucial and necessary to this country as space exploration is.

Many of the same skeptical people seem to think our religious ideas will change once we get out into space; they feel that we are apt to forget God. Perhaps many of our religious ideas will be changed as we discover the truth, but I don't think we are about to forget God. On the contrary, I think that our faith in God will continue to grow as space exploration starts.

Let's look at it this way: This is God's universe. We are God's people. God made us. He made human nature. It is the nature of mankind to know about his surroundings. Therefore, it is human nature for us to explore space. And, therefore, it must be part of God's great plan for us to know about His universe.

Space exploration is a new field, and, therefore, there is a greater need for God. Space is an awfully big place, and an awfully lonely place. The burden of loneliness on space travelers will be eased by faith in God. Man is still unsure of his footsteps in space, and he needs God's helping hand to guide him.

Perhaps we will find that we earth creatures are not the only living human beings in existence. Will this so terribly upset our religious philosophy? No. It will strengthen it. This, too, must be part of God's plan.

The Episcopal Church has adopted the following stand in regard to space travel:

Seek ye the truth; come whence it may; cost what it will.

Think about it for a moment: Seek ye the truth; come whence it may; cost what it will.

American youth is ready to seek the truth now. We are ready to pay the consequences. We are also remembering the words of Jesus Christ, who said: "I came that you might have life and have it more abundantly."

This is youth; American youth. We are somebody, and we have a future. We shall have life, and we shall have it more abundantly.

And now to God the Father, God the Son, and God the Holy Ghost. Amen.

Moratorium on the Payment of Federal Income Taxes

EXTENSION OF REMARKS

OF

HON. MARTHA W. GRIFFITHS

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 24, 1958

Mrs. GRIFFITHS. Mr. Speaker, I submit herewith the following resolution received from the city of Livonia, which is located in my district.

CERTIFIED COPY OF RESOLUTION

The undersigned, Maria W. Clark, duly elected and qualified city clerk of the city of Livonia, does hereby certify that at a regular meeting of the Council of the City of Livonia held March 31, 1958, at 33001 Five Mile Road, Livonia, Mich., at which time and place the following members of the council were present: Austin T. Grant, Frank O'Neill, Sydney B. Bagnall, Rudolf R. Kleinert, David L. Jones, Peter A. Ventura, and John T. Daugherty; absent: None; the following resolution was duly made and adopted:

"Whereas the economic conditions not only in the city of Livonia, but throughout the entire Nation, is creating a tremendous increase in unemployment; and

"Whereas renowned economists have advised that an excellent way of alleviating the ourrent economic recession is to declare a moratorium on the payment of Federal income taxes, thereby increasing consumer purchasing power: Now, therefore, be it

"*Resolved*, That the Council of the City of Livonia hereby requests the Congress of the United States of America to take immediate steps to give President Eisenhower the authority necessary to declare a moratorium on the payment of Federal income taxes for a period of 90 days; and be it further

"*Resolved*, That the city clerk be and she hereby is directed to forward certified copies of this resolution to the Honorable MARTHA W. GRIFFITHS, Representative in the United States Congress, and to the Honorable CHARLES POTTER and PATRICK V. MCNAMARA, United States Senators; and be it finally

"*Resolved*, That certified copies of this resolution be sent to the various cities, villages, and townships in the county of Wayne, urging them to enact similar resolutions, and that they forward copies of their resolutions to the Congressman of their district and to the Honorable CHARLES POTTER and PATRICK V. MCNAMARA, United States Senators, Washington, D. C."

A rollcall vote was taken on the foregoing resolution with the following results: Ayes, O'Neill, Bagnall, Kleinert, Jones, Ventura, Daugherty, and Grant; nays, none.

The president declared the resolution adopted.

In witness whereof, the undersigned has hereunto affixed her signature on the 15th day of April A. D. 1958.

MARIE W. CLARK,
City Clerk, City of Livonia, Wayne County, Mich.

Freedom of Information

EXTENSION OF REMARKS

OF

HON. W. R. HULL, JR.

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 24, 1958

Mr. HULL. Mr. Speaker, the Grass Roots Digest is published by one of the country's preeminent schools of journalism, that of the University of Missouri, and in a recent issue of the Digest a true grassroots editorial was printed, pinpointing the subject Freedom of Information.

Written by one of the most capable and hard-driving newspapermen of my acquaintance, Joe Snyder, the editorial advances an urgent plea for wisdom and fairness in dispensing Government information. I may say that I agree fervently with its content.

Under leave to extend, I include the article from the Gallatin (Mo.) North Missourian in its entirety:

The right of the people to know what is going on in Government at all levels is one of the basic rights of the American people under our system of government. But during the past decade there has been a growing tendency to conceal and cover up, under the guise of national safety, anything which tends to put those concerned in a bad light.

Reporters and editors have a clear duty to perform in ferreting out information that the people should have and making it available to the public through the columns of their newspapers. At the top level they will frequently run into the obstacle that information which can have little bearing on military or defense secrets is labeled "classified" and withheld from the public. It is their job to obtain all the facts and make them generally available.

Congressman Moss, Democrat from California, heads a House subcommittee which is inquiring into Federal information practices. Representative Moss has obtained widespread support from newspaper, radio, and television editors who have been battling the veil of secrecy which too often is thrown around operations that have only the faintest connection with national security.

Recently Moss and Murray Snyder, Assistant Secretary of Defense, who heads the Pentagon's public information department, went round and round at a meeting in New Orleans of the Associated Press Managing Editors Association. Moss pointed to the "smug smog of secrecy" which has surrounded United States development of intercontinental missiles, along with the Russian sputnik trips into outer space. Snyder attempted to justify the haze which consistently covers many of the operations and much of the thinking at the Pentagon.

In time of war there are many facts which must be withheld from the public in order to keep them from the enemy. But it has been well established that the Pentagon and many other branches of Government conceal facts from the American people which are already generally known to Russia or any other foreign power which has the slightest interest in them.

The American system of Government is based on information about Government at every level available to all the people.

Democracy has no opportunity to work, however, if facts are unnecessarily concealed. And as far as we're concerned, that concept applies not only in Washington but in Jefferson City, the Daviess County Courthouse and the city hall.

A Pioneer Celebrates Its 50th Anniversary

EXTENSION OF REMARKS

OF

HON. STEVEN B. DEROUNIAN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 24, 1958

Mr. DEROUNIAN. Mr. Speaker, the Tablet, a fine Catholic weekly newspaper published in Brooklyn, N. Y., is celebrating its 50th anniversary this month, and I should like to place in the Appendix of the CONGRESSIONAL RECORD an editorial which appeared in its pages on Saturday, April 19:

FIFTY FULL YEARS

By the grace of God and with the loyal support of thousands of devoted subscribers, the Tablet has completed 50 years as the dedicated organ of the diocese of Brooklyn and as an articulate member of the Catholic press of the United States. From a small, struggling start, our newspaper has grown in size and stature to the position of acknowledged leadership and influence which it holds today.

In retrospect we must properly and gratefully attribute what success we have achieved

to the blessings of Divine Providence above all. In a multitude of ways known chiefly to those who have worked in the Tablet office, God's helping hand has been manifest. Through many and repeated crises, only the help of God could have carried the Tablet along.

Through the years the encouragement, assistance, and loyal devotion of a host of friends among the hierarchy, the clergy, the religious, and the laity, as well as that of many non-Catholics, have been the mainstay of our newspaper. Especially are we indebted to the bishops of Brooklyn and to the diocesan clergy for their unremitting interest and cooperation.

From its inception our newspaper has found inspiration and guidance in broad policy from the utterances of our holy father, the Pope, to whom the Tablet has always given unqualified filial respect and loyalty. As a Catholic publication, after the mind of Christ's vicar on earth, our editors have always striven to present the news in an honest, truthful, and factual manner. In the expression of Catholic opinion, thinking with the church and with the holy father, we have sought only to serve the cause of Christian truth, Christian justice, Catholic idealism, and sincere patriotism.

Guided by the sound principles of Catholic philosophy and theology and by the standards of traditional Americanism, the Tablet has been able to view and to review the parade of human events, local, national, and international. The judgments our editors made on events and personalities in the passing parade, though trenchant, vigorous and direct, found their inspiration in dedication to Christian principle. They came from the honesty and courage of those who seek only the honor and glory of God, the welfare of immortal souls, the progress and prosperity of holy mother church and the preservation of our American heritage.

In the first years of its publication the Tablet faced and met head on the challenge of ignorance, bigotry, and suspicion in reaction against a rapidly growing and expanding American Catholicism. With honesty and courageous forthrightness blended with patience and charity, the Tablet defended the faith of the American Catholic and his right to be respected as a patriotic, loyal citizen.

During the depression days of the thirties the Tablet sounded a clear and loud alarm against the growing menace of communism. Identifying communism as an international conspiracy of aggressive atheistic materialists bent on world domination, the Tablet prophesied accurately the evil effects to our Nation and to the peoples of the world that would result from the recognition of Soviet Russia and the subsequent growth of Communist influence and power in world affairs. So vigorous were our expressions in those days that even some of our friends chided us with seeing nothing but Red. Events have proven that we may have erred on the side of moderation.

In the prewar days of the late thirties our editors took their motto from the holy father: "Nothing can be gained by war that cannot be achieved in peace. In war all is lost." Stoutly the Tablet resisted with all its strength and energy all efforts to involve our beloved country in a world war. Time and again, with accurate prophecy, we pointed out the devastating effects of our involvement upon ourselves and upon the world at large. Time has vindicated our judgment.

Though deeply dedicated to peace among nations, in the actuality of war the Tablet stood firmly with all loyal Americans in the defense of our country, and in the will to victory. We accepted the judgment of our leaders and called for a closing of ranks and complete unity of purpose and effort in the war.

Through the years the Tablet has endeavored to meet unflinchingly every challenge without swerving from its avowed purpose to serve truth and justice. The course has been extremely difficult at times. Those who stood in opposition to the Tablet's policies were both vehement and vociferous. But the force and vigor of the opposition was always more than balanced by the loyal devotion of our thousands of devoted friends who never failed to give us the encouragement and support we needed.

These have been a full 50 years. With gratitude to Almighty God and to all who contributed to the success of the Tablet, we renew our dedication to the cause of Christ, our loyalty to holy mother church, to our holy father the Pope, to our well-beloved bishop. We hope to continue with the help of God, to remain for many more years worthy champions of Christian truth and justice and of patriotic Americanism.

The Accomplishments and Aims of the Tablet on Its 50th Anniversary

EXTENSION OF REMARKS
OF
HON. STEVEN B. DEROUNIAN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Thursday, April 24, 1958

Mr. DEROUNIAN. Mr. Speaker, the following, written by Patrick F. Scanlan, managing editor of Brooklyn's Catholic weekly, the Tablet, on the occasion of its 50th anniversary, is an article on the history and the aims of a notable newspaper:

SERVING THE CATHOLIC CAUSE FOR 50 YEARS

(By Patrick F. Scanlan)

When the Tablet was first issued in April, 1908, Pope St. Pius X was supreme pontiff, Rt. Rev. Charles E. McDonnell, bishop of Brooklyn and John Cardinal Farley, archbishop of New York. Theodore Roosevelt was President of the 46 United States, Charles Evans Hughes, Governor of New York, George B. McClellan, mayor of the city and Bird S. Coler, president of the Borough of Brooklyn.

People in those days did not have many of either the luxuries or comforts of today. Automobiles and radios were exceptionally few; airplanes were even rarer; television, atomic energy and talking pictures unheard of; most of the electrical and mechanical household utilities of the present time were unknown; even electricity was used in few houses, while oil heat was a comfort yet to be realized.

Men and women worked hard. A 6-day week and, in most cases, a 10-hour day were the lot of the average citizen. While weekly wages were low, the cost of living was but a fraction of what it is today. Comparatively few women went to business and nearly all who were married confined their work to the home. Life was not complex and juvenile delinquency was an unknown expression. The police blotters, even in downtown or heavily populated areas, would not contain the arrest of even one youth for many months.

Serving under 3 bishops, 15 members of the board of directors, and with numerous priest-associates, this writer is humbly thankful to have seen the tablet grow from an 8-page weekly with a circulation of 15,000 to a 24-page publication with a sale of 150,000; a paper whose business has shown a phenomenal growth, become a valuable diocesan asset, and performed untold good for the promotion of religion and everything connected with the church, as well as serving both the country and community in an acceptable way.

Readers who have disagreed with some policy, editorial, article, or believed this or that issue should either be taken up or treated differently, have usually manifested a spirit which was not only friendly but helpful to the publication. Controversies, as our columns testify, have been carried on in a way which has not injured the interest or influence of the paper.

When this paper commenced, there was no such issue as communism or a dozen other topics which are now outstanding both nationally and internationally to which alert papers give a large amount of space. Wars and rumors of wars, income and sales taxes, inflation and large debts, crime waves and indecent prints were not confronting the people as they are today.

THE TABLET'S OBJECTIVE

The Tablet through the 50 years of its existence has had continually before it the concise profession of purpose set forth in its first editorial, printed on another page. In addition, besides offering an avenue of communication—and the only public one—between the ordinary of the diocese and the clergy, religious and laity, it has unremittingly sought:

1. To follow closely and to promote consistently the doctrines of the church and to render loyalty to the holy father and his decrees and to the bishop of the diocese and his policies; to uphold at all times moral values as well as religious teachings and to oppose those forces which threaten morality and religion.

2. To propagandize and support all activities of the church; to encourage and arouse Catholics to take a more active part in the apostolate of bearing witness to Christ always and everywhere; to strive to win support for the extension of our faith in mission territories, for the expansion of our schools and colleges, for increased vocations, for every form of Christian lay activity, both individual and organized.

3. To inspire, encourage, enrich, and ennoble the faith of our readers in order that they may be better Catholics; to endeavor to give every reader a greater knowledge of the faith in order that he or she might be able to understand and appreciate it more fully and hence be in a position to explain it to others more intelligently and effectively.

4. To promote the best interests of the United States and to oppose her enemies.

In following this 4-point program, the Tablet has sought to serve as a force for Catholic unity and for the promotion of good citizenship. In addition, it has endeavored to be a channel of information for non-Catholics, as well as Catholics, in the defense of truth and of the things that pertain to God.

TOWARD THE FUTURE

With 50 years completed in the service of God, His church and our country, the Tablet looks hopefully to many more years of accomplishment. Our labors will continue to be undertaken in uncompromising loyalty to the principles, ideals and objectives which have spelled success; to a consistent and persistent devotion to the diocese—bishops, clergy, religious and laity—and with intense pride in the word Catholic and everything it means.

In thanksgiving to God for His many blessings and for permitting our publication to thrive as a free, dedicated and constructive auxiliary of His church, the Tablet looks forward to a future in keeping with the past, that we may labor worthily for the ancient faith, for all it represents and for its adherents everywhere, and for our beloved country and the best interests of all its citizens.

Greetings to the Tablet on Its 50th Anniversary

EXTENSION OF REMARKS
OF
HON. STEVEN B. DEROUNIAN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Thursday, April 24, 1958

Mr. DEROUNIAN. Mr. Speaker, on the 50th anniversary of Brooklyn's Catholic weekly newspaper, the Tablet, recognition and congratulations have come from many and I would like to record here but a few:

THE HOLY FATHER'S BLESSING

(A letter to Bishop McEntegart signed by Msgr. Angelo Dell'Acqua, substitute secretary of state of Pope Pius XII)

The holy father has given me the honored privilege of expressing his warm felicitations on the occasion of the golden jubilee of the Tablet, the official newspaper of the diocese of Brooklyn.

It is fitting indeed that you commemorate this auspicious anniversary, for from humble beginnings, under the providential care and blessings of Almighty God, this publication has become a potent means by which Catholic teachings are diffused to the faithful.

His holiness would have me remark that during the 50 years of its existence the Tablet has, on numerous occasions, evidenced its loyalty to the holy see by bringing to its readers the apostolic messages of the supreme pontiffs and at all times urging them to pray for the vicar of Christ and His intentions.

In rendering heartfelt thanks to divine providence for the manifold benefits bestowed upon the church through the services of the Tablet, the pontiff also commends your excellency and your revered predecessors for the encouragement and guidance extended to the zealous priests and able Catholic laymen, who, through the past 50 years, have given unstintingly of their time and talents to make this publication an evermore effective instrument for the propagation of our holy faith and for the salvation of souls.

As a token of his participation in this golden jubilee, the holy father, prayerfully invoking copious graces and favors upon all who encourage the work of the Catholic press and make it more fruitful, cordially imparts to your excellency and to the editor and staff of the Tablet his paternal apostolic benediction.

I gladly take this occasion to renew to your excellency the assurance of my high esteem and cordial regard.

PRESIDENT DWIGHT D. EISENHOWER

To the staff and members of the Tablet joined in the observance of the 50th anniversary of their newspaper, I send greetings.

Over the past half century the Tablet has contributed much to the spirit and growth of the diocese of Brooklyn. Continuing in the American tradition of free and responsible journalism, it can look forward to a splendid future of public service.

Congratulations and best wishes.

VICE PRESIDENT RICHARD NIXON

It is a pleasure to join others in extending congratulations to all who are associated with the Tablet on the occasion of its 50th anniversary.

Fifty years is a long time in this fast-moving world in which we live and I think we tend to forget, with our daily concerns, just how much progress America has made in this period of time.

The newspapers of this country have had a large hand in this progress and the religious press in particular has often served to remind us of the proper prospective with which we should view events. We are indeed fortunate to have religious liberty and a free press that faithfully reports and comments on daily happenings around the world, thereby contributing to the enlightenment and advancement of our people.

GEN. DOUGLAS MACARTHUR

On the 50th anniversary of the founding of the Tablet, I am glad to join a host of other Americans in expressions of tribute to its 50 years of dedication to the spiritual life of the community and the preservation of those American ideals, institutions, and traditions which have molded the character of succeeding generations of our people.

During the Second World War and the Korean war and even the occupation of Japan, when our forces were hard pressed and the issues may have seemed by many to be precarious, there was never any doubt as to the militant pro-Americanism of the Tablet and its editors. Their support of our position was invincible.

For this I have always been grateful.

J. EDGAR HOOVER

To some, 50 years is a long span of time. To others, it is but a brief moment in history. The 50 years just past have witnessed the birth and development of the Tablet. In that period, the official organ of the diocese of Brooklyn has gained an enviable reputation as a fearless and forthright member of the American press.

Uncompromising in its position where the freedom of America is concerned, the Tablet has made itself a powerful force in exposing concealed communism—the deadliest danger ever to threaten our free way of life.

My heartiest congratulations to the Tablet on this, its golden anniversary.

A. HOLLY PATERSON

Congratulating the Tablet on the 50th year of its publication is not just the writing of routine words of greetings and good wishes. For the Tablet is not a routine newspaper.

I have read its informative columns for many years, and although I am not of the Catholic faith, I have found in the Tablet's appeal to logic and reason refreshment not usually found in the secular press.

Its fortitude in fiercely fighting not only those who advance the banners of atheistic communism, but those who wittingly or unwittingly help them on in many ways and means, is to be applauded by all Americans, regardless of religious persuasion.

There are too few fearless journals which really print all the news that's fit to print. Time after time, I have found in the Tablet columns of what I consider highly important news for patriotic Americans to know. Other papers have skipped it or, at best, run a few short, unrevealing paragraphs.

Residents of 149 Labor Surplus Areas Demand Immediate Legislative Relief by the 85th Congress

SPEECH
OF
HON. JAMES E. VAN ZANDT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Thursday, April 24, 1958

Mr. VAN ZANDT. Mr. Speaker, since 1955, when I introduced the first distressed area legislation in Congress, I have constantly called attention to the plight of the unemployed in the labor-surplus areas of the Nation and pleaded for congressional action.

During the 3-year interval we have had the 1st and 2d sessions of the 84th Congress, the 1st session of the 85th Congress, and now the 2d session, and to date no positive action has been taken in alleviating the distress of unemployment in labor-surplus areas.

While it is true that hundreds of witnesses have appeared before congressional committees in and out of Washington during the past 3 years and have filled over 3,000 pages of printed testimony confirming the need for immediate action, the unemployment in the 149 labor-surplus areas has increased, and as a result today it represents nearly 60 percent of the Nation's unemployment.

Mr. Speaker, the 84th and 85th Congresses stand indicted in the eyes of the millions of residents of the 149 labor-surplus areas for taking no positive legislative action to aid them in restoring employment in their communities.

The records of the Congress and its committees reveal that I have continually referred to the absolute need for positive legislative action on a bipartisan basis. At the same time I have urged immediate action on some 40 distressed area bills by adopting an attitude of compromise in perfecting suitable distressed area legislation.

Meanwhile, my bill, H. R. 6975, was drafted as a reasonable compromise after much study and expert consultation. The result is that it has been described in many quarters as a fitting compromise and a realistic approach in breaking the legislative deadlock that has resulted because of the difference in the administration bill, S. 1433, and the Douglas-Spence bill, S. 964.

Mr. Speaker, my fervent pleas the past 3 years for bipartisan cooperation and decisive action in adopting a compromising attitude in drafting distressed area legislation were echoed by Gov. George Leader, Democrat, of Pennsylvania, when he testified last week in Washington before the House Banking and Currency Committee.

Governor Leader criticized Congress for not taking action sooner on legislation to help relieve unemployment in distressed areas.

Stating that it was his third trip to Washington to endorse distressed area legislation, he said caustically, "You can sit down in your committees in Washington and think those distressed areas will go away, but they won't. We haven't got any action. I hope this committee will give us some action."

Continuing, the Democrat Governor of Pennsylvania said, "The people who live in these labor-surplus areas don't care whether it's a Democrat bill or a Republican bill. They want a program that will put people back to work."

Governor Leader on other occasions, in discussing distressed area legislation said, "A trip to Washington for this purpose is one of the rites of spring. It seems as if an area redevelopment bill is as seasonable a matter in the Nation's Capital as the annual blooming of the

cherry blossoms. This will make my third trip to support legislation of the sort sponsored by Senator CLARK and Representatives FLOOD, CARRIGG, FENTON, and VAN ZANDT.

Governor Leader concluded by saying, "The story so far has been that we have had Republican bills and Democrat bills; but we have never been able to get an area redevelopment law."

On a previous occasion Governor Leader was quoted as saying that he has constantly pointed out and has continuously urged "that the members of both parties sit down together and work out a compromise effort."

Mr. Speaker, here is the Democrat Governor of the great State of Pennsylvania indicting the 85th Congress for its neglect of labor-surplus areas. In connection with Governor Leader's scathing indictment of the 85th Congress, some may say, "Well, the House Banking and Currency Committee is holding hearings." Therefore, let us talk about those hearings that have been in progress since April 14.

To date the committee has heard a half-dozen witnesses, headed by former President Harry S. Truman. Five of the six witnesses have been Democrats, the other witness being Republican Gov. Cecil H. Underwood of West Virginia.

Of the long list of witnesses yet to be heard, with the exception of Republican Governors Knight of California and Stratton of Illinois, and Republican Mayor Poulson of Los Angeles, all are Democrats.

Mr. Speaker, of all the thousands of words of testimony presented to date to the House Banking and Currency Committee, actually little has been said about distressed area legislation. On the other hand, however, the hearings are being used as a sounding board for political propaganda. Meanwhile, nearly 3 million unemployed in the 149 labor surplus areas continue to suffer from the misery of unemployment.

Mr. Speaker, there are over 5 million unemployed in the United States at the present time and nearly 3 million, or 60 percent of them, are in the 149 labor surplus areas.

The following chart will prove conclusively that this unemployment in these labor surplus areas is chronic because it has been there for years and as a result must be treated separately from the national unemployment problem which has seasonal characteristics.

Unemployment in major areas of substantial labor surplus—149 areas regularly classified by United States Department of Labor—Selected months, March 1952 to March 1958

Month and year	National unemployment	Percent of labor force	Number of labor-surplus areas	Unemployment in labor-surplus areas
March 1958	5,188,000	7.0	149	2,970,000
March 1957	2,693,000	4.0	149	1,885,000
March 1956	2,551,000	3.8	149	1,793,000
March 1955	2,654,000	4.0	149	2,494,000
March 1954	3,230,000	5.0	149	2,181,000
March 1953	1,602,000	2.5	149	1,443,000
March 1952	1,673,600	2.7	143	1,684,000

Mr. Speaker, the information contained in the above chart was furnished to me by the United States Department of Labor and the Bureau of the Census and proves that if the 84th Congress or the 85th Congress had perfected and approved distressed-area legislation, these 149 pockets of chronic unemployment in the United States would have been eliminated and the nearly 3 million unemployed residents given employment.

Mr. Speaker, I represent 2 of these 149 distressed areas and while some call the present unemployment situation a slump in business, back in my congressional district it is classified as a recession.

This is due to the fact that nearly 17 percent of a 90,000-labor market is unemployed, hundreds are losing their unemployment insurance benefits, and thousands are living on public assistance and surplus commodities.

The following chart shows the number of residents of my congressional district receiving surplus commodities from December 1956 to March 1, 1958. Let me call attention to the fact that as of March 1 of this year, 15.1 percent of the overall population of my congressional district, or 45,618 persons are living on surplus commodities.

Surplus commodities, Mar. 3, 1958

County	December 1956		June 1957		December 1957		February 1958		March 1958	
	Recipients	Percent	Recipients	Percent	Recipients	Percent	Recipients	Percent	Recipients	Percent
Blair	16,002	12	15,454	11	15,751	11	18,400	13.2	22,222	15.9
Centre	6,536	10	6,339	10	5,661	9	6,537	9.4	6,537	9.9
Clearfield	14,109	16	13,377	16	12,284	14	17,520	20.0	16,859	19.6
Total	37,247		35,170		33,696		42,457		45,618	
1950 census		12.8		12.1		11.6		14.6		15.1

NOTE.—The above figures represent the total recipients of surplus commodities and are comprised of public-assistance cases, the unemployed, pensioners, and persons whose income is inadequate to meet the minimum requirements of need as established by the income scale of the Pennsylvania Department of Public Assistance.

Mr. Speaker, the conditions that I have outlined are typical of all the 149 labor surplus areas of the Nation.

As I have said before, the unemployment situation in these areas is chronic and the only solution to the problem is distressed area legislation. Therefore, the answer lies with this Congress which has the power to enact suitable legislation to deal with this distressing situation. In the hands of this Congress rests the answer to the problem of unemployment that plagues 149 labor surplus areas of the country.

Mr. Speaker, can we not lay aside partisan politics? Can we not compromise the differences in distressed area bills? And above all, can we not get down to the business of approving legislation to aid these 149 labor surplus areas and thus wipe out nearly 60 percent of the Nation's current unemployment?

Mr. Speaker, by approving distressed area legislation, this Congress will be heeding the pleas of nearly 3 million unemployed Americans who are willing and eager to return to work.

Frankly, we will in truth be lending them a helping hand through the medium of a much-needed law to aid the 149 labor surplus areas in the abolition of the gaunt specter of chronic unemployment.

Postal Rates

EXTENSION OF REMARKS
OF
HON. FRANK CARLSON
OF KANSAS
IN THE SENATE OF THE UNITED STATES
Thursday, April 24, 1958

Mr. CARLSON. Mr. President, recently there appeared in the Kansas City Times, in the issue of April 16, an article on postage rates over approximately a one-hundred-year period.

For instance, in 1860 it cost $5.00 to send a letter between California and the Eastern States. It also took 8 days for the letter to travel from California to Missouri by pony express.

This article gives some interesting information on this subject and I ask unanimous consent to have it printed in the Appendix of the RECORD as a part of these remarks.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

NICKEL TOO MUCH? ONCE A LETTER COST $5

(By Roberta F. Caldwell)

Are you worried about pending legislation in Congress which may require you to put 5-cent stamps on your letters? Don't take it too hard.

In 1860 it cost $5 to send a letter between California and the eastern States. It also took 8 days for the letter to travel from California to Missouri, by pony express. Only a couple of years earlier it had taken 3 or 4 weeks (by stagecoach).

Still earlier, letters and packages had traveled from New York to San Francisco by steamer by way of Panama and had been carried across the isthmus on muleback. Parcels over this route were handled by an express company at rates of approximately 75 cents a pound for large packages, $3 to $12 for smaller ones up to about a pound.

With the establishment in 1856 of cross-country stagecoach service along the California trail, the water route declined in popularity. The overland coach, generally pulled by a 4-mule team, took 22 days and nights of continuous travel from Missouri to California.

CAME THE PONY EXPRESS

It was a tremendous improvement when the pony express was introduced. Mail and small packages were carried in saddlebags on fast horses. Since light weight meant faster travel, tissue paper was used for letters. The men rode day and night. Stations were approximately 25 miles apart, and ordinarily riders were changed at every fourth

station. At every station, a fresh horse was waiting.

After operating only about a year the pony express, a romantic chapter in American history, was discontinued in 1861 because a new invention, the telegraph, had just reached California. The pony express carried important news primarily; this could now be transmitted by telegraph. Interestingly, the first telegraph line was owned and operated by the Government as a part of the postal system. Although the pony express was discontinued, the overland stage still carried mail until 1869 when the Union Pacific railroad was completed.

The idea of sending messages from place to place by means of relays of special riders did not originate with the pony express. The method is at least 2,000 years old. The name post office owes its origin to the Roman empire which maintained a system of sending official dispatches and intelligence information from post to post along the roads. The word "post" is derived from the low Latin, posta, meaning station. Originally, a post was a station where horses were kept for the use of men appointed to travel from one station to the next with messages. (Hence, postmen and post house or office.) The master of the posts was the keeper of the relay horses. Thus, originally a postmaster's duties were to care for horses and had practically nothing to do with mail.

FOR THE NOBILITY

The posts of ancient times were only for military messages and State dispatches, not for private correspondence. By degrees, permission was granted private individuals to use the posts. First the prerogative of the nobility, the privilege was gradually extended to the general public.

In America an official, but very erratic, postal system existed throughout the Colonies by 1710. The handling of letters was a haphazard business. The post rider often was an old man. As he jogged along over a corduroy road, he entertained himself by knitting socks or reading the letters he carried.

From earliest colonial times, letters arriving from overseas were supposed to be called for aboard ship. When ready to sail again, the captain left all unclaimed letters at some coffee house near the wharf where they were spread out on a shelf or table to await call.

FRANKLIN WAS FIRST

In 1753 Benjamin Franklin became first postmaster general of the American Colonies. Until then mail had been sent only about once a month between the principal business centers, Philadelphia, New York, and Boston. Franklin arranged for mail to go regularly twice a week in winter, three times in summer by stage coach.

Early coaches took 3 days or longer between New York and Philadelphia, 6 days or more between New York and Boston. About the time of the Revolutionary War another stage, not so much coach as covered wagon, was introduced. Because it traveled so fast—Boston to New York in only 4 days, New York to Philadelphia in 2 days—it was called "the flying machine." Traveling hours were from 3 a. m. to 10 p. m. each day.

RAIL AND AIR

Through the years, other important steps in the development of postal service have included: Use of fast trains, highway mail, air mail (1918), helicopter delivery, rural delivery (1896), postal savings (1910), parcel post (1913), money orders, insurance, special delivery, registration and certification. Despite all these additions, the cost has gone down more than up. In 1792 the postage rate was fixed at 6 cents on letters traveling up to 30 miles, 10 cents between 30 and 80 miles, and so on, up to 25 cents over 400 miles. This cost had to be paid in advance, but it was not until 1847 that postage stamps were used to show the sender had prepaid the cost.

In 1851 rates were fixed by weight rather than distance, first 3 cents, later (1883) 2 cents for one-half ounce; then (1885) 2 cents an ounce. Between World Wars I and II, the rate went to 3 cents an ounce despite increased services and rising costs.

Three cents—or even 5—for a stamp is still one of today's genuine bargains.

Needed: A Welcome Mat at the United States Capitol

EXTENSION OF REMARKS
OF
HON. ROBERT J. McINTOSH
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Thursday, April 24, 1958

Mr. McINTOSH. Mr. Speaker, under leave to extend my remarks, I would like to call the attention of my colleagues to an article by Vera R. Glaser that appeared recently in the Washington Sunday Star editorial section. The article points out the need for an adequate guide service in the United States Capitol. I have joined with Representative FRANK THOMPSON, of New Jersey, in introducing legislation designed to provide visitors with a more appropriate welcome to the building which they, as taxpayers, own. The article imaginatively describes the limitations of the present setup:

NEEDED: A WELCOME MAT AT THE UNITED STATES CAPITOL

(By Vera R. Glaser)

Jennie Jones gazed skyward at the dome of the United States Capitol. It was her first trip to Washington. Her heart swelled with the glory and the grandeur.

At that moment Jennie personified 2 million Americans who each year, mainly in spring and summer, make a patriotic pilgrimage to one of the most beautiful cities in the world. For many it is a once-in-a-lifetime event. For all who visit the venerable Capitol Building it is an experience compounded of awe, thrilled expectancy, and a solemn sense of belonging.

The letdown comes fast. There is no welcome mat for visitors without congressional connections.

Two energetic young Representatives, ROBERT J. McINTOSH, Michigan Republican, and FRANK THOMPSON, JR., New Jersey Democrat, have spoken out in Jennie's behalf. They are proposing what amounts to an overhaul in the Capitol's model-T public-relations system.

They remind us that Jennie, who could be from Albuquerque or Des Moines, is not a seasoned sightseer. She does not even know the name of her Congressman. She is simply an American taxpayer who wants to observe her Government at work.

How does a stranger go about that?

When a guide with a handful of tickets buttonholed Jennie just inside the east entrance of the Capitol, she bought one for 25 cents. Her half-hour tour included brief glimpses of the Senate and House in session. If she had not paid a quarter, she would have had no way of viewing her elected lawmakers at work—that is, unless she learned accidentally that Congressmen furnish passes to the galleries.

"But who is my Congressman?"

There would be no one around to answer. Forlornly, Jennie would wander through a building in which she is a shareholder in the truest sense of the word.

A pleasanter reception awaits about 5 percent of the tourists who make a point of touching base with a Congressman. They are supplied with descriptive booklets and perhaps a clerk is detached from work to point out highlights of the building.

Handshaking, of course, slows down the wheels of official business and perhaps it is well that so few tourists seek out their Senators and Representatives. This leaves the Jennie Joneses, the servicemen on furlough, the students, and the visitors from foreign lands, who comprise 95 percent of the human flood, with no encouragement at all to absorb the artistic and historic wonders of the Capitol.

Indeed the beloved shrine has become one of the strangest paradoxes in Washington. It houses 531 officials who, by the very nature of their election to office, must be skilled in the art of public relations.

Yet collectively, as the Congress of the United States doing business in the Capitol, their public relations effort falls short.

A quartet of experts, including 2 Congressmen and 2 public relations specialists, were polled by this writer for suggestions on how the Capitol could best fulfill its meaning for Americans. Their views are condensed here:

Consistent with the dignity of a major Nation, guide service should be furnished officially at no charge.

Capitol guides are appointed by political patronage and rely on the 25-cent fees as their sole source of income. Representative THOMPSON labels the system cheap and degrading and has introduced a bill to abolish it in favor of free guide service. Admitting that the Capitol guides make a real and conscientious effort, he nevertheless points to Canada, where free guide service is provided by Parliamentary authorities, as the ideal. The smaller democratic nations—including Australia, Ireland and Switzerland—also provide free guides.

Representative McINTOSH recommends a Visitors Information Center which might be located in the rotunda, to supply names of Congressmen, office and hearing room locations, and the like. "Such a clearinghouse is urgently needed," McINTOSH claims, "to provide facts, soothe tempers, and most important of all, convey a spirit of friendly welcome."

A film describing the work of Congress and the layout of its vast plant, to be shown at regular intervals in advance of the tours, was suggested by one expert.

A simple, basic piece of descriptive literature for public distribution is a must. McINTOSH recommends that the folder also be placed in Federal buildings throughout the Nation as a Capitol preview for visitors. At present, the only source of Capitol booklets are Members of Congress, who receive limited quantities from document rooms and their campaign committees. Most visitors must pass money across souvenir counters to get such literature.

Every department of Government, including the White House, maintains a public information office. The United States Capitol, carrying one of the heaviest loads of telephone, telegraph and mail inquiries, has none.

A central telephone query desk and mail-reply unit are recommended. In recent years thousands of requests, sparked principally by school children and requiring varying degrees of research, have swamped Members. Any relief afforded overworked congressional staffs might serve to normalize their schedules.

Expansion of present constricted eating and comfort facilities is past due. The Capitol contains no truly public restaurant. Visitors pile into the seriously short staff quarters. Four drinking fountains, 4 small men's

rest rooms and 3 tiny ladies' rest rooms serve millions. Elevators are taxed to capacity. Police, doorkeepers and employees are stopped every few feet for questioning by eager tourists. Without taking into account future needs the Capitol Architect estimates current shortage of work space in the building at 106,000 square feet.

Extension of the east front of the Capitol, of course, by enabling the building to serve its dual function as workshop and national shrine, would help solve this serious public relations problem.

The experts are unanimous in calling for a change of attitude. Visitors are guests, they declare, and not herds of sheep. The United States Capitol is a potential classroom in patriotism for those citizens who love her well enough to travel thousands of miles for a close view. But the experts also agree that a big gap yawns between what the Capitol is and what it should be.

Perhaps that is why Jennie Jones had a vague feeling of disappointment as she straightened her flower-sprigged hat and walked back to her hotel to pack.

A National Campaign To Promote the Use of Wood and Wood Products

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 23, 1958

Mr. PORTER. Mr. Speaker, the interest of the Federal Government in the great federally owned forests require that they manage them in the best possible manner. This means building adequate access roads and supplying a sufficient number of able men to manage these highly valuable resources for the best profit to the United States on a sustained yield basis.

However, merchandising wood is up to the industry and I am glad to report that under the leadership of organizations such as the Douglas Fir Plywood Association and the National Lumber Manufacturers Association men and women in forest products businesses are progressively and resourcefully undertaking to promote the use of wood and wood products.

Mr. Speaker, under unanimous consent to extend my remarks in the RECORD, I include herein a news story from the New York Times for April 20, 1958, telling of the lumber industry's program:

[From the New York Times of April 20, 1958]

LUMBERMEN RAISE WAR CHEST TO HOLD POSITION IN MARKET

(By John J. Abele)

The lumber industry hopes to improve its health by a million-dollar shot in the arm.

Alarmed by sharp decline in sales and profits over the last 2 years, the industry is moving ahead with plans for a $1,250,000 national campaign to promote the use of wood and wood products.

The program was prepared for the National Lumber Manufacturers Association by the Baltimore advertising agency of VanSant, Dugdale & Co., Inc. It is designed to combat inroads into lumber's traditional markets by a growing flood of competitive materials—metals, plastics, concrete, brick, asbestos, and others.

While the use of these materials has been increasing steadily in construction, lumber's share has been declining. Shipments last year were at a 9-year low of 33,600,000,000 board feet, 11 percent below the 1955 figure. During the same period sales fell to $2,900,000,000 from $3,500,000,000, a decline of 17 percent, and profits plummeted 65 percent to $67,500,000 from $190,600,000. Profits in 1957 represented 2.3 percent of sales, against 5.4 percent in 1955.

HOUSING DROP CITED

The decline in new housing starts from 1,300,000 units in 1955 to 990,000 last year was one factor in lumber's poor showing. Another was the declining use of wood in each house built. In 1920, for example, about 18,900 feet of lumber were used in building the average home. By 1953 that figure had dropped to 10,500 feet. The decline is believed to be continuing.

Competitive materials bear a large part of the responsibility for lumber's lost markets. Among them are aluminum window frames, steel doors and structural work, plastic floor coverings, asbestos siding, asphalt roofing, and wall panels of various compositions. Not the least annoying to lumber manufacturers have been synthetic materials decorated to look like wood.

These products have been well advertised and aggressively merchandised, often by such industrial giants as the Aluminum Company of America, United States Steel Corp., Kaiser Aluminum Co., Allied Chemical & Dye Corp., and Armstrong Cork Co.

The tens of millions of dollars spent by these companies in promoting their products in newspapers, magazines, and television dwarfs the propoesd lumber program of $1,250,000. Lumbermen concede this but point out that the program is only a start—the last industrywide promotion campaign was in 1932—and may snowball in time as wholesalers and retailers join. Whatever happens the proposed program would represent a sizable addition to present budgets for the promotion of lumber, estimated at about $5 million a year for the entire industry.

So far the program has been approved by two of the largest member associations of the NLMA, the West Coast Lumbermen's Association and the Southern Pine Association. It has also been approved by directors of the Western Pine Association, the remaining member of lumber's big three, which is canvassing its members for their reaction. The program also has received the approval of several smaller member associations of the NLMA's 16-member groups. Final acceptance by the end of this month appears certain.

The regional associations have been conducting a large part of the industry's promotion in recent years but have been supporting particular species of lumber, such as Douglas fir, Southern pine and Northern maple. Supporters of the new program point out that it will not replace this regional promotion but will supplement it by helping to pave the way for increasing acceptance of wood instead of aluminum, steel, plastics, or other materials.

As one speaker at a recent lumbermen's meeting declared: "Your biggest rival is not the man sitting next to you but the producer of competitive materials."

About 40 percent of the proposed program would be devoted to advertising in trade journals in the building fields and consumer publications. Other major items would include information on wood technology and cost for architects, builders, engineers, and financial interests and expansion of field staffs to win greater acceptance of wood by building code and insurance officials.

If adopted, the program might help solve a long-standing grievance between lumber manufacturers and retailers. The manufacturers complain that retail lumber yards are stocking an increasing amount of competitive materials and don't promote lumber as they should. The retailers respond that the manufacturers don't give them much help in merchandising wood.

Address of Hon. Joseph M. Proskauer in Accepting American Liberties Medallion

EXTENSION OF REMARKS
OF
Hon. EVERETT McKINLEY DIRKSEN
OF ILLINOIS
IN THE SENATE OF THE UNITED STATES
Thursday, April 24, 1958

Mr. DIRKSEN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the acceptance address of the Honorable Joseph M. Proskauer, in accepting the American Liberties Medallion.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

It has been my privilege to bestow upon Senator Lehman and Judge Learned Hand this American Liberties Medallion with which you now honor me. To become the successor of these two leaders, thus far the only recipients of this award, is a signal honor for which I am profoundly grateful.

I hope to supplement what each of my predecessors had to say on acceptance of this award. From Senator Lehman we had a challenging outline of legislation which would safeguard American liberties. He described eloquently the tactics for America to follow in this struggle for civil liberties by a program of specific enactments. Some draw from the cliché that you cannot legislate morality the inference that the world can get along without a policeman. To this I do not subscribe. The sanctions of the law must still be invoked against the lawbreaker. Yet, I have an old man's belief that we should concern ourselves—as we must—not only with tactics but with strategy; not only with the battles to be waged, but with the underlying principle by which we shall win the war.

Judge Hand spoke of this strategy when he quoted the eloquent defiance of convention with which Shelley closes Prometheus Unbound:

"Neither to change, nor falter, nor repent;
This, like thy glory, Titan, is to be
Good, great and joyous, beautiful and free;
This is alone life, joy, empire, and victory."

I add another concept. We are admonished in the Book of Proverks: "Remove not the ancient landmark." There is truly no lamp by which to guide our feet more brightly than the lamp of experience. Obviously we cannot fetter ourselves with slavish adherence to convention and precedent; and yet the accumulated wisdom of the world has set for us certain landmarks which give direction to the paths which we must follow in our attainment of full civil liberties. Even the great reformers of the world have very often ignored those landmarks; and while they have raised the banner of revolt against cramping conformity, they have too often disregarded these guideposts of the past and thus brought us new problems and new evils.

The yearning quest of democracy has been for that liberty of thought which Voltaire, in his famous letter to Helvetius, described

as "the life of the soul"; the liberty of conduct free from bigoted interference; those liberties which inhere in our age-old concept of the dignity and worth of the individual. Fundamentally we advance our search neither in slavish adherence to traditional formalism, nor in rash Promethean denunciation of the conventions which society has impoded upon itself.

When we contemplate the curious paradoxes which history discloses, we see more and more clearly the necessity to sift the wheat from the chaff and to recognize the safe efficiency of the beaten path, even when we must at times alter its direction. Luther in flaming words voiced his denunciation of the corruption which had invaded the established church. He founded a reformation which created a new spiritual world. But he lapsed from the moral teachings of Christianity. He urged his followers, in the words of Will Durant, "to burn down the homes of Jews, to close their synagogues and schools, to confiscate their wealth, to conscript their men and women to forced labor, and to give all Jews a choice between Christianity and having their tongues torn out." And Durant concludes: "These utterances helped to make Protestantism—so much indebted to Judaism—more anti-Semitic than official Catholicism."

But Luther's successors through the centuries returned to the beaten path; and today we read in the Book of Common Prayer an appeal that "we may reverently use our freedom and help us to enjoy it in the maintenance of justice among men and nations." There was a Catholic Inquisition and a St. Bartholomew's Day which, too, ignored love and tolerance. But we have come to see the gentleness of St. Francis permeate the thinking of the Catholic Church; within our own time we have heard a Pope declare: "Anti-Semitism is inadmissible to a Catholic; spiritually we are all Semites."

We Jews, too, have at times shown intolerance. Uriel Acosta held the opinion that certain Jewish rites and beliefs were un-Biblical; he was excommunicated from the synagogue in Amsterdam, recanted, and was again excommunicated under humiliating conditions that caused him to take his own life. But, in dying, he left to the great Spinoza the duty and the opportunity to replace the ancient landmark, "to show that not only is perfect liberty to philosophize compatible with devout piety and with the peace of the state, but that to take away such liberty is to destroy the peace and even piety itself."

So we Jews have today returned to the ancient ways, knowing that the whole duty of man is to do justice, to love mercy, and to walk humbly with our God.

Just now we are celebrating the 300th anniversary of the so-called Flushing Remonstrance. In 1657, when Peter Stuyvesant issued an edict forbidding the people of New Netherlands to admit Quakers into their homes, 30 freeholders defiantly proclaimed:

"Our desire is not to offend one of (God's) little ones, in whatsoever form, name or title he appears in, whether Presbyterian, Independent Baptist, or Quaker, but shall be glad to see anything of God in any of them, desiring to do unto all men as we desire all men should do unto us. * * * Therefore, if any of these said persons come in love unto us, we cannot in conscience lay violent hands upon them, but give them free egresse and regresse into our town * * *"

That indeed is a glorious landmark.

Our route leads to a summit where there will be no gap between the promises of our Bill of Rights on the one hand and our way of life on the other. To reach it, we must cling to the fundamentals of freedom. True, when a Faubus defies the law of the land and of humanity, we must use the tactis of the law that Senator Lehman described. True, when superstition and convention are invoked to strangle human betterment, we must, as Judge Hand has taught us, fire ourselves with that defiance which sparked the words of Prometheus. But equally true it is that the way to freedom must always be defined by the great landmarks of the human soul.

The 10 Commandments, as God thundered them forth to Moses on Mount Sinai, and the Sermon on the Mount are still our guideposts. I have always loved to recall that the New Testament tells us that when Jesus was asked what a man should do to be saved, the answer was, not in words newly fashioned, but with a quotation from our Hebrew Scriptures: "You shall love the Lord, your God, with all your heart and with all your soul," and "You shall love your neighbor as yourself."

This is the synthesis of what is noblest in Judaism and in Christianity.

That synthesis the American Jewish Committee has followed in the past. We have fostered a belief that no one is truly free unless all men are free; that we must seek unity, but with absolute right of independent dissent; that, in the words of Ralph Barton Perry, "the only kind of unity that can be said to be praiseworthy is a unity which harbors differences and renders them benign"; that the nations should promulgate a guarantee that everyone, of every race and creed and country, should have the fundamental rights of life, liberty and the pursuit of happiness. Our charter proclaims that we should protect the rights of Jews everywhere. But we have wisely interpreted it to mean that we should endeavor to protect the freedom of all men.

Thus the ancient landmark charts our path. Let us highly resolve to follow it to our goal—a world where every man may live in dignity and peace under his own vine and fig tree, and where we shall achieve at last, in love, a true brotherhood of all mankind.

Veterans of World War I of the United States of America

EXTENSION OF REMARKS
OF
HON. MARTHA W. GRIFFITHS
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 24, 1958

Mrs. GRIFFITHS. Mr. Speaker, the State of Michigan has gone on record as being in favor of the enactment of H. R. 11077, the World War I charter bill which is pending for floor action. Shortly after this measure was introduced, I wrote to Chairman CELLER of the House Judiciary Committee, urging him to give favorable consideration, and I would like to reaffirm here my support of this proposal:

House Resolution 34

(Offered by Representatives Currie, Yates, Pears and Jeffries)

Resolution urging the Congress of the United States to act favorably upon House of Representatives bill No. 11077, incorporating the veterans of World War I of the United States of America

Whereas the legislature of the State of Michigan notes that there is now before the House of Representatives of the United States, House bill 11077, which has been reported favorably by the Judiciary Committee to the full House of Representatives; and

Whereas the members of the Michigan Legislature look with favor upon this proposed legislation and urge that the Congress of the United States take favorable action on the passage of this bill: Now, therefore, be it

Resolved by the House of Representatives, That the Michigan Legislature urge the Congress of the United States to act favorably upon H. R. 4412, incorporating the Veterans of World War I of the United States of America; and be it further

Resolved, That copies of this resolution be transmitted to each of the Michigan delegates to the United States Congress.

Adopted by the House April 11, 1958.

NORMAN E. PHILLEO,
Clerk of the House of Representatives.

Why Above the Law?

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 24, 1958

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include a very interesting article which appeared in the Boston Sunday Globe on April 20, 1958:

WHY ABOVE THE LAW?

(By Judge Ernest W. Gibson, United States District Court, Vermont)

I have long believed that an independent judiciary is the real protector of the freedom of man in our country. I have been greatly distressed at some of the happenings in our administrative agencies, particularly in some of their decisions.

The Congress has provided for a judicial review of one sort or another for many of the decisions of the various administrative agencies of our country—but it also, in some instances, provided that an administrative decision shall be final and that there may be no judicial review of any kind of that decision.

For instance, if a veteran who was disabled in World War II seeks disability compensation from the Veterans' Administration, he may have no judicial review of the final decision of the Veterans' Administration in Washington.

HAVE FINAL WORD

Their word is final—because there is no judicial review of a final decision of the Veterans' Administration in Washington.

I sought to help a veteran secure disability compensation, service connected.

His claim was turned down by the Veterans Board in White River Junction, Vt., and he appealed to the Washington Veterans Board. The Veterans' Administration in Washington sent an investigator, with a secretary, up to Vermont. The investigator went to many who had made affidavits, threatened them, claimed they had given wrong affidavits, claimed the veteran had lied. And when he put the veteran under oath, he was continuously saying to the veteran—"We have information in the files which says otherwise from what you are testifying. Is that true or untrue?"

When the investigator was asked what information they had, who said it, where it was said, and to whom it was said, he would answer—"That is secret information."

A Communist on trial for treason in a Federal court gets much better treatment than that veteran was afforded by the Veterans' Administration.

If the Veterans' Administration, for instance, was subject to judicial review of its decisions, you may be sure that the Veterans'

Administration would never dare act in the manner that it has acted and does act.

VERMONT BANS COWS

Another illustration. Several years ago, some cattle out on the Pacific Coast apparently became infected with the hoof and mouth disease. The Secretary of Agriculture placed an embargo on the importation of cattle from Canada into the United States.

The only hoof and mouth disease cattle, so far as I have been able to determine, were on the Pacific Coast.

All of the Vermont farmers along the Canadian border were required to erect fences to make sure that their cattle pasturing in Vermont did not wander over into Canada. In many instances, farmers had pasture land adjoining their own farms, the pasture land being actually in Canada.

On a particular night up in Franklin, Vt., where there were several customs inspectors apparently watching, armed with flashlights, a couple of cows from one farm broke through the fence and went over the line into Canada, whereupon the customs officials dashed to grab the cattle, and, of course, many other cattle surged across the border through the fence and surged back.

In the melee, the customs people were able to seize about 10 cows. Under the law, these seized cows were supposed to be delivered forthwith to the Department of Agriculture for destruction.

GRANTED INJUNCTION ANYWAY

When the following morning I signed an order temporarily restraining the Collector of Customs from turning these seized cows over to agents of the Secretary of Agriculture and set a hearing for granting of a temporary injunction, I was told by agents of the Department of Justice and of the Department of Agriculture that I had no authority to do any such thing—that such a decision of the Secretary of Agriculture was entitled to no judicial review.

However, I did grant a temporary injunction, and before the case ever came to hearing on the merits, the hoof-and-mouth embargo was lifted—and the cows were returned to the farmer and were not slaughtered.

There are those who will say that to grant a judicial review, however limited, to all administrative decisions would be to ask the impossible.

Such I believe to be a ridiculous statement.

The American Bar Association has recommended the creation of an administrative court.

This administrative court would be authorized to grant whatever judicial review of administrative decisions that Congress decided to give it.

Members of this administrative court would hold the same tenure as does a United States district judge, tenure based on good behavior.

These would be men trained in the law, who would hear both sides of the matter, would write a decision and sign it. They would not be worrying about whether they would be reappointed or what was going to happen to them when their terms of office expired.

The FCC makes a good example of the present trouble with our administrative system.

The Commission has a staff of opinion writers who think up reasons for them. They can think up reasons to support any decision the Commission decides to make. No Commissioner signs it—indeed many times they pay little attention to the examiners' views. All they read, if anything, is staff summaries—this making the hearings practically a useless expense.

MUCH FAIRER WAY

How much more logical, how much fairer it would be if a trained administrative court judge heard the arguments presented on the one hand by the FCC, and on the other hand by protesting applicants—and then he handed down a decision, finding facts, stating the law and the reasons for his conclusions and judgment—and signing the same.

Thus if we could have a reorientation of our administrative practice, a judicial review available, however, limited, of all administrative decisions, and an administrative court designed purposely to handle these matters—an administrative court that would be part of an independent judiciary holding office during good behavior, I believe the freedom of man in our country and his property rights would be much better protected.

Toward 5 Percent

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 24, 1958

Mr. DINGELL. Mr. Speaker, pursuant to permission granted I am inserting an article from the Washington Post of Thursday April 24, 1958, entitled "Toward 5 Percent."

TOWARD 5 PERCENT

Reduced to cold figures, the economic challenge to this country in the decade ahead is to produce at least 4 percent more goods and services each year than the year before. And, given the great and growing burden of armaments, that growth rate must be pushed to 5 percent if there is to be the kind of material and social progress which is the core of the historic American dream. This seems to be the central conclusion of the impressive study just completed by a panel of outstanding economists and business leaders as a part of the special studies project of the Rockefeller Brothers Fund.

The hopeful estimate of the panelists is that a 5 percent rate can be achieved, even though before 1930 annual growth did not exceed 3 percent and in recent years has not gone above 4 percent except during World War II. But heroic measures will be required, and for most of those steps urged by the Rockefeller panelists, there is not yet anything like the general understanding and support that would be required for their adoption.

Tax reform, to speed capital accumulation and investment and eliminate widespread inequities in the present system, may be the most difficult political problem. But there will be nothing simple about obtaining needed improvements in the credit system, a sustained and steady expansion of outlays for public works and social security, the better organization and fuller support of research, the adaptation of obsolete segments of the economy to new methods and demands, the elimination of wasteful, progress-impeding subsidies and a much fuller national commitment to partnership in world trade and economic development.

The aim of these reforms is economic growth, and the purpose of growth, in this country, is to expand the area of individual economic choice and to enlarge individual opportunity for personal growth and fulfillment. But the Rockefeller report does not face as squarely as it might the greatest difficulty about all this, which is that the means to these traditional American ends will involve a massive collective effort of reappraisal and action. A later report of the special studies project on the democratic process may deal with the problem, but something of its nature is suggested by the present panel's assertion that:

"The immediate challenge is to our sense of values and to our self-restraint. We must decide between the essential and the desirable; we must choose among our aspirations those which carry the highest value * * * We need, in short, a greater and more articulate sense of national purpose to guide us in this inevitable process of choice. This is in large measure a problem of promoting a broad public understanding of the problems and challenges that lie ahead. As an example, a more general appreciation of the values that could be secured by increased Government expenditure for education or social welfare might well generate broad support for such a program."

To deal with the present recession, during which national economic growth has all but halted, the Rockefeller report proposes a combination of easier credit, accelerated public works spending and a tax reduction (of unspecified amount) which adds nothing new to the debate already under way. But the report does contribute to the present general concern a timely note of urgency and perspective. The Nation's task is not merely to put 2 or 3 million (or more) persons back to work, but to embark upon a program of unprecedented growth—or face the prospect of stagnation.

The American Indian

EXTENSION OF REMARKS
OF
HON. KARL E. MUNDT
OF SOUTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Thursday, April 24, 1958

Mr. MUNDT. Mr. President, Mr. Kenyon Cull of Springfield, S. Dak., addressed the recently adjourned 67th Continental Congress of the National Society of the Daughters of the American Revolution dealing with the problems of our friends, the Indian Americans, which I think is particularly noteworthy.

Mr. Cull, a native of Standlake, England, and a graduate of Yankton College, Yankton, S. Dak., and of the State University of South Dakota at Vermillion, became headmaster of St. Mary's School for Indian Girls at Springfield in 1955. His talk, entitled "The Race That Refuses to Vanish," is the result of his experiences at St. Mary's and very graphically points to the struggle of a proud and mighty people trying to find their place in the white man's world.

I may add that the Daughters of the American Revolution have established a custom which I believe might well be emulated by other great patriotic and service organizations of the Nation. They have, in a sense, adopted this little Indian school in South Dakota, which is privately supported. The Daughters of the American Revolution make a contribution from their own funds every year to this school, helping to support it and helping to make its services available to Indian children.

Moreover, each year, the Daughters of the American Revolution bring several of the girls from this school to Washington in the spring, to be the guests of the National Congress of the Daugh-

ters of the American Revolution, to see their Capital City, and to become better acquainted with the processes of Government.

It seems to me that many of our great public spirited organizations, looking, as they are, for people to help and causes to serve, might well follow the example of the Daughters of the American Revolution and select the cause of the American Indian as one to which they can devote some of their time, talent, and attention.

We all recognize the fact that we, as Americans, have not dealt equitably or amply or fairly with the American Indian. He has been making considerable progress in the last few years, but much remains to be done. All of it cannot be done by legislation; some of it must be done by the cooperative activities of private citizens who are willing to help the red man find a place in the white man's life.

I hope that others who read and hear of this activity will follow the example of the Daughters of the American Revolution and will, in their own way and in a place of their own choosing, devote some of their efforts and finances to help to make easier and happier the lot of the American Indian.

Mr. President, I ask unanimous consent that the interesting and informative address delivered by the headmaster of St. Mary's School for Indian Girls at Springfield, S. Dak., be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Madam President General, distinguished guests, and Daughters of the American Revolution; the President General has most graciously requested me to address you at this session of the 67th Continental Congress—a session devoted to your magnificent work among our Indian Americans and particularly at St. Mary's School for Indian Girls at Springfield, S. Dak. No words can express our thanks to you all for your continued support and interest in our work at St. Mary's. The best I can say is "thank you," but in saying thank you, I would also add something which I feel sure will be a blessing to you all, "It is more blessed to give then to receive."

At the New Jersey and Pennsylvania State conferences at which I was privileged to speak, the President General requested me to present to this Congress an address which is entitled "The Race That Refuses to Vanish." This I shall attempt to do this morning as frankly and sincerely as on previous occasions, and because so many of our girls are known to you through our scholarship plan, I shall from the outset speak to you of real persons. The names only have been changed.

There are 12 children in the Running Bird family. Three of the girls attend St. Mary's. The father has a heart condition and is unable to work. The family income for 14 people is less than $300 a month. They live in two wooden houses and haul water from a spring 2 miles away. On wash days this means two trips. There is no electricity. A few years ago they had to move their house when a new dam was built, they had to buy the land on which to set it, and it is possible that they will soon have to move again. The two oldest girls are honor roll students and both plan to become nurses.

Wilma Looks Twice lives in a log cabin with her grandparents. There is nothing on the dirt floor besides bedding and the furniture consists of a cooking stove. Wilma suffers from malnutrition.

Grace One Bear lives with her mother and seven children in a new 2-room Government home which was intended for an old Indian couple. Her father is in the penitentiary. The family lives on ADC. Last summer when Mrs. Cull and I visited this home to interview Grace, Mrs. One Bear could not even find the $1 application fee. There were half a dozen puppies outside in the mud and filth but we knew that these would all be Sunday dinners when it got cold. We took Grace, but of course there won't be any tuition forthcoming. Grace is a Sioux Indian, an American citizen, one of the first Americans.

Irma Bluebird is 11. Like so many she comes from a broken home and 3 weeks ago she came to the office in tears and wanted to go home. Her mother was in jail. She had hit a man with a hammer because he wouldn't admit that he was the father of her next child. All this from an 11 year old girl who wanted to go home and look after the other six children in the 2-room shack. Irma also is one of the first Americans.

The High Wolf family lives in a shack 40 feet long and 12 feet wide. There are 15 people in this house and in the shed along side it which has a dirt floor and which serves as an overflow for the many relatives. The father is an alcoholic. These are some of the first Americans, and their environment is part of America 1958.

Little Mary Eagle came to us from another broken home. She was quite retarded and at the end of her first year she did not return. We now know why—at 14 she has had her first baby and the father is her own stepfather. Such is the lot and tragic environment of these young Indian Americans, these first Americans.

Two years ago I had the unpleasant task of sending a girl home. Before she left, she asked me if I knew what there was on her reservation. I told her I had visited all our reservations. "Well," she said, "there are a few shacks, a beer joint, and a juke box and we girls sit around until 2 or 3 in the morning watching the drunks fight it out."

There is very little on a reservation for a young Indian, and when there is little or no parental guidance it is not difficult to see why there are so many Indians in our training schools and in our penitentiaries. Conditions off the reservations in our small towns and the large cities to which so many of our Indian people have drifted are little better and in many cases much worse. Here they find that, unprepared for our highly industrialized society, they are unskilled and, let's be quite honest, unwanted. Here, without work, they live in worse slums and soon fall a prey to the vices of our society. They are a frustrated people from whom almost everything has been taken, including their former initiative, and to whom for decades a mere pittance has been given by a paternalistic Government who assumed that they were members of a race which would vanish as did the buffalo. Daughters, the Indian American in 1958 is far from vanishing. Figures for South Dakota alone indicate that the Indian population is rapidly increasing and statistics show that the reservations will not adequately support 25 percent of the Indian population. No wonder then they drift to the towns. But they are unprepared for our modern way of life—and make no mistake about this—they are unwanted and suffer from discrimination and exploitation, a subtle discrimination, because the average non-Indian displays a shocking ignorance concerning our first Americans, an ignorance which indicates that he does not wish to recognize that there is an Indian problem, a problem which in a few years' time will be one of our greatest social problems.

Exploitation continues as ever in the selling of land and in the prices which Indians pay for many of the necessities of life. But, after all, they are members of a vanishing race which should have vanished with the buffalo.

Four years ago a little Indian boy called Robert was killed in one of those freak accidents. A piece of shrapnel from an aerial bomb pierced his chest at a firework display during the interval of a high-school football game. Of course, for the death of a little Indian American citizen his parents received compensation. At least we know they were able to buy a television set but, after all, he was only an Indian.

At this Congress last year a lady told me that she and others had recently provided a casket for a Sioux Indian. No one, it seemed, was interested in giving this first American a decent burial. But, after all, he was only an Indian who should have vanished from the American scene.

Perhaps you will remember that 4 or 5 years ago an Indian who had served in the Marine Corps died. He was refused burial in the local cemetery because his blood was a little different. He now lies in Arlington Cemetery, but he was only an Indian, a member of a race which originally inhabited this great land, but who should have conveniently vanished from the American scene.

These first Americans, on and off reservations, exist today with a higher rate of tuberculosis than any other racial group and a life expectancy of between 30 and 40 years. We are told that the life expectancy of a baby born on 1 of our reservations in Arizona is as low as 17 years. The figure would scarcely be higher for those born on reservations in South Dakota. This figure can be compared with that of 68 for a white man.

Driven from their native lands with and like the buffalo, ostracized, constantly supervised, kept alive by pitiful rations, existing in hovels and shacks these first Americans refused to vanish. Their treatment is a sordid and sorry page in our history and the ever present hovels and the underfed Indians of the Pine Ridge Reservation do not and never will compensate for the bloody massacre of Wounded Knee. There has been considerable talk recently in the press of the starving Indians on this reservation of South Dakota. Whether at this time they are starving or not, is debatable, but the fact remains that like thousands of other Indians throughout our land for decades these people have never received the right kind of food or enough of it and have been slowly starving.

Not far from such conditions and such an environment but sufficiently removed from them to provide a healthy training ground for citizenship and character training there stands at Springfield, St. Mary's School for Indian Girls founded in 1873 by a pioneer and visionary bishop of the Protestant Episcopal Church—a school which is well known to all of you but about which I should like to speak for a few moments.

To St. Mary's come girls from the many subtribes of the Sioux, the Ogalala, and the Rosebud, the Sisseton, Cheyenne, and Santee. We have in our student body Arapaho, Ariokara, Black Feet, Chippewa, Fox, Pawnee, Mandan, Shoshone, Bannock, and Apache. They come from the Dakotas, Wyoming, Montana, Utah, New Mexico, Idaho, Michigan, Minnesota, Nebraska, and Iowa. We have had them from Colorado, California, Wisconsin, and Illinois. We do not ask their degree of Indian blood because a girl who is one-sixteenth Indian may share the same environment and have as great a need as one who is a fullblood. They represent many denominations: Episcopalians, Methodists, Presbyterians, Congregationalists, and Roman Catholics.

For these girls who are carefully selected and which Mrs. Cull and I interview in their homes during the summer St. Mary's provides a course of training which has a four-

fold purpose: First, to build and develop Christian character; second, to provide a sound academic training; third, to provide such a course of training and learning experiences which enable the student to become a useful citizen and a leader among her own people; fourth, to provide guidance and financial assistance for all students worthy of an education at the college level. Emphasis, therefore, is placed upon character and citizenship and St. Mary's girls are taught to be proud of and loyal to their immediate family, the Indian people, the church to which they belong, their school, and last, and most important, their country. In the last place, therefore, emphasis is placed on the American, as well as on the Indian—they are Indian Americans.

St. Mary's is an accredited high school—the only accredited high school solely for Indian girls in the country. We teach all the normal subjects in the grades, and in high school, in addition to the language arts, social sciences, science, and business subjects. We offer creative writing, driver education, home economics, religion, and arts and crafts. Fifty percent of our students take piano lessons and every student takes chorus.

All these subjects are very important but the guidance which takes place after school each day and before school the following morning is, in many cases, much more vital to the ultimate training of a St. Mary's girl, because the Indian people have never been taught how to budget their money, how to look after their health, or to understand the importance of time.

Let me give you a few examples. Wilma Three Stars came to school this summer with $45 spending money, $5 for each month of the school year. She was very fortunate because many have very little and some none at all for weeks at a time. Her grandfather also brought $10 tuition. He did not understand that the tuition was more important than the spending money, and both he and Wilma needed guidance on this point. A few weeks ago one of our parents drove 90 miles one evening to bring $2 spending money for her daughter. Both she and her family have to learn that a 3-cent stamp would save both time and money. At times such a lack of judgment and sense of values is most frustrating but we must remember that they have never been taught to budget their money. This, however, does not mean that they do not learn.

As I have previously mentioned our Indian people present a tremendous medical problem. Far too often they see a doctor when it is too late, and they do not understand that it is important to carry out instructions. Many and justifiably, have no faith in the Government medical service. Each year nearly half of our students are found to need glasses and the dental bill for a typical school year amounted to $3,000. Two years ago, after very careful and continued guidance on the subject of wearing glasses, Mary Pretty Bear was still walking around without her glasses. On being asked why she was not wearing them she replied, "You said we were to give something up in Lent. I gave up wearing my glasses."

There is no word for time in the Dakota language. Constantly we must emphasize the importance of time in our modern way of life and we are becoming very successful. Two years ago our entire student body was back at school after the Christmas vacation within 24 hours of the scheduled time. The Indian had no need of a word for time but with the right kind of training he learns quickly if we have patience and understanding.

We have seven members on the faculty, all of whom to be successful must be dedicated, understanding, and devoted to the training of these underprivileged Americans. When the tuition asked of parents is only $100, and many pay far less and some nothing at all, our salaries are small and the need for dedicated teachers correspondingly greater. Our budget has been tripled in the last 2 years to provide for more students and to build a new dormitory. The church provides between 75 and 80 percent of the annual budget and the remainder is given by your society and the Children of the American Revolution.

Our main schoolbuilding erected in 1884 is thoroughly inadequate and unsuitable for present-day use. We must build a new school which will accommodate a hundred students instead of 65. This building we are planning to begin this summer and thanks to your special offering this dream has been made more of a reality though we still need a large sum of money before our needs will have been met.

Our training at St. Mary's emphasizes citizenship and whether a girl returns as a leader to her reservation or takes her place as an American citizen in a normal community, it is the most important part of the training of a St. Mary's girl. Each summer when Mrs. Cull and I visit the homes of our students we see the results of our work. We are not always as successful as we would wish and sometimes we are impatient but last summer in every home except two there was evidence of real progress, of an increase in self respect, and once again we could say as others had before us, "You can tell a St. Mary's girl by the home she keeps."

There are many plans and projects, many agencies, organizations and individuals which believe that they have an answer to the Indian problem. Some are grossly misguided and misinformed; others enlightened and progressive; but whatever the future holds for the Indian people one thing has become very clear; they live in a white man's world and a white man's society. To this modern society they must be encouraged to give all that was, and still is, virtuous and great of their own culture. They must learn to take from the white man's civilization, not his vices only—his drunkenness, his immorality, and his deceit—but his virtues. This will only come about if we as non-Indians understand that our first Americans are people who have similar rights and privileges.

I began this address with a frank but, believe me, not an exaggerated picture of the environment of some of our students. I gave you 3 examples—3 among many—of the discrimination and exploitation which our Indian people still suffer. In conclusion, I would give you one answer—an answer given by our Indians themselves who, with our help, can and must take their rightful places in our American civilization. It is an answer which indicates tremendous progress in spite of tremendous odds and a determination not to vanish from the American scene.

The Fire Thunder family live in a nice, new home in a small town in Nebraska. Their mother is a former St. Mary's girl; their father is an inspector in a factory. They are living as normal American citizens. Their two daughters attend St. Mary's today. Irene Winter Chaser, another graduate of St. Mary's is the wife of a college professor and a mother of two fine children—the entire family accepted as full members of the community in which they live. Irma High Elk with a bachelor's degree is teaching in the State of Washington and Marie Blackbird is a fully trained nurse in a Government hospital. All of these have taken advantage of the training which St. Mary's has offered for the past 85 years. They have all refused to vanish.

I spoke of a little dead Indian boy, of a Sioux with no one to bury him, and of a dead marine who was refused a plot in the cemetery. They were only Indians. Now I tell you of Ella Deloria, an anthropologist, author of the book Speaking of Indians. She is now working among her own people as head of our dormitory school at Wakpala, S. Dak. Miss Deloria is a cultured woman of high character and she is only an Indian. Dr. Vine Deloria, her brother, assistant head of the Home Department of the Episcopal Church with an office in New York is another Dakota Indian, and Ben Reifel, a Sioux Indian, director of the Aberdeen, S. Dak. area office of the Indian Bureau, with a doctor's degree from Harvard, is also just an Indian. They are all members of the race that refuses to vanish and what fine examples of this race they all are.

What progress has been made by our Indian people, many of whom only 40 years ago had not fully embraced the Christian religion, and some of whom can still remember the bloody massacres by the white man, and all of whom have suffered untold privations and discrimination? From the environment of a South Dakota reservation to a doctor's degree from Harvard is a path of progress unique in the history of civilization. In our blindness and with a callous disregard for the first Americans, we have overlooked the tremendous progress which they have made in a few generations. They have been asked in a very brief period of time to adjust from the blanket to the electric blanket. Have you ever thought how long it has taken us with great heritage to reach our present state of civilization? Close to 2,000 years and more.

When one looks back on the sordid and tragic treatment of the first Americans, one must stand in awe of their faith and determination throughout the years. Perhaps it is their faith which has, above all else, kept them from vanishing. This great faith I would leave with you this morning, and I would have you remember that today in 1958 it is this faith which alone remains as our Indians still find themselves unwanted, unprepared, unskilled, and frustrated. It is well expressed in the Indian version of The Lord's Prayer in which the first American realizes his own insignificance in the presence of his Creator. He kneels on the prairie in the bitter cold and intense heat and, in spite of the white man's lack of the Christian spirit, acknowledges the greatness of God:

> Great Spirit, whose teepee is the sky
> And whose hunting ground is the earth,
> Mighty and fearful are You called—
> Ruler over storms, over men,
> And birds and beasts:
>
> Have Your way over all,
> Over earthways as over skyways.
>
> Find us this day our meat and corn,
> That we may be strong and brave,
> And put aside from us our wicked ways
> As we put aside the bad works of them
> Who do us wrong.
>
> And let us not have such troubles
> As lead us into crooked roads,
> But keep us from all evil,
> For Yours is all that is—
> The earth and the sky,
> The streams and the hills,
> And the valleys, and stars,
> The moon, and the sun, and
> All that lives and breathes.
> Wonderful, shining, mighty Spirit.

In these words and in these thoughts and in this faith is revealed the patient suffering and the eternal human hope of the race that refuses to vanish.

The Birth of TVA

EXTENSION OF REMARKS
OF
HON. ESTES KEFAUVER
OF TENNESSEE
IN THE SENATE OF THE UNITED STATES
Thursday, April 24, 1958

Mr. KEFAUVER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial published in the Chattanooga Times of April 10, 1958, commemorating the transmittal of the message from President Roosevelt to Congress requesting the establishment of the Tennessee Valley Authority. A quarter of a century ago Congress began the consideration of a project which was to reshape the life of the entire Southeastern part of the country and raise the general level of prosperity of the United States. That project was the Tennessee Valley Authority. Since that time in 1933 when President Roosevelt introduced his proposal to create the Authority, the Tennessee Valley region has benefited in such a diverse and extensive fashion that it is difficult to recount the benefits. Briefly, however, it has brought low-cost power, stabilized the land, protected the forests, improved navigation, controlled floods, eradicated disease, attracted industry and contributed to national defense. It is doubtful that any other single project has so sparked the imagination of man and so illuminated the possibilities for similar development elsewhere.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Chattanooga Times of April 10, 1958]

THE BIRTH OF TVA

Twenty-five years ago today President Franklin Roosevelt transmitted to the 73d Congress a request for legislation creating a Tennessee Valley Authority: "A corporation clothed with the power of Government but possessed of the flexibility and initiative of a private enterprise."

A day later the late Senator George Norris of Nebraska, realizing a 12-year dream, introduced the bill to receptive Congressmen. Senators Kenneth McKellar and Nathan Bachman of Tennessee hailed the advent of a great industrial and agricultural development not only for our own State but for the entire Southland.

Today the TVA has been a fact for almost a quarter of a century, the act having been signed by the President May 18, 1933. Today we consider not only the continuing fruition of that development but the concept that gave it birth.

As fortune dictated, Franklin Roosevelt in his physical infirmity spent long hours pondering the problem of regional planning in his native New York State. At his "other home in Georgia" he gave much thought to national planning and particularly to the South and its relation to the rest of the country.

In his message to Congress he pointed out that Muscle Shoals Dam, built for needs during World War I, was "but a small part of the potential public usefulness of the entire Tennessee River." Behind his words was a vision, of a river as a massive resource with its potential for good or evil; a vision shared decades earlier by a famed predecessor, Theodore Roosevelt—and nourished by such men as Pinchot and Norris, Lilienthal and Clapp.

In short, Mr. Roosevelt said, the Muscle Shoals of war days led logically to planning for a "complete river watershed involving many States and the future lives and welfare of millions. It touches and gives life to all forms of human concerns." And there was the flavor of a Teddy Roosevelt in his summation, that of April 10, 1933: "This in a true sense is a return to the spirit and vision of the pioneer."

There are those most assuredly who still speak of the TVA in terms of a partisan demonology, and there is also perhaps a certain dispiritedness arising from the very taking of TVA for granted. The Authority's 25th birthday, lastly, happens to fall 1 day after the fourth anniversary of the Supreme Court's desegregation decision. The southland, in the tormented months in between, has thought of little else unless, of late, it be the recession.

But if TVA has not been large in southerners' thoughts just now, its example remains in southern memories. And, once again, 25 years after its inception, it faces a crucial legislative test in the matter of self-financing. Again, it will be an active public concern in coming weeks.

What Franklin Roosevelt sought, in his words, "transcends mere power development: it enters the wide fields of flood control, soil erosion, afforestation, elimination from agricultural use of marginal lands, and distribution and diversification of industry." National defense, as well as other features, was to be added as a vital aspect.

The 20 dams TVA built in its first 20 years; its steam plants for supplementary power; its fertilizer and malaria-control work; its navigation; all have been a spur and an incentive to private industry as well as a storied example of the whole world of what a truly integrated river development can be.

The TVA has touched the valley and given it added life. It has helped rehabilitate the land and conserve the forests. It has, with no exaggeration, electrified us with the fact of low-cost power and of efficient operation. It remains controversial but the day it ceases to be so it will have lost its vitality. For if it has not realized today the whole of George Norris' dream, it still encompasses the age-old desire to bring forth the oneness in nature—to harness most fully its power to lessen man's burden, to enoble and to enrich him.

Financial Assistance to Schools

SPEECH
OF
HON. GRAHAM A. BARDEN
OF NORTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 23, 1958

The House in Committee of the Whole House on the State of the Union had under consideration the bill (H. R. 11378) to amend Public Laws 815 and 874, 81st Congress, to make permanent the programs providing financial assistance in the construction and operation of schools in areas affected by Federal activities.

Mr. BARDEN. Mr. Chairman, I rise in opposition to the amendment.

Mr. Chairman, I do not know where this amendment came from. I do not know what it includes. I do not know how far-reaching it would be. I do not know how much it would cost. I know one thing. It has not been discussed in committee. I do not believe there are a half dozen men in the House who could explain it or understand it without reading it, and I have not seen a copy of it.

Mr. WAINWRIGHT. Mr. Chairman, will the gentleman yield?

Mr. BARDEN. I yield.

Mr. WAINWRIGHT. I do not think there are a half dozen men in the House who understand the bill.

Mr. BARDEN. I think the gentleman is underestimating the intelligence of the House a little bit, but I just say this, Mr. Chairman. I have a lot of faith in the intelligence of this House, and for that reason I do not think they need one bit of argument against that amendment and I ask for a vote on the amendment.

Independence of Israel

SPEECH
OF
HON. MARTHA W. GRIFFITHS
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 23, 1958

Mrs. GRIFFTTHS. Mr. Speaker, we in the United States have a special reason for rejoicing with Israel in the celebration of her 10th anniversary as an independent nation.

Ours was the first government to recognize Israel after she proclaimed her independence in May 1948. The United States also took the lead in sponsoring her admission to the United Nations.

We have not only witnessed but have been privileged, as well, to assist in the momentous task of development and reconstruction which has enabled Israel to surmount seemingly impassable obstacles. The progress made by Israel's economy is probably best indicated by the fact, that, despite the need to feed, clothe, and house 3 times as many people as lived there in the early days of Jewish statehood, and despite the rise in the standard of living of the old settlers, the adverse foreign trade gap increased by only 20 percent, rising from $224 milmil in 1949 to $273 million last year. Moreover, while exports paid for a mere 11 percent of the imports in 1949, they paid for more than one-third last year.

We have been richly rewarded in the help we have extended to this small nation. We have watched Israel welcome about a million refugees of varying tongues and cultures. During its brief lifetime as a nation, Israel has opened its doors to approximately 900,000 Jewish immigrants from displaced persons camps in Germany, Austria, Italy, countries in north Africa, and the Middle East, as well as other parts of the world. Starting with 600,000 Jews in British mandated Palestine 10 years ago, they have increased the number of the Jewish population there to 1,800,000 by today.

That Israel has made such progress is justification of the faith of those who shared in the work of establishing the country, and is proof of the great spirit and the dedication of the people of Israel to its just cause.

In 10 short years Israel has developed into the most advanced nation in the Middle East—an oasis of democracy in an area that still clings to feudal concepts.

Israel has faced many threats to her survival from the moment of her birth. Israel has and is continuing to play a constructive role in the family of free nations.

Israel stands on the threshold of a challenging decade. She merits the continued moral encouragement of all who share her great love for liberty and independence.

Foreign Aid: Necessary in Spite of Its Faults

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 24, 1958

Mr. LANE. Mr. Speaker, seldom do we see an editorial that considers the arguments for and against, before arriving at a reasonable conclusion.

Too often there is more heat than light.

The American people, through their Congress, must look at an issue from all sides, and not just two, in order that they may be fairly sure of taking the right step toward the solution of a complex problem for which there is no certain answer.

In foreign aid, we must take calculated risks.

It is far better to do something, imperfect as it may be, than to adopt a do-nothing policy, that permits communism to move into the vacuum.

The following editorial titled "The Case for Aid," from the Chelsea Record, of Chelsea, Mass., dated April 14, 1958, brings us the clear and concise opinion that, after all the arguments are in, the decision is in favor of foreign aid.

I ask for unanimous consent to reprint this editorial in the Appendix of the CONGRESSIONAL RECORD.

THE CASE FOR AID

Numerous political leaders, as well as many average Americans, appear to have a false perspective on the complicated issue of foreign aid. It is regarded as a cheap means of defeating communism; it is seen as an investment in American security, and as a means of winning friendship for the United States.

What is false about this perspective is that it assumes too much, and too simply. Poverty and backwardness are not the only causes of communism. The appeal of communism often is felt most strongly by the intellectuals, by the educated, in some of the underindustrialized countries. Foreign aid is not likely to change the minds of the elite who shovel pro-Russianism or pro-Marxism to ignorant masses. Nor is aid likely to win friends overnight for the white man and for the West.

Then why aid? The soundness of aid is that it permits underindustrialized countries to make more effort at industralization. Also, American aid provides contact with the West and the ideas of the West. It widens the channels of Western influence and reveals a Western example different from that of colonialism. But aid does not work quick miracles. It does not necessarily mean that defense will be easier for us, nor will it bring us quick allies. It does, however, strengthen the power and position of pro-westerners in the underindustrialized countries.

Aid is a long-run investment. Like all investments, it cannot be absolutely guaranteed in advance. The conditions and problems of each country should determine whether or not aid should be given and, if so, how much and what kind. The time has come for developing an overall, coordinated aid program.

The Truth Shall Make You Free

EXTENSION OF REMARKS
OF
HON. WAYNE N. ASPINALL
OF COLORADO
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 24, 1958

Mr. ASPINALL. Mr. Speaker, in the last 6 months the American public has suddenly become aware that a good school system involves a great deal more than simply providing adequate classroom space for the increasing numbers of children who attend our public schools. There have been signs of an awakening to the fact that fine school buildings, although desirable, do not automatically bring about a correspondingly good school system.

Mr. Speaker, one of the most sensible statements of the basic essentials of a good educational system that I have read in a long time is contained in an address delivered recently by Rear Adm. H. G. Rickover at the Polytechnic Institute of Brooklyn. Admiral Rickover's address should be required reading for those who are concerned with making our public school systems top flight educational institutions. The address follows:

THE TRUTH SHALL MAKE YOU FREE

(Remarks by Rear Adm. H. G. Rickover, United States Navy, Chief, Naval Reactors Branch, Division of Reactor Development, United States Atomic Energy Commission, and Assistant Chief of the Bureau of Ships for Nuclear Propulsion, at the Dedication-Inauguration Ceremonies, Polytechnic Institute of Brooklyn, Brooklyn, N. Y., April 19, 1958)

I thank you for the honor which you have bestowed upon me today. Although I appreciate that a doctorate of engineering is a personal award, I prefer to accept it in the name of all who have been associated with me in the naval nuclear power program. In an engineering project such as ours, whatever credit may be earned belongs to everyone who has shared in the work.

It is a great pleasure to be present at the dedication of the new home of Brooklyn Polytechnic and to address this distinguished audience. As I now have a filial interest in this, my adopted alma mater, may I be permitted to start my speech with a word of caution: Do not, I beg of you, in this beautiful new home lose the traditional spirit of plain living and high thinking which was so well expressed in the remark of one of your academic stars: "What do we want with marble halls? We've got men."

I have always felt that marble halls are not a necessary environment for serious intellectual work. I am therefore pleased to note that the predominating atmosphere here is utilitarian rather than Ionian. This is as it should be in an institution which has always been distinguished by single-minded concern with matters of the mind, and which can match its atmosphere of scholarly austerity with that of any of Europe's famous and venerable centers of learning.

In some curious fashion we, in this country, have convinced ourselves that higher learning has had a fashionable cachet abroad and retains it to this date. Many of us think of academic life in terms of leisurely pursuit of culture in ivy-clad towers, as unreal a picture of most European universities as could be imagined. Far from being islands of aristocratic privilege, these universities have always been intellectual workshops of austere aspect. In the long and honorable history of learning which sets western civilization apart from all others and to which the Western World owes its dynamic quality, the scholar and the student have more often been poor than rich. The medieval and Renaissance universities which shaped the crude intellect of Europe through association with the polished mind of Greece and Rome offered no more nor less than a chance to seek truth, to achieve liberation of the mind from ignorance and superstition.

These universities were built of men—professors and students—rather than of brick and mortar. Lacking fixed assets, they went wherever academic freedom could be found. In truth, that was all they needed. Unincumbered by material possessions, Europe's students were free to wander from university to university, searching for the best professor in their field of study. Traditionally, scholars have been as rich in spiritual freedom as they have been poor in tangible wealth.

I read a story the other day which illustrates this point. It tells of Guarino, a famed Italian of the 15th century, who taught rhetoric and Greek in a small Italian town. Students flocked to his classes from the four corners of Europe. In coldest weather they waited patiently outside the room in which he lectured—shivering in their thin garments, undeterred by freezing rain or snow. It is difficult to imagine such eagerness for learning today. Guarino spent most of his income helping the poorest of his students, and with them he lived in utmost austerity. Still one must not think that life was grim. Medieval students were as full of pranks as are today's. Guarino himself was a sociable soul. He often invited his friends to share with him fave e favole—beans and conversation.

True enough, professors and students formed a cosmopolitan elite, but it was an elite of the mind, not one of social privilege. Communicating with each other in the universal language of scholarship—Latin—steeped in a common heritage of classical Greek and Roman culture, the scholars were the first true Europeans. Upon the unity of spirit and mind which they built must rest today's hope for unification of that divided continent. All of us in the west owe to them our phenomenal wealth and power—all of us benefited when the trained minds of scholars took on the task of putting science to work on man's age-old problems of disease and want.

I do not advocate for our professors and students a return to such austerity, but I wonder whether, in our schools and universities, we have not lost sight of the supreme importance of men as compared to the relative unimportance of buildings. I do not like to see a splendid school more

from modest quarters where it has achieved solid academic success. During a tour of duty in the Far East I may have subconsciously absorbed from the Chinese their misgivings about such moves. For in times past when China was noted for her wisdom, it was considered extremely risky for a wealthy merchant to leave an old and shabby store where he had prospered, lest he offend the good spirits who had brought him success. I suspect this was not so much superstition as that oblique sort of commonsense reasoning for which the Chinese have long been famous. They could readily see that the upkeep of elegant new quarters would have to come out of the pockets of the customer in higher prices or shoddier merchandise. So they would naturally take their business to wiser competitors, and thus in time the new house would eat up the profits, and that would be the end of the foolish merchant.

Now, this is not meant as pure whimsy. I am, of course, not seriously worried that Brooklyn Polytechnic will do less important things in the new big rooms than it used to do in the old little ones. Nevertheless, I believe that overexpansion is risky for any educational institution. It means sometimes a long-term debt; sometimes greatly increased overhead costs, and these must be met some way. Sheer need for survival may force compromise with academic standards. Tuition may become more important than the quality of the student. Endowments with strings attached may have to be accepted, even if they disturb the atmosphere of scholarship which is as necessary to an educational institution as pure air is to man. Research grants which might formerly have been rejected may now have to be accepted for the money they bring in, regardless of whether they fit into the academic program or not. Professors and graduate students may consequently be turned into mere laboratory technicians.

Not a few small colleges which once stood like beacons of light in the world of scholarship have grown, and are now huge run of the mill universities accommodating thousands of students, many of whom are in search of things not strictly academic. But the hard pressed administrator struggling to meet steadily rising costs not only welcomes them; he tries to find courses which will attract them. What had been a good academic program is thus lost in a proliferation of trivial vocational courses and service activities, designed to attract the future homemaker no less than the theoretical scientist, the beautician as well as the physician. The world is thereby the poorer, because excellence has been traded for size.

Size always endangers quality. Colleges and universities are as likely to overexpand when successful as are other types of organizations. They are after all merely one particular type of the genus organization, and they are susceptible to the same virus of elephantiasis which attacks other corporate bodies. The trend towards excessive growth is today as great as it was when the late Justice Brandeis warned us so eloquently of its perils.

Let me elaborate a moment on the subject of this danger:

Most of the work in a modern society must be done by corporate bodies, simply because ours is a civilization of extreme specialization. Few tasks can therefore now be done by a single individual. Most tasks call for large numbers of people working together. Experience has shown this can best be done by establishing an organization. Someone must run things; lines of command and responsibility must be laid down and people must be allotted their several tasks. In any sizeable organization there must be some people who merely maintain the proper environment in which productive work can proceed smoothly. They tend the physical plant and handle personnel matters, their talents are in housekeeping and administration, and their function is, or ought to be, entirely subordinate to that of the productive workers whose labors alone justify existence of the organization.

Whoever has had anything to do with organizations will have observed the tendency of the administrator to gain control over the whole corporate body. Yet it can be stated flatly that the success of any organization can be measured quite accurately by the relative position of the administrators and the productive workers. The successful organizations get along with a minimum of housekeeping staff and keep them confined to their proper place; those whose real work is declining almost always have swollen administrative staffs. Nothing worse can happen to an organization than usurpation of command by administrators. This is because a natural desire to enhance their own importance leads most administrators subconsciously to look upon the organization as an end in itself rather than a mere legal and administrative convenience. They are therefore natural boosters for size; they are inclined to foster expansion for its own sake, sometimes in inverse ratio to the amount of real work done; occasionally after production has all but ceased.

In this country we tend to turn every human occupation into a business. We think that every organization profits by introducing what we term business methods. But a businesslike attitude makes for efficiency only in purely routine matters. It is disastrous when applied to creative people whether they work in an educational institution, a research center or a government department.

The role of the administrator is of necessity less important where creative intellectual work is done than where the work is routine. Any capable administrator can learn enough about the technique of routine production to organize it efficiently and to provide a proper environment for the worker. These are matters for which he has been trained. But few administrators possess the capacity to master the special fields in which creative brainworkers are expert; nor can they, as a rule, understand the mental processes of professional people and the atmosphere of intellectual freedom without which these people cannot work effectively. Without mastery of the subject and understanding of the people, there is little an administrator can contribute to improvement of the mental work done in his organization. Worse, he often becomes more of a hindrance than a help. Not infrequently, all he does is interfere with the professional staff and reduce real productivity by constantly bothering them with trivia. Nobody can waste as much time as a superefficient administrator trying to run a group of eggheads.

I fear that we have gone far toward lowering the output of our brainworkers by overorganizing them. We are drowning in paperwork. We are talking ourselves into a standstill in endless committees, those pets of the administrator. We are losing the genius we once had for improvisation. Nowadays nothing can be done without elaborate preparation, organization and careful rehearsal. We have been diluting responsibility for making decisions by piling layers of supervisory administrative levels, pyramid fashion, on top of the people who do the real work. All of this has resulted in a dangerous lengthening of lead time.

By lead time I mean, of course, the time which elapses between conception of a new idea and the moment when the idea has been transformed into a useful new object rolling off the production lines.

Lead time is an exteremely important factor in military strength. Starting even, one nation will soon outpace another if it has no other advantage than ability to transform ideas more rapidly into mass-produced military hardware. We know that the Russians have overhauled us in lead time for certain items which they have decided to concentrate on in order to achieve their goal of military and technological supremacy. We cannot permit this to go on. If overorganization lengthens our lead time we must heed Thoreau's cry of "simplify, simplify."

As dangerous as excessive lead time in military items is excessive lead time in producing the professional men and women needed to run our complicated society. Never before has the future of a nation depended so greatly on its ability to train enough specialists and to train them rapidly. The efficiency of a country's educational system has become as vital an element for national progress, perhaps even for survival, as its industrial and military strength. In fact industrial and military strength cannot advance if education lags behind.

Our professional schools are not to blame for our chronic shortage of able professional people. They have a clear-cut purpose and must meet definite standards set by State licensing requirements or by professional associations. Most of them are efficient and require no more time to turn out professionals than similar schools abroad.

But professional education in America is handicapped by the inefficiency of our public elementary and secondary schools. These delay preparation of the student for entry upon professional study far beyond the time when his European contemporary is ready to begin such study. Because high school graduates lack a broad enough general education, most professional schools now require completion of from 2 to 4 years of college by every prospective student. This discourages many able students from choosing a professional career. Even where a high school diploma will still suffice for admission—as in engineering schools—previous educational deficiencies must be made up by requiring remedial courses in English, mathematics, and the sciences. In European school systems these courses are completed before the student reaches the age of 17 or 18. Incorporating these essentially secondary school subjects into the engineering curriculum makes the study load unnecessarily burdensome and partly accounts for the high dropout of engineering students before completion of the full course.

A pernicious mañana spirit permeates our public elementary and secondary schools. The time when pupils come to grips with real study has for years been progressively delayed. Each year the American child drops a bit further behind his contemporaries abroad. He still cannot spell in his own language when abroad children his age are already deep in serious literature and are carrying one or more foreign languages, besides heavier schedules in mathematics, sciences, history, and so on. Recently I was told of a German exchange student who, though an average student at home, not only found school here ridiculously easy, but actually stood highest in English—mind you in English—among his American high school classmates.

We waste the best years of our children, when their minds can most easily and rapidly absorb a wealth of facts and when their curiosity is most lively. We do this in the name of democracy and of the sacred comprehensive school which must cater equally, and perhaps even in the same classroom, to children of such diverse mental capacities that among one age group the mental age between the least gifted and the most gifted may differ as much as 6 years.

The excuse for this procrastination is always that ours is mass education while Europe's education is for the aristocracy. This is an erroneous and spurious alibi. Ex-

cept for relatively short periods of time, European higher education has been primarily the concern of the middle class, but with scholarships available for talented children of the poor. In fact, education has long been the principal channel of social advancement for gifted children of Europe's lower middle class, artisans, farmers, clerks. In the past, the aristocratic father did not find it necessary to subject his son to the rigorous mental discipline of higher learning; at least not until his privileges had begun to decline and he had to compete with a rising middle class.

Not school fees—which were always modest—but inability to finance years of unproductive life for their children, has in the past kept the European masses from higher education. Europe is simply poorer than we for lack of ample land and natural resources. Also, in class societies parents tend to feel that what was good enough for them is good enough for their children. The desire to give our children a better education than we have had ourselves goes hand in hand with a high standard of living and an expansive optimism such as we have had in our country since its beginning.

But in Europe, too, the level of life has risen and democracy has been growing steadily. There, too, proportionately more children now attend academic secondary schools and universities. For example, between 1850 and 1950 the population of the Netherlands tripled but the number of university students multiplied 28 times.

Long ago, most European governments took over all or a major share of the cost of education from kindergarten to university. Elementary education was made free in some countries before we ourselves took that step. Fees for secondary and university education have either been abolished or are adjusted to the parents' income. In their internal management European schools and universities enjoy great freedom and it is to be doubted whether the relations between principal and teaching staff is any less democratic there than here.

Though their national gross income is less than ours, the percentage devoted to education is very nearly the same as it is here, as is the percentage of young people studying for the professions, about 6 percent. Professional study, in fact, is much cheaper there—for example, $75 a year for tuition in Holland. But in Europe, a variety of courses are available after elementary school ends. These are tailored to fit the aptitudes of children, as determined by examination. Teachers are on the lookout for gifted pupils and urge their parents to let them go to schools preparing for the university. Due consideration is given the late bloomers who always have a chance to switch tracks later on, though at the cost of losing 1 or 2 years.

The careful manner with which European school authorities seek to find the proper type of schooling for each child's individual gifts is often criticized here as cruel and undemocratic. Weeding out by means of examinations, in particular, arouses pity and horror. Most Americans seem to regard education as a sort of commodity or service which anybody ought to be permitted to get, simply by paying tuition or by having the cost of education met through taxes. Let me give you an example of this curious attitude as reported in a newspaper.

A young principal in a western high school, on checking his pupils' intelligence and achievement tests, found that he had enough talented students to warrant setting up a special course for them, a tough academic curriculum. The children liked it and so did their parents. But not the rest of the community. Furious at what they considered unfair treatment of their own chfldren, the parents of those not included in the hard course not only managed to get it stopped but got rid of the young principal to boot. Though this actually happened a good while ago, similar cases have been reported recently.

I fear that we shall not have real improvement in our educational system until it is widely understood that education is and always has been something which money alone cannot purchase. The only acceptable coin which buys an education is hard intellectual effort. How much education can be bought with mental effort depends on the quality of the teacher and of the pupil. Strong motivation can often offset a modest I. Q., and we also know that a high I. Q. without strong motivation can be ineffective. All that a democratic government can do to insure educational equality for all its children is to throw open the school to everyone who will make the effort to learn. This, most of our European friends have long been doing. Insistence on intellectual effort is where we have fallen down.

We also seem to think it more democratic that in this country public education be controlled by some 50,000 local school boards and State boards of education. Almost everywhere else standards for teacher qualifications; for content of curricula, and for school-leaving examinations are under a national ministry of education composed of highly educated men. We show a surprising lack of confidence in ourselves when we fear to let a Government agency set uniform educational standards. It all depends, of course, on what we expect of the men in such a ministry of education. If we want them to be noted scholars—as do the Europeans—and if we grant such scholars the right to determine curricula and to devise the best teaching methods, then it is difficult to see how their recommendations for educational standards for teachers and schools could possibly endanger our democratic freedoms.

Robert M. Hutchins once asked a former minister of education of the Netherlands what would have happened if the minister had appointed a professor of whom the faculty of the university did not approve. The reply was, "My Government would have fallen." The people of Holland feel strongly enough about academic freedom to require of their Government respect for the right of university faculties to select new members solely on the basis of their academic qualifications.

We do not have such respect for scholarship. Our State universities enjoy no such freedom from political interference. Nor are our elementary and secondary schools run by teachers and scholars, who are the only productive workers in the field of education. In our fear of Government control, we have lost the advantages to be gained from entrusting the curricula of our schools and the training of our teachers to the most highly qualified scholars in our land.

As an engineer, specifications are second nature to me. I cannot conceive of maintaining quality without exact standards. It is obvious to me that these ought to be expertly formulated and uniform in a country such as ours, where people constantly move from one place to another and children often have to change schools several times. Lacking central direction by an agency of high scholastic standing, who then does determine school curricula and teacher qualifications in our country? The answer must be that responsibility for this vital task is quite diffuse.

The quality of our teachers is governed by certification requirements, set by State boards of education. But professors of pedagogy, school administration, and child psychology in our teachers colleges are so influential on these boards that it is often they who prescribe the content of certification requirements. Unfortunately, these influential educationists are seldom qualified to control the professional education of our children's teachers. They naturally consider the subjects they themselves teach most important for teacher education, and they are usually biased against subject matter courses. Indeed, few subject matter courses are to be found in teachers college catalogs. Yet, courses in pedagogy merely teach how to present a subject to the pupil, not what the pupil is to be taught. Putting the emphasis on the how, at the cost of the what, makes American teacher qualifications lopsided. If I may explain:

In all learned professions there are certain tricks of the trade without which the most profound knowledge of subject matter cannot be fully utilized. A trial lawyer must pay attention to his apperance, his voice, his psychological insight into other men's minds; he has to be somewhat of an actor. This professional know-how is not taught in law schools. It is an art acquired during pursuit of one's profession. In education, pedagogy compares with this know-how. It admittedly has great importance in the early school grades where presentation of subject matter to very young minds will greatly affect their grasp of it. But as the pupil's mind matures, method grows progressively less important. Teacher training everywhere includes pedagogy. But in no other country is so large a part of teacher training devoted to study of methods, so little to knowledge of subject matter.

This excessive stress on study of the tricks of the trade benefits no one but professors who teach these courses. These, indeed, will never lack for students. Not only are their courses required for all who want to become teachers, but they can count on a continuous flow of returnees, for a teacher can advance only if he goes back for more of the same courses at stated intervals. His proficiency in his subject matters not one whit. Since even a teacher's time has limits, this control over his professional development prevents all but the most self-sacrificing from acquiring as profound a mastery of their subject matter as is required of their confreres abroad. The ultimate loser is the American child.

Next in importance to teacher qualification is the content of school curricula. Here, too, the faculties of teachers colleges are influential. But members of local school boards, pressure groups of various kinds, school principals, and parents also have something to say in this matter. The people best qualified to render competent advice, the schoolteachers and the college and university professors who must deal with the products of our public schools, all these have little influence. On the other hand, the administrators of our school plant, the principals and superintendents of schools, though seldom professional scholars, these have great influence.

We have thus in this country the curious situation that people with little practical experience in classroom teaching and little knowledge of subject matter decide what the true professionals, the schoolteachers, must teach.

This is again a case of administrators taking command. Perhaps it has happened because our educational plant has grown so rapidly—has had to make room for our fast-growing child population. Each year we increase by 3 million. This is more than our total population at the end of the American Revolution. To provide room for the newcomers is a stupendous administrative task. No other industrial country in the world has a problem of such magnitude in education. Doubtless this has enhanced the position of the school administrator. Perhaps, too, as a people we respect a practical administrator more than a teacher or scholar. Whatever the reason, our school principals and superintendents of schools exercise extraordinary control over curricula and over the teaching staff Rarely is their relation to the

teachers one of primus inter pares. Most often it resembles that of employer to employee.

This would matter less if school principals were always former teachers or if they were scholars. But despite their masters' and doctors' degrees, these men are usually school administrators pure and simple. Their academic titles are seldom won by original research and study of a learned discipline. They are often in such subjects as, the technique of estimating school equipment costs, a scale for measuring anterior-posterior posture of ninth grade boys, or public-school plumbing equipment. Before we allow ourpselves to be overly impressed by degrees in education, we might well investigate in just what fields these have been won. But whatever their academic worth, these degrees open positions of influence in deciding whether the school will provide a solid academic course of study preparing for college entrance, or one which slants the curriculum toward what one Califo rnia school calls the essentials of living. These particular essentials turn out to be such things as how to take care of a home; how to budget one's income; how to buy the right kind of food; and—not surprisingly perhaps—how to make minor repairs on household plumbing.

This sort of thing is likely to happen when teachers and curriculums are put into the hands of people who are by training superintendents of works. There is no doubt that in their special field, these men have done an outstanding job of efficient and honest management. It is only when they impinge on the professional preserve of the true teacher that I voice criticism.

Now that the sputniks have opened the floodgates which damned a torrent of long-suppressed parental dissatisfaction with our public schools, steps are being taken here and there to toughen curriculums and throw out some of the rubbish and trivia cluttering up American education. There is growing recognition that we must free our schools from the experimentalist philosophers who have been in control of our teachers colleges since Dewey and Kilpatrick set out to destroy traditional ways of teaching the young. It is true that progressive education deserves credit for having brought a relaxed and friendly atmosphere into our classrooms. But it has not stopped there. On its own pragmatic terms we must reject it for it is a proven failure. It does not adjust the child to life in a society such as ours. The assertion that it prepares the child for life and that it does this better than a traditional education has simply not been borne out by experience.

Dewey claimed that the primary business of the school is to train children in cooperative and mutually helpful living. I submit that this is an erroneous conception of education in a dynamic, competitive society. It may be appropriate in static cultures which value the status quo above all else, since it does indeed develop pleasant young people who can readily fit into any group and get along splendidly with their peers. But do we really want a happy-ant-school system, as Senator FLANDERS of Vermont put it so succinctly? History shows that there is little comfort for the survival of a society composed of happy, cooperative ants.

I do not believe our present piecemeal attempts will toughen the schools effectively unless we reach a consensus on just what we expect our schools to accomplish. What is their purpose? What sort of person would we like young graduates to be?

Each of us must find his own answer to this question, and must then express his wishes clearly and in a proper democratic way to those who run our schools. For what it may be worth, here is my own answer:

Formal education in schools should, I believe, be clearly differentiated from such learning as may be termed incidental, what the child picks up in the home, in association with contemporaries and adults, and from his personal experiences. The school's concern is with the intellect alone. Young people in this modern world need minds that are well stocked with the kind of knowledge that makes life intelligible. No substitute for a liberal arts education has yet been invented that serves this purpose so well. English, foreign languages, mathematics, sciences, history, geography—these are the subjects which must be mastered. They are the intellectual tools that enable us to order our lives intelligently, to understand the complexities of today's tense and uncertain world.

A school succeeds when it sends its graduates into the world with minds which function markedly better because of time spent in the classroom. The child's own endowments and his determination to develop them will of course set limits to what the school can do for him. All we have a right to expect of the schools is that they will strengthen this determination and allow no other limits but those set by nature to impede any child's intellectual progress.

Unfortulately, the wrong kind of school may handicap the child's progress. Children may not only be barred from mental growth where high tuition withholds education from poor children; just as much harm may be done when pupils are forced into an intellectual strait jacket for the sake of democratic equalitarianism. A school system which insists on the same instruction for the talented, the average, and the below average child may prevent as many children from growing intellectually as would a system that excludes children because of the social, political, or economic status of their parents. Neither system is democratic. Attendance figures may be impressive but they mean little when they represent attendance in schools where the mind lies fallow.

Nothing we bestow upon our children in the way of material advantages can compare with the gift of a good education. We often speak of democratic freedom, and of course we treasure it. But basic to political freedom is personal independence; and this can exist only where the mind has been unshackled from ignorance, from dependence on the opinions of others, and from fear of disagreeable facts. Bombbarded as all of us are, all day long, by subtle sloganeers seeking to convert us to their views, we sorely need mind that have been sharpened by hard intellectual work. We must know how to dig up our own facts, how to discover truth for ourselves. The person who has learned to trust only proven facts, who knows how to find and recognize truth, and who has been trained to decide all issues on the basis of truth and reason—he and he alone is a free man.

In my opinion, the purpose of schools is to help children to develop minds which are free, because no inner deficiencies or outer pressures can then bar them from truth and, through truth, from inner freedom. I believe with Francis Bacon that, "It is heaven upon earth, to have a man's mind * * * turn upon the poles of truth," and this I want for our children.

Distribution of Surplus Food

EXTENSION OF REMARKS
OF
HON. MARTHA W. GRIFFITHS
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 24, 1958

Mrs. GRIFFITHS. Mr. Speaker, I request your permission to submit the following letter for the RECORD as I feel it speaks eloquently in support of a food stamp plan under which a distribution of surplus food can be made to our needy. Hearings were recently held on this proposal by the House Agriculture Committee, and the letter submitted herewith should disturb every Member of Congress into taking immediate and positive action:

FOOD INDUSTRY COMMITTEE,
Detroit, Mich., April 22, 1958.

Hon. MARTHA W. GRIFFITHS,
House Office Building,
Washington, D. C.

DEAR MARTHA: I know you will be interested in hearing that we have just received a call from the welfare department in which Daniel Ryan advised us that they are being swamped by applicants for surplus foods because of unemployment. There has been an average of 500 persons per day over the past week who have exhausted their unemployment benefits, and, therefore, are eligible for these foods.

It is going to be a tremendous job to try and handle them and certainly a food stamp plan which would permit these persons to go to their own retail grocer would go a long way toward solving our problem.

Sincerely yours,

W. E. FITZGERALD,
Executive Secretary.

Award to Staff of Medford (Oreg.) Mail-Tribune

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Thursday, April 24, 1958

Mr. NEUBERGER. Mr. President, one of the outstanding newspapers in smaller communities of the United States is the Medford Mail-Tribune of Medford, Oreg. This newspaper was honored some years ago when its distinguished editor, Robert W. Ruhl, received the Pulitzer prize for outstanding achievement in the field of editorial writing.

Now the Medford Mail-Tribune has been honored again at the national level, with an award of merit for distinguished coverage of religious news during the year 1957. The award particularly honors Miss Peggyann Hutchinson, the church news editor of the Mail-Tribune, for her extremely fair, accurate, and complete reports of religious activities in the Medford district.

Because the Nation as a whole has recently been following the annual meetings of various groups representing the fourth estate, I ask unanimous consent that the article from the Medford Mail-Tribune of April 18, 1958, describing the award to Miss Peggyann Hutchinson, be printed in the Appendix of the RECORD.

The being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Medford (Oreg.) Mail-Tribune of April 18, 1958]

PEG HUTCHINSON GIVEN HONOR AS RELIGIOUS WRITER—WRITER IN NEW YORK TO ACCEPT AWARDS

The Mail Tribune last night was presented with an award of merit for distinguished coverage of religious news during 1957.

The award was one of three presented. The others went to the Detroit (Mich.) Free Press, and the United Press associations.

The award was presented at the Riverside church in New York City, and was accepted by Miss Peggyann Hutchinson, church news editor for the Mail Tribune, who herself was cited for her extremely fair, accurate and complete reports of religious activities in the Medford district, which have won for her the confidence of ministers and all church people in the Mail Tribune's circulation area.

CASSELS RECEIVES AWARD

The awards were presented by the National Religious Publicity Council at the 29th annual convention of the Association of Professional Religious Public Relations and Publicity Personnel. Receiving the award for the United Press was Louis Cassels of Washington (whose byline has frequently appeared in the Mail Tribune), and for the Free Press, the award was received by Adrian Fuller, religion editor.

The Mail Tribune's citation said:

"The Medford Mail Tribune is known for its high standards of professional journalism not only throughout its home State of Oregon, but throughout the Nation. In 1934 it received a Pulitzer award 'for the most disinterested and meritorious public service rendered by any American newspaper during the year 1933.' It has always maintained the high caliber of reporting and editorializing which won for it that most respected of journalism awards."

SHOWN BY REPORTS

"Part of the public service rendered by the Mail Tribune is the unfailing attention it pays to news of the activities and interests of all religious organizations in Jackson County. This is shown by its full reports on through-the-week events in the life of the county's 80 churches, the considerable space given each Friday to stories and photographs concerning local religious activities, and the regular reporting of the wider State and National affiliations of Jackson County churchmen and churchwomen.

"Because the Medford Mail Tribune has an established policy of portraying reverently and completely the principal religious festivals and events important in the life of its community, without neglecting the wider national and world setting of these events, the National Religious Publicity Council presents to it this Award of Merit."

DEDICATED WORKER

Miss Hutchinson's award said:

"Miss Peggyann Hutchinson combines, to an unusual degree, the qualifications making for superior type of religious newswriter. She is, first of all, a dedicated churchworker, a Sunday school teacher, and a faithful member of her congregation. As a devoted Christian she brings to her journalistic tasks the insight, sympathy, and understanding which gives an added dimension to her news stories."

The Price of Farm Products

EXTENSION OF REMARKS

OF

HON. KARL E. MUNDT

OF SOUTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Thursday, April 24, 1958

Mr. MUNDT. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record an editorial entitled "Who Gets It?" published in my hometown newspaper, the Daily Leader, of Madison, S. Dak., under date of April 16, 1958. The editorial discusses the distressed situation which prevails because the farmers receive such a small percentage of what the consumer pays for the foodstuffs, and asks the question, "Who gets it?" with respect to the money paid for the contents of the family breadbaskets of America.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Madison (S. Dak.) Daily Leader of April 16, 1958]

WHO GETS IT?

Every so often statisticians refer to the wide spread between the price received by the farmer for his products and the selling price at retail.

One thing is certain, it doesn't come from profits taken by food processing and selling firms.

In a recent statement prepared and printed by a New York bank, profits of all corporations large enough to report to the Securities and Exchange Commission, were collected and compared with 1956 and 1957, with the following results for firms handling foodstuffs. These profits, expressed as percent of selling price were:

	1956	1957
Baking	3.3	3.4
Dairy products	3.6	2.5
Meatpacking	.9	.5
Other food products	4.2	3.9
Food chainstores	1.4	1.4

Surely this margin of profit does not affect the retail price enough so that the buyer would notice it.

Our favorite theory is that the American housewife is buying more and more processed foods, with what the trade calls built in maid service. Obviously the processing cost of such foods takes more and more of the total cost, leaving less and less of the food dollar for the raw material.

Governor Rosellini Asks Congress for Legislation To Aid Small Business Financing

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 24, 1958

Mr. MULTER. Mr. Speaker, yesterday, the distinguished Governor of Washington, Hon. Albert D. Rosellini, made an appearance before the House Committee on Banking and Currency. The purpose of Governor Rosellini's visit to the National's Capital was to advise and counsel our committee on business and unemployment conditions in Washington, and in the Northwest, and to give us his suggestions and recommendations on Federal legislation to alleviate the hardships of unemployment and to help bring about a return of prosperity and economic growth.

These are subjects on which Governor Rosellini is peculiarly well qualified to advise. The Governor was himself for 18 years a member of the State legislature in Washington, and was Democratic leader of the State senate before being chosen by his people to fill the Governor's chair. He has long been a prime mover in programs for economic development in the Northwest, and a diligent worker for small business. He has established a department of commerce for economic development in the State of Washington, authorization for which was passed in the last session of the legislature of his State. He has been the prime mover in organizing a world's fair to be held in Seattle in 1961, and he has been instrumental in organizing the Colombo Conference, which is to be an economic conference of 18 southeastern Asian countries, the first to be held in this country, this coming fall.

In his statement to our committee, Governor Rosellini discussed many problems and made several recommendations concerning legislation which should be passed by the National Congress. One of the things that he recommended be passed immediately is legislation which would help small-business firms and business firms of an intermediate size gain access to capital. Governor Rosellini emphasized particularly small businesses' need for long-term loans which he said constitutes one of the basic needs for the stimulation of a balanced, orderly economic growth in the Pacific Northwest.

I know that all of the Members will be keenly interested in that portion of Governor Rosellini's remarks and recommendations dealing with this subject, which are as follows:

FINANCING OF SMALL AND INTERMEDIATE BUSINESSES

One of the basic problems in the stimulation of balanced, orderly, economic growth in the Pacific Northwest, as is true elsewhere in the country, is the financing of expansion programs for small and intermediate manufacturing and business establishments. Long-term, insured financing is required for new plants or additions to existing plants, for new equipment or modernization of existing equipment, for working capital, and for inventory purposes. Many small businesses have been forced to curtail employment earlier than would ordinarily be required because of inability to tie up limited working capital in inventories.

Sincere and commendable attention is being given to this recognized problem by Members of the Congress. The chairman of this committee (BRENT SPENCE, House Banking and Currency Committee) has H. R. 6215, which, within the general framework of seeking to stimulate area development and redevelopment, would provide for long-term loans to small businesses. That nationally recognized champion of small business, WRIGHT PATMAN, of Texas, has introduced H. R. 10345, to create a small-business capital bank system through the framework of the Federal Reserve System. This also seeks to alleviate the financing problems of small business, with the important ingredient of attempting to keep the process as close to established banking channels as possible. Loans would also be available for redevelopment purposes to municipalities and other political subdivisions. The general stewardship of the established and respected Federal Reserve System lends substance to this proposal.

Time has not permitted my detailed study of these proposals. For that matter evalua-

tion of both these admirable proposals is one that requires the competence of experts. For my part, I prefer simply to endorse the principle of facilitating the solution of the financing problems of small and intermediate businesses, and to identify the few basic principles that I am convinced should guide such considerations:

1. The basic need is to provide a loan structure available to small and intermediate businesses that will permit such companies to enjoy full advantage of tax depreciation provisions of the Internal Revenue Code. To growing and expanding industry, large and small, these depreciation allowances are like money in the bank. Normal short-term commercial bank loan channels do not provide the long-term provisions that permit full utilization of tax depreciation allowances. Testifying before the House Select Committee on Small Business last November (see p. 397, of the hearings of November 19, 20, 21, and 22, 1957) William F. Kelly, on behalf of the Credit Policy Commission of the American Bankers Association, testified: "The banks, as this committee knows, are not set up, they are not capitalized, they are not organized for the purpose of providing equity capital, and they are certainly not organized for the purpose of providing long-term loans." Within this framework, it would appear that justification exists for an addition to the normal financial channels of this Nation that would provide for small and intermediate business the long-term financing advantages that accrue easily to larger corporations. The Pacific Northwest, the State of Washington, the Nation as a whole, face a period of tremendous growth in the new markets of the sixties, resulting from our rapidly increasing population and the expected doubling of the new family-formation rate. If small and intermediate business is to enjoy its just share of this growth, some provision must be made to meet their long-term capital needs.

2. It would appear, from testimony already on record, that some governmental partnership with normal banking channels will be required to make this possible. Legislation pending before the Congress, particularly H. R. 10345, pursues this possibility. In any event, a basic principle that should be applied to modification of the Nation's long-term loan channels to accommodate the needs of small and intermediate business should be to keep such developments as closely allied with private banking interests as possible.

3. There is reason to believe that private capital, at least in some States, could, if it wished, organize to meet the long-term needs of small and intermediate businesses. In my State—Washington—insurance laws permit the establishment of the single purpose insurance company that would be required, and banking laws permit the creation of the mutual loan corporation, which could combine to provide long-term insured financing for small and intermediate businesses. I am told by competent sources that the debentures of such a private loan structure, could, when a significant level of active loans is reached, become legal reserve under the Federal Reserve System. Private capital sources have expressed an interest in the potentiality provided through the laws of Washington. We are desirous of encouraging such interest. Private proposals thus far have been largely exploratory and have not reached a point where they promise early availability of capital for expansion, working capital and inventory loans to small business.

The important consideration, in the long run, is to have early fruition of a long-term insured loan channel available nationally to small and intermediate business. Our complex industrial society, constantly geared more and more to electronics, control devices, and other forms of automation, opens a wide horizon for the small specialized manufacturer. Regional markets, a situation that geographical location imposes on the Pacific Northwest, for example, promise real opportunity for the small and intermediate manufacturer of consumer goods for regional markets. These potentialities can be realized only if small and intermediate manufacturers have available the wherewithal required for their growth.

Certainly, States and regions of this Nation, whose economy has been historically based on raw materials production and export, have a major stake in the encouragement of small business. In Washington, our economy needs the balance that additional value-added-by-manufacture can provide. Our best channel for gaining this is through the growth of small business.

Israel: Ten Years of Independence

EXTENSION OF REMARKS
OF
HON. LAURENCE CURTIS
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 23, 1958

Mr. CURTIS of Massachusetts. Mr. Speaker, the first 10 years of Israel's independence have evidenced the most remarkable growth and development of a new country ever seen in the history of the world. Americans join wholeheartedly in congratulating Israel on this achievement and wishing this new country future health, strength, and peace.

The people of Israel overcame hostile attack at the start of Israel's existence, and subsequent blockade. In the face of enormous difficulties they have developed and transformed the land, raised up industries, trebled the population given hospitable refuge to oppressed people, nurtured and assimilated them, revived an ancient culture, and established stable, democratic government.

These achievements in the face of such difficulties could not have been possible except by a people imbued with religious faith and fervor, and they truly partake of the miraculous.

America's friendship with Israel has been demonstrated ever since America was the first nation to recognize the new state a few days after its independence was proclaimed on May 14, 1948. This friendship is based on a similar experience in pioneer development, and a common dedication to the principles of freedom and democracy. The preservation of the independence of Israel has frequently been proclaimed to be a tenet of American foreign policy.

The presence of a free, stable democracy, with a forward-looking Western type of civilization amidst the ancient countries of the Middle East is of benefit to the Western World, and is an example of economic development in the ways of freedom.

What is most needed in that area is peace. Instead there is a tenuous truce. The attainment of peace would bring in its wake a resurgence of trade and intercourse, of land and water development, and would raise the living standards of the whole area. It is said that peace in the immediate future may be unattainable. The next best thing is security, and with it the gradual growth of mutual understanding and an atmosphere that will finally lead to peace. The free world will support these objectives.

Theodore Roosevelt and Family Life

EXTENSION OF REMARKS
OF
HON. STEVEN B. DEROUNIAN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 24, 1958

Mr. DEROUNIAN. Mr. Speaker, the life of Theodore Roosevelt is always an inspiration to us and I should like to place in the RECORD this account of his religious faith:

[From These Times of March 1958]

THEODORE ROOSEVELT AND FAMILY LIFE

(By Robert W. Olewiler)

"The first essential for a man's being a good citizen is his possession of the home virtues," said Theodore Roosevelt, the 26th President of the United States, "based on recognition of the great underlying laws of religion and morality * * * which if broken mean the dissolution of civilization."

He believed that the right kind of men and women in the homes of the country took precedence over everything else. "No piled up wealth, no splendor of material growth, no brilliance of artistic development, will permanently avail any people unless its homelife is healthy," Mr. Roosevelt maintained.

President Roosevelt preached and practiced the vital duties necessary for a happy and healthy home. He was a champion of the family council meeting. His biographers say that everything of any significance in the Roosevelt home was made a matter for the entire family. An admirer has said that the table was like a Cabinet session, that the children were encouraged to discuss even the most important things, and that Mr. Roosevelt openly and frankly shared his thoughts with them.

He was a helpful father at all times. He once told a friend that "it's a mighty bad thing for a boy when he becomes afraid to go to his father with his troubles, and it's mighty bad for a father when he becomes so busy with other affairs that he has no time for the affairs of his children." While Mr. Roosevelt was abroad, he wrote at least once a week to each of his children. It was not unusual for him to stop dictating around 4 o'clock in the afternoon so that he could go to the nursery and play a few games with his children. He had the deepest confidence in his wife's judgment. "I never make an important move without first consulting her," he told a friend.

Mr. Roosevelt is said to have allotted at least one-half hour a day to his children, even in the busiest periods of his active life. In addition, he often took the children on picnics, and regularly organized constructive playtimes for them in which he joined. The Roosevelt home was one of love and sympathy, where God was worshiped and reverenced, and where the children were reared in an atmosphere of Christian simplicity.

Even though President Roosevelt invited a great many people to dine with him, few were really brought into the inner circle. There was a clearly defined line between the two. Only a selected number of intimate friends were ever a part of the "family

gatherings," and these friends have testified that it was hard to describe the exuberance of joy and fellowship which predominated at such periods.

In a Christian home the father has duties just as binding as those of the mother, Mr. Roosevelt believed. In the lectures that he delivered at the Pacific Theological Seminary at Sacramento, Calif., in the spring of 1911, he said: "We continually speak—and it is perfectly proper that we should—of the enormous importance of the woman's work in the home. It is more important than the man's. She does play a great part. But the man is not to be excused if he fails to recognize that his work in the home, in helping bring up, as well as provide for the children, is also one of his primary functions."

It is easy to understand why President Roosevelt was an ideal family man when it's remembered that he was reared in a home where the spiritual life was a normal thing. Bible reading was a regular and revential practice of his childhood. His sister, Mrs. Corinne Robinson, has written: "Father always had family prayer just before breakfast every morning. It was a joy to us all and never a burden. He would call cheerily, 'Come to prayers.' Each one of the children would then endeavor to be the first one to call out, 'I speak for you and the cubby hole, too.' The first one to call this secured the seat of honor, which was located between the head of the old-fashioned sofa and father. Here he or she sat while he read the morning lesson from the Bible. He had a religion of brightness and gayety. It gave cheer. It was never black, nor did it have any sympathy with depressing and fearful forebodings. God was very real and near to my father."

Theodore's father was once congratulated by his pastor upon the meaning of his son's name—"Gift of God." "Suppose we change it a little and call it a gift to God," said the father, who accepted his fatherhood as a serious responsibility.

That Theodore was reared in a home of Christian faith and joy and thus prepared to be the ideal family man that he was comes to light in the letters that he wrote to his children. These letters reveal a beautiful picture of American family life at its best. When Dr. C. L. Slattery, a contemporary of Mr. Roosevelt, who served an important parish in New York City, took occasion to refer to these letters, he said: "For parents who think themselves too busy (chiefly with their own pleasure) to give any special attention to their children, delegating them uninterruptedly to nurses, governesses, and schoolmasters, it must be startling to read what the most active President of the United States was able to do for and with his children while he lived in the White House."

Dr. Christian F. Reisner, one of Mr. Roosevelt's many biographers, tells us that when the Rough Rider came to the White House, he warned the newspapermen that they must not infringe on the privacy of his home by mentioning Mrs. Roosevelt or any intimate home details in their articles. The correspondent not observing this request was told that he would not receive any of the President's communications, nor would he or any other representative of that paper be allowed in the White House.

One daily paper broke this rule in a most irritating manner, Dr. Reisner reports. The story got around that the Roosevelt children had amused themselves by chasing a turkey over the White House grounds with a hatchet and finally killed it. It was believed that this story was concocted by one of the President's foes, who hoped to picture the episode as a natural outcome of electing a President with a wild west record. Mr. Roosevelt was furious at the implication that he could be such a cruel father and poor sportsman as to teach or permit his children to enjoy such a barbarous pastime. The reporter who invented the tale was permanently shut out of the White House.

That Mr. Roosevelt implicitly believed there's nothing so vitally essential to the welfare of the Nation, nothing around which the Nation should so bend itself to throw every safeguard as the homelife of the average citizen has been crystallized for us by his chief biographer, Mr. Hermann Hagedorn, executive director of the Theodore Roosevelt Centennial. Mr. Hagedorn writes in his book, The Free Citizen: "When 'T. R.' talked of the 'home virtues'—and there was scarcely a speech that he made that he did not talk about them at some time or other—the people he was talking to saw in him his words made flesh and blood. They knew about the family at Sagamore Hill, his home at Oyster Bay, N. Y., that for 7 years was the summer White House.

"You might be a Democrat, in which case you wouldn't be likely to be uncritical of any Republican; you might be a Southerner, in which case you would be raging against the President who had invited Booker T. Washington to luncheon at the White House; you might be a corporation executive and be convinced that the President was an anarchist who had sold out to labor; or you might be a labor leader who was sure the President had sold out to the trusts; whatever you were and whatever grievances you were nourishing, you took your hat off to the Roosevelts' family life and wished that yours could have the unity, the fellowship, and the genuine happiness the White House family knew.

"At dinner tables of the rich and the not-so-rich, at country stores, at campfires, in farm kitchens and in lonely ranchhouses, people talked about the family life in the White House, the busy President, the poised and gracious First Lady, who never failed to find time to be companions for their lively brood of 4 boys and 2 girls in the White House as on their Long Island hilltop; and homelife suddenly seemed more important than it had been and, clear across the country, took a turn upward."

George A. Janssen

EXTENSION OF REMARKS
OF
HON. GEORGE P. MILLER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 22, 1958

Mr. MILLER of California. Mr. Speaker, at my request Col. N. W. Armstrong, of San Leandro, Calif., has written a brief history of one of Alameda County's great sons, a man who served her well. I am happy to preserve this short sketch of George A. Janssen by making Colonel Armstrong's notes part of the RECORD.

The death of George A. Janssen in Oakland, Calif., on April 8, 1958, ended the career of one of Alameda County's outstanding citizens. For 23 years, prior to his retirement in 1955, Mr. Janssen served as a member of the board of supervisors and no history of California would be complete without a record of the part he played.

Like many other successful people of the Golden West, George Janssen started life in comparative poverty. Following the death of his father, he began work at the age of 14 in order to support his mother and provide an education for his brothers and sisters. He worked long hours as a delivery boy and apprentice in a meat market and attended night school.

Mr. Janssen soon owned his own meat market in the Melrose section of Oakland and became active in civic improvement projects. He headed the volunteer fire department; started a movement that resulted in a splendid branch library. He helped organize and became one of the first directors of the Bank of Melrose and encouraged others to embark in business by making small loans with low interest charges.

Mr. Janssen was married to a young lady who had a millinery shop near the meat market where he embarked in business. The marriage of Miss Christine Meyer and Janssen lasted for almost 40 years when Mrs. Janssen was taken by death.

George Janssen's ability and leadership were recognized when he was appointed Park and Recreation Commissioner by the late John L. Davie, then mayor of Oakland. In 1933, he was selected to fill a vacancy on the Alameda County Board of Supervisors by former Governor of California, James A. Rolph, Jr.

The following year George Janssen was elected to the Board of Supervisors over a field of 11 opponents and thus began a career service to the people of his county which lasted for nearly a quarter of a century.

During his entire political career supervisor Janssen refused to accept campaign funds and paid his own expenses. He gave unstintingly of his time, heart, and energies. His office and home doors were always open to the people he represented.

George Janssen was instrumental in securing funds for the $2 million courthouse occupied in 1936. He served on the Alameda County Commission at the 1939–40 Worlds Fair at Treasure Island. He served as chairman of the Alameda-Contra Costa County Joint Highway District. As chairman of the hospital committee, his tireless efforts resulted in Fairmont Hospital being rebuilt into one of the finest county hospitals in the State.

George Janssen was also a leader and member of numerous fraternal and church organizations, which included the Fruitvale Masonic Lodge, Fraternal Order of Eagles, Rebekah Lodge, the Scottish Rite Bodies of Oakland, Aahmes Temple, Ancient Arabic Order of the Mystic Shrine, Thyra Lodge of the Society Dania at Hayward, Southern Alameda County Firemen's Association, Melrose Merchants, East Oakland Breakfast Club, High Twelve Club, Woodmen of the World, and others.

He believed in and practiced personal charity. No one will ever know how much aid and relief he provided for the unfortunate. During the years of World War II, he aided many families whose sons, fathers, and husbands were overseas. He never demanded nor expected a dollar to be returned.

He is survived by a daughter, Mrs. Fred Carter; 2 grandchildren; a sister, Mrs. Frank Beck; and 2 brothers, Arthur and Henry.

George Janssen's extraordinary record of public service will be long remembered. The county of Alameda and, indeed, the entire State of California mourns the loss of one of our most loved and honored citizens.

Liquor Advertising

EXTENSION OF REMARKS
OF
HON. A. L. MILLER
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES

Thursday, April 24, 1958

Mr. MILLER of Nebraska. Mr. Speaker, I have today received a petition

concerning the advertising of alcoholic beverages which I insert in the RECORD for the consideration of my colleagues.

This petition was signed by 92 residents of Gering, Scottsbluff, and Mitchell, Nebr. The group asked publication in the RECORD.

PETITION

Hon. A. L. MILLER,
House Office Building,
Washington, D. C.

May we again call your attention to our urgent request for relief from the invasion of our homes by the advertising of the alcoholic-beverage industry. This advertising is aimed at our children and our youth. Parents today are helpless against the mass suggestions through newspapers, magazines and especially TV and radio that to drink is harmless, and conducive to health.

We urge your active support of bills now before you to remove this advertising from channels of interstate commerce and over the air.

(Signed by 92 citizens of west Nebraska.)

Remarks by Brig. Gen. J. L. Person, United States Army, Assistant Chief of Engineers for Civil Works, at the 33d Annual Convention of the Red River Valley Association, Shreveport, La., April 8, 1958

EXTENSION OF REMARKS
OF

HON. OVERTON BROOKS

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 22, 1958

Mr. BROOKS of Louisiana. Mr. Speaker, in extending my remarks I present herewith an extremely able address delivered by Brig. Gen. J. L. Person, United States Army, Assistant Chief of Engineers for Civil Works. General Person is, by the way, one of the outstandingly able engineers in the Corps of Army Engineers. He has rendered brilliant service to the Corps of Engineers over a period of years, and it was as a natural recognition of this service to his country that General Person was elevated to the extremely important place of Assistant Chief of Engineers in charge of civil functions.

General Person attended a flood-control meeting in Shreveport on April 8, 1958, where problems of the Red River Valley from Denison to the mouth of the river were discussed at length. General Person has presented some facts regarding the further use of our rivers and harbors which should cause us to think. His reference to the Overton Waterway indicates an alertness regarding major projects which is a byproduct which this officer has received in his years of association in the Army Corps of Engineers. His address is as follows:

Mr. Chairman, ladies, and gentlemen, it is always good to get back to Shreveport. I am indebted to my good friend Roy Matthias for this opportunity to be with you. I had planned to talk to you today about the misleading propaganda disseminated by people who apply the term "pork-barrel" to our water resource development program. But I am glad to report that I was beaten to the draw by one of the best friends the development of our natural resources has ever had—Senator ELLENDER, whose brilliant speech on the Senate floor on March 4 was a far better answer to our uniformed critics than I could ever have produced. If any of you have not yet read that speech, I urge that you do so.

I would like, because they bear repetition, to repeat some of the facts given in Senator ELLENDER'S speech as to what the American people have bought with the $11 billion which our pork-barrel program has cost since 1824, when Congress first appropriated construction funds for improvement of our waterways. On the navigation side we now have 22,600 miles of improved inland waterways, over 400 improved harbors, and of course the Great Lakes system. These facilities handled over a billion tons of commerce in the last year of record. They have produced over $3 in benefits for every dollar invested. Of even greater importance—incalculable importance—is the effect of navigation on our national economy. For example, without our pork-barrel program our great seaports could not handle our vast world trade, our steel industry would starve for lack of the ore that comes through the Soo Locks, and the Ohio Valley would not have earned its nicknames of Atom Valley and the Ruhr of America without its adequate water supply and its free water transportation. Let me stress here that these benefits are continuing, and the total will go on accumulating as long as the projects last. So much for the navigation improvements.

Flood control became a major part of the national water resource investment program when in 1928 the Congress declared a national interest in preventing human suffering and economic losses from floods in the Mississippi Valley, and authorized the alluvial valley project. This project has yielded $6 in benefits for every dollar invested. In 1936 flood control was authorized on a nationwide basis. The 500 flood control projects completed or placed in partial operation have been in operation for an average of about 15 pears. They have already prevented flood damages totaling $8⅔ billion, which is about twice the amount invested. These projects, like navigation projects, will continue to yield benefits long after we are gone. If that is pork-barrel, the hog-raising industry may well feel flattered.

Floods are a menace which can strike in any river valley at any time, often with devastating force. The alluvial valley of the Mississippi is the only major river valley in the United States in which the authorized flood-control program is as much as 65 percent complete; none of the other valley programs is more than half finished and some are barely begun. Furthermore, these percentages apply to authorized programs, and the authorized programs themselves are not fully adequate to meet the Nation's need for flood control. For every new improvement in every community located within the flood plain of any river increases the potential flood damage, and the need and justification for flood protection measures. Thus, as our valley communities keep growing, the need grows with them. Flood control must be as dynamic as the Nation itself.

For this reason we are undertaking basic review surveys in some of our major river valleys—notably the Lower Mississippi, Ohio, and Columbia Basins—to discover what changes, if any, should be made in our comprehensive flood control plans to accommodate changes that have occurred since the plans were formulated or last reviewed. The flood control program for the Alluvial Valley is the oldest comprehensive project, and on the main stream we have now reached the point where the largest flood of record could be contained; but it is always the recordbreaking floods which cause the great disasters, and the Mississippi River project is not yet ready to hold the unprecedented kind of flood which we know is possible there.

Navigation and flood control alone do not represent the total benefits realized from the civil works program. Large additional values also accrue through conservation and use of our water resources through multiple-purpose development. These include development of hydroelectric power, storage of water for industrial, municipal, and agricultural use, and the numerous benefits which result from improvement of low river flows. In many cases the projects also provide important public recreational values and opportunities for the preservatin and enhancement of fish and wildlife resources. To mention but a few figures showing the impact of these important collateral functions:

Hydroelectric power: 22.6 billion kilowatt-hours generated at Corps of Engineers installations during fiscal year 1957, representing 18.2 percent of the hydroelectric power produced and 3.6 percent of the total production by all sources of the nation's utility systems. This hydropower has been of vital importance to industry and development generally in many parts of our country. This is particularly true in the Pacific Northwest which is almost wholly dependent upon water power.

Water supply: The Corps of Engineers is providing over 1 million acre-feet of storage space in the interest of domestic and industrial water supply, and almost 4 million acre-feet is being operated either exclusively or jointly for irrigation and other uses. In addition, conservation and power releases from reservoirs operated by the Corps of Engineers have in many cases improved the quantity and quality of water available for downstream supplies. These releases in fiscal year 1957 amounted to about 30 million acre-feet (almost 11 trillion gallons). During the recent drought in the southern Great Plains area water in these reservoirs or releases from them prevented the shutdown of important industries and provided the margin of water supply that enabled many communities to live through that difficult period.

Public recreation: Recreational visitor days at corps projects now exceed 84 million per year, which is in the same order of magnitude as the attendance at all of our national parks. This benefit is definitely recognized by the public; but so is the fact that the basic access and public use facilities at completed corps projects often are not adequate to care for the increasing number of visitors. Facilities cost money, and the need for adequate funds for such facilities has not yet been met. Actually, recreation pays in many ways—expenditures by visitors which go into the local economy, purchases of sporting equipment that spread money all over the country, and returns from leases and concessions which are paid into the State and Federal Treasuries.

The projects creating these benefits have not just happened. Men of version have associated themselves with them through the years, and their determined efforts have paid off. Daniel Webster's prediction in 1850 that "ere long the strength of America will lie in the valley of the Mississippi" was a good prediction. I trust that in the valley of the Mississippi he meant to include the tributaries, and particularly the valley of the Red. You have here in this valley a major water course, people determined to develop its full potential benefit, and problems and possibilities in every category of water-resource development.

On the navigation side, your major potential development is the Overton Waterway. A year ago this month General Itschner told

your association that the completed review showed the project to be economically justified. There remain two problems to be solved before construction can start. First is the provision of the required local cooperation, and second is the availability of funds. I am sure that you understand that the first problem must be solved before you can hope for a solution to the second. Your association has had a long uphill fight for the waterway, and a lot of effort lies ahead. I would be less than frank if I failed to point out the danger of delay. The benefit-cost ratio is not very high, and as time goes on we must recognize the danger that price increases and other factors might upset the economic balance. Furthermore, when low-cost water transportation is not available, people with products to move must use other forms of transportation, and other forms of transportation, once established, are not always enthusiastic supporters of navigation improvements.

On the flood control side, your Red River Valley is a sitting duck for a disastrous flood. True, we have built Denison, Texarkana, Wallace Lake, and Bayou Bodcau, and they—especially Denison—were very effective in reducing the heavy damage sustained in last year's floods. But it was never contemplated that these completed reservoirs by themselves would solve the problem. As long as major tributaries—including the Little River—are completely uncontrolled, the threat of catastrophe will hang over your valley.

In contrast to the picture I have drawn of your current flood control position there is a bright spot with respect to water supply which I should like to mention. The officials of the Northeast Texas Municipal Water District and this association are to be congratulated on a job well done in financing the local share of the water supply cost for the Ferrells Bridge Reservoir. You may have set a pattern for similar cooperation on Cooper, and on other reservoirs in the future.

The problems which you have in the Red River Basin are typical of the problems of water resource development throughout the Nation. Significant progress has been made toward solving those problems, here and elsewhere. Much remains to be done, but the importance of our water resources is becoming more and more widely recognized. With the continued efforts of men of vision the problems will be solved. The performance of your association in the past amply demonstrates your ability and determination to provide leadership and vision for this valley. Working together in the future I am sure we will continue to go forward in the program for conservation and development of the water resources of the Red River Basin.

Misrepresentation and Deception: A Case Study of the National Research Co.

EXTENSION OF REMARKS
OF

HON. HENRY S. REUSS

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 16, 1958

Mr. REUSS. Mr. Speaker, on several occasions I have called to the attention of Members of Congress the reprehensible activities of a business enterprise calling itself the National Research Co.

This company's research consists of obtaining information about delinquent debtors by deceit. This company obtains its information by mailing from the NRC Office, Washington Building, Washington, D. C. punch card notices deliberately designed to look official and governmental, designed to make unsuspecting recipient believe that the United States Government is asking him for information.

The reputed mastermind behind the clever operations of the National Research Co. is Murray M. Chotiner of California. As I pointed out in remarks in the House on April 15, 1957, and February 18, 1958, it is Mr. Chotiner's job as the firm's attorney to keep the National Research Co. in business, masquerading as Uncle Sam, as long as possible, despite an order issued by the Federal Trade Commission on June 1, 1956, prohibiting use of the deceptive forms and notices.

So far, Mr. Chotiner is doing very well. The National Research Co. is still fooling some of the public in the same old way.

Perhaps it is difficult to realize just how nasty this business can be. The point is brought home most forcefully, however, in a letter I recently received from a Maryland resident who works in the Washington Building and has had an opportunity to observe personally the worst results of the National Research Co.'s operations. Mrs. Robert E. Brown has kindly consented to the publication of her letter, documenting the sad story of how one man was duped into coming to Washington to cash what he thought was a check from the Government, when all he really had was a worthless National Research Co. form:

The Honorable HENRY S. REUSS,
House of Representatives,
Washington, D. C.

Re: The National Research Co.

MY DEAR CONGRESSMAN: I was so pleased to read the extension of your remarks printed in the February 18 issue of the CONGRESSIONAL RECORD. I have been embittered and enraged over the activities of the National Research Co. for many months. My sentiments or reason for writing this letter are in no way prompted by political bias. I am now and have always been a registered Republican, but regardless of who is behind the National Research Co., I feel that something must be done to stop this company from continuing in their brazen practices and flagrant violations.

I am employed in a law office two doors away from the hole in the wall occupied by the National Research Co. In early January a poor soul was wandering up and down the hall, much distraught. I asked him if I could help him find what he was looking for. He showed me one of the National Research Co.'s forms and said he had been waiting outside of their door for over an hour for someone to come in so he could collect the money they were going to give him. I invited him into the reception room of my employer and talked to him and learned that he was a coal miner who had, until the day before, been employed in a mine in West Virginia. The mine closed and he contacted relatives in Connecticut and told them he had received a check from the Government and was going to Washington, D. C. to collect it and that would give him enough money to make the trip to Connecticut. His relatives there assured him that they would provide a place for him to stay and they would help him find employment there. He showed me this so-called check. While it is true that a person with the benefits of an education would ascertain upon careful inspection that this was not a check, a man in his circumstances would certainly have reason to believe it was just that. The form also specified that in order to establish his identity, he was required to furnish his social security number, place of employment, name of employer, banking account, etc.

When I explained to him that I thought this was a form to get information so that they could collect some outstanding bill of his, he informed me that he did not owe anyone anything. Whether or not he did, I do not know, but he had no reason to tell me an untruth.

I suggested that he see the postal inspector and called an official of the post office. The poor man told me that he had $1.25 in his pocket and that was all, and asked me to give him the names of the streets so he could walk to the post office to keep the appointment I made for him. I gave him cab fare so he would not get lost.

I am sure that you will be flooded with letters of congratulations on your stand, and while I am just 1 individual, I feel that it is better to light 1 candle than to curse the darkness, and I feel that you may have started a whole bonfire. I certainly hope so.

Respectfully yours,

Mrs. ROBERT E. BROWN.

Mrs. Brown says that this incident involving the man from West Virginia is just one of many similar occurrences that she has observed. And of course it isn't necessary to come to the NRC office in the Washington Building to be fooled. Most recipients of the NRC forms just fill out the things at home, send them in thinking not necessarily that they are going to receive money but that they are complying with a request from the Government for information, when they are actually inviting the bill collector.

In discussing this matter before, I have repeatedly emphasized, and do again, that the collecting of debts from delinquent debtors is entirely a legitimate business—if legitimately conducted. But the National Research Co.'s practice of locating delinquent debtors by misrepresentation and deception and hiding behind Uncle Sam surely does not fall in the category of legitimate conduct.

Mr. Chotiner has argued before the Federal Trade Commission that his company's practice of misrepresentation and deception for the purpose of locating defaulting debtors in behalf of their creditors is in the interest of the public and consequently should not be considered a violation of law. With this view I, for one, cannot agree. Helping merchants to recover financial losses from debtors is a good thing, but it doesn't justify the perpetration of deceit upon those debtors.

The Federal Trade Commission has taken steps to stop the NRC's improper activities, but the Commission hasn't yet been able to make its order stick. Mr. Chotiner may be able to keep the NRC alive forever the way things are going.

Let us hope that the Government will speeedily demonstrate that it can control this type of distasteful, deceptive, and fraudulent activity.

Repeal of Federal Taxes on Transportation

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Thursday, April 24, 1958

Mr. NEUBERGER. Mr. President, many leaders in transportation are disappointed that the administration, in announcing its so-called program to aid our lagging railroads, has failed to advocate the repeal of the unfair and discriminatory Federal freight tax of 3 percent and the travel tax of 10 percent. This disappointment is reflected in an able editorial entitled "Railroad Aid," published in the New York Times of April 24, 1958. I ask unanimous consent that it be printed in the Appendix of the RECORD for the information of the Senate. I am particularly appreciative of the editorial's views, because the region which I help to represent—the Pacific Northwest—has been severely handicapped in industrial development by arbitrary Federal taxes on tonnage and freight.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

RAILROAD AID

The Administration has sent to Congress, in the form of a letter from Secretary of Commerce Weeks to the Senate Foreign Commerce Committee, four proposals dealing with the long-term problems of the railroads and one dealing with the immediate emergency problem. The last-named takes the form of a $700 million guaranteed loan program.

The suggestions of a more permanent kind proposed to the Senate Committee, which has been investigating the railroad situation, are:

1. More authority for the Interstate Commerce Commission to permit discontinuation of unprofitable services.

2. More precise definition of the private truckers who are exempted from ICC regulation.

3. Clarification of the exemption for those who transport agricultural commodities.

4. Revision of Federal rate-making policies to encourage more service and price competition.

Though these recommendations may be helpful in enabling the subcommittee on Surface Transportation, headed by Senator SMATHERS, to produce a reasonably satisfactory final report, railroad officials can hardly be blamed if they find the suggestions disappointing, standing alone. Certainly, one will look in vain in any or all of them for anything that promises to be a key to the plight of the railroads.

The railroads had hoped—and with good reason—that the administration might recommend, not a lending programs as aid in the present situation, but a repeal of the present excise taxes on transportation. Secretary Weeks, in his letter, observed that such action, while it would be advantageous to the transportation interests * * * should be considered only as part of a general tax revision consistent with over-all fiscal policy.

We have an idea that the railroads would not object to such relief as part of a general tax revision. We know that we wouldn't.

The Citizen's Responsibility for Good Government

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Thursday, April 24, 1958

Mr. HUMPHREY. Mr. President, it was my pleasure to accept an invitation to address the Climax Drive Workshop of the Citizens Committee for the Hoover Report on March 31, last, at the Shoreham Hotel.

However, I was, at the last minute, forced to forego attending the conference luncheon at which I was to speak. In my stead, I asked Mr. Miles Scull, of the staff of the Senate Subcommittee on Reorganization, of which I have the privilege of serving as chairman, to deliver my address for me.

Today, Mr. President, I received the following letter from Mr. Clarence Francis, chairman of the Citizens Committee for the Hoover Report, which I ask unanimous consent to have printed in the Appendix of the RECORD, along with the accompanying draft of my remarks.

There being no objection, the letter and draft of address were ordered to be printed in the RECORD, as follows:

CITIZENS COMMITTEE FOR THE
HOOVER REPORT,
Washington, D. C., April 23, 1958.

The Honorable HUBERT H. HUMPHREY,
United States Senate,
Washington, D. C.

DEAR SENATOR HUMPHREY: On behalf of the citizens committee I want to express my warm thanks to you for your address prepared for delivery at our recent workshop meeting on the citizen's responsibility for good government.

We were sorry that sudden legislative developments made it impossible for you to give the message in person. However, we are grateful that you sent the capable Mr. Miles Scull, Jr., an associate on the Senate Government Operations Committee, who made an excellent delivery of your prepared remarks.

As we have advised you often in the past, the citizens committee is greatly indebted to you for your keen interest in the cause of good government as shown by your support of major recommendations of the Hoover Commissions.

With best personal regards, I am,
Sincerely,

CLARENCE FRANCIS.

THE CITIZEN'S RESPONSIBILITY FOR GOOD GOVERNMENT

(Remarks of Senator HUBERT H. HUMPHREY, of Minnesota)

I am, indeed, delighted to take part in this public-spirited assembly today.

Your presence here at this citizens committee workshop is most stimulating. This gathering is firsthand and, I may say, most heartening evidence that our Government is a dynamic thing and that you as citizens have a dynamic interest in it.

Also, this occasion presents me with an opportunity to which I have long looked forward: That of discussing a subject which is very close to my heart—The Citizen's Responsibility for Good Government—and, perhaps, of shedding a little light upon a few other things along the way.

At no time since the Founding Fathers forged the Constitution upon which this great Republic rests has Government been of greater importance to us. Not only America, but the free peoples of the world, look to our Government for leadership as the universe crosses the momentous horizons of the space age where man holds in one hand the lighted torch of miraculous human progress and in the other the awesome power to destroy himself with the hydrogen bomb.

Whether mankind holds high the lighted torch of progress as he crosses the threshold of space or whether he smashes everything for which civilization stands in a maddening maelstrom of nuclear warfare hinges greatly on Government's leadership in these fateful days of danger, decision, and crisis. And—nowhere does the responsibility for Government's leadership lie more heavily than on the individual citizen.

For in a democracy the course government takes, the power good government wields, the strength with which it arms itself and the principles of liberty, justice, and freedom for which it stands all depend upon the will, the strength, the courage, and the willingness to sacrifice, if need be, of its individual citizens.

In the final analysis the citizens of America are the government—the invisible power, strength, and force for good that is behind the portals of the White House, the marble columns of the Capitol dome and of which the American flag is the shining symbol. No responsibility they bear is greater than that—to their country.

I suppose it could be said the citizen's responsibility to his government begins with that precious privilege—the right of franchise. It is at the ballot box in the country schoolhouse that the caliber of government is initially determined when the citizen votes for his elected representative to carry out his wishes—at the town hall, at the State capitol, or in Washington.

If the citizen makes a conscientious choice, if he persuades good, public-spirited candidates to stand for office, and if he himself knows what the issues are, he discharges his responsibility properly. If he does not—or if he let's John do it—as many do, he not only fails to exercise a precious right, he fails to perform a duty he owes to himself, to his family, and to his country. He cheats himself and them.

Along with the right of franchise goes the responsibility of knowledge—knowledge of government, knowledge of candidates, knowledge of issues.

No longer is the day when the citizen at the crossroads can look upon the Federal Government as a distant authority at Washington City which, in some vague way, looks after his national interests, as was the case 50 years or so ago.

Today the Federal Government's influence is everywhere, in the States, in the cities, in the towns, on the highways, in the airways, in the main street bank, in the country store, affecting his life in a hundred different ways every hour of the day, every day of the year.

Thus—the responsibility of knowledge—in today's era of expanding governmental activity and influence is imperative—for without knowledge, judicious exercise of the ballot is futile.

In my opinion—the spreading of knowledge—the dissemination of information—the stimulating of interest in government has been, in all probability, the greatest contribution the two Hoover Commissions have made to this Nation—possibly greater than if all their recommendations for improving the Government's operations had been enacted into law.

For this the Nation owes a debt of gratitude to former President Hoover who headed up that great work, his associates on the Commissions and to you.

Again, at no time in history—other than when our forefathers were bringing forth a new Republic of free men at Constitution Hall in Philadelphia—at no time, I say, has there been a greater interest in government than there exists in the United States today. From the PTA meeting—to the city council—to the State capitol and on to the Halls of Congress—there is a tide running strong for better government, more efficient government, and more economy in government—and significantly, I think, for less government, as the Hoover Commissions proposed in some of their reports.

This is all to the good. For the more that the governed are aware of their government, the more knowledge they possess of its operations, the more alert they are to its inescapable frailties, the greater their voice is going to be heard, the greater their influence is going to be, and the better their government is going to be.

Although it is an old cliche, it nevertheless is true, representatives of the government, appointed or elected, are very sensitive to the people. As one, I can tell you that is so.

However, a crusade for better government, such as that which has followed the Hoover Commissions' reports, to succeed must be conducted in a framework of reality—based upon fact. I would offer a gentle rebuke to any who criticizes for criticism's sake only, or who makes false promises beyond the realm of reality. These techniques accomplish nothing, as a matter of fact, they do grievous damage to the cause we all espouse.

I, for one, am proud, very proud, of my Government. I know the Constitution to be the greatest living document by which men rule themselves of all the ages. I believe that the framework within which our Government operates is as sound as the proverbial Yankee dollar of which we are so proud. I also believe that the very great majority of the people who work for the Government are loyal, hard-working, patriotic citizens who give a dollar's worth or more for every dollar they are paid.

Oh, I know today's Government has its shortcomings, its weaknesses, and, at times, its failures. But, my friends, so does any human enterprise of its magnitude, fraught with the crises that today's world presents, besieged by a foreign ideology which seeks to conquer it, at times torn apart by political dissension, yet, still standing like the Rock of Gibraltar, shining like a beacon to free men the world over—strong, vigorous, ready to face whatever uncertainties a troubled future might bring—in truth the greatest Government the world ever has known. I ask you, would you trade it for any other?

The weaknesses we seek to shore up. The shortcomings to correct. The failures not to repeat. But, let us go about this with reality. Let us not endanger the house because grease is burning in the kitchen oven. Let us not condemn all Government because grievous mistakes have been made or a part here or there has failed us.

To be sure, let us correct that which has failed, but let us look upon the whole, not the part, and to the future, not the past. And let us march forward solidly, together to build the whole ever greater and stronger.

My friends, only by doing this can we hope—as the leaders of the free world—to succeed, or to survive.

Thank you.

Time Is Running Out on Us

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 23, 1958

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to include a very well written article by Joseph Alsop entitled "Time Is Running Out on Us," that appeared in the Saturday Evening Post edition for March 15, 1958.

This statement, written as a result of the extensive travel of the author abroad with careful observations of conditions throughout the entire world, is most interesting, and I am satisfied will be helpful to all of us in approaching some of these world problems:

TIME IS RUNNING OUT ON US
(By Joseph Alsop)

After many months abroad in many countries, observing many great and often ominous events, I am chiefly haunted by the memory of a grin. It was a self-congratulating, false-jolly grin—such a grin as a shrewd, hard peasant might wear when he knew he was bringing his pigs to slaughter in the best possible market. I watched this grin come and go on the broad, expressive, peasant face of Nikita S. Khrushchev, when he received me for a long interview in Moscow in February of 1957.

Khrushchev grinned when he predicted a catastrophic Western defeat in the Middle East. He grinned again when he foretold the future dissolution of the Atlantic alliance. Most triumphantly of all, he grinned when he intimated that the U. S. S. R. was decisively passing the United States in the terrible technical-military contest of modern-weapons development.

Since then, Khrushchev's third forecast has been only too plainly confirmed by the famous sputniks. I would not laugh off his other forecasts either. After much on-the-spot reporting in both areas, I can easily see why Khrushchev expects the destruction of all the vital Western interests in the Middle East. I can also see why he even hopes for the eventual breakup of the Atlantic alliance in Western Europe. Our peril nowadays is many-sided.

Yet this multiple periol primarily arises from a single, central failure. In the last 5 years, by sheer, silly self-indulgence, the United States has allowed its former great superiority in nuclear striking power to be lost to the Soviet Union. This tragic loss of the American lead, belatedly brought home by the sputnicks, has aroused, angered and alarmed the American people. When Allen W. Dulles was at last permitted to tell the congressional leaders the truth about the Soviets' new strength, it is said that Senator HARRY F. BYRD asked only one question, "When will they hit us?"

Paradoxically, however, this is almost certainly the wrong question. There is no doubt that the prime cause of our peril is the growth of Soviet nuclear striking power. But unless we are as great fools in the years to come as we have been in the last 5 years, the U. S. S. R. is highly unlikely to use this striking power against the United States.

The main danger today, in fact, is not the hot-war annihilation of the United States. The main danger today is the cold-war defeat of the cause of freedom everywhere.

One kind of danger is unreal, the other kind is grimly real, for the same little-understood reason, because of the strange rules that set nuclear warfare altogether apart from conventional warfare. By their strangeness, they always remind me of the rules of a lunatic chess game, in which the stake is the survival of human life on earth. Furthermore, these rules of nuclear war have never been tested in practice, in actual combat between two great powers with nuclear weapons. One prays they will remain forever untested. Yet they have their own macabre, remorseless logic. Neither the Kremlin nor the Pentagon can conceivably escape from the logic of these rules. Briefly, they are as follows:

Rule I: The first blow must be the last.

It is this basic rule which makes nuclear war a radically new form of warfare. Even the greatest conquerors of the past have always won their victories in an exchange of blows. But if there is an exchange of blows in nuclear war, the aggressor will pay for his enemy's destruction with his own destruction—which is too high a price.

Rule II: The aggressor's problem is astronomically difficult, and the aggressor requires an overwhelming superiority of force.

To prevent any return blow, the aggressor has to achieve an immediate, total knockout of his enemy's entire structure of nuclear striking power. Nothing less will do; yet these complex structures present a nightmarish multiplicity of targets spread out over very great areas. For example, the American Strategic Air Command has no fewer than 400 airbases in the NATO nations, plus many more in other regions of the world. Simply to score a one-blow knockout of this SAC airbase system, A- and H-weapons would have to be delivered to all these many hundreds of targets with great accuracy and the most careful timing. This would require literally thousands of coordinated air sorties and/or missile firings, all within the space of a few hours at the longest.

Rule III: The problem of retaliation is relatively easy; and retaliation will succeed if a quite modest force survives the aggressor's first blow.

This is because the aim of retaliation is merely to destroy the aggressor. It is ironically easier nowadays to destroy another nation than to destroy that nation's power to hit back in its death agony. The difference lies in the number of targets, plus one other critical fact. In order to forestall a return blow, one must rely exclusively on the restricted but instantaneous killing powers of fire and blast. But in order to destroy another nation, one can also rely on the far slower and far wider killing power of radioactive fallout. Thus only about 50 high-megatonnage H-bombs, exploded at altitude above the great cities, would pretty effectively end the national existence of the Soviet Union. A proportionately small number of air sorties and/or missile firings would be enough to do the job.

Rule IV: For these reasons, the certainty that a modest retaliatory force will survive the first blow is a certain deterrent of nuclear aggression.

Such are the rules. To clarify the argument, I have simplified considerably, but only by omitting important additional features of the aggressor's problem. He has other very grave questions to answer before he dare attack, such as the question about

the effect of great numbers of explosions of his own A- and H-weapons on the world air, which his own people breathe. If the other side is well prepared, moreover, there are certain questions which the aggressor actually cannot answer.

One such is the time-space question, as some experts call it. This question arises when the other side possesses a widely dispersed structure of nuclear striking power linked to a fully effective warning system. The air bases of the American Strategic Air Command, for instance, are dispersed from Turkey to Okinawa and from Greenland to Texas. Our DEW line, in northern Canada, also provides good early warning of attacking aircraft for all the SAC air bases in the United States. Until they have built up an operational stock of intercontinental missiles, the Soviets must therefore choose between two equally disagreeable alternatives if they wish to strike the first blow. They can try to destroy all SAC's air bases simultaneously, sending the air sorties destined for the Texas bases across the DEW line very early. But the whole world-wide structure of SAC's striking power will thus be warned to retaliate, before any of it can be knocked out. Or the Soviets can aim for a simultaneous crossing of all SAC's warning lines, with a staggered destruction of SAC's air bases. The air bases in the United States will thus be warned to retaliate in good time; and in this case the DEW's line warning will be sternly, unmistakably confirmed by the earlier destruction of SAC's more advanced bases.

Perhaps the most disquieting single feature of the Soviet success in missile development is the fact that their intercontinental missiles may shortly provide the Soviet war planners with a satisfactory answer to this time-space question. The existing DEW line cannot see highflying missiles. But radars can be built that will also give warning against missiles. The DEW line's full effectiveness can be restored by all-out effort. The strong deterrent power of the time-space question can thus be prolonged into the period that now lies ahead, despite the far narrower time margins of missile firings.

In sum, if you study the working of the strange rules of nuclear warfare, two points stand out above all others. One is an ugly point. Structures of nuclear striking power and systems of warning must be continuously maintained and continuously modernized, at constantly increasing expense. There is no escaping this vicious circle of military investment except by international agreement. If one side scamps the needed investments, the other side may acquire the kind of superiority that will make aggression a safe bet.

But the other point that stands out is at least not ugly, although it is decidedly bizarre. If needed investments are not scamped, neither side can use this hideous power that costs such enormous sums. In this case, the whole purpose of one side's investments—and it is a perfectly adequate purpose—is simply to prevent the other side's investments from producing any positive result.

For just these lunatic-logical reasons, it was criminal folly for the Eisenhower administration's budget-firsters to scamp America's nuclear investments in the last 5 years. Nevertheless, as of today, the damage does not seem to be irreparable. As of today, the situation seems to be that neither party in the struggle for the world can dare to strike the first blow with nuclear weapons.

It is only too easy to prove that the American Strategic Air Command has now lost its former ability to solve the nuclear aggressor's problem.

On the one hand, the Soviet structure of nuclear striking power has been immensely amplified. In the first Eisenhower years, the Kremlin built up an impressive new force of long-range jet aircraft. In the last 2 years, the Soviets have added a large operational stock of intermediate-range missiles. They are now building an operational stock of intercontinental missiles. Concurrently, Soviet airbases have been multiplied; missile emplacements have been added to the airbases. These are massive extensions of the target system that SAC would have to knock out in one blow. Yet they have not been matched by any comparable increase of SAC's striking power.

On the contrary, the reckless failure to modernize SAC has left a full two-thirds of SAC's total striking power squarely dependent on the overseas bases owned by our allies. All our European allies are now intensely conscious of the threat of Soviet intermediate-range missiles. If only because SAC's aircraft would take so long to cover the distance between the Soviet warning lines and the Soviet missile emplacements, SAC cannot any longer guarantee our allies against Soviet nuclear retaliation. Our allies, therefore, will certainly refuse to provoke their own destruction by permitting SAC to strike a first blow.

In these ways, SAC has been gradually but irremediably transformed into a purely defensive force. SAC's sole role today, SAC's sole capability in the present, is to guard the United States and the West against Soviet nuclear attack.

As for the Soviets, it is only too easy to show how horribly near they came to solving what I have called the nuclear aggressor's problem. The fact sticks out a mile from the first decision taken by the SAC staff, after the hard lesson of the sputniks.

This was the decision to keep a substantial proportion of SAC's aircraft always in the air, with H-bombs always aboard, beyond reach of Soviet surprise attack. This decision has given rise to much ignorant clamor, especially in Great Britain, about American "nuclear aggressiveness." But SAC's aircraft always in the air are the very opposite of aggressive. They are far too few to strike the first blow. In fact, the only possible purpose of this somewhat desperate and hastily improvised expedient is to maintain a certain deterrent of Soviet aggression.

For the future, it must be added, SAC's emergency expedient cannot always be counted on to deter aggression by making retaliation sure. Another of the unpleasant truths known to our Intelligence, but not yet admitted to the American people, is the loss of the American lead in two additional major fields of military technology. The Soviets are already building new radars considerably superior to our radars of the DEW line. They have also put into production an antiaircraft missile with a nuclear warhead, whereas our own nuclear AA missile is at best nearing the testing stage. This combination of greatly improved radars and nuclear AA missiles will neutralize the threat of SAC's aircraft always in the air.

Partly for this reason, the American Government is now anxiously trying to strengthen the West's retaliatory power with intermediate-range missiles emplaced overseas. And we are now making greater efforts to produce antimissile radars, and to move forward the production date of the American intercontinental missiles.

Even after both sides are able to menace each other with intercontinental missiles, however, there will be other ghastly stages when antimissile missiles and satellites with bombs on board come into successive use. Unless there is agreement upon a wholly new kind of coexistence, neither side in the world struggle can ever afford to relax its vigilance and slacken its efforts. It will be fatal to repeat the folly of the 5 years before the sputniks waked us up. Which was the reason, of course, why Allen Dulles reportedly wound up his session with the congressional leaders with the heartfelt exclamation, "Thank God for the sputniks."

At this point, I can imagine the impatient reader muttering angrily, "Well, if the Soviets really can't use their striking power against us, then what the devil have they gained by spending so many billions of rubles to strengthen their striking power, and what was all this talk of mortal peril that you began with?" If I may be temporarily cryptic, I would reply that both the Soviet gain and our own peril lie in a change in the meaning of two words. These are two words I have been using rather loosely—"retaliation" and "deterrent."

In brief, SAC was still a sword, not a shield, in the years when the American Strategic Air Command first began to be described as "the great deterrent." Again, Secretary of State Dulles was not even dreaming about Soviet nuclear aggression when he issued his famous warning that we would meet Communist aggression with massive retaliation by means and at places of our own choosing. The context of this warning was the first Formosa crisis, caused by a threat to Formosa and its outlying islands by the Chinese Communists, who did not even possess tactical A-weapons. In sum, Dulles was enunciating a new strategic theory. He was saying that rather than fight any more limited wars, on the Korean pattern, we would unleash SAC if sufficiently provoked to do so. This Dulles theory has remained the alleged basis of American world strategy to this day.

Politically, the Dulles warning was singularly maladroit. Militarily, the Dulles theory at least had a basis in fact while the superiority of American nuclear striking power still endured.

Even while we had an absolute atomic monopoly, of course, our freedom of nuclear action was restricted by the character of our Government and by our need to obtain the agreement of our allies. The Kremlin gaged these restrictions most carefully. The shrewdness of Soviet judgment of risks was proved at Berlin, in Korea, and elsewhere. But some kinds of risk were always avoided. The Red army was never employed, for instance, even in a local military action. Certain critical and tempting areas of political action also were left strictly alone. Both kinds of risks were considered excessive.

Today, however, although the Secretary of State was still talking about retaliation in his most recent speech to the National Press Club, the Dulles theory of American world strategy has become as phony as a seven-dollar bill. The trouble is that the meanings of the two key words, "deterrent" and "retaliation," have greatly shriveled and shrunk in the Eisenhower years. The United States cannot any longer strike the first blow in a nuclear war, even if our allies unexpectedly concur, without inviting the annihilation of the United States and the West. Therefore we and our allies are not going to begin a nuclear war simply because we are displeased by Soviet pressure tactics in the Middle East, or because the Chinese Communists have suddenly seized the island of Quemoy. Hereafter, there is no real possibility of nuclear retaliation against nonnuclear action. Hereafter, nothing but one side's use of nuclear weapons will induce the other side to use these weapons. This calls for very careful rethinking of the highly dubious idea of graduated deterrents and tactical A-bombs, by the way.

Fortunately for the West, there is still some fuzziness in the line of demarcation between the two kinds of military power which I have been trying to trace. A big frontal attack, such as a Red army onslaught upon Western Europe, would unleash emotions of unpredictable violence. It would also precipitate immediate tactical use of nuclear weapons. Such a major political-military explosion would therefore be highly likely to lead on to a full-scale nuclear war.

For just this reason, the extreme provocation of a frontal attack will almost certainly be avoided. But with this sole exception, the great growth of the Soviet structure of nuclear striking power has now given the Soviets a wholly new freedom. They are now free to undertake almost any kind of adventure except a nuclear adventure. Herein, ironically, lies the Soviet gain from their heavy nuclear investments.

In order to see the peril to us of this new Soviet freedom of adventure, one need only turn to the problem of the Middle East. Joseph Stalin was always convinced that western interests in the Middle East were really too vital, and that playing around in the Middle East was really too risky. From the withdrawal of Soviet troops from Azerbaijan in 1946, until the death of Stalin, "Hands off the Middle East" always remained the Kremlin rule.

Within only 2 years after Stalin's pompous funeral, however, 3 things had happened that changed the Kremlin rule. The gambler, Nikita Khrushchev, had attained a key position as a Soviet policymaker. Soviet nuclear striking power had already begun to be reinforced with long-range jet aircraft as good as SAC's, causing a new growth of confidence. And President Eisenhower and Sir Anthony Eden had gone to the famous summit meeting with the singular ambition of convincing their implacable enemies that they were religiously dedicated to peace-at-any-price.

The first Soviet-Egyptian contacts took place just before the dreadful good-will rally at Geneva, but they were wholly tentative. Immediately after the Geneva rally, however, Dmitri Shepilov hurried to Cairo to sign the Soviet-Czech-Egyptian arms deal. That was how Soviet intervention in the Middle East began.

The risks had been recalculated. Always, since then, Soviet middle eastern policy has been marked by a continuous recalculation of risks. When the Eisenhower doctrine was proclaimed after the Suez crisis, for instance, the Kremlin at first supposed that the doctrine had real military meaning. Hence there was a period of pull-back. The Kremlin remained glumly passive while King Hussein trounced the pro-Soviet forces in little Jordan, and while the West's friends won the stormy Lebanese elections.

But this period of pullback ended in late July of 1957, with the shrewd Soviet intervention that produced the left-wing coup d'état in Syria in August. And now the Kremlin is clearly thinking about taking an altogether novel kind of risk in the Middle East.

The mark of this possible intention is simply a Kremlin promise secretly given to the Egyptians a few months ago. Specifically, the Soviets promised that they would soon openly support the Arab drive to force Israel back to the so-called United Nations frontiers of 1947—which would lop off huge chunks of Israel's present territory. If you know the complex middle eastern situation, you can begin with this secret promise; and step by step, in an almost Euclidean manner, you can deduce the new Soviet intention as you might deduce the next theorem in geometry.

The purpose of the Kremlin's promise is to force the anti-Communist, pro-Western Arab governments to accept Kremlin championship against the hated Israelis. If the promise is kept, this result is sure. Equally surely, the secondary result will be subsequent replacement of the pro-Western Arab governments with pro-Soviet regimes on the Egyptian-Syrian model. Thus, the Soviets hope to win the great game for the Arab lands.

But another result of Soviet support for the Arab demands will be to threaten Israel with imminent destruction as a viable state. The suicidally brave, militarily brilliant Israelis will almost automatically respond to this threat by seeking a showdown fight with the Arabs.

In such a conflict the Israelis can defeat all the Arab armies put together, and the first to be destroyed will be the Soviets' Egyptian-Syrian friends. As the Suez fighting proved, mere shipments of Soviet arms will make little difference. Nothing less than Red army units—no doubt disguised as Moslem volunteers—can be surely counted on to rescue the Arabs.

For just these reasons, the Soviets have thus far refrained from backing the Arabs against Israel, although this maneuver is the quickest way to a great Soviet triumph and Western defeat in the Middle East.

But now, as the promise to the Egyptians indicates, the Soviets are at least considering backing the Arabs. Therefore, the Soviets must also be considering the unavoidable parallel decision to be ready to send Red army units to rescue the Arabs, if this need arises.

Such is the proof that the Kremlin is now thinking about taking the one kind of risk the Kremlin has never taken in all the troubled years since the Japanese surrender. The proof is in turn confirmed by other signs, such as the evidence of just-in-case preparation of a skeleton base for Red army parachute forces in Syria.

But enough has now been said about the Middle East to prove the main point I have been trying to make—that the Soviets have gained a wide new freedom of nonnuclear adventure by their gain in nuclear striking power. The West will hardly risk nuclear annihilation because half a dozen Red army parachute brigades have plummeted into Syria by "invitation" of the new Egyptian-Syrian Government. The same rule applies, furthermore, to a good many other critical and dangerous points that used to be effectively protected by SAC's deterrent power. One such is that same island of Quemoy which caused Secretary Dulles to issue his original warning of "massive retaliation."

The story does not end, either, with this enhanced danger of local military actions that the West is presently unprepared to counter. The whole theme and aim of Soviet policy, ever since the end of the Second World War, has been to achieve a decisive upset of the world balance of power. One means to this end has been the tremendous build-up of Soviet nuclear striking power. The Middle Eastern maneuver, if finally undertaken, will be another means to the same end. Its purpose will be to cut the oil jugular of the British and western Europeans, and so to deal a perhaps mortal economic blow to the military strength of NATO. All the other local actions which the Kremlin may order, at Quemoy or elsewhere, will also be aimed to upset the power balance.

Already, moreover, the Soviets are actively using their new nuclear striking power in still another way, but once more with the same end in view. They are brandishing their missiles and their H-bombs at our allies on the other side of the Atlantic, in just the manner of Adolf Hitler brandishing his panzers and his luftwaffe in the middle thirties. Like Hitler, they are seeking to promote fear, disunity and a general tendency to run for cover. Like Hitler again, they are alternating their threats with honeyed words and invitations to negotiate. As anyone can see who reads the newspapers, these tactics are already having far-reaching effects upon the western alliance. No doubt Nikita Khrushchev was already planning just these tactics when he told me gleefully that "America's allies will not always want American bases on their soil, when they begin to realize that these bases are nothing but invitations to H-bombs."

In sum, the western alliance is now entering a new period of acute danger, in a mood that is increasingly flabby and maudlin, with less and less unity and firmness, and with little preparation for the unprecedented tests that probably lie ahead. The leaders of the United States alone can make the needed preparations for these tests. But thus far they have not seen fit to do so. Such is our melancholy situation and such was the cause of Khrushchev's happy grin.

In this situation, I do not greatly fear the ultimate horror of a nuclear holocaust, for the reasons I have already given. We seem to have waked up just in time to ward off that particular kind of danger—unless, to be sure, one of the great machines of nuclear striking power suffers from some purely accidental malfunction which will cause a holocaust. But as long as the Western nations are armed only with the weapons neither side can use, there are other things to fear besides nuclear war. The danger now is a long series of successful Soviet encroachments, a continual process of Western enfeeblement, a more and more drastic tilt in the world power balance in favor of the Kremlin.

At the end of such a process, one can foresee the United States and the surviving Western allies reduced to the mere status of endlessly beleaguered, endlessly beset, and desperately guarded islands in a Soviet-dominated world. In such guarded, beleaguered islands, the freedom which alone gives meaning to our way of life is highly unlikely to endure for very long.

Such are my conclusions at the end of my first year on the weary road as a permanent foreign correspondent. They sound, I am afraid, like one long, harsh cry of despair. Yet I do not think we need to despair. We need, rather, to make the taxing intellectual effort to understand the New World situation, in all its unfamiliar complexity. We need to re-examine every Western position from Berlin to Seoul, deciding how every vital position may best be defended. We need to make the taxing military-fiscal effort to provide mobile, rapidly transportable and conventionally Armed Forces, whose mere existence will automatically discourage local military actions by the Soviets and their satellites. Finally, above all and at all costs, Western unity must be restored; for it is Western unity the Kremlin most respects and fears.

We are in a last-chance situation, for there is not much time left. But if we can only do all the difficult and painful things I have listed without undue delay. We may yet fulfill our task as the history-appointed guardians of the last, best hope of freedom. And once the Soviets are convinced that they cannot solve their own problems by the simple expedient of destroying the West, I also think they will be ready to consider better avenues of escape from the nuclear nightmare in which they, too, now live.

Financial Assistance To Schools

SPEECH
OF
HON. RALPH W. GWINN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 23, 1958

The House in Committee of the Whole House on the State of the Union had under consideration the bill (H. R. 11378) to amend Public Laws 815 and 874, 81st Congress, to make permanent the programs providing financial assistance in the construction and operation of schools in areas affected by Federal activities, insofar as such programs relate to children of persons who reside and work on Federal property, to extend such programs until June 30, 1961, insofar as such

programs relate to other children, and to make certain other changes in such laws.

Mr. GWINN. Mr. Chairman, I rise in opposition to the amendment. We have no survey from any department of the Government that indicates where this legislation would lead us. We have no legal advice on the complications involved in the Federal Government's paying off bond issues already issued or part of a bond issue to be issued hereafter. It is certainly a good example of what not to do in amending legislation on the floor of the House. I think the amendment should be voted down.

The Right To Shirk?

EXTENSION OF REMARKS
OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 24, 1958

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the text of an address on the so-called right-to-work laws, by Rev. Jerome L. Toner, O. S. B., Ph. D., dean of industrial relations, St. Martin's College, Olympia, Wash.:

THE RIGHT TO SHIRK?

(Text of an address on the so-called right-to-work laws by the Rev. Jerome L. Toner, O. S. B., Ph. D., dean of industrial relations, St. Martin's College, Olympia, Wash., before the Catholic Seamen's Club, Seattle, Wash., on February 18, 1955)

When Chief Justice William Howard Taft, former President of the United States, solemnly stated in the American Steel Foundries case of 1921 that "a single employee was helpless in dealing with an employer * * * (and that) labor unions (born) out of the necessities of the situation, were essential to give laborers an opportunity to deal on equality with their employer * * * (to obtain) his daily wages for the maintenance of himself and his family," he was stating an economic, social, legal, and moral principle categorically contrary to that purposed by the promoters of the right-to-work laws.

President Herbert Hoover made Chief Justice Taft's policy the law of the land in 1932 when he signed the bill which said that "the public policy of the United States is hereby declared (to be) that the individual unorganized worker is commonly helpless to exercise actual liberty of contract and protect his freedom of labor, and thereby to obtain acceptable terms and conditions of employment. * * * (Therefore) it is necessary that he have full freedom of association, self-organization, and designation of representatives of his own choosing, to negotiate the terms and conditions of his employment (through) concerted activities for the purpose of collective bargaining or other mutual aid of protection."

In the light of these principles and the realities of our times when crimes against man, society, and God are increasingly committed in the name of liberty and freedom of the individual to do absolutely what he chooses—whether it be in speech for communism, through actions which bring forth the terrorizing tide of juvenile delinquency, or the selection of new spouses at a rate that will ultimately be self-destructive of our civilization—would it not be much wiser for every State in the Nation as well as the Federal Government to turn their attention to the responsibilities and duties of men toward their fellow men, society, and God than to strive to establish liberties which are actually licenses?

The right-to-work laws, which are actually right-to-shirk laws, are economically unsound, socially schizophrenic, legally defenseless, and doubly immoral.

ECONOMICALLY UNSOUND

The right-to-work laws are economically unsound because they deprive the stockholders and management, employees and union of their individual and collective rights of choosing the most mutually efficient means of profitably operating their business according to the time-tested, traditional and legal principles of our free-enterprise, democratic-capitalistic system. The God-given duty and constitutional right to work for a family living, saving wage, which is far more fundamentally important than the right to work without belonging to a union, is nowhere proposed or held as a bar to the collective bargaining contract which does not provide for the family living, saving wage.

SOCIALLY SCHIZOPHRENIC [1]

The right-to-work laws are socially schizophrenic because they have lost contact with and any realistic understanding of the nature and environment of the legal collective bargaining realities which force and compel the stockholders, management, all employees, and the union to obey each and every clause and condition of the collective bargaining contract mutually agreed to by everyone coming under the contract.

The right-to-work laws have disintegrated the employee into the frustrating duality of an isolated economic individual, absolutely free to do his own will, while, at the same time, his legal and moral personality is absolutely bound by all the terms and conditions of the legal collective bargaining contract.

LEGALLY DEFENSELESS

The right-to-work laws are legally defenseless because:

1. They are contrary to the public policy of the United States, expressed by Chief Justice Taft, formulated into law by President Hoover, and found in the Wagner and Taft-Hartley Acts of encouraging the practices and procedures of collective bargaining as an effective process of increasing industrial production and peace.

2. As the Supreme Court of the United States said in the Hitchman Coal Co. case, "The cardinal error of the right-to-work laws lies in the assumption that the right (to work without belonging to a union) is so absolute that it may be exercised under any circumstances and without any qualifications; whereas, in truth, like other rights that exist in civilized society, it must always be exercised with reasonable regard for the conflicting rights of others."

3. The right-to-work laws unreasonably and arbitrarily make the right of the individual nonunion worker absolute and paramount to the equally basic and fundamental rights of possible more than a million stockholders of a company like American Telephone & Telegraph, for example, their management, more than half a million (A. T. & T.) employees, and their governmentally certified union to make the type of contract which they mutually agree will be the best to preserve the profitable operation of the firm for them, the public welfare and the common good.

[1] (Gr. schizein—to cleave, split; phren—mind, heart. A type of psychosis or mental disease characterized by loss of contact with environment and by disintegration of personality.)

DOUBLY IMMORAL

The right-to-work laws are doubly immoral because, under a mutually agreeable legal collective-bargaining contract (the only kind under which compulsion of a union-security contract may legally exist), the nonunion employee offends against both commutative and social justice.

COMMUTATIVE JUSTICE

The nonunion employee under a legal collective-bargaining contract offends against commutative justice by refusing to tender his proportional share of the expenses of the collective-bargaining agent—the union—which he legally elected and hired to improve his wages, hours, and conditions of work.

SOCIAL JUSTICE

The nonunion employee offends against social justice, the essence of which is to demand from each individual all that is necessary for the common good, by refusing to participate affirmatively in the legal processes of industrial democracy through collective bargaining by which, for good or evil, the wages, hours, and conditions of work for himself as well as the rest of the employees are determined. Since the nonunion employees cannot affirmatively vote in the industrial democracy, their nonparticipation may be the means by which substantial harm may come to the firm, public welfare, and common good.

The right-to-work laws logically deceive the American public into believing that these laws protect the American worker's constitutional right to work, where, when, and at any terms mutually agreeable to him and to his employer. Such "thorough competition in the goods market," says the Chamber of Commerce's Economic Intelligence Bulletin No. 76 for November of 1954, "is indispensable for the survival of capitalism, and probably of democracy * * *. The purpose of collective bargaining is to destroy individual bargaining, to create a labor monopoly."

The Supreme Court of the United States, along with Congress and other Federal courts, consistently condemn such a philosophy. In the 1944 J. I. Case decision, the Supreme Court said that "the very purpose of providing by (the National Labor Relations) statute for the collective agreement is to supersede the terms of separate agreements with terms which reflect the strength and bargaining power and serve the welfare of the group * * *. The workman is free, if he values his own bargaining position more than that of the group, to vote against representation; but the majority rules, and if it collectivizes the employment bargain, individual advantages or favors will generally in practice go in as a contribution to the collective result."

Such a "labor monopoly" of "collective bargaining," which necessarily "destroys individual bargaining," comes from the Taft-Hartley law, which specifically states that the "representatives designated or selected for the purposes of collective bargaining by the majority of employees, shall be the exclusive representative for all the employees in such a unit for the purposes of collective bargaining in respect to rates of pay, wages, hours of employment, or other conditions of employment." The Supreme Court, in effect, made the collective bargaining monopoly a duty of the certified union in the 1944 Draper case when it said that the union had "* * * the duty to protect equally the interests of the members of the craft (who are not members of the union) as the Constitution imposes upon the legislature to give equal protection to the interests of those for whom it legislates."

The absolute right of the individual worker to do as he pleases and to be free from the monopoly of the collective-bargaining agreement has no Federal basis. In the 1948 National Maritime Union case the United

States district court said that "this (monopoly of the majority), to be sure, was an abridgment of the minority's fundamental rights, as well as those of the employers, but the importance of the broad public purposes sought to be served (by the NLRA) justified the means employed."

"The purpose of the (R. L.) act," said the circuit court of appeals in the Steel case, "was not to guarantee to employees the right to do as they pleased but to guarantee to them the right of collective bargaining for the purpose of preserving industrial peace."

This absolute liberty of the employee to have freedom of choice and to do as he pleases with utter disregard of the will of the majority was clearly condemned by the Supreme Court of the United States in the Draper case when it said that "Congress has seen fit to clothe the bargaining representative with powers comparable to those possessed by a legislative body to create and restrict the rights of those whom it represents."

Since there is no Federal legal defense for the philosophy of absolute freedom of the individual worker, which the right-to-work defenders are trying to sell to the American public, it is logical to establish the basic motive behind the right-to-work employers. W. R. Brown, research director of the Missouri State Chamber of Commerce, writing in the Labor Law Journal of January 1953, said that "right-to-work laws are well worth considering in the search * * * for means of curbing the excessive powers of unions over individual workers."

Probably a franker statement was made by J. R. Morris in his Southern Economic Journal article, Compulsory Union Membership and Public Policy, copies of which are widely distributed by the Commerce and Industry Association of New York, Inc., in which he said "the employer's basic motive in opposing compulsory union membership (and therefore advocating right-to-work laws) is, in essence, that most employers fear a strong union. Specifically, employers are concerned with efficiency, and they fear the closed-shop union security will derogate from this because of union control over the work force. Finally, most employers honestly seem to believe that compulsory union membership is undemocratic. Judging from past performance, however, a few management officials probably would regard this as convenient rhetoric."

The bitter battle fought for the destruction of unions waged in the name of the "right to work without belonging to a union" in the 1900–10 open shop and the 1919–29 American plan wars make the "undemocratic" charges of the right-to-work campaigners more than convenient rhetoric. Democracy, be it political or industrial, said Lincoln, "is government under God of, for, and by the people," and not government by an irresponsible minority of nonunion, nonstockholder, nonvoting citizens or people. The right-to-work laws, which deprive the stockholders and their management, employes and their union from jointly ruling their business, are contrary to the age-old principle of free men, which is that government, political or industrial, derive their just powers to govern from the consent of the governed.

LIBERTY AND DEMOCRACY

In Detroit I asked an employer the following question: "Is it not a denial of liberty and democracy to compel and force a worker to join a union as a condition of exercising his constitutional and God-given right to work—to earn a family-living-saving wage?"

Here is his astonishing answer:

He said: "It would be just as humorous for me to claim that a union security contract was a denial of liberty and democracy to a nonunion worker as it is for the Russian Communists to claim that their form of government is the only real free people's democratic government in the world."

I asked him to explain. He said: "In the United States under the Taft-Hartley law, once the stockholders, through management, and the employees, through their governmentally certified union, enter into a legally binding collective bargaining contract, the employer and all of his employees coming under the contract are bound to each and every term, condition, and clause in that contract.

It is no more unreasonable for the union to request that management include a union security clause in the contract so that all employees who receive the direct and primary benefits of the contract will, within 30 days, become legal members of the union, than it is for management to demand that all persons who wish to receive the direct and primary profit-income of the firm must join the stockholders' organization. Such contracts," he said, "are the very essence of liberty and freedom. They provide absolute freedom of choice. True to our national free enterprise heritage they provide a realistic opportunity for an individual to think for himself and to exercise his ability and responsibility to choose between alternatives of a wage or a profit income. No one is compelled or forced to become either an employee or a stockholder, but if anyone chooses to receive an income from wages or profits, or both, that person must also bind himself by all the legal terms offered by the collective bargaining or the stockholders' contract."

Foundations: Pro and Con

EXTENSION OF REMARKS
OF

HON. B. CARROLL REECE

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 22, 1958

Mr. REECE of Tennessee. Mr. Speaker, Mr. Rene Wormser, a noted attorney of New York, served as counsel of the Special Committee To Investigate Tax-Exempt Foundation during my chairmanship of that committee. During this investigation Mr. Wormser gained a unique insight into the inner workings of some of our larger foundations. After leaving the committee he continued to study the influence and power of these foundations, and he has now written an outstanding book on the subject. This book is a searching analysis of some of America's most powerful tax-exempt foundations, their actions as opposed to their stated purposes, the interlocking groups of men who run them, and their influence on the country.

I would like to include for the attention of my colleagues a very fine appraisal of Mr. Wormser's book, Foundations, Their Power and Influence, which appeared in a recent issue of Newsweek magazine. This review was made by Raymond Moley, and I feel it is an excellent evaluation of the book:

FOUNDATIONS, PRO AND CON

(By Raymond Moley)

For reasons easy to surmise, certain members of the New York and Washington press seem at the moment to have ignored a thoughtful, fair, and thoroughly documented book, Foundations, Their Power and Influence. Yet they wrote many columns a few years ago attacking two committees of the House which were investigating foundations.

The author, René Wormser of the New York bar, has given most of his 38 years' practice to a subject which lies at the root of foundations, estate dispositions, and planning, and his various books on the subject are respected and consulted. In this case, he has not only given commendation to the general usefulness of foundations such as those bearing the names of Ford, Rockefeller, and Carnegie, but has pointed out some of the unfortunate nature and consequences of some of their activities and grants.

Excluding the many which are merely means of tax avoidance, there are about 7,000 foundations, with aggregate assets of nearly $10 billion, concerned with specific fields of social, educational, and economic life. These institutions were born out of tax exemption and represent a great volume of wealth set aside from the sources of public revenues.

INTO THE UNKNOWABLE

The original contributions of the Rockefeller Foundation to medical science and public health make a bright page in history. Millions of lives have been spared and lengthened, and much of the misery attending the ills of the flesh has been spared us all.

But back in the 1920's a great diversion of interest took place—a diversion which was then bitterly opposed by some of the distinguished men who guided the elder Rockefeller. Social science, in all the ramifications of that word, began its vogue and spread the delusion that human relationships and human conduct, like physical substances and phenomena, were capable of exact empirical measurement.

To further this great adventure into the unknown, there were set up clearinghouses for the disposition of grants—project jobbers like the Social Science Research Council. Within these there developed an inner political machine, largely determining the objectives under which favored projects should operate. Conformity to the point of view of those in control qualified the donees. Sometimes patent political movements were supported, such as the League for Industrial Democracy (the Intercollegiate Socialist Society under a new name), and the Institute of Pacific Relations. The ideology of those who controlled the grants bent the minds of otherwise useful professors, and college teaching was greatly changed.

THE REMEDIES

When the Ford Foundation came along with its mammoth resources, H. Rowan Gaither and his advisers went almost the whole way for the new science, now known as behaviorism. Paul Hoffman and Robert Hutchins "sold" this with a mixed jargon drawn from hucksterism and sociology, with occasional medical terms wrenched from their proper place in true science. The big foundations assembled a great bureaucracy of philanthropoids who hatched projects and scattered them over the Nation.

Whenever I read of the present neglect of of the real sciences such as physics or when I see unkempt and starved hospitals, I think of this major cause of both tragic deficiencies.

Wormser wisely points out that the remedy for the foundation activities which he criticizes, is not in major legislation, but lies with the boards of directors of the foundations themselves. There should be directors who direct and not merely emboss the annual reports, who represent no conflicting interest between donee and donor, who serve fixed terms and are ineligible for reelection. Boards should put an end to "projectitis" and give grants without strings to responsible colleges and other beneficial institutions—a point of view which I know is held by many

college administrators. These institutions have their own established ways of testing and evaluating projects of their own. There should be much greater emphasis upon pure natural science. Finally, there should be continuous scrutiny and legitimate criticism by Congress and the Internal Revenue Service, the Nation's legal judges of the problems involved.

The Scientists and National Policy

EXTENSION OF REMARKS
OF
HON. STEWART L. UDALL
OF ARIZONA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 21, 1958

Mr. UDALL. Mr. Speaker, the current nuclear testing controversy revolves around deep-seated questions of national policy. One aspect of this question was discussed in a column last Sunday by Chalmers M. Roberts, diplomatic correspondent for the Washington Post and Times Herald.

Mr. Roberts, in my opinion, has rendered a real service in sharpening the focus on this issue. His piece follows:

SCIENCE INVADES REALM OF POLITICS

(By Chalmers M. Roberts)

The big headlines last week were made by the President's decision, as evidenced by his Thursday speech, to stand up and fight the powerful congressional opponents to his Pentagon modernization proposal.

But it may very well be that that was not the really big news of the week at all.

For it also was the week of the scientists-in-politics: Oppenheimer, Teller, Bethe—three of the highest ranking names of the nuclear age. Each in his way had something to say on the great issue which prompted Mr. Eisenhower at long last to revamp the Pentagon; the issue of how the politicians shall deal with the world created by the scientists.

What occurred here last week was not yet the culmination of the scientists-in-politics but it was a historic way station. And it raises the most fundamental kind of national policy.

The day of the first atomic bomb was dropped on Hiroshima, Einstein wept. A sort of guilt complex soon swept much of the scientific community which had worked on the Manhattan project. This was reflected, in part, in the opposition by Oppenheimer and others to making the hydrogen bomb. It is present today in much of the scientists' opposition to continued nuclear testing.

Under the democratic system, of course, every man is entitled to his say. But it has not been just that simple with the scientists. Some even abandoned science for exhortation on scientific-political issues outside Government.

A number of leading scientists, especially Teller, Lawrence, and the late Mark M. Mills, remained in the Government where they became a sort of high priesthood to which the administration turned to back up its political conclusions on scientific matters; specifically in the case of the AEC-Pentagon opposition to halting nuclear testing.

Scientists, in fact, do not disagree substantially on the scientific facts involved in the arguments over radioactive fallout dangers or the possibilities of creating so-called clean small tactical nuclear weapons. But neither the scientific community nor the administration nor the nonscientists outside Government involved in the testing arguments have limited the scientists to scientific aspects of the issue.

This is a major reason why Senator SYMINGTON said last week after listening first to Teller and then to Bethe that "everybody's pretty well mixed up" on the testing and disarmament issue.

What has happened is that the scientists, to use their own word, have extrapolated political judgments from their own scientific knowledge. And different scientists have reached differing conclusions in the political realm. Yet each falls back on scientific facts to bolster his extrapolation.

Today the situation is so confused that it is time to reconsider the scientists' role in political debate. For it is a matter of political judgment, given the general agreement on scientific facts, whether testing should or should not go on. The issues involved are not just bone cancer and mutations but the security and the survival of the democracies. Scientific facts are vital; but the judgment must be political.

It is time to view the scientist for what he is: a man of conscience aware of certain scientific facts too little understood by nonscientists. But also, as Oppenheimer, Teller, and Bethe all demonstrated here last week, he is shocked to find on leaving his laboratory that the political world, the international scene, is not well ordered and lacks, say, the immutable laws of physics. Hence he begins to extrapolate.

If the administration would give the public more of the scientific facts it could make its own judgments. And the scientists could continue to have their say but in a more normal proportion to their scientific, rather than political, right to command the market place of ideas.

Death Takes Paul A. Dever: Leader of the Democratic Party in Massachusetts

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 24, 1958

Mr. LANE. Mr. Speaker, outside of Boston, Lawrence is the strongest Democratic city in Massachusetts.

We knew former Governor Paul A. Dever well, from his frequent visits to our community, and from his neighborly interest in our welfare.

Although he was not holding public office at the time of his death, he was the titular leader of the Democratic Party in the Commonwealth. No one could match his devotion to the party's principles and its programs; his skill in promoting organization and unity; and his ability as a fund raiser.

His success as Attorney General, and as Governor, is a matter of enduring public record.

Fewer people knew of his tremendous loyalty to the Democratic Party, which was an article of faith to him. He was not the political opportunist who calculates only what the party can do for him, personally. He worked hard for it, when his days of campaigning for elective office were past, because he believed that the Democratic Party was the instrument by which human needs are translated into Government programs.

In this he reflected the depth and sincerity of his generous spirit.

Even those who did not agree with him politically, respected his great loyalty to his beliefs.

In recognition of this quality, I ask for unanimous consent to reprint in the RECORD, the following editorial of April 12, 1958, from the Evening Tribune of Lawrence, Mass.:

A COLORFUL DEMOCRATIC FIGURE

The sudden passing of former Governor Paul A. Dever removed from the Massachusetts Democratic Party's ranks one of the most dynamic leaders it had in years.

After the colorful career that he had during the 4 years he served as the Bay State's chief executive only the affliction of a heart condition moderated his numerous public appearances and utterances as related to his party's causes.

He had many friends in Lawrence, long a Democratic stronghold, and he made occasional public appearances here in the course of his lengthy political career which began when he was elected to the Massachusetts House of Representatives back in 1928.

He was outspoken and full of energy. Being an orator of considerable repute, his defense of his convictions and actions if and when they became the objects of stormy criticism was pointed.

During his two administrations as governor he launched a number of construction programs. It could not be suggested that he sat on his hands and assumed a do-nothing attitude.

He contended that during the two terms that he served as governor, in no year had he spent the amounts which the legislature authorized by appropriation, and that at each year's end he had a substantial surplus in the general fund.

He emphasized that employment, industry, and business enjoyed unparalleled expansion, development, and prosperity during his administration.

Quite naturally, as politics go, his Republican adversaries disputed these claims.

It resulted in some of the warmest verbal explosions the Bay State had heard in generations.

The former governor's death, at the comparatively young age of 55, is a blow to the Democratic Party and its principles which he expounded and supported not only throughout Massachusetts but also on a national level on occasions.

Whatever failings he had—for all men in political life have faults—it could never be said that he was a man without courage and determination.

Resolution Opposing Curtailment of Veterans' Benefits

EXTENSION OF REMARKS
OF
HON. VINCENT J. DELLAY
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 24, 1958

Mr. DELLAY. Mr. Speaker, as an active member of the American Legion, I agree with the following resolution to oppose curtailment of veterans' benefits, which was unanimously adopted by the American Legion, Department of New Jersey's executive committee, on March 8, 1958, in Trenton, N. J., and submit the resolution for insertion in the CON-

GRESSIONAL RECORD as a means of calling it to the attention of my colleagues:

RESOLUTION OF THE AMERICAN LEGION, DEPARTMENT OF NEW JERSEY

Whereas the President of the United States, in a recent Executive communication, advocated the curtailment of veterans' benefits, such as veterans' non-service-connected pensions, for the purpose of economy to support the financial burden of the United States missile and defense programs; and

Whereas organized veterans have long advocated, assisted, and cooperated with our United States Defense Department, the Congress of the United States, etc., to insure our Nation's nationality security to become and remain the strongest free leader of nations in the world; and

Whereas organized veterans strongly believe that the curtailment of veterans benefits are not the economical answer to the financing of defense programs; and

Whereas the elderly veterans of our Nation at present are subsisting on meager pensions and small social security payments, and no definite solution has been arrived at towards the financial crisis of our elderly citizens nor towards their social, financial, physical, and emotional old-age problems; and

Whereas various Government economists have always brought their "guns" of false economy to bear upon veterans' benefits as their primary target; and

Whereas the curtailment of veterans' pensions would create an enormous increase in local, county, and State welfare rolls; now, therefore, be it

Resolved by the American Legion, Department of New Jersey, assembled in regular executive committee meeting on March 8, 1958, in Trenton, N. J., That we respectfully urge our congressional Representative to oppose any curtailment of veterans' benefits.

WARREN R. DAVIES,
Department Commander.
MORRIS W. KUZBYT,
Department Adjutant.

TRENTON, N. J., *March 8, 1958.*

Not the Masters in Their Own Roundhouse

EXTENSION OF REMARKS
OF
HON. HOWARD W. ROBISON
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 24, 1958

Mr. ROBISON of New York. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Wall Street Journal of today, April 24, 1958, concerning the crisis in the railroads of our Nation:

SEA OF TROUBLES

It might sound ridiculous to say that if a swimmer is in trouble in dangerous water it doesn't do him much good to toss his an anchor. Yet, rack our brains as we might, no other comparison to the administration plan to help the troubled railroads seems as apt.

For the most part, the railroads are not in very good financial shape. Their equipment is in need of replacement. Their taxes—Federal and State and county and city—are enormous. Regulation by Federal and State agencies is so restrictive that railroads are not permitted to do the things they deem necessary to put their affairs in some kind of fiscal order and meet the intense competition from other forms of transportation. They cannot, for example, simply change their rates to meet rising costs without permission from this or that regulatory body. Nor can they end a service on a spur line without somebody else's say-so, no matter how few people the line serves or how much money the railroad loses.

It ought to be pretty clear that the trouble lies in the fact that the railroads are not masters in their own roundhouse. They are not free to follow sound business principles. They are struggling in a sea of restrictions, regulations and red tape and some of them aren't keeping their heads above water.

Into this sea of troubles Commerce Secretary Weeks tossed the anchor of even more Federal interference and control. His program would not, for example, end Interstate Commerce Commission regulation of rates but only revise them so as to permit more competition. It would not give railroads a free hand to pull off a losing train, but only give the Interstate Commerce Commission new jurisdiction over curtailment of money-losing services. While these proposals may help a little, they are still controls and they do not do the things necessary to allow the railroads to make money.

What the administration plan proposes, instead, is to guarantee loans to the railroads for $700 million and thus, through financing, further strengthen and broaden control by Government.

The railroads are discouraged by the plan, quite naturally. They had hoped for, among other forms of aid, some alleviation of the transportation excise taxes, which run 3 percent for freight and 10 percent for passenger fares. In his letter to Senator SMATHERS, chairman of a Senate Commerce Subcommittee which has been studying the plight of the rails, Secretary Weeks said he could not recommend repeal of transportation excise taxes, since such a suggestion should be part of an overall tax-revision program. As a matter of broad fiscal principle, the Commerce Secretary is unquestionably right. But it will puzzle more than the railroaders that the administration rejects a suggestion that might help the roads pay their own way and insists instead on lending them money. The net effect is inescapable; the administration helps lend the roads money to pay their taxes.

That, we submit, is not the way to get the roads in better financial state. A guaranty of $500 million for capital additions and facilities improvements, plus $200 million to guarantee part of the financing necessary to acquire up-to-date rolling stock, may appear helpful—and it may be temporarily helpful—but in the end it is only a one-way ticket to even more trouble. What happens when the $700 million is used up? And how does the Government expect the railroads to demonstrate that savings effected in 5 years through improvements will equal the loans the Government backs? And how does the Government expect railroads in trouble first to prove that loans are not available at reasonable terms through private banks in order to get the Government aid, and then to give "reasonable assurance" they will be able to repay the Government?

If the troubled railroads could do those things, they would not need the Government loans. And it is certainly not likely that, if the Government does get into railroading to the extent of $700 million, the railroads will ever be able to get their heads up. It will mean only further loans at later dates, more and more trouble, and, in the end, Government operation of the Nation's rails.

Maybe that is what some people want. But if it is not, then the sound way is to rescue the rails from their sea of Government controls. And you don't do that by throwing them the weight of even more Federal controls.

At the Bottom of the Well

EXTENSION OF REMARKS
OF
HON. RALPH W. GWINN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 22, 1958

Mr. GWINN. Mr. Speaker, this is a speech, as revised, which was delivered at the 67th annual congress of the Daughters of the American Revolution on April 17, 1958:

Distinguished guests, my subject was "Have You a Pet Federal Aid Program?" After attending two of the sessions of the Daughters of the American Revolution Congress, and on further reflection, I know that most people have had their pet Government dole. They have received some of the corrupt proceeds that always come from any Government socialized project. I have learned, also, that you are all heartily ashamed of that, and that you intend to reform. So I am going to talk about why your resolutions, so carefully prepared, are headed for the bottom of the well when they arrive in Congress on Capitol Hill. Then I will propose a remedy and give you and your husbands and brothers and, above all, your sons a job to do.

Last month, one of the most distinguished leading manufacturers in this country came to see me as ranking Republican member on the Labor and Education Committee. He wanted five perfectly sound, greatly needed amendments to the Taft-Hartley Act that we have been trying to get since 1947.

I told him, "Why, don't you know that you haven't a ghost of a chance to pass any such laws? We haven't the votes. * * *"

He looked surprised.

Another man came in and said, "We have been working on a tax-reform bill for years. We must take this incredible load of Government off the backs of the American people."

Neither of these men seemed to know, and indeed very few of us know that in the last election we, and especially the businessmen, spent millions—we don't know how many millions—to elect a President of the United States.

But the AFL–CIO political action knew that they could not elect Mr. Stevenson, so they went to work to elect a Congress, and did it. * * *

Now we have, after 10 years of their organized political action this situation: At least 175 Members in the House of Representatives today owe their seats, wholly or partially, to the money and the work of the CIO–AFL and their allies. We now have 216 Congressmen and 45 Senators (that is, a working majority) who vote most of the time for the legislative programs of the Americans for Democratic Action. This is the front organization for labor bosses. This is the descendant of the Socialist Party in America, and the financial beneficiary of large sums from the CIO–AFL.

Free Enterprise, care of We, The People, put out a little pamphlet which you can get that gives the votes of all the Congressmen. The red votes are for the ADA propositions; the black marks are against them. It is remarkable how completely red some of our States have gone by the votes of their Congressmen. That is, they vote consistently for labor-socialist measures * * *.

Walter Reuther is not going to be president of the United States some time in the future as some fear. He does not need to be president. Labor bosses have already taken over, in critical areas, and are now dominating Congress. When the elections are over this fall, they will have, in all probability, 25 to 30 more members beholden to them, on the floor of the Houses of Congress. They will have been financed and selected and then elected by CIO–AFL. They expect to have no opposition by you or any other women's organizations or any business men's groups organized for political action.

* * * * *

How does the AFL–CIO political action and control by a labor-Socialist government in America affect you, the Daughters of the American Revolution?

It is perfectly obvious. You have passed certain important resolutions. * * * They will not receive the consideration that they deserve * * *. They represent the wisdom that resides in you, as delegates and officers. They are important and have been for years. I know of no organization whose judgment I respect more than the Daughters of the American Revolution. * * *

We have gotten to the point that such things as a billion dollar increase in Government lending authority is no longer socialism in the minds of most of our people. You know better. Your resolutions show that you know better and you must, above all, continue to meet, to discuss, and continue to tell America that our Government today is almost at the mercy of worldwide socialism. And that America too is Socialist in everything but name.

But you are prepared to see the Congress of the United States drop your resolutions to the bottom of a well.

* * * * *

Instead of reducing spending and taxes, and ending Government powerplants and irrigation projects, food subsidies, Government housing, vast and unprofitable Government lending and vast foreign aid, we get more and still more, and besides some 700 other Government projects.

Nearly all the people's petitions and resolutions are ignored. It's as useless to petition Congress today as it was for your ancestors to petition Parliament and King George in 1775.

Now what shall we do?

What we need to do now, my friends, is to imitate—to see to it that the great genius of organized American men and women—especially the businessmen—gets into the political battle. Their present organizations are the only forces in America that can possibly save us from an expansion of our present labor-socialist government.

Here is how labor

Mr. Meany says as is labor's big job." Top offic into political action. AFL–CIO is put in fighting trim.

Here is a little book: "How to Win" elections, the best book published.

Sixty-two percent of the labor press is devoted not to just talk, but to political and legislative action.

As you carry your resolutions back home to get some action of your own, drop by the CIO–AFL offices and get a copy of "How to Win." They sell it to their workers for 50 cents. They will charge you $3, but it's worth it.

Then go to the political boss in your county and say to him that you heard down in Washington that we are now designating candidates for Congress.

You'll find some young lawyer who would like to make the fight, but he has no money and no organization. If he runs he has to go out and get himself elected.

So, he doesn't run. Why should he?

He knows that he will be opposed by an organized political machine directed by extremely practical professional politicians who work for the leaders of organized labor. He knows that they have at their disposal more than 300,000 paid workers, in addition to millions of men and women who are so misled by our custom of misnaming socialism until they believe in it. They are dedicated to work against him.

The potential statesmen of tomorrow—they may be your sons—are staying out of politics today because they know that they alone cannot possibly win out against labor's political power. That must be your deep concern.

Call a meeting of all the people you know who believe in America and in what your ancestors fought and died for in those long-ago days.

Get the professionals who work for local conservative organizations. Get the paid secretaries of the local chamber of commerce, the local employers association, the medical society, the dental society, the bar associaciations, along with the elected officers of those organizations.

This local group can start now to develop the mechanics of political action.

This takes time. It takes planning. You will need professional help. You should be thinking about providing TV time, radio shows, getting together the money for newspaper ads, campaign literature, and direct mail to voters. Start holding rallies, picnics, coffee hours, and the other social activities which cement together people with a common objective. Provide the candidates with an opportunity to find out what you want your Congressman to be and see if the candidates measure up. Think about outdoor advertising, posters, buttons, bumper stickers on automobiles, match books, pencils. They all cost money, but they are the mechanics of politics.

You may be told that these activities are against the law.

The most recent court actions are that you, the DAR, or any other association or group, or corporation, can spend money in such activities for the purpose of informing members, customers, stockholders, suppliers, and so forth, of their views on public issues, and the effect on their affairs and of the election to office of candidates who share or oppose those views.

Such organizations may use any media of communication known to mankind for this purpose.

Do not, as a matter of law and as a matter of practical commonsense, go around endorsing candidates. Such endorsements, without more, are of utterly no value in a political campaign.

Your local group must do actual work in the election districts. You will need voting records of incumbent legislators, National, State and city councils. You will need information as to political spending by organized groups in your last elections. You will need authoritative discussions of the issues. You cannot rely solely on the news that comes out of Washington to give you the kind of information you need. Your local paper is more likely to give you the kind of information you need than the big city dailies. Furthermore, your local newspaper will look upon you as a potential advertiser.

All of this material is now available from public sources, from official reports, here in Washington. Steps are being taken now by several organizations to provide you with the kind of material which will give you the substance for political action.

Only the local people—you and you and you—can come up with the manpower and the money and the enthusiasm that will even begin to offset labor's political strength.

National organizations can, and God knows I hope they will, provide you with the material for you to use (as you best can decide) in selecting and electing to office the kind of men you want in office.

You, the DAR, cannot do it alone. You must persuade, demand, cajole all of the conservative organizations to lay aside their normal competitive instincts to engage in an organized, planned campaign that will encourage intelligent and conservative young people to go into public life. Many are now convinced that men of principles who believe in America and her former system of government are not wanted in public office. You must convince them otherwise.

Time is short. Labor leaders now have at their beck and call probably less than 2 million political workers out their total of 18 million dues payers. This relatively small number has been organized calculatingly in exactly the places where it will bring about the most far-reaching political results.

Your job is to offset that organized minority. You can improve upon my suggestions as to how to run a political campaign. For a mere man to even assume superiority in any area over women, with their inborn instinct—their motherhood instinct to preserve the race—is ridiculous.

How can you do nothing in this fight? If you go home and stay inside, you will be doing something. You will be doing precisely what Walter Reuther and those others whose activities bring joy to the hearts of world communism want and expect you to do.

Bob Welch, whose reputation you all know, tells me that there is only 1 danger which the Communists face today and only 1 thing they fear. That is, for the American people to be awakened sufficiently, too soon, to the very nature and methods and existence and progress of the Communist conspiracy itself.

By doing nothing you and you and you will have become another ally of world communism.

Dean Manion, an old and cherished friend of mine, calls my attention to a quotation from the Book of Proverbs:

"Remove not the ancient landmark, which thy fathers have set."

What is the landmark? What must we do if we had the votes?

We can restore the Constitution, and reassert its provisions so that even the Supreme Court of the United States cannot misinterpret it.

We can limit the power of Congress to tax, as it was limited until the 16th amendment.

We can take away—if the face of the Congress is changed—those things which the Federal Government is now doing which are immoral, unconstitutional, illegal, and outrageous.

We can once more set the free mind of America, the foundation, the creative, the atomic power of America, free America, further from the restrictions, the management of man over man, the compulsions, the propaganda, the deception, the unlimited, unconscionable power of government.

Almost 6 years ago Senator Taft and Candidate Eisenhower signed a manifesto of principles. This is what it says, in part:

"The greatest threat to liberty today is internal, from the constant growth of big government through the constantly increasing power and spending of the Federal Government. * * *"

God help us as we organize for the peaceful revolution to restore constitutional government in our land.

Walter Reuther's Background

EXTENSION OF REMARKS
OF
HON. TIMOTHY P. SHEEHAN
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 23, 1958

Mr. SHEEHAN. Mr. Speaker, Dr. J. B. Matthews, substituting for radio commentator Bob Siegrist on radio stations WLS and WGEZ, on Thursday, April 24, supplemented his broadcast of April 23 with additional material on Walter Reuther's background and philosophy.

Dr. Matthews has been personally acquainted with Mr. Reuther for many years and his observations of April 24 are as follows:

Walter and Victor Reuther came back to Detroit from the Soviet Union in the fall of 1935, having spent at least 18 months in the Communist utopia. One magazine says the Reuther boys went to Russia and "found out the ugly truth" for themselves. Such an assertion is apocryphal nonsense. There isn't a scintilla of evidence to support it.

The record leaves no doubt that the Reuther brothers went to Russia as Marxists and came away even more so. The pretense that they went and "found out the ugly truth" for themselves is an afterthought dictated by their interests as political adventurers.

When they reached Detroit late in 1935, the Reuthers went at once into the serious business of carving out careers for themselves in the unionizing of the automotive industry. But, that story should wait for a moment upon a revealing incident in the files of the Detroit Police Department.

Sergeant Harry Mikuliak had been in the Detroit Police Department some 15 years when, as a highly skilled investigator, he attended a meeting on May 3, 1937.

According to Sergeant Mikuliak's account, this meeting was held in an auditorium in downtown Detroit. The meeting was originally scheduled to be held in the Cass Technical High School, but permission had been denied by the representative of the board of education.

Anna Louise Strong, well-known Soviet propagandist, was the speaker at this meeting which was held to raise money for the Communist side of the Spanish civil war. The money-raiser, at this meeting, was none other than Walter Reuther. The amount which Reuther raised in cash that night was $522.67.

Walter knew Anna Louise Strong from his Soviet days. He knew her, as did everybody else who had ever heard her name, as a Soviet apologist.

Walter Reuther has not denied this collaboration with the Communists, and it occurred more than a year and a half after his return from Russia. Obviously, he cannot. It is a part of the public and police record of Detroit.

Whatever happens to the Reuther political ambitions along the way, he deserves a place in American history as the generalissimo of the sit-down strikes. His present position rests upon those acts of violence in which he collaborated to the fullest extent with the Communist Party of the United States.

Shortly after his return from the Soviet Union, Walter Reuther joined the insignificant little union in the automotive industry. In practically no time, he had achieved the presidency of the west side local of the auto union.

In 1935, France was swept by a wave of Communist-led sit-down strikes which completely paralyzed the economy of the country. In 1936–37, this Communist insurrectionary technique was introduced into the United States. The three Reuther brothers masterminded the sit-down strikes in the automotive industry, with Walter as the chief of staff. The Reuthers are still proud of this achievement.

The story of the sit-down strikes which the Reuther brothers led is a matter of public record.

Walter Reuther and his two brothers introduced this Communist strike technique at the Kelsey-Hayes wheel plant in Detroit. Of the 78 members of Walter's west side local more than half were employed at Kelsey-Hayes.

Walter called a strategy meeting at his home. Fifteen of his Kelsey-Hayes members attended. Walter had learned well the lesson of the Bolshevik revolution; namely, that small conspiratorial and determined nucleus is all that is necesary to deliver a successful revolutionary blow.

Two of the Walter's conspirators were carefully trained to pull the right switches at a given signal. A few others were stationed at strategic points and instructed to yell "strike" as soon as the switches were pulled and the assembly line ground to a halt. Victor Reuther was ready with a fiery speech. Walter was waiting at home by the telephone. Victor told the plant manager that only Walter could get the assembly line moving again, and gave the manager Walter's telephone number. Walter was sent for, and when he arrived he mounted a box to deliver his own fiery harangue.

That memorable day at the Kelsey-Hayes plant, Walter Reuther and his goons not only pulled the switches which stopped the assembly line; they also brought law and order to its knees. A civilized community surrendered to primitive violence.

The story was reenacted in plant after plant. In Flint, Mich., Reuther and his goons fought off the police by hurling nuts and bolts. They turned fire hoses upon the uniformed guardians of the community. They maufactured blackjacks inside the plant.

In the Saturday Evening Post, a few years ago, a reporter described the Reuther boys' activities in the Flint, Mich., insurrection as follows: "The redheaded Reuther brothers—Walter, Victor, and Roy—were everywhere, shouting encouragement from sound trucks, organizing defenses, helping to plan strategy and climbing through windows to make reassuring speeches to the strikers. No Communist Party member—and there were many of them in on the show—worked with more fiery zeal than the Reuthers."

It was well known at the time that the entire Communist apparatus of the State of Michigan was placed at Walter Reuther's disposal and that, without this assistance of the Kremlin's agents, the civil combustion would have been greatly reduced.

Most people have probably forgotten that the sitdown strikes in Michigan prompted MARTIN DIES to introduce his resolution which set up the congressional committee to investigate un-American propaganda and activities in the spring of 1938. As director of research for the Dies committee from 1939 to 1945, I added greatly to my knowledge of the pro-Communist activities of Walter Reuther.

I learned, for example, that the Communists had set up what they called the unity caucus in the autoworkers union. Sworn testimony before the Dies committee incorporated the following memorandum on the unity caucus: "There were present at this caucus Wyndham Mortimer, Ed Hall, Walter Reuther, and about 90 delegates to the convention who were actually Communist Party members. Also present were William Weinstone, Michigan secretary of the Communist Party; Jack Stachel, a member of the central committee of the Communist Party; Morris Childs, of Chicago, secretary of the Communist Party; Jack Johnstone, of Chicago, a member of the central committee; and Louis Budenz, a member of the staff of the Daily Worker."

In 1946, 10 years after the sitdown strikes, Walter Reuther ran for the presidency of the automobile workers union on an anti-Communist platform—and was elected by a narrow margin. Walter Reuther's first act, on the announcement of his election to the presidency of the automobile workers union, was to stand before the convention and make an offer of peace to the leader of the Communist faction whom he had just defeated. The Communist leader curtly declined Reuther's publicly proclaimed offer to collaborate with the Communists.

Periodically, Walter Reuther grabs the headlines by announcing a new Reuther plan. Two years ago, for example, he announced a gigantic plan for global socialism. Political Affairs, the most authoritative medium through which the Communist Party line of the moment is expounded, gave its highest praise for this recent Reuther program. The Communist publication said: "Reuther's two major points, taken together, provide for participation by the United States and the Soviet Union in a common effort to bring to the poverty-stricken peoples of the world the wherewithal for upgrading of their economies."

And how would Reuther attain this goal? The answer: "The United States should contribute 2 percent of its gross produce each year (about $8 billion this year) for the next 25 years into a world fund to provide economic and technical aid to less developed countries, whether alined with the United States or not. The program would be administered through the United Nations and multilateral agencies. United States aid would be made available at once through existing multilateral agencies, pending U. N. action on the creation of the world fund."

While Reuther's plans do not bear the Communist label, they are always socialistic in essence. Their adoption would take America step by step into a full-fledged Socialist economy. And, it must be remembered that the historic mission of socialism is so to destroy the national morale and so to disintegrate the national economy as to make it a pushover for communism.

Walter and Victor Reuther closed their famous letter to Melvin and Gladys Bishop with the words, "Carry on the fight for a Soviet America." The surest road to the sovietizing of the United States would be for the American people to follow Walter Reuther.

Israel Independence Day

SPEECH
OF
HON. EDWARD P. BOLAND
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 23, 1958

Mr. BOLAND. Mr. Speaker, today marks the 10th anniversary of the independence of the State of Israel. On this happy occasion I wish to extend my sincere congratulations to both the leaders and people of Israel for the magnificent progress they have made during the last decade and to express the hope, echoed

by all America, that the future may prove even more successful and prosperous.

Great changes have been wrought since that momentous day in 1948 when Israel first proclaimed her independence—changes which can only serve as a living memorial to the courage and fortitude of the Jewish people. In the space of 10 short years Israel has risen from the status of a new and struggling nation to that of a stable and mature state whose voice is listened to with respect in the councils of the world. In the troubled sea of the Middle East, Israel stands as an island of democracy and progress.

Nor has her domestic progress been any less startling. In spite of the fact that she has been offering blessed sanctuary to countless thousands of the unfortunate victims of World War II, Israel has, nevertheless, managed to provide a sound economic base for the future through intelligent agricultural and industrial planning. Vast building programs have provided both homes and schools for her growing population. Desert areas like the Negev have been made to bloom again through the application of modern methods of technology and irrigation to the cultivation of the soil. Governmental institutions have matured and have nurtured and protected the liberties of the individual through extremely trying times.

These tremendous achievements have not been accomplished without suffering and sacrifice, for Israel has had to contend with both active military hostility and economic boycott imposed by her neighbors. It is not surprising, however, that the same faith and courage which kept the precious idea of a national homeland alive for more than 2,000 years has been able to surmount all obstacles. Today Israel stands as a symbol to men striving for their independence all over the world—a symbol of what man can accomplish when sustained by a deep and abiding faith and dedicated to the principles of freedom and democracy.

Clearance Requirements Across the Atlantic Intercoastal Waterway

EXTENSION OF REMARKS
OF
HON. PAUL A. FINO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Thursday, April 24, 1958

Mr. FINO. Mr. Speaker, in view of the proposed action of the Fact Finding Committee of the Corps of Engineers, United States Army, regarding the reduction of the minimum vertical clearance requirements below the present 80 feet across the Atlantic Intercoastal Waterway, protests have been filed objecting to such action.

The American Boat Builders & Repairers Association, Inc., through its executive secretary, Jerome F. Healy, Jr., has filed such a protest on behalf of its members. This is a matter worthy of attention of all Members of Congress. The letter of protest follows:

AMERICAN BOAT BUILDERS & REPAIRERS ASSOCIATION, INC.,
New York, N. Y., April 18, 1958.

FACT FINDING COMMITTEE, CORPS OF ENGINEERS, UNITED STATES ARMY,
Care of Col. Paul D. Troxler, Chairman, District Engineer,
Jacksonville, Fla.

GENTLEMEN: We represent over 100 small shipyards and sailmakers. You will note from our attached current membership list that they are located along the Atlantic seaboard.

We protest the proposed reduction of the minimum vertical clearance requirements below the present 80 feet across the Atlantic Intracoastal Waterway.

The proposal, if carried through, will seriously affect the economy of a large number of these yards and the towns where they are located and will add to the recession now rapidly spreading across the country. The reverberations will be felt by yards as far north as Maine, as we will show below.

How this proposal will affect a cross-section of our member yards:

Hartge Yacht Yard of Galesville, Md., now employs about a dozen people. About 20 of its customers use the Intracoastal Waterway. In addition, many others stop at this yard for repairs en route north. Most of these customers would be affected by the 55-foot clearance of bridges on this waterway, and would be unable to use the waterway. With a change in the route of its customers, this yard would be by-passed and lose the repair business of these vessels. It is the opinion of this yard that small yards, like itself, would be almost eliminated if such a proposal becomes a reality. A photostat copy of this yard's statements is attached.

Another yard, Manchester Yacht Sails, Inc., located at South Dartmouth, Mass., employing about 15 people, has approximately 25 customers sailing yachts and using the inland waterway en route to and from southern sailing areas. These customers advise the yard that the proposed 55-foot clearance would necessitate their sailing outside in the open ocean along the most dangerous parts of the Atlantic coast and in treacherout waters fraught with peril for their craft.

Barbour Boat Works, of New Bern, N. C., which has a payroll of about 50, is another member who feels that it will be affected by this proposal. Its letter is attached.

The Arnold C. Gay Yacht Yard, of Annapolis, Md., is another yard which has approximately 25 of its customers using the waterway and judges that it outfits another 25 for the same purpose. It is of the opinion that if these boats are unable to use the waterway, boatyards all along the way would be forced to close. Its statement is also attached.

This is but a cross section of the many yards which would be faced with the same problems in the event that this proposal is carried through.

E. Farnham Butler of the Mount Desert Yacht Yard located in Maine has heretofore written to you his opposition to the proposed plan setting forth his position in a similar vein.

Many yards of this association are located in small towns along the waterway and contribute substantally to the business economy of these towns. Making the waterway impassable for high-masted vessels would reroute these vessels with the resultant substantial loss of business currently enjoyed not only by these small yards but by the local townspeople such as suppliers, restaurants, and the like. This loss of business, in turn, would be reflected by an increase in the country's present growing unemployment rolls. Any step taken that would at this time contribute to unemployment is false economy. The wooden boat building and repair industry is hard pressed under normal conditions to retain its skilled workers. It consists of a large number of individual companies, each of which is within the category of small business. This industry deserves encouragement and stimulus and not obstruction and restraint, because it is claimed that some money can be saved when building bridges. Boat building and repairing skills are among the occupations listed in the United States Department of Labor's list of critical skills vital to national defense programs. These skills are found only in boat yards and the dissipation of such skills through failure to keep the boat building and repairing industry in full operation in time of peace would pose a serious threat in time of mobilization.

Complete statistics on the height of the masts of all boats using the Intracoastal Waterway, as your own research has undoubtedly revealed, are not available. Our investigation reveals that the Corps of Engineers, with the opportunity to gather this information as each boat using the Intracoastal Waterway passes its locks, did not commence to do this until March 5, 1958, although the same procedure has been used over the years for obtaining other information. We also understand that the United States Coast Guard lacks these figures. We point this out not in a critical vein, but as clear evidence that the 80-foot minimum clearance was so well established that no one was even concerned about mast height, and that boatowners and boatbuilders and others concerned had a right to rely on the long established minimum clearance and not to expect it to be arbitrarily reduced to suit the convenience of another group.

No pressing need for the proposed change has ben established. Alleged public economy in the construction and operation of bridges is the only argument presented in favor of lowering the clearance. Such an argument is far outweighed by the harm which will be occasioned by such an act to the business economy of our industry, and to the property life and limb of many boat owners who would be deprived of the use of the waterway.
